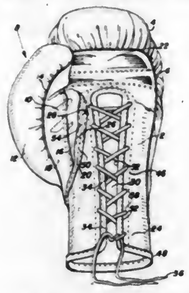
1. In a spring winder, in combination, a pair of U-shaped members one received in nested relation within the other and slidable with respect thereto, the sides of each of said members each being provided with a V, both V's of each of said members being directed in the same relative direction of movement between said members and the V's of one member being directed oppositely to the V's of the other of said members, said V's being adapted to receive a mandrel, means for effecting relative movement between said members whereby to cause such mandrel to be frictionally clamped by the opposed V's of said members, a boss fixed to the outer of said members and to the outer face of one of the sides thereof in closely adjacent relationship with respect to said V therein, said boss having a bore therein arranged with its axis in a plane transverse to the axis of said mandrel and having a slot extending therethrough into said bore in a plane transverse to the axis of said bore, and an axially slotted wire guide member rotatably received within said bore, the slot in said guide member extending into intersecting relationship with respect to said slot in said boss.

2,446,756
RADIO CABINET HAVING INTEGRAL HANDLE DEVICE
Charles P. Geyh, Hartsdale, N. Y., assignor to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware
Application February 25, 1946, Serial No. 649,917
1 Claim. (Cl. 312—7)

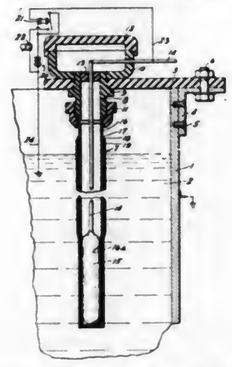


A cabinet for radio equipment and the like: said cabinet being formed with a ventilating opening near the base thereof; said cabinet having a top and a rear side wall formed integrally and curving at their juncture to form a generally rounded corner, said corner being formed with an inwardly directed portion, said inwardly directed portion having a hand-admitting opening formed therein, and having a substantially horizontally extending surface terminating at its inward end in the lower periphery of the last mentioned opening; and a wall extending downwardly from the top of said cabinet inwardly of said last mentioned opening, thus preventing the horizontal egress of light from within said cabinet through said last mentioned opening, said downwardly extending wall being positioned at such a distance from said opening as to allow the insertion of the hand of an adult thereinto far enough for the back of the hand to rest on said horizontally extending surface, whereby said downwardly extending wall forms a stop and leverage applying point for the ends of the fingers and said horizontally extending surface forms a pivot region, about which said cabinet may be pivoted while being carried.

2,446,757
SURFACE TREATED PICTURE
Paul C. Goetz, Mount Holly, N. J., assignor of one-half to Carlos Cudell Goetz, New York, N. Y.
No Drawing. Application July 13, 1944, Serial No. 544,830
3 Claims. (Cl. 117—81)

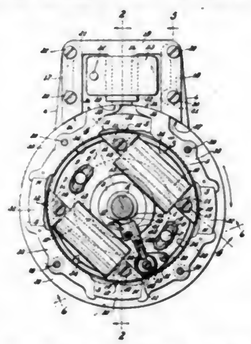
2. In combination, a surface comprising a pictorial representation formed from pigments and pigmented photographic emulsions, and a colorless, transparent, nonglaring, uniform and inert coating for said surface to preserve said representation against atmospheric conditions and to improve the clarity thereof, said coating consisting of cetyl alcohol.

2,446,758
BOXING GLOVE
Jules Golomb, Rego Park, N. Y., assignor to Benlee Sporting Goods Mfg. Co., New York, N. Y., a copartnership
Application January 10, 1946, Serial No. 640,257
9 Claims. (Cl. 2—18)



3. In a boxing glove, a glove body comprising a palm portion and an inner thumb portion seam united thereto, the seam between the palm portion and the inner thumb portion being disposed inwardly toward the center of the palm portion and convexly curved downwardly toward the bottom of the palm portion so as to conform to the outlines of the ball of the user's thumb, and there being a greater length of material in the seam edge of the inner thumb portion than in the seam edge of the palm portion joined thereto.

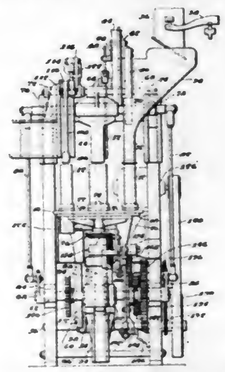
2,446,759
OPEN-HEARTH PROCESS
Frederick J. Griffiths, Massillon, Ohio, assignor to Chromium Mining and Smelting Corpn., Limited, Sault Ste. Marie, Ontario, Canada, a corporation of Canada
No Drawing. Application October 22, 1945, Serial No. 623,872
6 Claims. (Cl. 75—57)



5. The method of reducing the carbon content of steel in an open hearth furnace process which comprises forming a bath of molten steel in an open hearth furnace, forming a layer of slag comprising calcium oxide and iron oxide above and in contact with the upper surface of the molten steel, and igniting in contact with the slag in the furnace an exothermic reaction mixture comprising sodium nitrate and ferrosilicon and capable of yielding by reaction upon ignition sodium oxide capable of reacting with at least one component of the slag and modifying the characteristics of the slag to promote a reaction between carbon contained in the steel and iron oxide contained in the steel and slag.

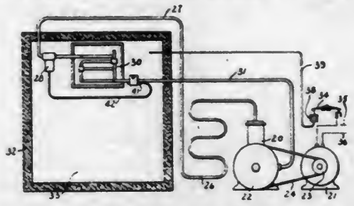
2,446,760
LEAK DETECTOR FOR THE PROTECTIVE WELL OF A THERMAL INSTRUMENT SENSITIVE ELEMENT
Frederick W. Hampson, Holyoke, Mass., assignor to Plating Processes Corporation, Holyoke, Mass., a corporation of Massachusetts
Application May 24, 1945, Serial No. 595,627
3 Claims. (Cl. 177—311)

1. In a leak detector system in combination, a bath of electrolyte, a thermally responsive instrument comprising, a metal bulb in heat exchange relationship with said bath, a protective well to prevent direct contact between said bath and bulb comprising a liquid-tight preformed tube with closed bottom extending into said bath and having an inside diameter substantially the same as said bulb adapted to receive therein said bulb in snug substantially form fitting removable relation, said well being formed of a plastic insulating material with an extremely thin wall, a coating of heat conductive metal deposited thereon to reinforce said plastic material to self-sustaining shape and to provide a highly heat conductive surface for said well, and an electrical signalling circuit, one side of which is connected to said bulb and the other side of which is connected to the outer metallic coating of said well immersed in said bath.



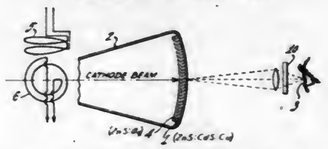
2,446,761
COMBINED MAGNETO AND ALTERNATOR
Kenneth A. Harmon, Longmeadow, Mass., assignor to Wico Electric Company, West Springfield, Mass., a corporation of Massachusetts
Application June 18, 1947, Serial No. 755,421
3 Claims. (Cl. 171—209)

1. In a combined magneto and alternator, comprising, an annular magnetic rotor having an even plurality of permanent bar magnets symmetrically spaced in a circular series about the axis of rotation of the rotor, and a like number of members of magnetic material each interconnecting the like poles of two successive magnets of the series, whereby successive members of the series are of opposite polarity, inner pole shoes one on each member comparable in angular extent to the angular spacing between the like polar ends of two successive magnets of the series, and outer pole shoes formed one on each of two successive connecting members and located one closely adjacent one polar end and the other closely adjacent the other polar end of that magnet which is located between said two connecting members, said outer pole shoes each being much smaller in angular extent than any one of the inner pole shoes; an inner stator including a coil for the generation of alternating current and a core for the coil with its ends so spaced as to be operable during rotation of the rotor to connect two inner pole shoes of opposite polarity; and an outer stator including a magnetic core structure with ends so spaced as to be operable during rotation of the rotor to connect with the outer pole shoes of the rotor, and primary and secondary coils carried by the core structure for the generation of ignition current.



2,446,762
PACKAGING MACHINE FOR COMPRESSIBLE COMMODITIES
Armin G. Hauck, Quincy, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts
Application January 6, 1945, Serial No. 571,581
5 Claims. (Cl. 226—101)

3. In a packaging machine for use in filling a container with a compressed commodity, in combination, an elongated sleeve having an internal cross sectional area slightly less than that of the container to be filled, means for depositing a commodity in its loose and expanded condition into said elongated sleeve to form a column thereof substantially greater in height than said container, a pair of reciprocably mounted opposing plungers arranged to enter said sleeve from both ends to engage and compact the commodity therebetween to a size substantially less than the capacity of the container, said sleeve being reinforced at the point of maximum lateral pressure adjacent the reduced mass within the sleeve, and means for ejecting the compressed commodity through said sleeve to permit it to be received in a container held below the sleeve.

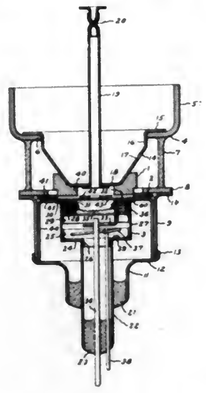


2,446,763
REFRIGERANT EVAPORATOR
Paul Haymond, Fairmont, W. Va.
Application January 18, 1945, Serial No. 573,374
4 Claims. (Cl. 62—126)

1. An evaporator for a refrigerating system comprising duct means forming two elongated and substantially horizontally disposed duct sections arranged in different substantially horizontal planes and connected in series circuit relation by a vertically extending duct section, one end of the upper section having means for connecting same with the high pressure side of a refrigerating system and the end of the lower section having means for connecting the same with the low pressure side of the system, means forming a dam

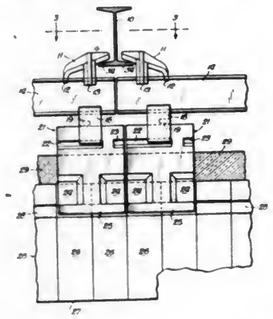
in each of said sections, said dam means stopping short of the top of the respective duct section in which it is disposed for retaining a quantity of liquid refrigerant in each of the sections and providing for the free flow of gaseous refrigerant, and means for forming a second outlet for gaseous refrigerant, and adapted to be connected with the low pressure side of said system, said second outlet being disposed intermediate the ends of the duct means.

2,446,764
CATHODE-RAY TUBE
Stanley Thomas Henderson, Buckinghamshire, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England
Application July 19, 1945, Serial No. 605,968
In Great Britain April 21, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 21, 1964
3 Claims. (Cl. 250—164)



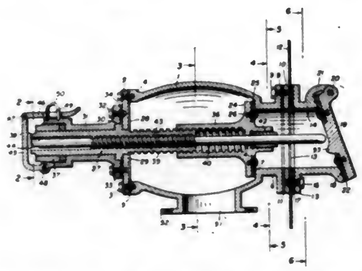
1. A cathode beam tube having a fluorescent screen comprising a phosphor adapted to be excited by the beam and having a sufficiently long time lag to produce a build-up of illumination by scansions at a frame scan period shorter than the time lag of the said phosphor and another phosphor adapted to be excited by the light from the first phosphor and having a shorter time lag and adapted to emit light of a different color from the light emitted by said first phosphor, whereby the elemental areas of said screen emit light of one color when successively excited a plurality of times and light of a different color when excited a smaller number of times.

2,446,765
ELECTRICAL DISCHARGE TUBE
John S. Hickey, Schenectady, and William H. Teare, Ballston Lake, N. Y., assignors to General Electric Company, a corporation of New York
Application September 24, 1946, Serial No. 699,002
6 Claims. (Cl. 250—27.5)



5. In an electrical discharge device including an annular cathode and an annular electrode in operative relationship thereto, a structure for

spacing said electrode from said cathode comprising a metallic electrode supporting cylinder having said annular electrode supported across one end thereof, a cathode supporting member having a flattened portion normal to the axis

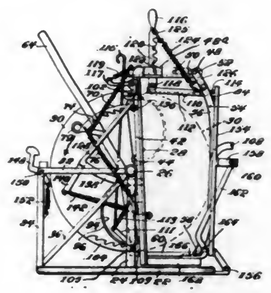


of said cylinder, said annular cathode being supported from said member in insulated relationship thereto and centrally of said cylinder, the other end of said cylinder engaging said flattened portion whereby said electrode is positioned therefrom in spaced relation to said cathode.

2,446,766
FURNACE ARCH OR ROOF CONSTRUCTION
Louis H. Hosbein, Glencoe, Ill., and Louis Ellman, Pittsburgh, Pa., assignors to M. H. Detrick Company, Chicago, Ill., a corporation of Delaware
Application September 16, 1942, Serial No. 458,592
14 Claims. (Cl. 110—99)

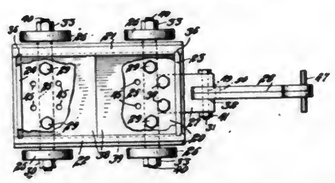
1. A furnace roof comprising a metal supporting structure including a series of beams and a number of metal hanger members each provided with a pair of opposed flanges directed toward each other with their adjacent edges resting on a flange of one of said beams, each metal hanger member being provided with a further pair of oppositely directed flanges extending in the same direction as said first pair, refractory hanger members supported from said metal supporting structure, each of said refractory hanger members being provided with oppositely disposed grooves in which said further pair of flanges of said metal hanger members are engaged for suspending the refractory hanger members from said metal hanger members, and a plurality of interengaging refractories supported by said refractory hanger members.

2,446,767
TANK VALVE
Lorenzo D. James, Long Beach, Calif.
Application May 6, 1947, Serial No. 746,264
5 Claims. (Cl. 277—63)



1. A valve for attachment to a side wall of a tank having an aperture in said wall, said valve comprising a hollow body having a reduced front end neck section, and an internal annular valve seat in said end, a neck section complemental to the neck section first mentioned and having a flap valve swingable thereon to open the same, means for attaching said neck sections to opposite sides of said side wall in surrounding relation to said aperture, a disc valve member in said body adapted to be adjusted toward and from said seat, and manipulative means extending into said body for swinging said flap valve member and adjusting said disc valve member independently.

2,446,768
ELECTRICAL SWITCH DEVICE FOR LAMP SOCKETS
William Kaufman, Mount Vernon, N. Y., assignor to Kulka Electric Company, Mount Vernon, N. Y., a partnership composed of William Kulka and Eugene R. Kulka
Application January 11, 1946, Serial No. 640,413
6 Claims. (Cl. 200—51.14)

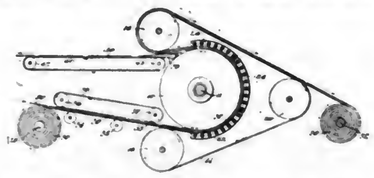


1. In a switch, the combination of a non-conductive support, a first conductive member fixed to said support, a second conductive member fixed to said support, said conductive members being spaced from each other, a control-member which is turnably connected to said support, said control-member being turnable forwardly around a fixed axis to a circuit-closing position and being turnable reversely around said fixed axis to a circuit-opening position, first stop-means which limit said forward turning movement of said control-member beyond said circuit-closing position, second stop-means which limit said reverse turning movement of said control-member beyond said circuit-opening position, a conductive blade-spring which extends radially outwardly from said fixed axis, said spring being radially compressible and being turnable about said fixed axis and being electrically connected to said first conductive member, said spring being turnable towards said second conductive member to abut said second conductive member in a circuit-closing position of said spring, said spring being turnable away from said second conductive member to a circuit-opening position of said spring, limiting means which limit said last-mentioned turning movement of said spring to a selected limited angle, said spring having a first cam-leg and a second cam-leg, said cam-legs having proximate ends and remote ends, said cam-legs being inclined to each other, the remote ends of said cam-legs being radially closer to said axis than said proximate ends of said cam-legs, said control member having a projection, said projection being radially closer to said axis than said proximate ends of said cam-legs, said second cam-leg being located intermediate said first cam-leg and said second conductive member, said projection substantially abutting said first cam-leg between its ends when said control-member and said spring are in their circuit-closing positions, said projection substantially abutting said second cam-leg between its ends when said control-member and said spring are in their respective circuit-opening positions, said spring being turned reversely to said control-member when said control-member is turned from one of its said positions to the other.

2,446,769
TILTING CHUTE
Robert C. Keirsey, Roy, N. Mex.
Application November 1, 1946, Serial No. 707,312
4 Claims. (Cl. 119—98)

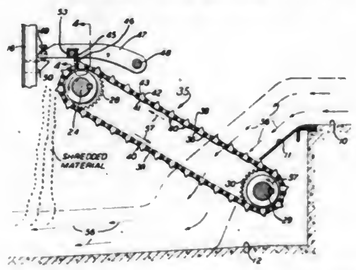
1. A device of the character described, comprising a frame, an axle mounted in said frame, a side member mounted on said axle for rotation thereabout, a side squeeze member pivotally secured to the upper edge of said side member, a semi-circular gate mounted on said axle and swingable thereabout to engage the neck of an animal, said gate having an arcuate outer edge, and formed with arcuate shaped side flanges outlying an arcuate neck engaging aperture therein, and leg spreading members pivotally secured to said side member for spreading the legs of an animal retained in said frame by said side squeeze member.

2,446,770
CONSTRUCTION TOY
John F. Kershisnik, Elmhurst, N. Y.
Application April 30, 1945, Serial No. 591,020
1 Claim. (Cl. 46—16)



A convertible wagon type of construction toy comprising a flat wagon bed having transversely spaced axle bolt openings therethrough near opposite ends, longitudinally extending undercut grooves therein near opposite side edges and cross grooves across the face of the same near opposite ends, wagon bed sides tongued along the lower edges to slidingly interlock in said undercut grooves and having transversely spaced axle bolt openings near opposite ends spaced the same as those in the bed, vertical grooves in the inner faces near the ends to register with said cross grooves and longitudinal grooves in the inner faces near the upper edges, wagon box ends slidable in said vertical grooves downward into seated engagement in said cross grooves to lock the sides in place longitudinally on the bed and at least one of said ends when seated in a cross groove being of less height than said longitudinal grooves in the sides, a wagon bed cover slidable in said longitudinal grooves over the last mentioned seated wagon box end to lock the latter in position, axles having bolt openings spaced the same as those in the wagon bed and sides, quick removable bolt elements interchangeably engageable in said bolt openings in the axles and wagon bed or sides so that the sides may be mounted on the axles in place of the wagon bed, a yoke having bolt openings spaced the same as the bolt openings in the axles, bed and sides for enabling it to be connected by the quick removable bolt elements with the axles, the bed or the sides, a separable, two-part tongue pivotally connected with said yoke and the two parts of said tongue having bolt openings to register with bolt openings in the wagon box sides and whereby said tongue parts may be separated from each other and be secured by the quick removable bolt elements to the wagon box sides to serve as push or pull handles, said wagon box cover being in sections of a length approximately equal to the width of the wagon box between the sides and whereby said cover sections may be inserted in the wagon box as a back support, the quick removable bolt elements for fastening the separate tongue parts to the sides projecting into the wagon box body sufficiently to form abutments for holding said cover sections in inclined back supporting position therein.

2,446,771
METHOD OF IMPARTING SURFACE EFFECTS TO THERMOPLASTIC SHEETS
Thomas M. Knowland, Belmont, Mass., assignor to Boston Woven Hose & Rubber Company, Cambridge, Mass., a corporation of Massachusetts
Application December 31, 1946, Serial No. 719,544
5 Claims. (Cl. 18—53)



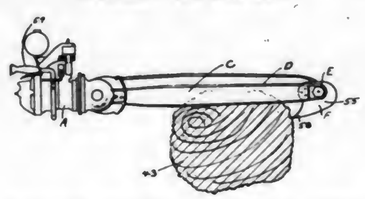
1. A continuous process of imparting ornamental surface finish to thermoplastic sheets,

which includes the steps of passing an endless pressure band in a looped path about a substantial portion of the circumference of a heated rotating drum, introducing a thermoplastic sheet between the drum and pressure band thereby ad-

vancing the sheet under conditions of heat and pressure, and feeding a series of thin flexible metal plates between the drum and the sheet, each plate having a three dimensional surface pattern disposed to lie against the sheet.

2,446,772
COMBINED WET SCREENING AND SHREDDING APPARATUS
William C. Laughlin, New York, N. Y., assignor to Ralph B. Carter Company, Hackensack, N. J., a corporation of New York
Application August 3, 1945, Serial No. 608,647
2 Claims. (Cl. 210—152)

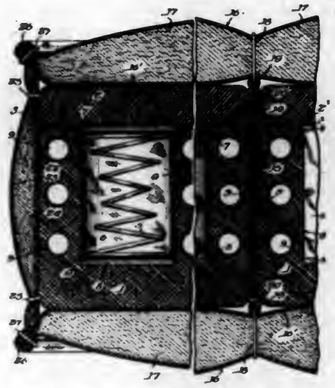
1. In a combined wet screening and shredding apparatus, the combination with a continuous belt conveyor having laterally spaced and end pivoted links, pusher abutments on said links, cutting edges on the forward parts of said pusher abutments, means supporting one end of the conveyor above the other end to present an inclined surface to the horizontal, and a comb transversely disposed to the conveyor having cutting edges complementary to the cutting edges of the conveyor links, and above the upper end of the conveyor, of a yoke for supporting the comb, a pivotal support for one end of the yoke at one side of the comb, and a support for the other end of the yoke at the other side of the comb.



2,446,773
CLAMPING TOOL
Stanley J. Leskiewicz, Lynn, Mass.
Application January 9, 1946, Serial No. 640,121
8 Claims. (Cl. 153—32)

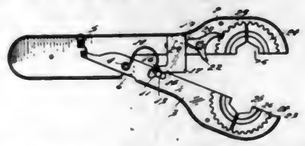
2. A clamping tool for holding a template in association with die stock during bending of the latter to form a shoe-cutting die, comprising a handle portion, a rod-like extension of said handle, releasable clamping means for said die stock mounted on said extension of said handle forming locating means for positioning said die stock and template together in cooperative relation, releasable clamping means for said template alined with said extension, and means for moving said

template clamping means into and out of cooperative relation with said die stock.



2,446,774
CHAIN SAW
Arthur W. Mall, Flossmoor, Ill., assignor to Mall Tool Company, Chicago, Ill., a corporation of Illinois
Application November 15, 1943, Serial No. 510,409
1 Claim. (Cl. 143—32)

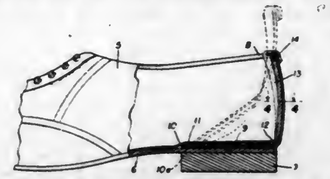
A chain saw machine comprising a power unit, a chain guiding member extending therefrom and having a chain sprocket at each end thereof, a cutting chain trained about said guide member and sprockets, a bracket member rigidly secured at the end of the chain guiding member opposite the power unit and enclosing the sprocket and corresponding end of the cutting chain, said bracket member including a plate forming an arcuate wedge shaped hook projecting beyond the cutting plane of the cutting chain and extending toward the power unit, said hook terminating in a chisel shaped edge forming a work gripping member engaging but not substantially penetrating the work, whereupon the machine may be anchored temporarily in the work as the cutting progresses, said plate extending substantially parallel with the path of the cutting chain, the machine being pivotable about said edge as the cut progresses into the work.



2,446,775
INNERSPRING MATTRESS CONSTRUCTION
Max Marsack, Milwaukee, Wis., assignor to Marsack Patents Corporation, Milwaukee, Wis., a corporation of Delaware
Application January 12, 1944, Serial No. 517,907
5 Claims. (Cl. 5—353)

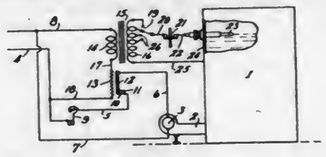
1. In a mattress of the kind described and in combination, an inner construction consisting of two adjacent units arranged edge to edge, each unit comprising a molded body of yieldable elastic material provided with a plurality of sealed compartments and with a spring in each compartment, an intermediate sheet adhesively secured to the meeting edges of the adjacent body units for holding them in close edge to edge re-

lation, coverings arranged over the top and bottom faces of the units and coverings about the exposed edges thereof, said first mentioned coverings having means securing the same to said intermediate sheet adjacent the upper and lower faces of the units.



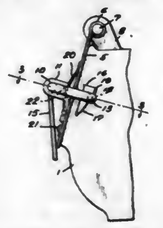
2,446,776
RATCHET WRENCH HAVING A MAGNETIZED SECTIONAL SOCKET
Olof Matson, Hatboro, Pa.
Application July 25, 1944, Serial No. 546,471
2 Claims. (Cl. 81—63)

1. In a ratchet wrench, a casing forming a grasping portion and having a head consisting of a stationary and a movable section, an annular sectional socket rotatably mounted in said sections, pawl mechanism to turn said socket, a spring tending to move said movable section into its open position, a spring-tensioned locking member movably carried by said movable section and adapted to be actuated to locking position by the hand engaging said grasping portion, and a hook on said stationary section and engaged by said locking member to retain said movable section in its closed and locked position, said socket having two sections in each head section with the juxtaposed ends of the two socket sections magnetized to retain them together.



2,446,777
SHOEHORN
Frederick C. Menenko, La Porte, Ind.
Application January 13, 1947, Serial No. 721,727
3 Claims. (Cl. 36—1)

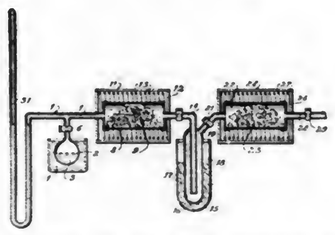
1. In combination, a shoe having an attachment for facilitating the insertion of a foot into the shoe, said attachment including a lower plate and upper plate, the two plates being hinged to each other, the lower plate being secured to the inside of the shoe at the heel, and an outwardly and downwardly turned hook integral with said



upper plate for fastening the upper plate to the upper rear edge of the shoe, the lower plate being highly flexible and the upper plate being relatively inflexible.

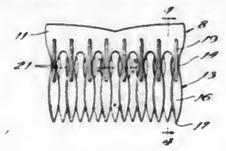
2,446,778
CONTROL FOR AUTOMATIC BURNERS
Theodore J. Mesh, Easthampton, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application March 15, 1945, Serial No. 582,979
9 Claims. (Cl. 122—504)

2. The combination with a boiler and a burner for firing the same, of a normal control means for respectively starting and stopping the burner when there is a demand for heat and when such demand is satisfied, a safety control mechanism for the burner including a member operable when moved in one direction from an initial position for a predetermined time to prevent operation of the burner under the control of the normal control means, means responsive to the level of water in the boiler for moving said member in said direction when and while the water is below a predetermined level, and means for moving said member toward its initial position operable when the water is at or above said level.



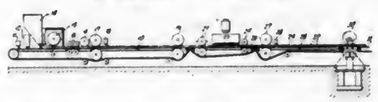
2,446,779
RAILWAY JOURNAL BOX LID
John McMullen, Cleveland, Ohio
Application May 17, 1944, Serial No. 535,906
1 Claim. (Cl. 308—51)

In combination, a journal box provided with a rectangular service opening having opposed par-



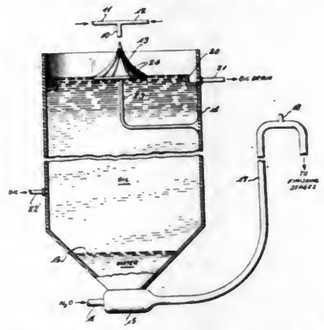
allel side edges and a lip surrounding said opening and provided with a seat, a cover hinged to the box on an axis parallel to one side edge of said opening and having a peripherally extending inner surface adapted in cover-closed position for sealing engagement with said seat, two spaced brackets mounted upon the outer surface of the cover, a rigid shaft spanning the space between said brackets and rotatably mounted in them on an axis parallel to that of the cover hinge and extending across the service opening, when the box is closed, midway between the side edges of said opening to which it is parallel, the outer end portions of said shaft, beyond the side walls of the box, being bent toward each other to form arms provided with rigid terminal locking fingers, rigid keeper members, one mounted upon the outer surface of each side wall of the box below said lip and each having a curved track terminating in a locking recess, an elongated leaf spring secured to the cover and lying beneath said shaft in the space between said brackets, the end portions of said spring bearing upon the cover at two points spaced equally from and on opposite sides of said shaft, said shaft opposite the middle portion of said spring being provided with a cam and with a handle which swings downwardly away from the hinge and toward the cover when locking the same, whereby upon depression of said handle with the cover closed the fingers move from below the keeper members and engage and travel along the tracks and enter the locking recesses thereof and the cam simultaneously engages and depresses and flexes said spring, said spring being of such length and strength that when the cover is closed and the handle is depressed the spring, through its spaced end portions, applies yielding but substantial pressure to the cover at two points equally spaced from said shaft, and thereby releasably locks the cover in sealing engagement with said seat under yielding pressure applied uniformly to the lip around the entire opening, and said cover cannot be unlocked and released by reverse handle movement without again flexing and increasing the pressure applying tension of said spring.

2,446,780
METHOD OF PREPARING URANIUM HYDRIDE
Amos S. Newton, Ames, Iowa, assignor to the United States of America as represented by the United States Atomic Energy Commission
Application July 22, 1944, Serial No. 546,178
3 Claims. (Cl. 23—204)



2. A method of preparing uranium hydride which comprises establishing a pair of intercommunicating reaction zones, introducing an agent capable of reducing water vapor in the first of said zones, and uranium metal into the second of said zones, introducing water vapor into the first zone and establishing a temperature therein sufficient to generate hydrogen from the water vapor, continuing introduction of further water vapor into the first zone, forcing evolved hydrogen into the second reaction zone whereby the rate of reaction of the hydrogen with the uranium is controlled by controlling the rate of introduction of water vapor into the first reaction zone and maintaining the uranium in the second zone at a temperature such that uranium hydride is formed.

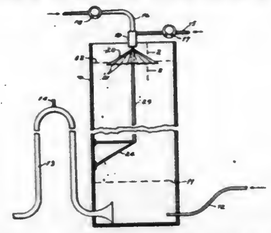
2,446,781
COMB
Allan A. Norin, Chicago, Ill., assignor to Gaylord Products, Incorporated, Chicago, Ill., a corporation of Delaware
Application October 15, 1945, Serial No. 622,306
3 Claims. (Cl. 132—26)



1. In a comb, a pair of backings, a row of teeth depending from each backing, means for adhesively uniting said backings to arrange the teeth of one row in contacting staggered relation with the teeth of the other row, said teeth having relatively narrow shanks defined by concave side edges to provide hair receiving pockets between adjacent teeth, said teeth having body portions of relatively greater width defined by convex side edges merging with the concave side edges of said shanks and extending downwardly to terminate in pointed terminals, the convex side edges of the body portions of adjacent teeth being disposed in overlapping relation, the body portion of said teeth being concavo-convex in cross section with the convex surfaces of adjacent teeth normally disposed in contacting engagement and yieldably resistant to movement out of contacting engagement.

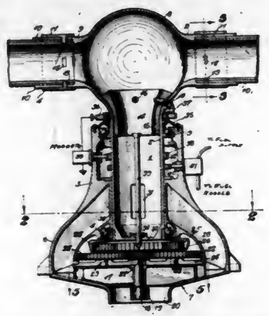
2,446,782
MANUFACTURE OF CEMENTITIOUS SHEETS
Harold J. Otis, New Orleans, and Jack Hesse, Gretna, La., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application January 26, 1946, Serial No. 643,798
5 Claims. (Cl. 18—60)

1. In manufacturing asbestos-cement shingles the steps comprising, forming a base layer including a dry mixture of asbestos fibers and hydraulic cement, deaerating and compressing the layer material, moistening the material with sufficient water to hydrate the cement, continuously advancing the layer while allowing the water to penetrate uniformly therethrough, applying to said moistened base layer a veneer coating including an intimate dry mixture of short asbestos fibers, finely divided mineral pigment and finely divided hydraulic cement, deaerating and strongly compressing said veneer coating and moistening the same while advancing the veneer coated sheet at a rate of at least 50 ft. per minute and allowing a period of at least 20 seconds for the moisture to penetrate throughout the veneer coating, highly compressing the composite shingle, and developing a hardening set of the cement binder.



2,446,783
APPARATUS FOR FORMING GEL INTO BEADS
John W. Payne, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application August 18, 1944, Serial No. 550,013
5 Claims. (Cl. 252—359)

1. In apparatus for forming spherical particles of hydrogel by introducing streams of an inherently gelable hydrosol into a body of a water immiscible liquid; an open vessel adapted to contain a body of liquid, a generally conical divider rigidly fixed in position in the upper part of said vessel with the apex directed upward, the surface of said divider being longitudinally curved inwardly toward the axis of said divider whereby the pitch of said surface is steep at the apex and changes gradually to approach the horizontal at the base, the surface of said divider being formed with a plurality of grooves each following a substantially direct path along said surface from a point of steep pitch adjacent the apex to the edge of the base of said divider, supply means to flow a liquid to the apex of said divider and control means to maintain the level of liquid in said vessel at a point covering the bottoms but not substantially above the rims of said grooves at the termination of said grooves on the base of said divider, whereby the liquid flowed onto the apex of said divider from said supply means will be uniformly split into a plurality of streams at a region of thin film flow at the top of the divider and each of said streams will be introduced to said body of liquid at reduced velocity thus reducing agitation at the points of stream introduction.

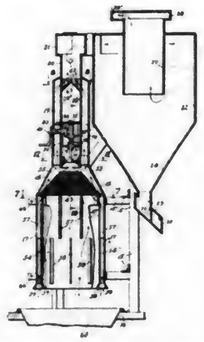


2,446,784
APPARATUS FOR MANUFACTURE OF SPHEROIDAL PARTICLES
Henry G. Daley, Woodbury Heights, and John W. Payne and Edmund L. Sargent, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Continuation of application Serial No. 477,168, February 25, 1943. This application October 19, 1945, Serial No. 623,362
3 Claims. (Cl. 18—2.4)

1. Apparatus for forming solid spheroids by flowing a solidifiable liquid into a treating liquid which comprises a conical divider rigidly fixed in position with its apex directed upwardly and having a plurality of grooves extending down its sides from the apex, means to discharge a stream

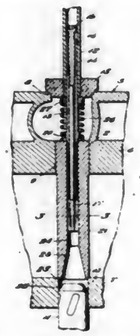
of liquid onto the apex of said divider and means to maintain a body of another liquid below said divider at a level not substantially below the base of said divider.

2,446,785
INTERNAL-COMBUSTION REACTION MOTOR
William M. Quick, Houston, Tex.
Application May 25, 1945, Serial No. 595,804
12 Claims. (Cl. 60—41)



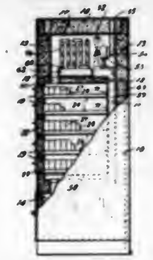
1. An internal combustion reaction motor including a tubular member mounted for rotation and defining a combustion chamber, a hollow reaction member carried by the tubular member and having communication with the combustion chamber and rotatable therewith, discharge ports carried by the reaction member to reactively discharge products of combustion from the combustion chamber to thereby rotate the same, means for intermittently feeding air to the combustion chamber, means for feeding fuel to the combustion chamber, and means for intermittently burning the combustible mixture within the combustion chamber while closed except for the discharge ports in the reaction member.

2,446,786
VERTICAL CURRENT PNEUMATIC SEPARATOR
Melvin W. Redhead, Los Angeles, Calif., assignor to Vacuum Concentrator Inc., a corporation of Nevada
Application September 23, 1944, Serial No. 555,521
4 Claims. (Cl. 209—138)



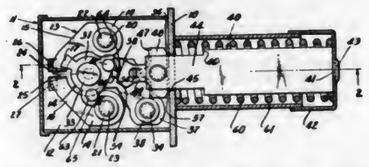
1. In a pneumatic separator, outer and inner upstanding cylinders spaced to provide an annular air passageway upwardly therebetween,

vanes therein extending lengthwise of said cylinders and positioned substantially parallel to the axis to said cylinders to control the air movement therethrough with respect to its circumferential movement, a series of riffle rings spaced one above the other in pyramidal form over said inner cylinder, to receive air currents upwardly there-



between from said annular air passageway, partition vanes above said riffle rings, extending substantially radial to said axis, and valve-controlled means for feeding matter to be separated downwardly over said riffle rings, whereby upflowing air currents through said riffle rings and said matter will separate lighter matter from heavier matter.

2,446,787
PILOT GUIDE DEVICE
Herman H. Reetz, Dickinson, N. Dak.
Application December 3, 1945, Serial No. 632,515
2 Claims. (Cl. 51—241)



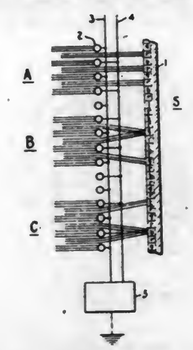
1. A device for resurfacing a valve seat of an engine block having spaced upper and lower portions respectively formed with cylindrical valve stem and tappet guide openings which are vertically aligned, comprising a pilot guide consisting of an elongated tubular member having an enlarged cylindrical upper end portion adapted to snugly fit in the valve stem guide opening and an externally tapered lower end adapted to simultaneously center in the tappet guide opening, said tubular member further having an axial cylindrical bore, a resurfacing head having a tubular shaft, and an expansible pilot including an elongated sleeve having the lower end portion of said shaft rotatably fitted on its upper end portion, said sleeve having an intermediate external tapered portion centered in the upper end of said bore and an expansible lower end portion snugly fitted in said bore.

2,446,788
REFRIGERATED DISPENSING CABINET
Milton Rifkin, Chicago, Ill., assignor, by mesne assignments, to Frez-O-Mat Sales Corporation, a corporation of Illinois
Application August 6, 1945, Serial No. 609,055
11 Claims. (Cl. 62—102)

1. A dispenser for frozen food packages comprising: a cabinet; a refrigerating medium; a fan forcing air through said refrigerating medium and into said cabinet; means for returning air from said cabinet to said fan; a plurality of doors opening through the front of said cabinet; means for supporting a row of the packages within said cabinet in alignment with each of said doors; means for forcing each row of said packages forwardly when that respective door is opened, and means for supplying air from the exterior to said fan when the pressure in the cabinet falls below a predetermined point.

2,446,789
ELECTRIC SWITCH
William Schmid, Bronson, Mich.
Application June 16, 1944, Serial No. 540,642
5 Claims. (Cl. 200—6)

4. An electric switch, comprising: relatively stationary contact means, including leaf spring contacts; cooperating relatively movable contact means, including a contact constructed and arranged for sliding engagement with said leaf spring contacts from a first position in which said relatively movable contact is in engagement with one of said leaf spring contacts to a second position in which said relatively movable contact is in engagement with the other of said leaf spring contacts; said leaf spring contacts and said relatively movable contact being so constructed and arranged that as said relatively movable contact moves away from either of said positions the leaf spring contact with which it is in engagement is flexed to increase the force of engagement between said relatively movable contact and the respective leaf spring contact; reciprocable operating means mounted for movement from a normal position into an operating position; actuating means, carried by said operating means, so constructed and arranged that it has an intermediate position between two operating positions; means whereby successive movements of said operating means from normal position into operating position causes said actuating means successively to move said relatively movable contact means from one of its positions to the other; biasing means; and said biasing means and said operating means and said actuating means being relatively so constructed and arranged that said biasing means biases said operating means to said normal position and biases said actuating means to said intermediate position by movement of said operating means into normal position.



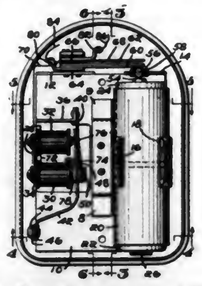
2,446,790
HAIR DRIER SHIELD
Alfred N. Scola, West Roxbury, Mass.
Application February 5, 1946, Serial No. 645,499
8 Claims. (Cl. 34—90)

1. Hair drying apparatus comprising a sheet of flexible fabric having one margin adapted to cooperate with the delivery end of a drier in position forming a tubular hood adapted to receive air from the drier and a relatively remote margin adapted to fit on and about the head of a person to be treated and having air escape openings therethrough and disposed about the head fitting margin, and baffle means attached to the sheet below and outside of said openings and forming a baffle wall extending upwardly and outwardly of the sheet about said remote margin, the baffle wall forming a pocket with the sheet open at the top around said remote margin, for directing the escaping air upwardly and outwardly away from the person being treated.

2,446,791
COLOR TELEVISION TUBE
Alfred C. Schroeder, Feasterville, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application June 11, 1946, Serial No. 675,862
14 Claims. (Cl. 250—164)

1. In pick-up tubes having a gun for scanning a cathode ray beam over a screen, a grid having parallel wires joined together, another grid having parallel wires joined together, the wires of one grid alternating with those of the other with uniform spacing between the wires, a screen in a plane parallel with and adjacent to said grids, a plurality of color strips on said screen parallel to the wires of the grids, the color strips opposite the spaces between the wires having maximum sensitivity to red light, the color strips opposite the wires of one grid having maximum sensitivity to green light and those opposite the wires of the other grid having maximum sensitivity to blue light and means for applying potentials to

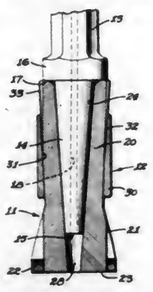
said grids for causing the beam electrons passing between the grid wires to land on the red, green and blue strips in succession.



2,446,792
SUBSTITUTED PYRIDINIUM AND PIPERIDINIUM COMPOUNDS
Robert S. Shelton, Mariemont, and Marcus G. Van Campen, Jr., Deer Park, Ohio, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio, a corporation of Delaware
Application August 28, 1943, Serial No. 500,340
21 Claims. (Cl. 260—295)

1. A germ-counteracting composition which comprises, as the essential germ-counteracting ingredient thereof, a heterocyclic quaternary ammonium compound in which the heterocyclic nucleus is a six-membered ring having five carbon atoms and the ammonium nitrogen, and aliphatic radicals of more than two carbon atoms each are attached to the ammonium nitrogen and to at least one of the carbon atoms of said ring respectively, the sum of the carbon atoms of said radicals being at least 17 and less than 20 when one of said aliphatic radicals contains 9 or 10 carbon atoms and being at least 16 and less than 19 when none of said aliphatic radicals contains 9 or 10 carbon atoms.

2,446,793
SUBSTITUTED PYRIDINIUM AND PIPERIDINIUM COMPOUNDS
Robert S. Shelton, Mariemont, and Marcus G. Van Campen, Jr., Wyoming, Ohio, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio, a corporation of Delaware
No Drawing. Application July 4, 1945, Serial No. 603,269
14 Claims. (Cl. 167—33)



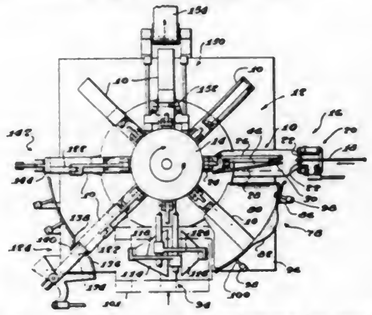
1. A germ counter-acting composition which comprises, as the essential germ counter-acting ingredient thereof, a heterocyclic quaternary ammonium compound in which the heterocyclic nucleus is a six-membered ring of five carbon atoms and the ammonium nitrogen atom, the ammonium atom having thereon an aliphatic radical of three carbon atoms, and an aliphatic radical having thirteen carbon atoms being attached to a carbon atom of said nucleus, said quaternary ammonium compound being present in said composition to the extent of between 0.1 and 0.5% by weight.

2,446,794
PORTABLE FIRE ALARM
Rudolph B. Thornton, Winchester, Mass.
Application July 30, 1947, Serial No. 764,821
1 Claim. (Cl. 177—311)

A portable fire alarm, comprising a mounting plate, a centrally located support on said mounting plate, a cover acting as a bell mounted on said support and having only a small area in contact with said support, said cover being of such dimensions as to completely conceal said mounting plate when viewed from the cover side, the rear of said mounting plate extending beyond the rear edge of said cover whereby said plate may be positioned against a surface without said surface interfering with said cover, a pair of upturned tabs at one end of said plate, one of said tabs supporting a contact adapted to be engaged by a battery and the other of said tabs supporting a thermostatically operable element, a battery positioned on said plate on one side of said support, a bell-ringing mechanism attached to said plate on the other side of said support in a position where the hammer of said mechanism will, when in operation, hit said cover, and electrical circuit connecting the aforesaid parts whereby, when said circuit is closed by the operation of said thermostatic element, said alarm will ring.

2,446,795
DRILL
Earl H. Trimble, Los Angeles, Calif.
Application October 14, 1944, Serial No. 558,670
9 Claims. (Cl. 255—64)

1. In a drill, a bar having a stem and a mandrel portion at one end of the stem, a sectional head supported by the mandrel portion and having blade parts, and means securing the head on the mandrel comprising a ring surrounding the head where it engages the mandrel, the head and ring having tapered engaging faces pitched out in the direction of the stem and the ring being free to wedge toward the stem to tighten the head on the mandrel.



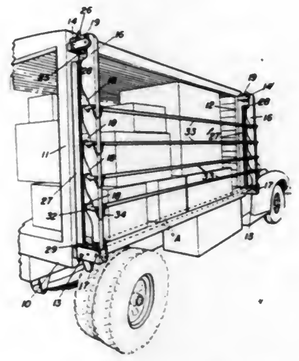
2,446,796
SUBSTITUTED PYRIDINIUM AND PIPERIDINIUM COMPOUNDS
Marcus G. Van Campen, Jr., Wyoming, and Robert S. Shelton, Mariemont, Ohio, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio, a corporation of Delaware
No Drawing. Application February 4, 1946, Serial No. 645,482
14 Claims. (Cl. 167—33)

1. A germ-counteracting composition which comprises as the essential germ-counteracting ingredient thereof a heterocyclic quaternary ammonium compound in which the heterocyclic nucleus is a six-membered ring of five carbon atoms and the ammonium nitrogen atom, said ammonium nitrogen and one of the carbon atoms of the nucleus each having attached thereto an aliphatic radical of at least seven and less than eleven carbon atoms, the sum of the carbon atoms of said radicals being at least seventeen and less than twenty, said quaternary ammonium compound being present in said composition to the extent of between 0.1 and 0.5% by weight.

2,446,797
CATALYTIC OXIDATION OF HALOGENATED HYDROCARBONS
William E. Vaughan and Frederick F. Rust, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application February 20, 1946, Serial No. 649,115
16 Claims. (Cl. 260—610)

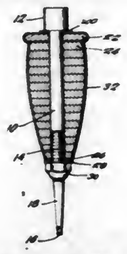
1. A process for the production of organic halogen-containing peroxides which comprises reacting a vaporous mixture comprising oxygen and a halogen-substituted saturated hydrocarbon in the presence of added hydrogen bromide at an elevated temperature which is below the spontaneous combustion temperature of the mixture, said halogen-substituted hydrocarbon containing a saturated tertiary carbon atom having a hydrogen atom linked directly thereto and containing at least one substituent halogen of atomic No. 9 to 35, and recovering the peroxide from the reaction mixture thus formed.

2,446,798
CONTAINER FORMING MACHINE
John G. Vergobbi, Quincy, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts
Application September 30, 1943, Serial No. 504,356
5 Claims. (Cl. 93—59)



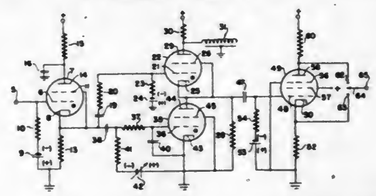
1. In a container forming machine, an expansible mandrel comprising a substantially rectangular block having a fixed side plate, an opposing pivotally mounted side plate, and a pivotally mounted end plate, said end plate forming a continuous end surface of the block, and means for rocking said pivotally mounted plates to collapse and expand said block including a toggle connected to said end plate, and means for yieldingly urging said pivotally mounted side plate into its expanded position parallel to said fixed side plate, and means associated with said toggle for rocking said pivotally mounted side plate inwardly when the toggle is contracted to collapse the block said toggle serving to lock the plates in their expanded position against substantial sealing pressure.

2,446,799
ADSORBENT REFINING METHOD
Charles C. Winding, Ithaca, N. Y., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
No Drawing. Application March 24, 1945, Serial No. 584,739
8 Claims. (Cl. 196—147)



1. A method for refining oil comprising contacting said oil with an active hydrated alumina adsorbent composition prepared by reacting under controlled conditions an alkaline aluminate in solution with an aluminum salt to produce a finely divided hydrated alumina and removing part of the water of hydration of the latter.

2,446,800
SIDE ROD ATTACHMENT FOR TRUCKS
Enrico Arrighi, San Francisco, Calif.
Application July 19, 1945, Serial No. 605,907
2 Claims. (Cl. 296—28)



1. In a device of the character described, the combination with a pair of parallel spaced supports, brackets secured thereto and in spaced relation, a bar extending between the brackets of each of said supports, each of said bars being pivoted to one of said brackets, latching means secured to the free end of each of said bars for engaging the other of said brackets, each of said bars having diagonally disposed slots formed therein, and rods extending between said bars, and supported in said slots, each of said rods having a U-shaped end straddling said bars, the open end of the U-shaped ends being toward the unslotted side of said bars, and means for retaining said U-shaped ends slidably engaged with said bars.

2,446,801
PUNCH
James G. Barrick, Ossian, Ind.
Application November 13, 1946, Serial No. 709,454
1 Claim. (Cl. 164—119)

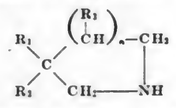
A punch including a shaft screw threaded externally of a medial portion thereof and having an enlarged head portion, a nut engaged with said threaded portion, and a resilient hand grip portion enclosing said shaft and compressed between said head and said nut and comprised of a plurality of transverse layers of resilient material covered with a layer of non-metallic material.

2,446,802
PULSE SHAPING CIRCUIT
Persa R. Bell, Jr., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,301
2 Claims. (Cl. 250—27)

1. An electrical circuit for generating voltage pulses substantially rectangular in shape and of variable duration comprising a first grid-controlled gaseous rectifier electron tube having anode, cathode, control, and suppressor electrodes, an energy storage device connected to said anode electrode, impedance means connected in the cathode-ground circuit of said first electron tube, means to apply a triggering pulse to the grid of said first electron tube for initiating current flow in said first electron tube whereby a voltage is developed across said impedance means, the duration of said conduction being dependent on the amount of energy stored in said energy storage device; a second grid-controlled multi-grid gaseous rectifier electron tube, a delay line energy storage device connected to the anode electrode of said second electron tube, a second impedance means connected in the cathode-ground circuit of said second electron tube, means for impressing voltage developed across said first impedance means onto the control electrode of said second electron tube to cause conduction in said tube; a third multi-grid gaseous electron tube, means for connecting the space discharge path of said third electron tube in parallel with said second impedance means, resistance-capacitance delay

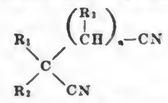
means connected to the control electrode of said third electron tube, means for impressing voltages developed across said first impedance means onto said resistance-capacitance delay means so that conduction in said third electron tube is delayed behind conduction in said second electron tube a predetermined amount of time; a fourth electron tube having at least anode, cathode, and control electrodes, means for impressing voltages developed across said second impedance means onto the control electrode of said fourth electron tube so that at least a portion of said voltages is amplified by said fourth electron tube, and means for deriving an output from said fourth electron tube.

2,446,803



MANUFACTURE OF HETEROCYCLIC BASES

Franz Bergel, Alexander Lang Morrison, and Heinrich Rinderknecht, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Roche Park, Nutley, N. J., a corporation of New Jersey



No Drawing. Application January 15, 1944, Serial No. 518,402. In Great Britain January 26, 1943

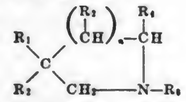
4 Claims. (Cl. 260—294)

1. A process for the manufacture of salts of heterocyclic bases of the general formula:

where R_1 is aryl, R_2 is an esterified carboxyl group, R_3 is selected from the group consisting of a hydrogen atom and alkyl groups and n is an integer not greater than 2, which comprises subjecting a compound of the general formula:

to hydrogenation in the presence of a hydrogenation catalyst.

2,446,804

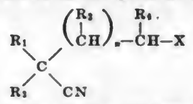


3-ARYL-3-CARBALKOXY PIPERIDINES AND PYRROLIDINES AND SYNTHESIS THEREOF

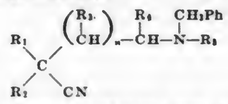
Franz Bergel, Alexander Lang Morrison, and Heinrich Rinderknecht, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Roche Park, Nutley, N. J., a corporation of New Jersey

No Drawing. Application February 25, 1944, Serial No. 523,908. In Great Britain March 9, 1943

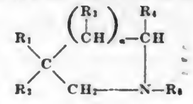
6 Claims. (Cl. 260—294)



1. A process for the preparation of heterocyclic bases of the general formula:



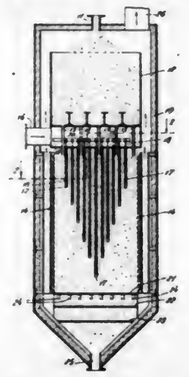
wherein R_1 is an aryl group, R_2 represents carbalkoxy, R_3, R_4 and R_5 are selected from the group consisting of a hydrogen atom and alkyl groups, and n is an integer selected from the group consisting of one and two, which comprises condensing arylacetonitrile derivatives of the general formula:



in the form of their alkali metal salts with dihalogenoparaffins selected from the group consisting of 1.2-dihalogenoparaffins and 1.3-dihalogenoparaffins in alcoholic solution to form condensation products of the general formula:

where X is a halogen, reacting the condensation products thus produced with benzylamines selected from the group consisting of alkylbenzylamines and dibenzylamine to form tertiary bases of the general formula:

where R_5 is a radical selected from the group consisting of benzyl and alkyl radicals and catalytically hydrogenating the said bases to form heterocyclic bases of the general formula:



2,446,805

HEATER

Eric V. Bergstrom, Short Hills, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application June 1, 1946, Serial No. 673,816

12 Claims. (Cl. 263—19)

1. A heater comprising a vertical shell having walls on opposite sides formed of louvers sloped downwardly toward the interior of said shell, a hopper above said shell for supplying granular solid material to said shell, a plurality of feed pipes extending downwardly from said hopper into the top of said shell, a manifold above said shell, a plurality of drop pipes extending downwardly into said shell from said manifold, said drop pipes being distributed across said shell between said louvered sides and being of varying length with the longest drop pipes spaced about midway between said louvered sides and the drop pipes of progressively shorter length being spaced at progressively shorter distances from said louvered sides, the distance between the shortest drop pipes and said louvered sides being greater than the distance between adjacent drop pipes of differing length, a smaller pipe in each of said drop pipes for supplying a fluid thereto independently of said manifold, means to supply a fluid to said smaller pipes, means to withdraw granular solid uniformly across the bottom of said shell, apertured plates extending across the space between adjacent louvers to throttle gas flow therethrough, and means to withdraw gases from outside said louvered sides.

2,446,806

PRODUCTION OF SUBSTITUTE LEATHER

André Bernard, Paris, France

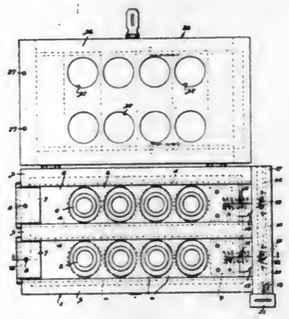
No Drawing. Application August 29, 1945, Serial No. 613,446. In France June 12, 1941

Section 1, Public Law 690, August 8, 1946

Patent expires June 12, 1961

1 Claim. (Cl. 117—161)

A method for producing a substitute leather consisting in applying on to a fabric carrier, a coating constituted by a compound emulsion obtained by the addition to an aqueous emulsion of polyvinyl resin selected from the group consisting of polyvinyl halides, polyvinyl esters and mixtures thereof, of an aqueous emulsion of anthracene oil.



2,446,807

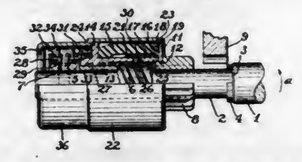
BOTTLE DISPENSER

Alexander Blair and Francis H. Collins, Pittsburgh, Pa.; said Collins assignor to said Blair

Application April 9, 1946, Serial No. 660,762

15 Claims. (Cl. 312—88)

13. A dispenser for bottles having reduced necks, comprising a case for housing a plurality of bottles, separable members adapted to hold the bottles in the case by their necks, means normally locking said members in bottle-holding position, coin controlled means for releasing said locking means to permit any selected bottle to separate said separable members engaging it, whereby the selected bottle can be withdrawn from the case, and means adapted to lock the rest of the bottles in the case while the selected bottle is being removed, said last-mentioned means including means adapted to cover the rest of the bottles in the row from which the selected bottle is being removed.



2,446,808

ENGINE STARTER GEARING

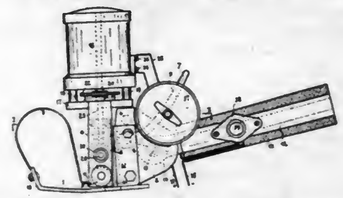
James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware

Application May 20, 1946, Serial No. 671,062

6 Claims. (Cl. 74—7)

1. In an engine starter drive a power shaft, a pinion slidably journalled thereon for movement into and out of mesh with a gear of an engine to be started, means actuated by rotation of the power shaft for moving the pinion into mesh with the engine gear including a control member having an inclined connection with the power shaft, a driven friction clutch member fixed to the pinion, a driving clutch member cooperating therewith, and means including an elastic pressure and torque transmitting member connecting the control member to the driving clutch member for pressing the clutch members together and transmitting torque to the driving clutch member, and an anti-friction thrust bearing between the control member and pinion for limiting the pressure applied to the clutch members to thereby cause the clutch to slip when the drive is subjected to a predetermined overload.

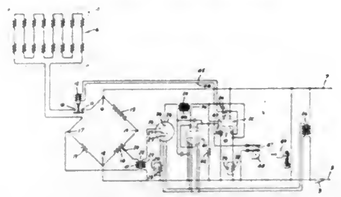
2,446,809



AUTOMATIC TONGS FOR MANUAL ELECTRIC ARC WELDING OR CUTTING

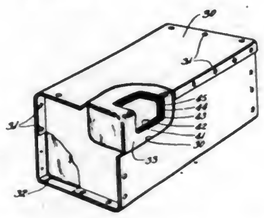
Camillo Cito, Uccle-Brussels, Belgium, assignor to La Soudure Electrique Autogene, Societe Anonyme, Brussels, Belgium

Application May 28, 1945, Serial No. 596,322



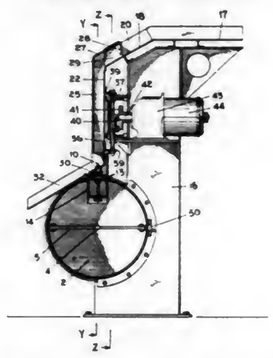
In France June 5, 1944

6 Claims. (Cl. 219—8)



3. Automatic tongs for manual electric arc welding or cutting, comprising a pair of jaws, a handle on which one of these jaws is firmly mounted, a spring pressing the other jaw against it, a lever pivoting relatively to the latter and adapted to act against the influence of said spring in order to remove the two jaws from the other when the operator acts on this lever, means for leading electric current to one of said jaws, and a device for the automatic advancement towards the work of an electrode clamped between said jaws.

2,446,810
ELECTRIC BLANKET AND CONTROL THEREFOR
Leonard W. Cook, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application October 1, 1947, Serial No. 777,266
9 Claims. (Cl. 219—20)

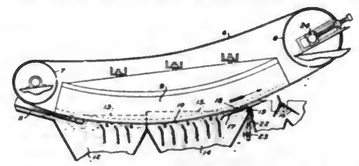


6. A control for an electric blanket having a heating winding with a high temperature coefficient of resistance comprising, in combination therewith, a resistor in series with said winding whereby the potential drop across said resistor varies in accordance with current flow through said winding, a resistance bridge network having said winding in one leg, and said series resistor in an adjacent leg, resistors in the other two legs of said bridge, one of said latter resistors being adjustable in accordance with a desired temperature to be maintained by said heating winding, means applying a potential to said bridge across said heating winding and series resistance legs, a transformer having primary and secondary windings, said primary being connected across said series resistor and said adjustable resistor of said bridge, an electron tube circuit having its input connected across said secondary winding and a relay in the output thereof, said relay having contacts in circuit with said heating winding and being adapted to be operated by a change in the output current to disconnect said heating winding from a supply source and means operable at the beginning of each heating interval to close said contacts.

2,446,811
SELF-SEALING FUEL TANK CONSTRUCTION
Richard A. Crawford, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 3, 1943, Serial No. 477,848
6 Claims. (Cl. 154—43.5)

1. A self-sealing fuel tank adapted to seal punctures therein caused by projectiles which comprises in combination a gasoline-resistant flexible lining, a rubbery sealing layer which swells rapidly but does not dissolve in gasoline, and a non-metallic non-shattering stiff supporting member substantially coextensive in area with said lining and said sealing layer comprising a plurality of layers of fibrous material interspersed between and adhered to layers of hard resinous material, said supporting member having sufficient stiffness to prevent substantial sagging and distortion of said tank when filled with fuel and being substantially free of any tendency to foliate upon penetration by a projectile; said lining, sealing layer, and supporting member all being adhered together.

2,446,812
SUCTION EVACUATOR FOR REMOVING THE FLUID CONTENT OF EGGS
Harold Harcourt Cribb, Glenside, and Donald James Ross Both, Everard Park, South Australia, Australia, assignors to Vacuum Extractors Limited, Adelaide, South Australia, Australia, a company of South Australia
Application May 1, 1946, Serial No. 666,404
In Australia June 4, 1945
12 Claims. (Cl. 146—2)



1. For removing the fluid content of eggs, a suction evacuator comprising; hollow needles projecting upwardly, means to support the needles, means to transmit suction to the needles, means to support the eggs at a higher level than the needles, a frame movable to a feed position to release eggs to fall from the supporting means, means to periodically move the said frame to the feed position, means to guide the eggs on to the needles when falling from the feed position, and means to strip the egg shells from the needles when the said frame is not in the feed position.

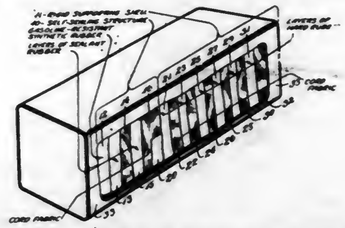
2,446,813
MAGNETIC CONCENTRATE WASHING MEANS FOR SUBMERGED BELT MAGNETIC SEPARATORS
Robert E. Crockett, Upper Montclair, N. J., assignor to Dings Magnetic Separator Co., Milwaukee, Wis., a corporation of Wisconsin
Application June 24, 1944, Serial No. 541,952
14 Claims. (Cl. 209—225)

12. In a magnetic separator, a belt conveyor having an inclined upwardly movable stretch, magnetic means arranged along the upper surface of said stretch for causing magnetic particles to adhere to the under surface thereof, means for applying a liquid mixture of particles to be separated, to the under side of a lower portion of said stretch, trough-like means extending up along beneath said stretch in spaced relation thereto,

and means for projecting a sheet-like spray of washing liquid having greatest intensity near its mid-portion, in a direction downwardly along a

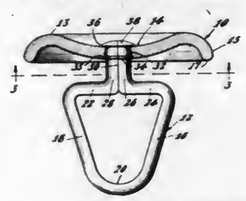
plane generally parallel to said stretch, between said stretch and trough-like means, at a region above the liquid level.

2,446,814
BROOM AND MOP COMBINATION
Nelle M. Crofton, Parkersburg, W. Va.
Application January 8, 1944, Serial No. 517,554
2 Claims. (Cl. 15—247)



1. A structure of the class described comprising a saddle applicable to the upper portion of a broom head, an elongated mop cloth having an upper end wrapped around the broom head and suspended from the saddle, means on the saddle providing a loop, said cloth being separable on a line extending longitudinally and on the side of the broom head opposite to said loop so that the cloth may be raised to expose the broom head and partially pass through the loop to maintain the broom head exposed, attaching bands on the saddle and cloth, string means separately connecting the bands, and portions of the band on the saddle, disposed above the line of separation of the cloth, being inclined with respect to the free end of the broom head to cause the cloth, when attached thereto, to partly expose the broom head.

2,446,815
SELF-SEALING FUEL TANK CONSTRUCTION
John M. Davies, James J. Shipman, and William L. Davidson, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 4, 1943, Serial No. 477,976
8 Claims. (Cl. 154—43.5)



3. A self-sealing fuel tank adapted to seal punctures therein caused by projectiles which comprises in combination a gasoline-resistant flexible lining, a rubbery sealing layer which swells rapidly but does not dissolve in gasoline,

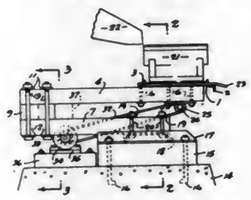
and a non-metallic non-shattering stiff supporting member therefor comprising a plurality of layers of filamentary yarns interspersed between and firmly adhered to layers of hard resinous material, said yarns being only superficially impregnated with the resinous material, said sup-

porting member having sufficient stiffness to prevent substantial sagging and distortion of said tank when filled with fuel and being substantially free of any tendency to foliate upon penetration by a projectile; said lining, sealing layer, and supporting member all being adhered together.

2,446,816
TUFTING BUTTON
James A. Dayton, Litchfield, Conn., assignor to The Turner & Seymour Mfg. Co., Torrington, Conn., a corporation of Connecticut
Application July 9, 1947, Serial No. 759,831
3 Claims. (Cl. 24—90)

1. A button comprising in combination a disc-like sheet metal head which has an aperture therethrough, and a shank formed of a single piece of half-round wire shaped into a depending loop and with its ends brought together and upwardly directed from the loop flatwise in contact with one another to form a substantially cylindrical stem exposed beneath the button head, said stem having an end portion passing up through said aperture and spread over to form of the two wire ends conjointly in effect a single stem head on the upper surface of the button head, the stem end portion being expanded within the aperture to tightly engage the walls thereof, there being a small shoulder formation on said stem end portions and the button head being engaged between said formation and said stem head to rigidly affix the shank to the button head.

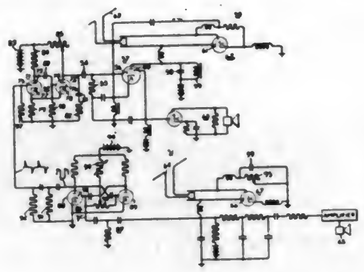
2,446,817
VULCANIZED FILLED RUBBER GRINDING WHEEL
Frederick W. Feiler, Bloomfield, N. J., assignor to Weldon Roberts Rubber Co., Newark, N. J., a corporation of New Jersey
Application December 22, 1945, Serial No. 636,696
2 Claims. (Cl. 51—206)



1. A vulcanized rubber bonded grinding wheel comprising a wheel body having a center opening,

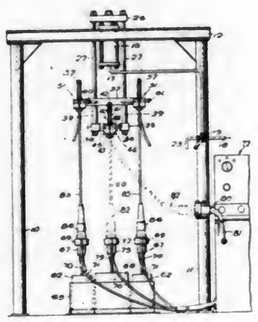
a rigid wear resistant bushing of less length than the width of said body entered within said center opening between the ends thereof so as to be embraced by the opening walls, with the bushing ends inwardly spaced relative to the adjacent lateral faces of the body, and annular bulged por-

tions of said body, contiguous to the ends of the center opening thereof, adapted to provide annular keeper elements intermediate said lateral faces of the body and the bushing ends and disposed to externally overlap the latter in planes parallel thereto.



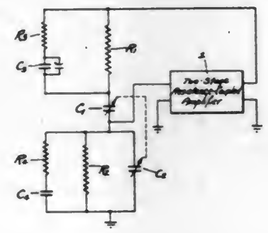
2,446,818
VIBRATOR
Stephen Flam, Sherman Oaks, Calif.
Application November 25, 1944, Serial No. 565,092
1 Claim. (Cl. 259—72)

In a vibrator mechanism, a first arm, means for anchoring said arm so that it has a free length, a second arm overlying the first arm, said second arm having provisions to support a load, a block interposed between the arms at a place remote from the anchoring means, said block being adjustable with respect to the arms, means for fastening the arms and the block together, and an unbalanced rotary device for applying a vibrating force to the second arm, and mounted on said second arm at a place remote from the block.



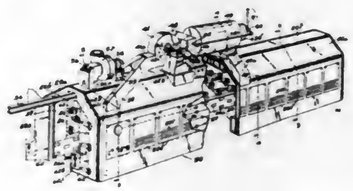
2,446,819
SYNCHRONIZED PULSE COMMUNICATION SYSTEM
George W. Fyler, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application March 27, 1943, Serial No. 480,823
6 Claims. (Cl. 250—13)

6. In a pulse communication system including a pair of spaced stations, a pulse transmitter in each of said stations, a control pulse generator for causing each of said transmitters to radiate discrete pulses at the pulse frequency of said generator, each said generator being adapted to be synchronized for operation at a common pulse frequency, a pulse receiver in each of said stations, means for synchronizing each receiver with pulses from the transmitter at the other station and for rendering said receiver operative only during short time intervals including said pulses, and adjustable time delay means controlled by received pulses from each receiver for impressing synchronizing pulses on the control pulse generator at the same station after a selectable time delay, thereby to restrict radiation of pulses from each station to discrete intervals between recep-



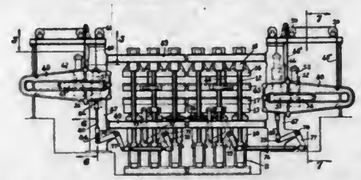
tion of pulses at the same station, said time delays being adjusted to cause the transmitters and receivers at both said stations to be mutually locked in synchronism in a closed loop to operate at said common pulse frequency.

2,446,820
APPARATUS FOR TESTING ELECTRIC CABLES
Richard D. Gambrill and Clay E. Lewis, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 4, 1944, Serial No. 529,495
7 Claims. (Cl. 175—183)



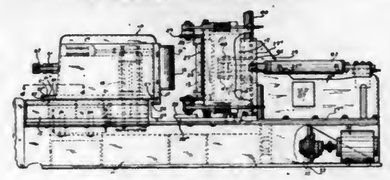
1. In an apparatus for testing cables while under tension including a test set, the combination of a frame including a cross beam at the top thereof, an air cylinder supported by the cross beam, a clamp carried by the piston of the cylinder for securing a cable including an electrical conductor to be tested, a weight positioned directly below the cylinder, means carried by the weight for securing a cable thereto, whereby the weight is lifted to tension a cable secured by the clamp and the securing means when the clamp is raised by the piston, and means for connecting the ends of the conductor of the cable to the test set.

2,446,821
RESISTANCE-CAPACITANCE TUNED OSCILLATOR
William Gessel, Philadelphia, Pa., and Henry Gritz, Iuka, Miss., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 30, 1944, Serial No. 570,678
2 Claims. (Cl. 250—36)



1. In an oscillator circuit, an amplifier, a regenerative coupling network connected between the output and input of said amplifier, said network including a resistor and a variable capacitor connected in series between the output and input of said amplifier, and also including a second resistor and a second variable capacitor connected in shunt relation across the input of said amplifier, and series-connected resistance and capacitance elements in shunt with each of said resistors and adapted to vary the effective resistance of said network in response to variation of the oscillator frequency, whereby to increase the frequency range of the oscillator.

2,446,822
METHOD AND APPARATUS FOR REMOVING VOLATILES FROM ARTICLES INVOLVING THE USE OF INFRA-RED LAMPS
Herbert L. Grapp, Minneapolis, Minn.
Application August 11, 1943, Serial No. 498,225
5 Claims. (Cl. 34—17)

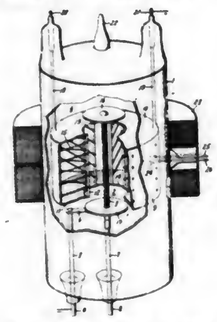


1. An apparatus for treating articles from which volatiles are to be evaporated having in combination, a housing, a row of infra-red ray lamps at one side of said housing, chambers at the side of said housing, wiring and sockets for said lamps disposed in said chambers, means for drawing cool air through said chambers, means for subsequently heating said air, means for delivering said heated air into said housing below said lamps and into contact with said articles and means for withdrawing said air and volatiles from said housing at a location above said lamps and discharging said air and volatiles into the atmosphere.

2,446,823
EQUALIZER FOR PLATEN PRESSES OR THE LIKE
James M. W. Grant, Ansonia, Conn., assignor to Farrel-Birmingham Company, Inc., Ansonia, Conn., a corporation of Connecticut
Application October 18, 1945, Serial No. 623,013
5 Claims. (Cl. 18—17)

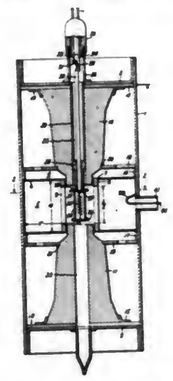
5. A belt press comprising a frame, a fixed platen and a plurality of movable platens supported thereon, a clamping device at each end of the frame to cooperate with each of the movable platens, standards at each end of the frame supporting said clamping devices, a plurality of bell crank levers pivoted to the frame each having one arm connected to one of the movable platens, a plurality of bell crank levers pivotally supported on said standards, means connecting said last-named bell crank levers to certain of said clamping devices by a direct connection and to others of said clamping devices by a lost motion connection, and means connecting the bell crank levers on the standards to those on the frame to insure equal movement of the clamping devices and platens.

2,446,824
METAL-BENDING MACHINE WITH HOLD-DOWN MEANS TO PREVENT DIE DEFLECTION
Lee B. Green, Lakewood, Ohio
Application June 21, 1945, Serial No. 600,765
11 Claims. (Cl. 153—33)



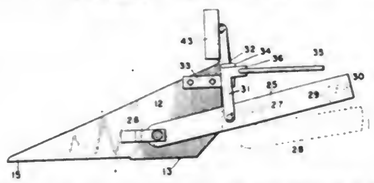
1. In a metal working machine of the character described, a frame having a fixed die mount thereon, a stationary die on said mount, a slide movable on said frame toward and away from said mount, a carriage, pivot means extending in projecting relation to the slide and mounting said carriage on said slide for swinging relative thereto, a die on said carriage and movable therewith for cooperation with said stationary die in subjecting a work piece to clamping and forming pressure therebetween, means for reciprocating said slide for causing closing and opening of the dies and the application of said pressure to the work piece, and cooperating thrust elements on said slide and carriage and located to receive the major portion of the working thrust during the closing of the dies and prevent such thrust from being applied to said pivot means.

11. In a metal bending machine of the character described, an elongated substantially horizontal frame having a die mount fixed thereon and extending thereabove, means on said frame



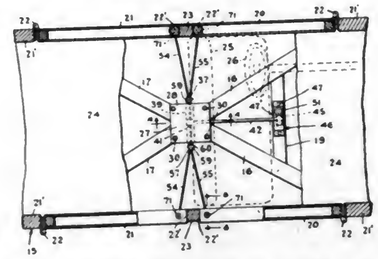
providing a guideway extending therealong, a stationary die member carried by said mount and located above the level of said guideway, a slide reciprocable on said guideway for movement toward and from said mount, a movable die member carried by said slide in upwardly offset relation to said guideway and having a clamping portion for cooperation with the stationary die member in applying clamping pressure to an intermediate portion of an elongated work piece so that end portions of the work piece project outwardly from the clamped portion, said movable die member having anvil portions on opposite sides of said clamping portion, bending die members adapted to cooperate with said anvil portions for bending the projecting portions of the work piece therearound, power means for reciprocating said slide, fixed means on said frame and extending upwardly therefrom and forming a thrust block engaged by said die mount and located on the side of the die mount opposite to said guideway, said thrust block having a relatively high portion adjacent said die mount and a relatively low portion more remote from said die mount, and a pair of divergent power cylinders for actuating said bending die members, said cylinders having their widely spaced ends straddling the relatively high portion of said thrust block and operably connected with said bending die members and their closely spaced ends extending over and operably connected with said relatively low portion of said thrust block.

2,446,825
ULTRA HIGH FREQUENCY ELECTRIC DISCHARGE DEVICE
Anatole M. Gurewitsch, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 31, 1942, Serial No. 470,758
1 Claim. (Cl. 250—27.5)



An electric discharge device of the magnetron type comprising an elongated cathode, an anode comprising a multi-cavity resonator surrounding said cathode and including a generally cylindrical conductive member, and a plurality of conductive structures electrically connected to and supported from said cylindrical member and extending radially inwardly in circumferentially spaced relation toward said cathode and terminating short of the cathode to define an interelectrode space, said conductive structures defining substantial open spaces in a circumferential direction through which electrons may pass without being collected by said anode when moving within said anode under the action of a magnetic field substantially parallel to said cathode and a substantially radial electric field.

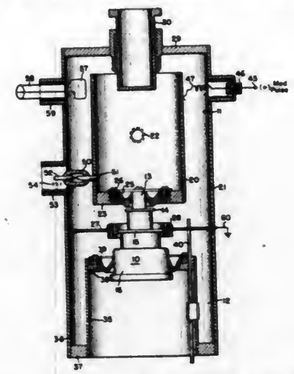
2,446,826
MAGNETRON
Elmer D. McArthur, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 14, 1943, Serial No. 482,995
11 Claims. (Cl. 250—27.5)



7. An electric discharge device of the magnetron type comprising an anode in the form of a cylindrical wall provided with circumferentially spaced axial slots therein tuned to resonate at a predetermined frequency, means providing a source of electrons within the cylindrical space defined by said anode wall, means adjacent said anode for subjecting said electrons to the action of mutually perpendicular electric and magnetic fields to produce curvilinear motion of said electrons and thereby excite the anode sections between said slots, and a wave guide of generally annular shape with the inner wall thereof formed by said anode wall, said wave guide being tuned to resonate at said predetermined frequency to produce standing electromagnetic waves in said wave guide, said slots being uniformly spaced providing two slots for each cycle of said standing waves around said wave guide whereby the wave pattern in said wave guide is substantially continuous, and alternate anode sections are effectively intercoupled magnetically for stable electrical oscillation at said frequency.

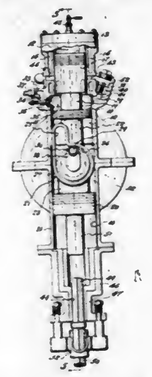
2,446,827
SCOOP AND TRIP MECHANISM THEREFOR
Howard E. Hall, Boise, Idaho, assignor to Olson Manufacturing Company, Boise, Idaho, a corporation of Idaho
Application January 29, 1946, Serial No. 644,070
7 Claims. (Cl. 214—146)

1. A scoop and fork assembly comprising a fixed rear wall, fixed side arm sections, and a fixed bottom section combined to form a skeleton frame having an open unobstructed front; a removable bottom section insertable in the open front of said skeleton frame made up of a plurality of tines and a tine supporting cross bar secured to said tines, means on said cross bar for detachably securing it to the fixed side arm sections and means on said tines to engage said fixed bottom section.



2,446,828
AUXILIARY DOOR LOCKING MECHANISM FOR AUTOMOBILES
Francis R. Hamer, West Asheville, N. C.
Application August 12, 1947, Serial No. 768,125
4 Claims. (Cl. 292—38)

1. An auxiliary door locking mechanism for automobiles of the type having a chassis, a body including front and rear pairs of doors, running boards adjacent to the lower edges of said doors, door posts adjacent to the inner edges of the doors, a floor, and a forward seat, said mechanism comprising a support mounted upon the chassis adjacent to the door posts and disposed beneath the floor, rack gears slidably mounted upon the support and adapted to slide longitudinally in opposite directions and transversely of the chassis, a pinion disposed between the rack gears and meshing therewith to drive the same, a rotatable shaft carrying the pinion and projecting forwardly from the support and terminating near the forward seat, manually operated means disposed adjacent to the forward seat for rotating the shaft, flexible elements connected with opposite ends of the rack gears and extending outwardly beyond the same and laterally of the chassis, guide means mounted upon the body near the door posts and adapted to receive the flexible elements thereon, movable bolts mounted upon the running boards adjacent to the guide means and connected with the flexible elements, and resilient means associated with each bolt and tending to force the same into engagement with the adjacent door for locking the same, the arrangement being such that when the rotatable shaft is turned in one direction, the bolts move into locking engagement with the doors and when such shaft is turned in the opposite direction the bolts move out of locking engagement with the doors.



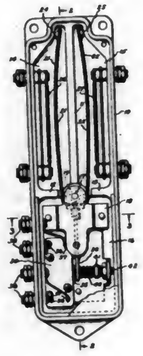
2,446,829
MODULATED-SIGNAL GENERATOR
Rudolf C. Hergenrother, West Newton, Mass., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application February 21, 1946, Serial No. 649,344
10 Claims. (Cl. 179—171.5)

1. A modulated-signal generator comprising, an oscillatory circuit including a cavity resonator normally maintained in a nonoscillatory condition and having an inherent background disturbance the amplitude of which is normally much less than a predetermined value, means for applying to said oscillatory circuit a pulse of modulating potential having a leading sloped portion to initiate therein oscillations of said predetermined value, a transient-signal generator positioned at least in part within said cavity resonator and having an operating interval not exceeding the duration of said leading sloped portion of said modulating potential, and circuit connections for exciting said transient-signal generator to introduce a signal into said cavity

resonator effectively to increase the amplitude of said background disturbance to a level much greater than its normal value for an interval which occurs in approximate time coincidence with but of a duration not exceeding said leading sloped portion of said modulating potential, whereby the oscillations initiated in said circuit build up to said predetermined value rapidly to produce a modulated-carrier signal envelope with a leading sloped portion occurring in approximate time coincidence with said sloped portion of said modulating potential.

2,446,830
PERCUSSIVE APPARATUS
Charles Austin Hirschberg, Mountain Lakes, N. J.
Application March 2, 1945, Serial No. 580,634
3 Claims. (Cl. 123—7)

1. In percussive apparatus having a power generating agency of the internal combustion engine type, a cylinder structure the upper por-



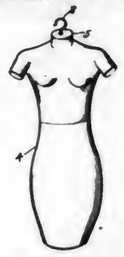
tion of which constitutes an explosion chamber, a unitary impact delivering means reciprocable within said cylinder structure comprising engine piston means movable in said explosion chamber, a guide piston movable in the lower portion of said cylinder structure, a cam-frame centrally aligned between opposite sides of the cylinder structure intermediate and in axial alignment with said engine piston means and said guide piston, and a striking member unitary with and projecting axially downwardly from said guide piston, said cam-frame having a circular opening, the perimeter of which provides a lift cam member, and a slideway leading tangentially upward from said opening parallel to the longitudinal axis of the impact delivering means, whereby to permit free movement of the latter during the end phase of its operative stroke, a crank-shaft journaled across said cylinder structure, the crank-pin of said crank-shaft extending through said cam-frame opening and being cooperative with the cam member formed by the perimeter of the latter, a fly-wheel affixed to an exterior end of said crank-shaft, and means at the lower end of said cylinder structure to hold a tool to be actuated in the path of and subject to the impact of said striking member.

2,446,831

THERMAL TIMING SWITCH APPARATUS

Frederick W. Hottenroth, Jr., Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application February 12, 1944, Serial No. 522,117
10 Claims. (Cl. 200—122)



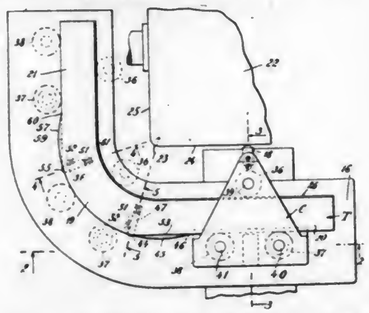
1. An ambient temperature compensated thermal timing apparatus comprising a movable switch member, a pair of thermal responsive members connected together in opposing relation and to said switch member jointly to control said switch member, separate electric heating means of unequal capacity disposed in heat conductive relation with said thermal responsive members, and a snap acting switch by said switch member and arranged to control only one of said electric heating means, said switch having a predetermined positional differential between circuit opening and circuit closing positions and being so positioned that said switch member normally lies at one limit of said differential.

2,446,832

PENDENT DRESS FORM

Jacob H. Insley, Johnstown, Pa.

Application May 27, 1946, Serial No. 672,427
3 Claims. (Cl. 223—68)



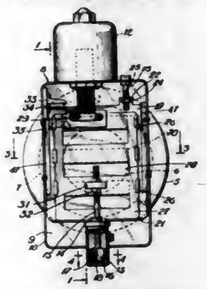
1. Means for supporting ladies' garments for display purposes comprising a backless form of a contour simulating the human torso including a neck portion, the top of which is closed and provided with an opening, suspension means mounted in the form, a portion of the suspension means extending upwardly through the opening in the top of the neck portion of the form, said extending portion of the suspension means being swivelly mounted to permit movement of the form thereon in a clockwise and counterclockwise direction.

2,446,833

APPARATUS FOR PRODUCING CONTROLLED RELATIVE MOTION BETWEEN TOOLS AND WORKPIECES

Arden Lee Johnson, Detroit, Mich., assignor to Vinco Corporation, Detroit, Mich., a corporation of Michigan

Application July 14, 1945, Serial No. 605,150
10 Claims. (Cl. 125—11)



1. In a device of the character described, in combination with two elements comprising a finishing tool and a support for a part to be finished, means for causing relative movement between said elements in a prescribed path comprising a track having an inner surface with an arcuate portion and a straight portion tangent thereto and an oppositely disposed outer surface with arcuate and straight portions respectively parallel to said inner surface arcuate and straight portions, a carriage mounted on said track and having three rollers carried on axes that are fixed against movement relative to each other, said rollers comprising a single roller engaging said inner track surface and two rollers equally spaced from said single roller and engaging longitudinally spaced points on said outer track surface, said outer rollers being displaced transversely of said outer track surface to engage different areas thereof, an arcuate extension of said outer track surface arcuate portion aligned with one of said outer rollers, a straight extension of said outer track surface straight portion overlapping and co-extensive with said arcuate extension and aligned with the other of said outer rollers, and means for mounting one of said elements on said carriage.

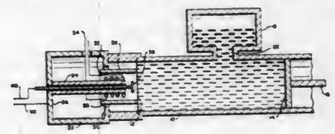
2,446,834

AIR CONTROL MECHANISM AND SWITCH FOR OIL BURNERS

Daniel Kaufman, New Haven, Conn., assignor, by mesne assignments, to The Oil Equipment Manufacturing Corporation, New Haven, Conn., a corporation of Connecticut

Application August 21, 1943, Serial No. 499,586
2 Claims. (Cl. 200—53)

1. In a mechanism of this character described, air control means comprising a housing member having an inlet port therethrough, a plate having ports therethrough and adjustable relatively to the inlet port of the housing, a vertically movable slide having ports therethrough movably mounted on the plate to cause the ports to cover and uncover the ports through said plate on movement of the slide relatively to the plate, means to stop the downward movement of the slide, said slide being biased by gravity into engagement with said stop means, an electromagnet to move the slide upwardly, the upward movement of said magnet being limited to an amount sufficient to effect uncovering of the plate ports by the slide ports when the plate is in its lowermost adjusted position, means for energizing said magnet, and retarding mechanism for limiting the speed of movement of the slide downward by gravity away from said magnet, the adjustment of said plate varying the area of the ports uncovered by the slide in its upper position.



2,446,835

COMPRESSION-WAVE DELAY DEVICE

Thomas J. Keary, San Diego, Calif., assignor, by mesne assignments, to United States of America as represented by the Secretary of War

Application June 21, 1946, Serial No. 678,172
6 Claims. (Cl. 178—44)

4. A signal delay apparatus comprising a liquid compressional wave transmitting medium, enclosing means therefor, liquid level maintaining means communicating with said enclosing means, an adjustable plunger for reflecting compressional waves in one end of said enclosing means, a metallic diaphragm in the other end of said enclosing means having one side operatively associated with said liquid compressional wave transmitting medium, a coil wound on a metallic core and adapted to receive an input signal, a metallic hollow cylinder concentrically surrounding said coil, said coil being disposed nearer to one base of said metallic cylinder, the other side of said metallic diaphragm covering the other base

of the said metallic cylinder and being attached thereto, a fixed capacitor plate spaced close to said other side of the said metallic diaphragm and forming a capacitor therewith whereby axial variations in said metallic diaphragm position will cause variations in the capacity of said capacitor, and means to detect said capacitor variations.

2,446,836

HERBICIDES

Gladys S. King, Metairie, La., assignor to James M. Fountain, Bryan, Tex.

No Drawing. Application November 15, 1946, Serial No. 710,233
16 Claims. (Cl. 167—45)

1. A herbicide comprising a combination of two basic ingredients, the first of said ingredients being aryl substituted monocarboxylic compounds from the group consisting of acids of the formula:

AOCH(B)COOH

and

ACOCH(B)COOH

where A is a halogenated aryl radical and B is a radical from the group H—, methyl and ethyl; and the esters and salts of said acids, the second of said ingredients being a plant bud growth inhibitor from the group consisting of compounds having the formula:

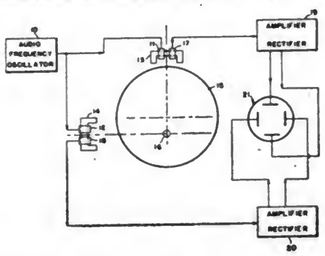
$R(CH_2)_nCOOH$

and

RCH=CHCOOH

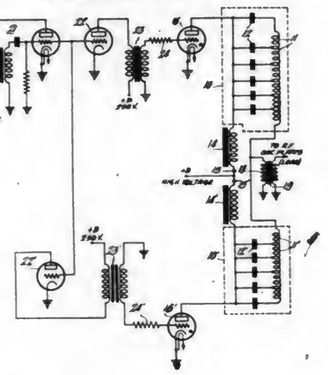
where R is a radical from the group phenyl, naphthyl and indolyl, and n is an integer from 1 to 4.

2,446,837



MAGNETIC SWEEP GENERATOR

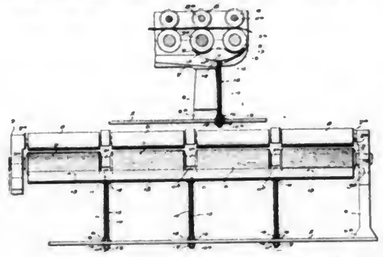
John D. Kraus, Newton Center, and Carlton A. Mizen, Needham Heights, Mass., assignors to United States of America as represented by the Secretary of War



Application March 29, 1946, Serial No. 657,948
2 Claims. (Cl. 315—24)

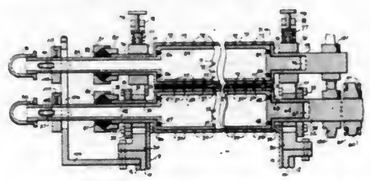
1. A magnetic eccentric disc sweep generator including a rotatable eccentrically mounted ferromagnetic disc, a first transformer with a primary and a secondary winding spaced near the periphery of said disc, a second transformer with a primary and a secondary winding spaced near the periphery of said disc and oriented in space about the axis of rotation of said disc 90 degrees from said first transformer, means for generating audio frequency voltage electrically connected to each of said primary windings, rectifier means electrically connected to each of said secondary windings, amplifier means electrically connecting the output of each of said rectifier means to the

deflection plates of a cathode ray tube whereby the electron beam of said cathode ray tube is deflected at an angular position corresponding to the angular position of said eccentric disc.



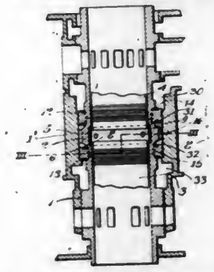
2,446,838
PULSE FORMING CIRCUIT
Howard C. Lawrence, Jr., Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 25, 1944, Serial No. 546,472
6 Claims. (Cl. 250—27)

1. In a pulse generating circuit, a plurality of pulse-forming delay networks, a plurality of reactance units connected to said networks, respectively, through which charging currents are supplied to said networks, said reactance units presenting a high impedance to the frequency components of the pulses to be generated, a load circuit that is common to said networks and which has an impedance that is substantially equal to the characteristic impedance of said networks as viewed from said load circuit whereby said networks discharge into said load circuit substantially without reflection, a plurality of discharge tubes connected to said networks respectively for discharging them through said load circuit, and means for causing said discharge tubes to periodically discharge said networks simultaneously.



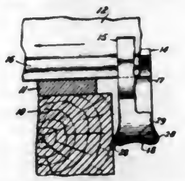
2,446,839
BOTTOM ROLL CLEARER FOR TEXTILE MACHINES
William F. Lee, Spartanburg, S. C., assignor to William O. Junker, Spartanburg, S. C.
Application December 17, 1946, Serial No. 716,786
3 Claims. (Cl. 19—139)

3. In a bottom roll clearer for drawing frames having a roll stand support, a roll stand carried thereby and pairs of upper and lower drawing rolls journalled in said stand; the combination of a clearer comprising an elongated bar beneath and running the length of at least one of the lower rolls, said clearer bar having its under surface transversely convexed, the upper surface of said bar having a lineally extending groove coextensive with the bar, said groove having means in contact with superjacent rolls for removing lint therefrom, a lineal series of spaced upstanding rods carried by said roll stand support, the



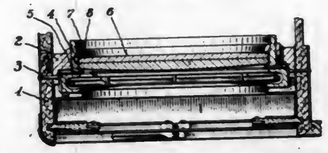
intermediate portion of the clearer bar having a lineal series of spaced transverse bearing holes, each of said holes slidably receiving the upper end of one of the rods, a coil spring carried by each of the said rods, the lower ends of the coil springs operatively supported by the roll stand support and the upper ends yieldably engaging the clearer, and means for adjusting said rods in the direction of their lengths whereby to clear the upper ends from the rod receiving holes of the clearer.

2,446,840
FIBER TREATING APPARATUS
William P. Leister, Gastonia, N. C.; Nora Martin Leister executrix of said William P. Leister, deceased
Application March 10, 1945, Serial No. 582,115
3 Claims. (Cl. 19—66)



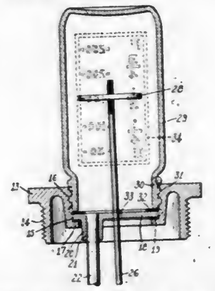
1. In a picker for textile fibers having a beater chamber and a pair of feed rolls, and means for conveying a web of textile fibers to the feed rolls to be passed between the feed rolls and into the beater chamber, the pair of feed rolls comprising an upper feed roll and a lower feed roll, each feed roll comprising an inner tube having an elongated neck portion extending from one end thereof and having a bearing portion, or stub shaft, extending from the other end thereof, a tubular feed roll surrounding the inner tube and having a neck portion extending from each end thereof, one of the neck portions of the tubular feed roll having the elongated neck portion of the inner tube passing therethrough and extending therebeyond, the neck portion on the other end of the feed roll having a cavity therein for rotatably receiving the stub shaft on one end of the inner tube, and having inter-connected driving means for imparting rotation to the feed rolls, the elongated neck portion of the inner tube extending outwardly and being supported by a suitable fixed bearing, means in the bearing for adjusting the position of the inner tube, each inner tube having a single row of perforations extending from one end to the other in a straight line, each feed roll being rotatably mounted around its inner tube and having a plurality of rows of perforations adapted to coincide, one at a time, with the single row of perforations in the inner tube, the perforations in the inner tube being adjusted to cause the jets of liquid under pressure issuing therefrom to be directed rearwardly and toward the lap of fibers being passed between the feed rolls, means for supplying a fluid under pressure through the neck portions of the inner tubes to the interior of the inner tubes, whereby the jets of fluid under pressure passing through the coinciding perforations will strike the web of fibers after it has passed from between the feed rolls to disintegrate and tear portions of the fibers away from the web.

2,446,841
CYLINDER LINER FOR OPPOSED-PISTON ENGINES
Hans Lieberherr, Winterthur, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland
Application May 5, 1945, Serial No. 592,232
In Switzerland May 8, 1944
7 Claims. (Cl. 123—193)



1. In a cylinder liner for a two-stroke opposed-piston internal combustion engine fitted in a jacket having a middle part of said liner which is not swept by the rings on the pistons, the improvement which comprises a heat-protective ring mounted in the interior of the middle part, and means for cooling a part of the liner on each side of the middle part which is swept by the piston rings.

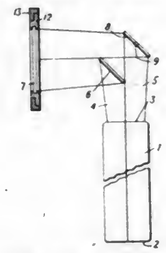
2,446,842
RAIL ANCHOR
Richard J. McComb, Chicago, Ill.
Application June 14, 1946, Serial No. 676,688
1 Claim. (Cl. 238—327)



A rail anchor substantially symmetrical along its longitudinal center line and having spaced rail base jaws for gripping the rail base at each side, a depending lever portion connecting said jaws for forcing the latter into gripping engagement with the rail base, said jaws and said lever portion being formed from stock of substantially uniform cross section, the central part of said lever portion below said rail base being deformed along the top and bottom thereof to provide smoothly curved projections extending laterally in opposite directions beyond the side walls of said anchor whereby one of said projections may contact the side of a tie upon creeping of the rail and further providing upper and lower grooves thereby reducing the effective cross section of said central part in the vertical plane adjacent said projections to improve the spring action.

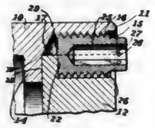
2,446,843
LENS AND FILTER FOR CAMERAS
George E. Merritt, Elmira Heights, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application January 3, 1945, Serial No. 571,125
3 Claims. (Cl. 88—57)

1. A lens for long-range photography comprising a positive element of colorless glass having a low dispersive power, and a negative element having identical original batch composition glass which is so colored as to form a red filter having a sharply defined absorption band adjacent the red portion of the spectrum, and having a comparatively high dispersive power in the red portion of the spectrum due to the addition of the coloring material to said glass composition, the focal length of the elements being so related that the dispersion of the negative element substantially neutralizes the dispersion of the positive element within said red portion of the spectrum, while the combination forms a converging lens of the desired focal length.



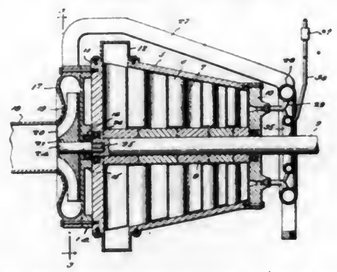
2,446,844
LIQUID GAUGE
Harry Molaver, New Haven, Conn., assignor, by mesne assignments, to The Oil Equipment Manufacturing Corporation, New Haven, Conn., a corporation of Connecticut
Application June 18, 1946, Serial No. 677,583
1 Claim. (Cl. 73—317)

A liquid gauge for tanks or the like, comprising a bushing adapted to be threadedly secured to



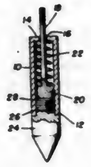
the tank, said bushing being provided with a recess and an inwardly projecting annular flange at the lower portion of the recess, a supporting member for the gauge mechanism resting freely upon said flange, gauge mechanism supported by said member including an indicator rod extending upwardly through said member, a container having an integrally formed closure at its upper end and an open lower end, said container having a lower threaded neck portion, said bushing having internal threads in said recess above said flange with which the threads of said neck portion are engaged to clamp the supporting member in place and seal the space between the bushing and the supporting member, and said indicator rod extending into the container and having an indicator on its upper end.

2,446,845
ABSOLUTE AIRCRAFT SPEEDOMETER
Montford Morrison, Upper Montclair, N. J.
Application October 2, 1943, Serial No. 504,673
6 Claims. (Cl. 88—1)



1. In a device for determining the relative speed between an aircraft in flight and ground, the combination, a viewing screen in said aircraft, a telescope mounted upon said aircraft continuously projecting a moving image of the field of ground vertically under said telescope from the eyepiece thereof, means reflecting a part of said image on said viewing screen, means rotatably mounting said screen provided with indicia to determine the direction of motion of said moving image part respect to said aircraft, a rotating image reflector intercepting a part of said moving image and causing the intercepted part of the moving image to have a motional direction upon said screen at an angle with the direction of movement of said first moving image part, and means to determine said angle.

2,446,846
JOINT CONSTRUCTION
Warren Noble, Washington, D. C., assignor to Lilly Florence Shirley Noble, Garden City, N. Y.
Application July 10, 1943, Serial No. 494,256
13 Claims. (Cl. 189—36)

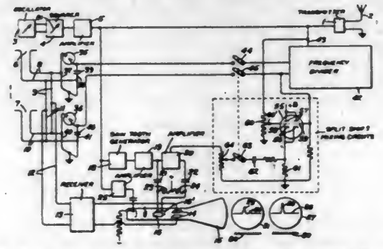


6. A joint for two members, one of which is seated upon the other, comprising mutually facing surfaces on the members, a plurality of spaced, parallel, arcuate, threaded recesses in said surface of the underlying member, a plurality of spaced, parallel, arcuate, smooth walled recesses in the overlying member, each disposed opposite to and facing one of said threaded recesses and having a transverse bottom, and a screw operatively disposed in each threaded recess, having a portion of its side wall in engagement with the adjacent non-threaded recess and a portion of its end face in engagement with the transverse bottom thereof and transmitting force from the threaded recess to said bottom to seat the one member upon the other.

2,446,847
TURBINE ENGINE
Eugene F. Osborne, Peach Bottom, Pa.
Application June 9, 1943, Serial No. 490,201
2 Claims. (Cl. 60—41)

1. In an internal combustion turbine including a stator and a rotor each having rows of blades, an injector plate in front of the admission side of the rotor, a plurality of fluid nozzles in said plate, said nozzles being arranged in a circle and having diverging discharge ends directed tangentially of said rotor, a compressed air conduit communicating with each of said fluid nozzles, a fuel nozzle communicating with each of said fluid nozzles adjacent its discharge end, deflector plates in each of said fuel nozzles adjacent the discharge end thereof for breaking up and atomizing the fuel discharged into the divergent fluid nozzle.

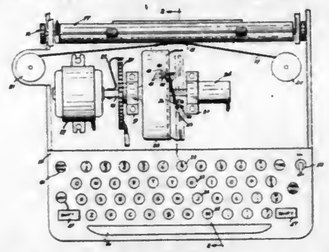
2,446,848
PUNCH
Arthur Prester, Philadelphia, Pa.
Application November 26, 1946, Serial No. 712,460
1 Claim. (Cl. 164—123.5)



A hand tool of the character described including a sleeve member, a pointed head secured to one end of said sleeve, a hammer reciprocatively mounted within said sleeve and having a handle portion extending outside said sleeve, and a spring adapted to urge said hammer in one direction, said sleeve being threaded at one end thereof to engage a correspondingly threaded portion of said head and having a cap at the other end thereof, and said spring being of helical type and compressed between said hammer and said cap within said sleeve, said cap being perforated and integral with said sleeve and said handle having a stem extending within said helical spring and through said apertured cap and adapted to be pulled to compress said spring.

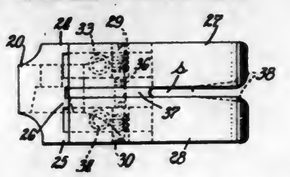
2,446,849
OXIDATION OF FATTY SUBSTANCES
Donald Price, New York, N. Y., and Francis J. Sprules, Arlington, N. J., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application December 3, 1942, Serial No. 467,810
16 Claims. (Cl. 260—406)

1. A process which comprises reacting a saturated fatty material containing a secondary-hydroxylated acyl chain of at least 8 carbon atoms and of the group consisting of fatty acids and substantially completely esterified fatty acid esters of monohydric and polyhydric alcohols with a hexavalent chromium compound in the presence of an oxidation-resistant mineral acid and in the presence of sufficient water to insure maintenance of an aqueous phase separate from the fatty material.



2,446,850
RADIO ECHO APPARATUS
Charles S. Root, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application November 30, 1942, Serial No. 467,297
11 Claims. (Cl. 343—13)

9. In combination, a cathode ray device having a viewing screen, means to produce a square wave, means to generate a sawtooth wave from said square wave and to deflect the ray of said device across said screen in accordance therewith, means to produce a second square wave, means to combine said square waves, said waves being of such character that a resultant wave is produced having zero value during alternate deflections of said ray across said screen and having finite value during deflections of said ray intermediate said alternate deflections, and means to superpose said resultant wave upon said sawtooth wave and to control the deflection of said ray in accordance with the resultant thereof.

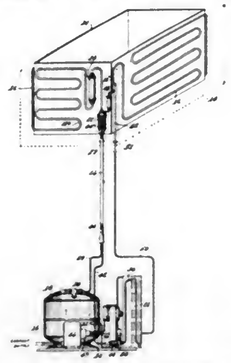


2,446,851
ELECTRICALLY OPERATED TYPEWRITER WITH CONSTANTLY ROTATING TYPE WHEEL
Martin Ruderfer, Brooklyn, N. Y., assignor to Doeh Development Co., New York, N. Y.
Application April 14, 1947, Serial No. 741,298
11 Claims. (Cl. 197—12)

1. In a typewriting machine of the character described, the combination of a continuously rotating rotor, a plurality of levers, each pivotally mounted on said rotor, a separate type element and a separate armature carried on each lever; all of said armatures normally lying in an annular lane and each lever being so positioned when swung about its axis from rest position on the rotor, that the type element carried thereon is brought to printing position, spring means to restore the moved lever to normal rest position

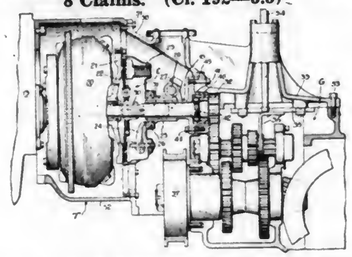
on the rotor, an electro-magnet means, adapted when actuated to direct its force in the lane of the armatures, attracting one of said armatures whose associated type element is thereby swung to printing position, a plurality of key circuits and an electrical selecting means to bring the particular key circuit which is brought to condition to operate, into energizing relation with the electro-magnet means.

2,446,852
PRESSER FOOT FOR SEWING MACHINES
Rudolph J. Saller, Townley, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application July 19, 1946, Serial No. 684,852
10 Claims. (Cl. 112—235)



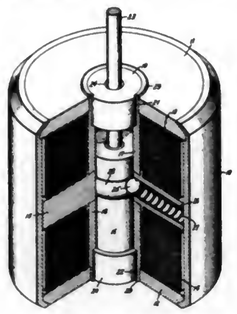
1. A sewing machine presser-foot having a shank, laterally spaced work-engaging soleplates supported by said shank for pivotal and bodily yielding movements of the sole-plates relatively to each other, said sole-plates having substantially parallel proximate side edges, a presser-member depending from said shank and having its lower face disposed between said soleplates and substantially in the plane containing the work-engaging faces of said sole-plates at the upper limits of bodily movement thereof, said presser-member having its forward end disposed a substantial distance rearwardly of the forward ends of said sole-plates.

2,446,853
RESTRICTOR-SUCTION LINE ASSEMBLY
Clinton W. Savidge, Minneapolis, Minn., assignor to Franklin Transformer Manufacturing Company, Minneapolis, Minn., a copartnership
Application August 10, 1945, Serial No. 609,980
3 Claims. (Cl. 62—127)



1. A tube assembly adapted for connection in the refrigerant line of a refrigeration system, said

tube assembly comprising, in combination, an outer suction tube, said suction tube being elongated and pipe-like in formation and having an enlarged extension at one end, and a restrictor tube



coiled in said suction tube and in said enlarged extension in contact with the walls thereof, said restrictor tube extending out of said enlarged extension and out of the opposite end of said suction tube.

2,446,854
TRANSMISSION AND CLUTCH ASSEMBLY
Charles S. Schroeder, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Application April 12, 1944, Serial No. 530,635
8 Claims. (Cl. 192—3.5)

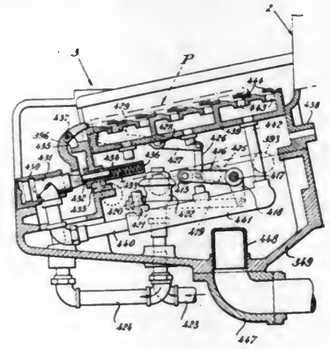
1. In a combination of the class described, a clutch assembly of the general type having a driving member and a driven clutch disk adapted to be spring pressed relatively to the driving member by a pressure member and release fingers for relieving the pressure of said pressure member, a gear casing secured in normal operating relation to said clutch assembly and having gears therein, a transmission shaft having one end passing into said clutch assembly, the other end of said transmission shaft extending into said gear casing, means whereby the said other end of said shaft drives the gears therein, a bearing in said gear casing mounting said transmission shaft for rotation in operative relation to said clutch and gears whereby to transmit rotation to said gears, a cap secured to said casing and having a sleeve portion fitting about said shaft, a throw-out collar mounted about said cap sleeve portion for transmitting motion to said release fingers, and said transmission shaft being movable axially of its length out of said clutch assembly into position to allow bodily tilting thereof relatively to said throw-out collar and said cap sleeve.

2,446,855
DOUBLE-ACTING SOLENOID
Richard M. Seibel, Ballston Spa, N. Y., assignor to General Electric Company, a corporation of New York
Application July 13, 1944, Serial No. 544,755
6 Claims. (Cl. 175—337)

1. A double acting solenoid comprising a unitary armature movable between two positions, a magnet core made of metallic material for said armature provided with a middle leg in engaging magnetic flux conducting relation with an intermediate portion of said armature and with an outer leg at each end of said armature selectively into abutting engagement with which said armature is movable, said outer legs being each provided with a non-magnetic gap, and two coils on said magnet core selectively energizable to move said armature from one position to the other, said middle core leg forming a common magnetic path for said coils and said air gaps in said outer legs being alternately effective to decrease the magnetic flux opposing movement of said armature.

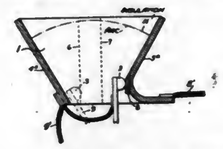
2,446,856
METHOD OF TREATING PHENOLS
Lee Irvin Smith, Minneapolis, Minn., assignor to Regents of the University of Minnesota, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Application October 16, 1943, Serial No. 506,551
10 Claims. (Cl. 260—396)

1. The process of preparing quinones which comprises reacting a substituted phenol of the benzene series in which the para position is vacant and which is a member of the group consisting of monoallyl phenols, polyalkyl substituted phenols and monoallylpolyalkyl substituted phenols with an aromatic diazonium compound, reducing the resultant admixture with an alkali metal hydrosulfite, separating the resultant compound and at an elevated temperature and under acid conditions oxidizing said compound with a salt of a polyvalent metal in which the metal is in a high state of oxidation and separating the resulting quinone compound.



2,446,857
RAIL FASTENING
Jacob Rush Snyder, Cleveland, Ohio
Application March 27, 1945, Serial No. 585,043
1 Claim. (Cl. 238—349)

In a rail fastening, a support, a rail on said support and having a base flange, a resilient rail-holding clamp having spaced portions engaging said support and said flange and having an opening therein between said portions, a fastener having a stem extending through said opening and connected with said support and a head engaging the clamp and holding the latter in a flexed condition, and a gauge member disposed in and extending through said opening and forming a spacer adapted to be clamped directly between said support and said head for limiting the deflection of the clamp by said fastener, the por-

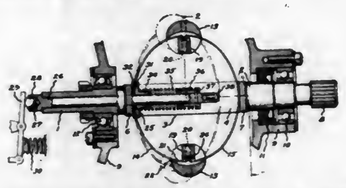


tion of the clamp defining the edge of said opening having a holding recess therein, said gauge member having an open transversely curved longitudinal recess in one side thereof and a projecting longitudinal rib on the other side thereof and said gauge member being insertable into said opening for engaging its longitudinal recess in straddling relation with the stem of said fastener and engaging said rib in said holding recess.

2,446,858
STEREOTYPE PLATE-COOLING MACHINE
Paul L. Tollison, North Plainfield, and Charles L. Ricards, South Plainfield, N. J., assignors to Wood Newspaper Machinery Corporation, Plainfield, N. J., a corporation of Virginia
Original application December 29, 1944, Serial No. 570,324. Divided and this application December 6, 1946, Serial No. 714,486
6 Claims. (Cl. 62—1)

3. In a stereotype plate making machine, a cooling chamber including parallel inclined sets of rollers for conducting a plate through said chamber by gravity, a stop movable to an extended position to arrest the movement of the plate within said chamber, a water supply duct, a valve in said duct, a lever attached to said valve, a movable roller operatively connected to said lever, said roller normally being positioned above the other rollers and being depressed by contact of the plate therewith, means for opening said valve for a predetermined interval when said movable roller is so depressed, and means operated by the water supplied from said duct for moving said stop to its extended position.

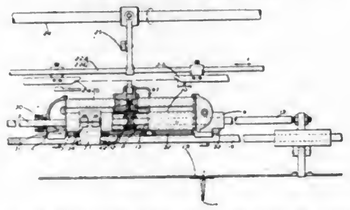
2,446,859
SWITCH
Oliver C. Traver, Drexel Hill, and Ludwig S. Walle, Lansdowne, Pa., assignors to General Electric Company, a corporation of New York
Application October 14, 1944, Serial No. 558,666
7 Claims. (Cl. 200—147)



1. In an electric switch, a substantially U-shaped electrically conducting member having side flanges made of magnetic material and a base portion extending at an acute angle with the outer edges of the flanges, a stationary contact secured to the end of the base portion closer to the outer edges of said flanges, a movably mounted contact movable between the spaced side flanges of said U-shaped member to engage and disengage said stationary contact, and means for causing an arc between said contacts to be attached to the base portion of said U-shaped member and move on said base portion as an arc runner.

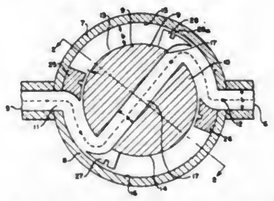
2,446,860
BOAT
Milton A. Wallace, Mystic, Conn.
Application June 29, 1945, Serial No. 602,267
16 Claims. (Cl. 114—67)

6. In a boat hull, inner and outer skins spaced from each other, tubular ribs arranged between said inner and outer skins and provided with openings, an intermediate skin lying against one of said first named skins between said ribs and curving around each rib into contact with the other of said first named skins, and a body of a mastic filling said ribs and extending around said openings into the spaces formed between said ribs, said intermediate skin and the first named skin against which said intermediate skin lies between said ribs.



2,446,861
CENTRIFUGAL SPEED GOVERNOR
Donald F. Warner, Swampscott, Mass., assignor to General Electric Company, a corporation of New York
Application September 11, 1944, Serial No. 553,611
8 Claims. (Cl. 264—18)

1. Centrifugal flyball type governor comprising a spindle having an intermediate portion forming a frame and end portions forming shaft stubs, means rotatably supporting the stubs, a



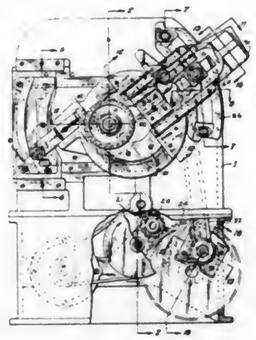
pair of separate curved leaf springs together defining an ellipse and each having inwardly bent free end portions and an intermediate portion, one of said intermediate portions being secured to the frame, and a pair of flyweights pivotally engaging said spring end portions.

2,446,862
KNITTING MACHINE
George Wilders, Kegworth, and John Edward Lynam, Mapperley, Nottingham, England, assignors to William Cotton Limited, Loughborough, Leicestershire, England
Application June 28, 1945, Serial No. 602,060
In Great Britain June 28, 1944
5 Claims. (Cl. 66—126)

1. In a knitting machine having a hydraulic piston-and-cylinder device for driving a member, such as a carrier, to and fro, said device including a piston rod protruding from an end of the cylinder; means for preventing leakage of hydraulic fluid along said protruding rod comprising a collector for leaking fluid and a pump and connections for returning said fluid to the hydraulic system.

2,446,863
ADJUSTABLE TRANSMISSION LINE
George J. Yevick, Boston, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application January 7, 1946, Serial No. 639,644
3 Claims. Cl. 178—44)

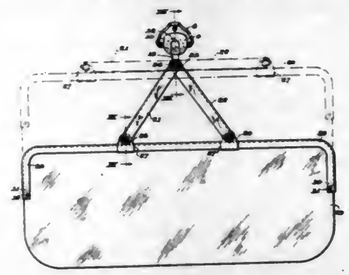
1. An electromagnetic energy-transference structure including a cylindrical stator member and a cylindrical rotor member forming respectively the outer and inner walls of an annular wave guide, said stator member having diametrically opposed energy inlet and energy outlet apertures to communicate with a wave guide transmission line, said rotor member having a diametral passage to communicate at each end with said annular wave guide, and energy reflective means extending into the annular wave guide and placed at clockwise edges of the apertures in the stator member and at counter clockwise edges of the ends of the diametral passage in the rotor member whereby the path length of electromagnetic energy through said annular wave guide is altered by rotational displacement of said rotor member.



2,446,864
COMPOSITION AND PROCESS FOR IMPARTING DURABLE WATER REPELLENT FINISH TO TEXTILES
Ellis Abrams, Philadelphia, Pa., assignor to Quaker Chemical Products Corp., Conshohocken, Pa., a corporation of Pennsylvania
No Drawing. Application June 26, 1944, Serial No. 542,240
12 Claims. (Cl. 260—33.6)

1. A composition particularly adapted for rendering textile material water repellent comprising a substituted urea having the formula

$$RNH—CO—NHR_1$$

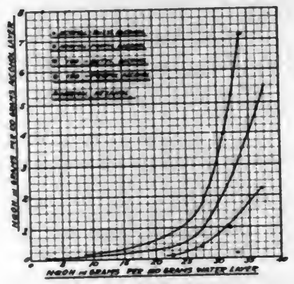


where R represents an aliphatic hydrocarbon radical containing at least twelve and not more than eighteen carbon atoms and R_1 represents a substituent selected from the group consisting of hydrogen and a hydrocarbon radical; and a resin soluble in an organic solvent selected from the group consisting of urea aldehyde and melamine aldehyde condensation products.

2,446,865
INDEXING MECHANISM
James H. Barnes, Glendale, Calif.
Original application June 9, 1941, Serial No. 397,171, now Patent No. 2,423,286, dated July 1, 1947. Divided and this application June 29, 1944, Serial No. 542,767
8 Claims. (Cl. 90—56)

1. In a machine for shaving a rolling power transmitting body while the body is held stationary, comprising a shaft adapted to have mounted thereon the power transmitting body in non-rotative relation with said shaft, circular toothed means fixed on said shaft, a pawl adapted to interengage said circular toothed means for locking the shaft while the said body is being shaved, a second pawl adapted to intermittently interengage and index said circular toothed member and shaft to present a new surface of the said body into gear shaving position, a plurality of rotary cams mounted concentrically with said shaft, said cams being arranged for unidirectional and simultaneous rotation, and means actuated by said cams and cooperating with said shaft and second pawl for projecting the first pawl into locking position when the second pawl is retracted and for retracting the first pawl as the second pawl moves into indexing relation with said circular toothed means.

2,446,866
GLARE SCREEN FOR MOTOR VEHICLES
Lee Alexander Bell, Valencia, Pa.
Application September 3, 1947, Serial No. 771,963
4 Claims. (Cl. 248—274)

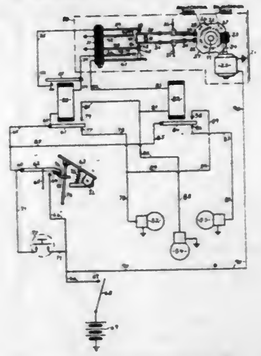


1. A holder for a glare screen, comprising a joint element adapted for connection to a fixed support, a second joint element adjustably held by the other element, a pair of links pivotally connected at their upper ends to the second element, and means for frictionally connecting the lower ends of the links to an upper edge of a glare screen plate, for adjustment longitudinally thereof.

2,446,867
UREA-FORMALDEHYDE COMPOSITION
David E. Cordier, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application April 1, 1944, Serial No. 529,190
4 Claims. (Cl. 260—17.3)

3. A dry thermosetting composition comprising a urea-formaldehyde reaction product and a potentially acid substance consisting of the guanidine salt of a mono-sulfonic acid of a hydrocarbon of the benzene series having from six to seven carbon atoms.

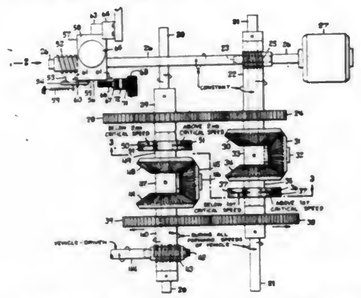
2,446,868
PROCESS FOR PURIFYING AQUEOUS ALKALI METAL HYDROXIDES
George Lewis Cunningham, Painesville, Ohio, assignor to Diamond Alkali Company, Pittsburgh, Pa., a corporation of Delaware
Application September 25, 1943, Serial No. 503,826
13 Claims. (Cl. 23—184)



3. The method of purifying alkali metal hydroxides which includes the steps of treating an impure aqueous solution of such hydroxide with a mixture of an immiscible solvent selected from the group consisting of n-propyl, isopropyl, n-butyl, isobutyl, n-amyl, isoamyl, secondary amyl alcohol, and mixtures thereof, and immiscible solvents selected from the group consisting of methyl and ethyl alcohols, separating and removing the solvent and hydroxides associated therewith from the resulting mixture, and separating and recovering the alkali metal hydroxides from the solvent.

2,446,869
METHOD OF PREPARING CALCIUM HYPOCHLORITE
George L. Cunningham, Painesville, Ohio, assignor to Diamond Alkali Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application December 13, 1943, Serial No. 514,097
7 Claims. (Cl. 23—86)

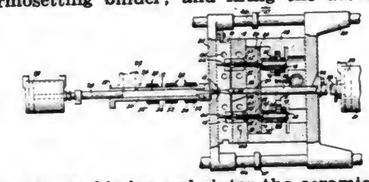
1. The method of preparing calcium hypochlorite substantially free from calcium chloride, which comprises the steps of simultaneously carbonating and vigorously agitating an aqueous slurry of basic calcium hypochlorite until substantially all of said basic calcium hypochlorite is converted to normal calcium hypochlorite, and separately recovering said normal calcium hypochlorite.



2,446,870
AUTOMATIC SIGNALING MECHANISM FOR AUTOMOBILES AND OTHER VEHICLES
Henry Spicer Davis, West Haven, Conn.
Application October 2, 1945, Serial No. 619,739
14 Claims. (Cl. 177—311.5)

1. An automatic signal-mechanism for automobiles and other vehicles, including in combination: differential-mechanism comprising a first drive gear-unit, a second drive gear-unit and a driven gear-unit interconnecting the other two gear-units; connecting-means for connecting the said first drive gear-unit to the running-gear of a vehicle for being driven by the latter; substantially-constant-speed drive-means independent of the running speed of the vehicle and connected to the said second drive gear-unit to cause the latter to urge the driven gear-unit in a direction opposite to which the same is urged by the first drive gear-unit when the vehicle is moving forwardly; and translating-means operatively interposed between the said signal-means and the said driven gear-unit and constructed and arranged to cause the operation of the said sig-

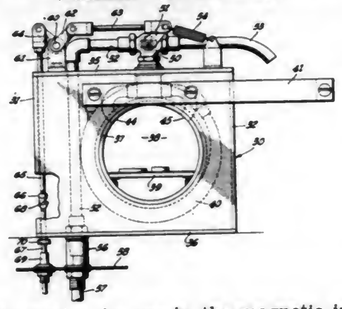
nal-means when the latter gear-unit is moved in one direction by differences in relative speed between the other two gear-units and to idle without causing the operation of the said signal-means when the said driven gear-unit is moved in the other direction.



2,446,871
SIGNALING SYSTEM FOR AUTOMOBILES AND OTHER VEHICLES
Henry Spicer Davis, West Haven, Conn.
Application December 23, 1947, Serial No. 793,465
25 Claims. (Cl. 177—311.5)

1. A signaling system for vehicles, including in combination: electrically-responsive signal-means; a source of electrical energy; current-transmitting means supplying energy from the said source to the said signal-means; switch-means associated with the said current-transmitting means and controlling the energization and deenergization of the said signal-means; substantially-constant-speed drive-means functioning independently of the speed of the vehicle; and automatic control-means for the said switch-means, the said control-means including a first member driven by the running-gear of the vehicle and varying in speed with variations in the speed thereof, a second member driven by the aforesaid constant-speed drive-means, and translating-means jointly operated by both of the said first member and second member and in turn translating the relative movements thereof into operation of the said switch-means, the said translating-means being constructed and arranged to cause the said switch-means to energize and deenergize the said signal-means to provide repeating cycles of on-period phases alternating with off-period phases and with each of one type of repeating phases being of substantially-corresponding duration despite variations in speed of the vehicle and the other said type of phases progressively decreasing in duration as the speed of the vehicle decreases.

2,446,872
METHOD OF MOLDING CERAMIC ARTICLES
Russell W. Ehlers, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 4, 1941, Serial No. 421,557
10 Claims. (Cl. 25—156)

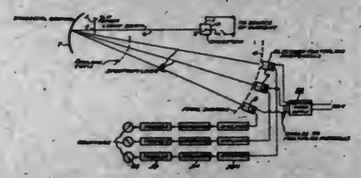


1. The process of making ceramic articles comprising the following steps: preparing a molding composition consisting of a mixture of finely pulverized ceramic material, a thermoplastic and thermosetting binder, and a plasticizer having an appreciable vapor pressure at a temperature below the softening point of the binder, said plasticizer being in fluid form so as to lubricate the mold, and said binder being substantially insoluble in the plasticizer; heating the composition to make it fluid; injecting the heated fluid material into a mold; cooling the mold to harden the article into its molded shape; heating the article to drive off the plasticizer and set the thermosetting binder; and firing the article to

drive off the binder and sinter the ceramic material into a coherent body, said binder being a thermoplastic resin mixed with shellac.

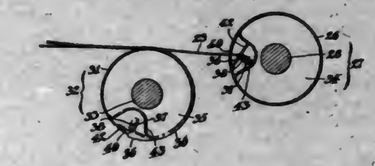
2. A molding composition composed substantially as follows: 84% finely pulverized ceramic material, 5.8% ethyl cellulose, 5.8% shellac and 4.4% N-butyl stearate.

2,446,873
MAGNETIC INSPECTION APPARATUS
Raymond L. Fitch, Pacific Palisades, Calif.
Application November 29, 1943, Serial No. 512,152
7 Claims. (Cl. 175—183)



1. Apparatus for use in the magnetic inspection of materials, which includes: a housing having a shell therein provided with a pair of apertures in its upper portion; a coil of electrical conducting material surrounding said shell and within said housing; a pair of ducts in said housing having outlet ends terminating in said shell apertures for discharging inspection fluid into said shell said ducts being angularly disposed so that their streams impinge; a fluid supply line connected to said ducts and provided with a valve; means normally holding said valve in closed position with respect to said ducts; means for operating said valve adapted to connect with prime mover means under the control of the operator; and connectors carried by said housing and adapted to connect said coil to a source of electric current.

2,446,874
ELECTRONIC APPARATUS FOR SPECTROGRAPHIC ANALYSIS
Joseph Geffner, Weirton, W. Va., and Edwin R. Millen, McCandless Township, Allegheny County, Pa., assignors to Fisher Scientific Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 11, 1944, Serial No. 535,156
6 Claims. (Cl. 88—14)



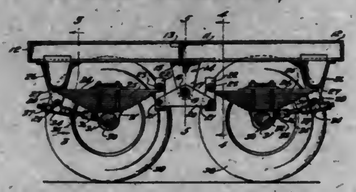
1. In a spectrograph, the combination of means for excitation of a sample, a spherical grating, a

member having a slit disposed between said sample exciting means and said grating and closer to said grating than its Rowland circle position, said sample exciting means, grating and slit being disposed in a substantially vertical plane, at least two line-selecting members disposed on the focal surface of said grating and adjustable over said surface for selecting and passing individually pre-

determined relatively narrow bands of spectral energy received at said surface from said grating, and an electron multiplier photocell associated with each of said selecting members for movement therewith and for receiving energy passed by the member, and an electric circuit associated with each of said photocells for measuring the intensity of light energy passed to it.

2,446,875
FABRIC TAKE-UP DEVICE FOR KNITTING MACHINES
Herbert Erich Haehnel, West Reading, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application April 7, 1945, Serial No. 587,047
5 Claims. (Cl. 66—149)

1. A take-up device for straight knitting machines comprising a shaft, a reel member mounted coaxially on said shaft, a strap having anchoring means, said reel member having slot means therein for permitting insertion and release of said anchoring means, and shielding means for said anchoring means intermediate said slot means and said shaft, said shielding means being formed integrally with said reel member.

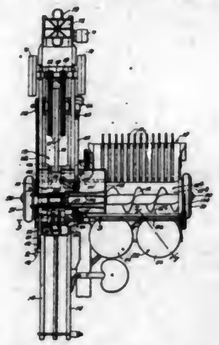


2,446,876
REFRIGERATOR CABINET AND MEANS FOR MOUNTING A COMPRESSOR AND CONDENSER THEREIN
George K. Iwashita, Indianapolis, Ind., assignor, by mesne assignments, to Admiral Corporation, Chicago, Ill., a corporation of Delaware
Application May 29, 1943, Serial No. 489,023
7 Claims. (Cl. 62—115)

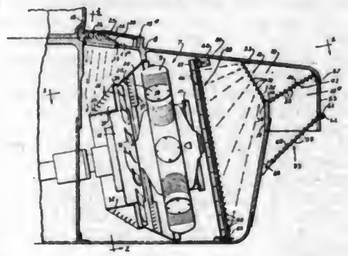
1. In a refrigerator having a cabinet, the combination of a condenser having a tube forming a coil lying substantially wholly in a single plane, means for hingeably mounting the condenser on the cabinet so as to support the condenser either in a substantially vertical plane or in an oblique plane, and an air stack arranged to direct an upward flow of air past the condenser, the condenser being substantially wholly enclosed in the lower

end of said stack when supported in the oblique plane.

2,446,877
EQUALIZING SPRING SUSPENSION FOR TANDEM AXLE VEHICLES
Frank Alfred Jones, Bristol, Tenn., assignor to Harry M. Daniel, Bristol, Va.
Application April 21, 1945, Serial No. 589,503
2 Claims. (Cl. 280—104.5)



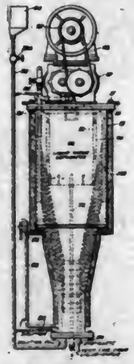
1. In a twin axle truck, a frame having a pair of spaced side bars, a pair of wheel carrying axles spaced in parallelism across said frame, hangers fixed to the side bars and depending therefrom, said hangers being arranged intermediate said axles and supporting a pair of pivoted equalizing levers, leaf springs arranged in pairs at each end of said axles, shackle members including shackle pins and bushings connecting the proximal ends of said springs to said equalizing levers, said shackle members being in tension to maintain the same against angular distortion during relative pivotal movement of the parts, downwardly extending spring stop means fixed to said frame immediately above the free ends of said springs to limit their upward movement, and radius rods pivotally supported by said stop means and to the adjacent axles, said radius rods being movable toward a horizontal plane intersecting said axles upon increase in load conditions and normally lying in a plane intersecting the plane of the axle axis.



2,446,878
TIER
Lee H. Kaupke and Russell R. Raney, La Grange, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application November 21, 1942, Serial No. 466,461
36 Claims. (Cl. 100—20)

15. In combination, means forming a horizontally extending baling chamber, means for feeding from the bottom of the baling chamber vertically thereacross to the top thereof in the form of a bight a baling strand extending from a source along the bottom of the chamber vertically across the end and along the top, a ro-

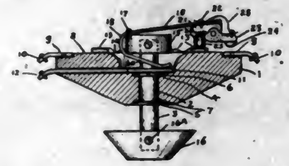
tatable hook positioned at the top of the baling chamber for forming a twisted loop, severing and clamping means positioned at the top of the baling chamber, means for shifting the severing and clamping means toward the twisting hook before forming of the twisted loop for engaging the bight to prevent rotation thereof to assure formation of the twisted loop by the twisting hook, means for shifting the severing and clamping means away from the hook after forming of the twisted loop to disengage the twisted loop from the hook, and means responsive to shifting of the severing and clamping means away from the hook for actuating the severing and clamping means to sever the strand into two sections adjacent the twisted loop and to clamp the severed end of the section not having the twisted loop.



2,446,879
AIR FLOW CONTROL
Walter W. Kennedy, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application June 28, 1943, Serial No. 492,567
2 Claims. (Cl. 98—40)

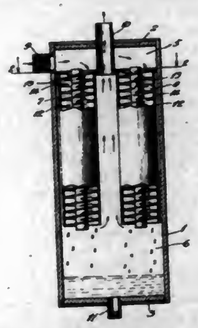
1. Air flow control means for a chamber having a restricted air outlet opening at one end and means for forcing air through the chamber toward said outlet opening, said control means comprising a grille extending transversely of the chamber between said air forcing means and said outlet opening and spaced from the opening comprising a series of fins operative upon the air flowing through the chamber to divide the same into a multiplicity of contiguous streams, the fins being variably inclined so as to cause said streams to converge toward said opening, the cross sectional area of the grille being substantially larger than the opening.

2,446,880
DISTILLATION AND HEAT EXCHANGE APPARATUS
Robert V. Kleinschmidt, Stoneham, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
Application June 28, 1941, Serial No. 400,354
27 Claims. (Cl. 202—187)



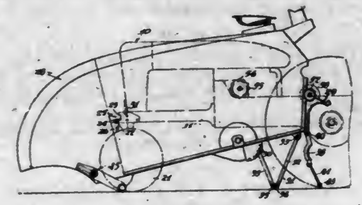
12. Distillation apparatus which comprises a vaporization chamber, a compressor, means for directing vapor from said chamber to said compressor for compression therein, condenser heat-exchange means in said chamber, means for directing vapor compressed by said compressor from said compressor into said condenser heat-exchange means in out-of-contact heat-exchange relation with solution in said chamber, means for directing solution into said chamber, means for withdrawing concentrated solution from said chamber, a line communicating between the vapor space in said chamber and the atmosphere on the exterior of said chamber, said line being unobstructed and arranged to provide free passage of vapor from the interior of said vaporization chamber to the external atmosphere and free passage of external atmosphere to the interior of said chamber depending upon the relative pressures of the vapor within said chamber and of the external atmosphere, and a thermometer in said line adapted to indicate the temperature of gas or vapor in said line.

18. Heat-exchange apparatus comprising a plurality of conical coils of piping nested together in contact with conical shields of sheet material between said coils leaving passage means between the exterior surface of said piping and said sheet material, said passage means being formed by the wall surface of said conical shields and the exterior of said piping so as to be substantially impervious and follow the tortuous path of the coils of piping for parallel flow of fluid within said piping and within said passage means, means for directing a fluid through said piping and means for directing other fluid through said passage means in out-of-contact heat-exchange relation with fluid in said piping.



2,446,881
MECHANISM FOR POWER ELECTRICAL TAP SWITCHES
Edwin August Miller, Fairfield, Conn.
Application July 3, 1946, Serial No. 681,212
5 Claims. (Cl. 200—4)

1. Mechanism for power electrical tap switches comprising a base; a series of relatively spaced contact points fixedly mounted radially upon said base, said points having attaching means in the provision of separate terminals; a series of relatively spaced cam elevations provided upon said base, said elevations being separated by valleys therebetween in radial alignment with the fixed contact points; a rotatable shaft positioned within a bore centrally provided by said base therethrough; a conductive ring centrally positioned on said base around said shaft and having an attaching means providing a terminal; an insulation body member fixedly carried by the upper extremity of said shaft; a conductive spring member, a lower extremity of said spring being in

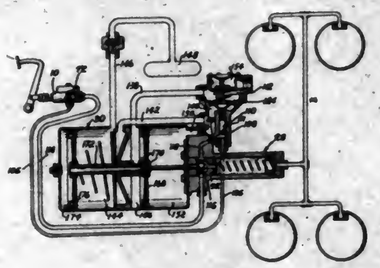


permanent rubbing contact with said ring, and an upper extremity extending over and fixed to said insulation body member in the provision of a sweep-arm; a block rigidly carried by the extremity of said sweep-arm; a pivotally depending conductive member carried by said block and including a roller element for selective engagements with said elevations and valleys, and a contact for selective engagements with said contact points; a flexible conductive jumper having one end fixed to said sweep-arm and the other end fixed to said pivotally depending member; and a knob with which the lower end of said shaft is provided.

2,446,882
OIL SEPARATOR
Joseph L. Morrison, Lincolnwood, Ill.
Application June 12, 1944, Serial No. 539,973
1 Claim. (Cl. 183—34)

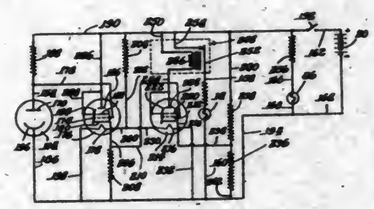
An oil separator for separating oil from a gas or vapor comprising a vertical elongated casing having a horizontal partition therein adjacent its upper end to provide a distribution chamber thereabove and a separator chamber therebelow, an inlet passage to said distribution chamber, a plurality of separators in said separator chamber extending downwardly from said partition and terminating a substantial distance above the bottom of said separator chamber, each separator comprising a helical passage in communication with said distribution chamber at its upper end and with said separator chamber at its lower end, and a discharge passage leading from the upper end of said separator chamber, the size of the passages and chambers being such as to provide a substantial velocity drop in the distribution chamber and in that part of the separator chamber below the separator, each separator comprising a central core, a cylindrical shell surrounding said core and spaced therefrom, and a helical ribbon extending around said core between said core and shell having radial corrugations flaring outwardly from the core to the shell.

2,446,883
TRACTOR-MOUNTED THRESHER
Stuart D. Pool, Moline, and Rexford D. Downing, Rock Island, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application May 11, 1946, Serial No. 669,022
5 Claims. (Cl. 130—27)



1. A mounting for implements on tractors in which the tractors have a narrow longitudinally extending body, a transverse driving axle at one end of the tractor, large traction wheels on said axle spaced laterally from said narrow body and small wheels supporting the other end of the tractor, a stationary housing for said axle, and in which the implements include a relatively long narrow structure adapted to be positioned adjacent said long tractor body, comprising in combination means for mounting said implement on said tractor and including an overhanging hook member on one end of the implement, a stand positioned beneath and inwardly of the end of the implement having the hook member, means at the other end of the implement for raising the implement about the stand as a fulcrum and lowering the hook member over the axle housing, means for clamping said hook member to said axle housing, and means for connecting the jacked end of the implement to the tractor.

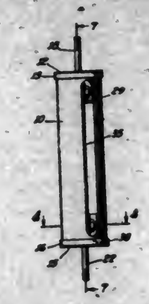
2,446,884
BOOSTER FOR BRAKE SYSTEMS
Earl R. Price, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 22, 1943, Serial No. 479,974
16 Claims. (Cl. 60—54.5)



1. For use in a hydraulic pressure system which includes a motor cylinder and a master cylinder unit having a reservoir; a power assistor unit comprisng an auxiliary cylinder having an inlet port adapted to be connected to the master cylinder and an outlet port adapted to be connected to the motor cylinder, a piston reciprocable in said auxiliary cylinder between said inlet and outlet ports, a check valve between the auxiliary cylinder piston and the motor cylinder

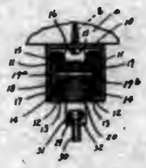
for maintaining a predetermined pressure in the motor cylinder, a lower cylinder for exerting pressure on the auxiliary cylinder piston, and a valve for controlling the power cylinder respon-

sive directly to the pressure in the master cylinder.



2,446,885
AIRPLANE ENGINE ICE INDICATOR
Karl E. Rollefson, Evanston, Ill., assignor to The Muter Company, Chicago, Ill., a corporation of Illinois
Application April 13, 1944, Serial No. 530,892
5 Claims. (Cl. 177—311)

3. In a fuel supply system for an airplane engine, a hollow fitting directing the fuel mixture to the engine, said fitting having internal angularly related surfaces defining a passage converging in the direction of movement of the fuel mixture, an aperture through said fitting laterally of said passage and opening into said passage at the intersection of said surfaces to provide a chamber in which ice forms prior to its formation elsewhere in the system, means for projecting a beam of light into said chamber, a photoelectric cell mounted to receive the beam of light from said chamber under the control of ice in said chamber, and means controlled by the photoelectric cell and constructed and arranged to indicate the presence of ice in said chamber in an amount indicative of such icing conditions within the system as to constitute a hazard if not removed.

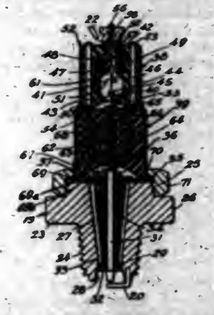


2,446,886
RENEWABLE FUSE CASING
Ray Schoeppell, Huntington Park, Calif.
Application June 15, 1944, Serial No. 540,421
4 Claims. (Cl. 200—131)

1. In a cartridge-fuse-casing comprising a shell of insulating material, closure caps having peripheral flanges telescoped over the outer periphery of said shell, and having also inwardly extending sleeves telescoped within and engageable with the bore of said casing, and terminals

extending into opposite ends of said shell through said sleeves, respectively.

2,446,887
TROLLEY YOKE STRUCTURE
William A. Shearer, New Castle, Ind., assignor to New Castle Products, a copartnership composed of Henry D. Oberdorfer and Julia S. Oberdorfer, New Castle, Ind.
Application June 19, 1944, Serial No. 541,076
4 Claims. (Cl. 16—97)



1. A trolley and yoke structure including in combination a pair of confronting spaced wheels, an intermediate yoke member, an axle extending through said member and wheels and terminating inwardly of the outer remote faces of the wheels, the latter having an external counterbore, and means on the counterbore exposed ends of the axle for assembly retention purposes, the wheels on their confronting faces having inwardly directed coaxial extensions of a diameter appreciably less than the diameter of the wheel, opposite faces of the yoke member including extension nesting counterbores, the length of axle-wheel and extension bearing being approximately equal to wheel tread width.

2,446,888
IGNITION SYSTEM
Hiram W. Sheridan, Oak Park, and Warren G. Taylor, Chicago, Ill.
Application March 22, 1943, Serial No. 479,964
1 Claim. (Cl. 175—357)

In a device of the class described, a transformer unit for a spark plug comprising a container, a primary and a secondary coil sealed within said container, said container being filled with an insulating composition for insulating the turns of said coils from one another, means for mounting said transformer unit on said spark plug and an interrupter unit mounted on said transformer unit, said interrupter unit including a vacuum chamber, a conductor extending

through said chamber, and electrically operated means within said chamber for opening and clos-

ing a circuit through said conductor, said conductor being in circuit with said primary.

2,446,889
CANNED FISH OF IMPROVED PALATABILITY AND PROCESS OF PREPARING SAME
Loren B. Sjöström, Wakefield, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
No Drawing. Application August 29, 1945, Serial No. 613,425
10 Claims. (Cl. 99—188)

1. In the preparation of cooked fish packaged in sterilized containers wherein the fish normally develop undesirable flavor during sterilization, the method of improving the flavor of the sterilized fish comprising treating the fish after cooking but before sterilization with a non-toxic edible alkali.

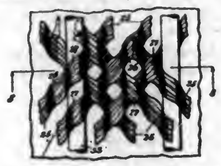
2,446,890
LATERAL BEND POWER-DRIVEN CONVEYER
Frank Stadelman, Cranford, N. J., assignor to Latendorf Conveying Corporation, Bayonne, N. J., a corporation of New Jersey
Application October 21, 1946, Serial No. 704,760
8 Claims. (Cl. 198—182)

2. In a conveyor, a flexible endless belt comprising a web of interconnected elements having freedom for transversely-differential lengthwise expansion and contraction arranged in a working run and a return run, a bed supporting the working run and including a curved portion, driving means operatively engaging said belt whereby the working run is loosely disposed on said bed so that the interconnected elements are free to expand and contract around the laterally-curved portion of said bed, a flexible guide-chain or the like extending along the inner periphery of the curve in said working run in frictional contact with said belt, and means for driving said guide-chain in the same direction and at generally the same speed as the inner periphery of the curved portion of said working run.

2,446,891
METHOD OF BENDING BIMETALLIC ARTICLES
Charles H. Tower, Cleveland, and Francis J. Lowey, Bay Village, Ohio, assignors to The S. K. Wellman Company, Cleveland, Ohio, a corporation of Ohio
Application January 29, 1944, Serial No. 520,162
6 Claims. (Cl. 29—148)

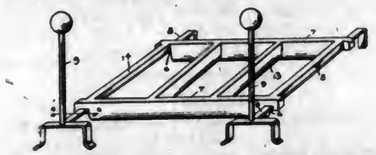
1. The method of bending to a predetermined curvature a flat bimetallic article of the type having a more plastic facing bonded to a less plastic backing member which comprises the steps of applying pressure to laterally extending areas of the article successively and progressively along the length of the article, and controlling the amount of pressure so as to elongate the more plastic facing to a sufficiently greater extent than the less plastic backing member to bend the article to the predetermined curvature and produce a curved article having an outer more plastic facing substantially free from cracks.

2,446,892
METHOD OF SHAPING BIMETALLIC ARTICLES
Francis J. Lowey, Bay Village, Ohio, assignor to The S. K. Wellman Company, Cleveland, Ohio, a corporation of Ohio
Application October 23, 1943, Serial No. 507,429
4 Claims. (Cl. 29—152.1)



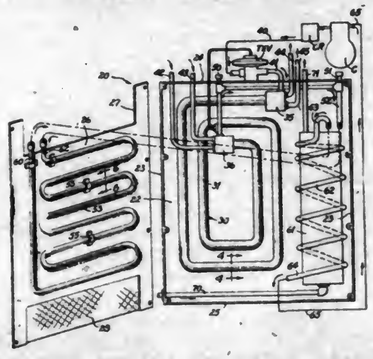
1. The method of bending to a predetermined conical shape, a flat bimetallic article of the type having a more plastic facing bonded to a less plastic backing member which comprises the steps of applying pressure to laterally extending areas of the article successively and progressively along the length of the article with the pressure applied to each area gradually increasing in amount from one side to the other side of the article and controlling the amount of the pressure so as to elongate the more plastic facing to a sufficiently greater extent than the less plastic backing member and with one longitudinal edge of the facing being elongated to a sufficiently greater extent than the other edge to bend the article to the predetermined conical shape and produce a curved article having an outer more plastic facing substantially free from cracks.

2,446,893
LAMINATED CONSTRUCTION
James N. Tynan, Chicopee, Mass., assignor to A. G. Spalding & Bros. Inc., Chicopee, Mass., a corporation of Delaware
Application October 6, 1943, Serial No. 505,153
23 Claims. (Cl. 20—91)



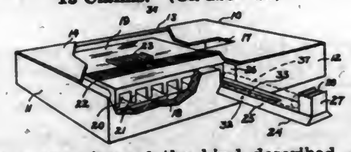
1. In a construction of the class described the combination of opposed and spaced skin sections;

and an intermediate core section providing a reinforcing and supporting structure, said core section including a plurality of crisscrossed diagonally extending strips respectively having longi-



tudinally related portions oppositely offset with respect to each other and alternately bonded to said spaced skin sections, with oppositely offset portions in crisscrossed strips overlying and underlying each other at crossings of the strips.

2,446,894
UNITARY ANDIRON LOCKING FUEL HOLDER
Frank H. Waggoner, Ramsey, N. J.
Application December 29, 1944, Serial No. 570,327
1 Claim. (Cl. 126—164)

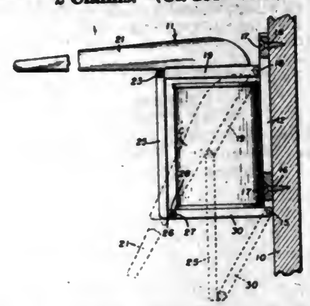


The combination of a pair of andirons of usual construction having irons of right angular cross section, a unitary grate having a rectangular frame and integral cross bars with right angular cut outs in the sides of said frame adapted to fit over said irons and lock said andirons and unitary grate in a fixed relation to each other.

2,446,895
COOLING UNIT FOR BEVERAGE SERVING ASSEMBLIES
Louis Weiss, University City, Mo.
Application May 29, 1944, Serial No. 537,931
4 Claims. (Cl. 62—141)

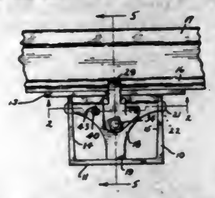
1. A beverage line chilling evaporator assembly of a multiple-draw beverage cooler, said evaporator assembly including a length of flexible multiple tubing having an outer tube for refrigerant evaporation and a plurality of inner tubes each forming parts of the beverage lines of the multiple-draw beverage cooler, with end portions of the outer tube sealed about the inner tubes, the several said tubes being of flexible metal and of generally circular section, and the inner tubes being metallically united to each other in spaced zones along the lengths thereof within the outer tube, an enlarged refrigerant-receiving chambered casing in one end region of the outer tube and an expansion valve near the refrigerant-receiving end of the outer tube.

2,446,896
CRAYON BOX
Charles P. Wellman, deceased, late of Pleasant Ridge, Mich., by Minnie M. Wellman, administratrix, Pleasant Ridge, Mich., assignor, by mesne assignments, to Andrew S. Mihalik
Continuation of application Serial No. 553,088, September 7, 1944. This application July 12, 1945, Serial No. 604,593
15 Claims. (Cl. 120—23)



1. A crayon box of the kind described, comprising a rectangular container with a flat top cover affixed thereto, a magazine within the container slideably disposed under said top cover and having a plurality of oblong cells extending parallel to each other, all being open at the bottom, and each providing space for one crayon, an extractor disposed slideably in the side of the container parallel to the cells but in the plane of the lower side of the magazine, means to slide the magazine laterally over the extractor to bring any desired cell over the extractor, a pivoted tongue axially disposed within the extractor, and spring means urging the tongue to enter the cell above the extractor, said tongue being normally kept in alignment with the surface of the extractor by a crayon, resting thereon.

2,446,897
PROCESS FOR POLYMERIZING OLEFINIC COMPOUNDS WITH METAL HALIDE-ORGANIC ACID DOUBLE SALTS
David W. Young, Roselle, and Henry B. Kellog, Union City, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 24, 1942, Serial No. 470,030
4 Claims. (Cl. 260—91)

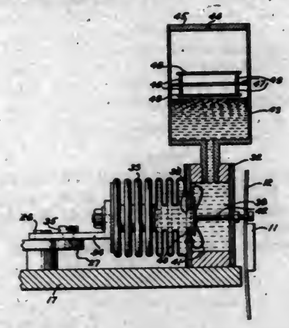


1. In a process for the liquid phase polymerization of an olefinic organic compound selected from the group consisting of isobutylene, butadiene, isoprene and styrene to form high molecular weight polymerization products of viscous to solid consistency, the improvement comprising subjecting the said olefinic compound to conditions causing polymerization at a temperature between —30 and —160° C. in the presence of a catalyst which is dissolved in the reaction medium and which is a double salt of a metal chloride and a saturated mono-basic fatty acid having from 1 to 3 carbon atoms per molecule, said double salt having both chlorine and organic acid radicals linked directly to the metal and said metal being at least one of the group consisting of aluminum and titanium.

2,446,898
CAN CRUSHER
Oscar E. Alvarez, Tampa, Fla.
Application May 5, 1947, Serial No. 746,123
2 Claims. (Cl. 153—10.5)

1. A can crusher comprising a base adapted to be fixed to a vertical support, a bottom crushing plate pivoted along one end edge to the lower end edge of the base, a crushing jaw pivoted at its lower end to the end edge of the bottom crushing plate opposite that which is pivoted to the base, a top crushing plate pivoted to the base at a point above the pivot of the bottom crushing plate and to the upper end edge of the jaw and a hand lever on the top crushing plate to swing the plates about their pivots and to advance the jaw toward the base.

2,446,899
CROSSTIE AND RAIL FASTENING MEANS
Elza C. Barnes, Attica, Ind.
Application November 26, 1945, Serial No. 630,717
9 Claims. (Cl. 238—275)



1. In a rail cross tie and fastening means, a channel tie with legs upwardly directed; an anchor plate of a length sufficient to rest upon and across the upper ends of said tie legs; a pair of legs disposed under said plate to have lower foot ends bear on the tie web interconnecting said tie legs, and transmit a load from the plate to the web thereby; each of said plate legs having a pin projecting therefrom from one vertical edge portion, said plate legs being placed one against the other to have the pin of one projecting oppositely from the pin of the other; said tie legs being provided with predetermined located holes to receive and hold said pins to fix said legs in position longitudinally of the tie; a pair of clamps, each having an upper rail base engaging arm extending along and above outer edge portions of said plate and a lower foot portion to extend below said plate; bolt means for interengaging said clamp foot portions through said plate legs; and means variably spacing said clamp foot portions from either outer face of said plate legs, whereby a rail engaged between said clamp arms may be variably positioned on said plate for desired track gauge.

2,446,900
SPRING OPENED INDEX
Samuel I. Berger, Newark, N. J.
Application February 16, 1946, Serial No. 648,060
3 Claims. (Cl. 40—104)

1. A sheet binder, comprising a base, resilient support studs for said base, a flanged cover hinged to said base, spring means urging the cover to open position, a releasable latch maintaining the cover closed, the rear studs being in the path of spring urged opening movement of the cover and serving as bumpers for arresting the rim of the rear portion of the cover flange.

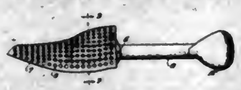
2,446,901
ARTICLE FEEDING APPARATUS
Charles O. Blaisdell, Oak Park, and Thomas A. Daniel, Downers Grove, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application August 31, 1945, Serial No. 613,774
7 Claims. (Cl. 51—135)

1. An apparatus for feeding an article against a working element, comprising a movable member for advancing the article against said element, a manual actuator for said member, a hydraulic system having a bellows attached to said actuator, chambered means in communication with said bellows for supplying fluid thereto during its expansion, and a spring-actuated valve within said means normally positioned to permit communication between said means and bellows and effective to close communication therebetween and thereby to stop movement of said actuator when a predetermined velocity of feed is exceeded.

5. An apparatus for feeding an article against a working element, comprising a support for an article, a slide for advancing the article on said support against said element, means for guiding said slide, an oil filled bellows, a hand lever pivoted to said support, operative connections from said lever to said slide and bellows for actuating the same, a movement of said lever to advance said slide, causing an expansion of said bellows, means normally in communication with said bellows for supplying oil thereto during its expansion, and means arranged between said bellows and oil supplying means effective to

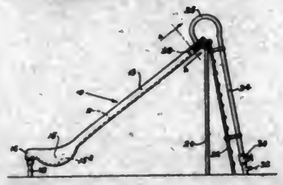
maintain communication therebetween during a predetermined velocity of feed and upon said velocity being exceeded to close such communication and prevent further feed.

2,446,902
ANKLE BANDAGE
Jane Brand, Pittsburgh, Pa.
Application May 29, 1947, Serial No. 751,207
2 Claims. (Cl. 128—166)



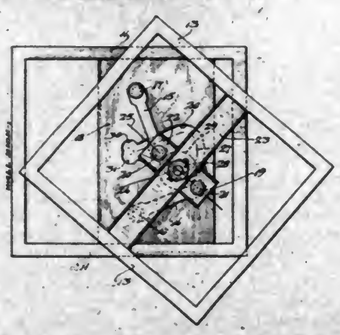
1. An elastic ankle support comprising a band of elastic material of greater length than width, a tape connected at its ends to the ends of said band at one side thereof, a second tape similarly connected to said band at the other side and in spaced relation to the first named tape, thereby forming a circlet structure, said tapes being narrower than said band, said band being long enough to overlie the ankle and extend from one side of it to the other side, and one of said tapes being adapted to overlie the heel and the other of said tapes to underlie the foot to thereby anchor the band in ankle-supporting position against normal ankle movements while leaving the heel uncovered, and said band being stretchable transversely but substantially incapable of stretch longitudinally of the ankle.

2,446,903
ASPHALTIC MOLDING MATERIAL
Elvin M. Bright, Milwaukee, Wis., assignor, by mesne assignments, to Fred A. Krause, West McHenry, Ill.
No Drawing. Application January 29, 1947, Serial No. 725,173
10 Claims. (Cl. 106—123)



1. A plastic molding material consisting of 60 to 70 parts by weight of 290° F. soft point black with brownish tinge petroleum asphalt characterized by specific gravity 1.14, viscosity 130, penetration at 77° F. nil; 2 to 10 parts of a plasticizing black petroleum asphalt characterized by 300° F. soft point, specific gravity 1.03, penetration at 77° F. 3; 2 to 10 parts lignin derivative derived by neutralizing black liquor of the soda process of manufacturing paper pulp by passing carbon dioxide containing gas therethrough, said neutralizing action being carried forward to a controlled pH value of 7 pH to 9.6 pH to thereby precipitate from the black liquor said lignin derivative; and filler materials as required.

2,446,904
SHOE TREE WITH A DESICCANT
Harold Frank Brush, Hoboken, N. J.
Application July 19, 1946, Serial No. 684,731
6 Claims. (Cl. 12—128)

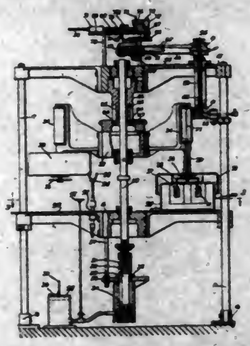


1. A shoe tree comprising a perforate body member, a hollow bar-member pivotally mounted thereon, a heel-brace associated with the bar-member at its heel end, said bar-member being adapted to receive in its hollow portion a perforate desiccant receptacle having an exterior annular ridge, and the bar member being provided with an annular interior groove to cooperate with the ridge on the desiccant receptacle to hold said receptacle therein.

2,446,905
PLAY SLIDER
Jesse H. Buffum, Boston, Mass.
Application November 8, 1945, Serial No. 627,362
2 Claims. (Cl. 272—56.5)

1. A play slider comprising a slide having a sliding surface, means to support said slide in an inclined position, said slide embodying a basin portion having a sliding surface that is a continuation of said first-mentioned sliding surface but which inclines downwardly more sharply than it and then inclines upwardly, a cover for said basin embodying a sliding surface which when said cover is in position is so positioned that it is a direct continuation of said first-mentioned sliding surface, and means to hold said cover to said slide.

2,446,906
REVERSIBLE SEAT
Edward Buker, Tarpon Springs, Fla., assignor to Coach & Car Equipment Corporation, Chicago, Ill., a corporation of Illinois
Continuation of application Serial No. 512,692, December 3, 1943. This application October 29, 1946, Serial No. 706,489
5 Claims. (Cl. 155—96)

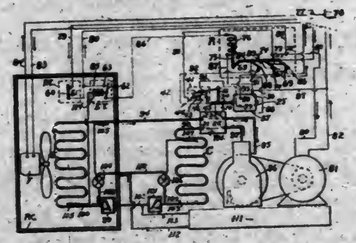


1. In a reversible seat structure, a base member, a seat member revoluble about a vertical axis and slidably supported on said base member and adapted during the reversing movement to follow a curved path, the opposite end portions of which intersect at a common point, means for controlling said path of movement comprising a pair of links arranged in overlapped relation and having their overlapped ends pivotally attached to the seat member at opposite sides of said vertical axis at equal distances therefrom and on a line passing therethrough and having their remote ends pivotally attached to the base at opposite sides of said intersection in said path of travel at equal distances therefrom and on a line passing therethrough, a trackway on the base conforming in contour to said path of travel, a stud depending from the seat member in axial alignment with the said vertical axis of the seat member and arranged to engage the said trackway, there being a head on said stud which projects beneath said trackway for preventing vertical and tilting movements of the seat member relative to the base.

2,446,907
ELECTRICAL APPLIANCE CORD
John F. Cavanagh, Providence, R. I., assignor to Nelson G. Burke, Warwick, R. I.
Application October 10, 1946, Serial No. 702,492
4 Claims. (Cl. 174—117)

1. An electrical appliance cord comprising a plurality of flexible insulated wires, a casing holding said wires together, a plurality of stiffening members within said casing and tandemly arranged with their ends spaced for the flexing of said wires at the location of the space between them to govern the packaging of said cord.

2,446,908
SPARK PLUG MANUFACTURE
Douglas Haynes Corbin, Dunstable, England, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 1, 1943, Serial No. 508,549
In Great Britain November 6, 1942
1 Claim. (Cl. 22—58)



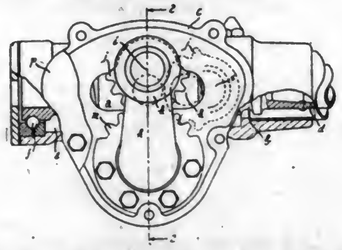
A machine for use in the manufacture of spark plugs embodying a frame structure, a rotatable and vertically displaceable lifting member mounted on said frame structure adapted to be moved step by step from station to station, a plurality of shafts rotatably supported by said lifting member, carrier members fixedly attached to each of said shafts for rotation therewith, means for pivotally suspending from the carrier members a plurality of insulators the bores of which have been already loaded with the metal required to form the core of the central electrode, said means permitting the insulators to swing outwardly under centrifugal force with the spark tip ends of the insulators directed outwardly, a pair of furnaces located at successive stations for heating the loaded insulators so that the metal becomes plastic or molten, means for slowly rotating the carriers while at said stations to produce even heating, means at a succeeding station for imparting a fast rotation to the carrier so that the loaded insulators are subjected to centrifugal force and the plastic or molten metal caused to fill the spaces to be occupied by the metallic core of a central electrode, and so that air and any trapped gases are expelled, cooling and unloading stations, means for intermittently moving said lifting member from station to station comprising an indexing cam, means associated with the lifting member and which cooperates with the indexing cam for effecting an indexing of the said lifting member and the carrier means supported thereby as determined by a raising and lowering of the aforesaid lifting member, a hydraulic means for effecting the raising of the said lifting member, pneumatic means for controlling the actuation of said hydraulic mechanism, and trip mechanism for governing the operation of the pneumatic means according to a prescribed time cycle.

2,446,909
KNIFE SHARPENER
Francis W. Davis, Belmont, Mass.
Application August 24, 1945, Serial No. 612,321
6 Claims. (Cl. 76—87)

1. A knife sharpener comprising a support, a pair of peripherally beveled hard sharpening disks, a headed pivot member securing each of said disks to said support in overlapping relation and with beveled peripheries facing in the same direction, a knurled knob also journaled on each pivot member and operatively engaging the adjacent disk, and a spring positioned between each pivot head and the adjacent knob and holding the adjacent disk and knob for frictional turning on said pivot.

2,446,910
CONTROLS AND SYSTEMS FOR DEFROSTING COOLING UNITS OF REFRIGERATING MACHINES
Lonnie A. Dickens, Archdale, N. C.
Application February 18, 1944, Serial No. 522,958
13 Claims. (Cl. 62—2)

1. In a refrigerating system wherein is provided a compressor, a condenser, a receiver and an evaporator and operating connections between the same by virtue of which operating connections refrigerating fluid is normally condensed in the condenser and evaporated in the evapora-



tor, the evaporator being located in a chamber to be cooled: the improvement which comprises mechanism to reverse the operations of the condenser and the evaporator for defrosting purposes, said mechanism including a reversing valve operatively connected to both sides of the compressor and to one end of each said evaporator and said condenser and separate expansion valves for the condenser and evaporator and thermostat means for controlling said expansion valves.

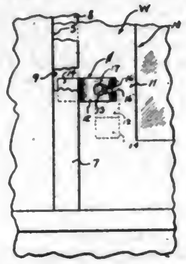
2,446,911

MECHANISM FOR TRANSFORMING LINEAR MOVEMENT OF ONE MEMBER INTO ARCUATE OR ANGULAR MOVEMENT OF ANOTHER MEMBER OR VICE VERSA WITH PARTICULAR REFERENCE TO SCREW AND NUT TYPE STEERING GEARS

John George Douglas, Aberfeldy, Scotland

Application February 1, 1945, Serial No. 575,670
In Great Britain February 7, 1944
8 Claims. (Cl. 74—499)

1. A vehicle steering gear including a screw-threaded spindle actuated by a steering wheel, a nut adapted to be moved axially by rotary movements of said spindle, a rocker arm through which movement is transmitted to a drop arm or the like of a steering transmission mechanism, a toothed gear rotatably mounted on the free end of said rocker arm, a pin or stud mounted on and eccentrically to the axis of said gear and in permanent engagement with a recess in said nut, and a second toothed member fixed concentrically and immovably around the axis of rotation of the said rocker arm and meshing with the first toothed gear whereby during axial movement of the nut movement is imparted to said rocker arm through the said pin or stud which makes substantially a straight line movement.



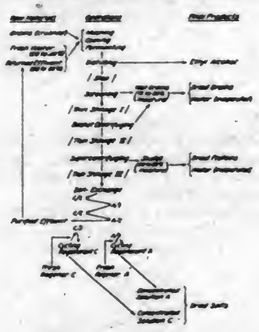
2,446,912

ANTIRATTLER FOR WINDOW SASHES

Margaret Erbach, Milwaukee, Wis.

Application December 4, 1945, Serial No. 632,662
1 Claim. (Cl. 292—342)

An anti-rattling attachment for a window of the type having a frame and a sliding sash comprising a resilient leaf spring having an arcuate body, an attaching foot on the inner end of said body, an outwardly extending arm formed on the outer end of the arcuate body arranged at an acute angle to the sash and adapted to be wedged between the sash and the frame, and means for pivotally connecting the foot to the sash, said means for pivotally securing the foot on the sash including a headed fastening element adapted to be connected to the sash with the head thereof spaced from the face of the sash, said body and said foot having a keyhole slot therein with the slot terminating in the foot and the enlarged outer end of the slot terminating substantially at the central part of the body, said slot forming



means for permitting the detachable securing of the attachment to the headed fastening element.

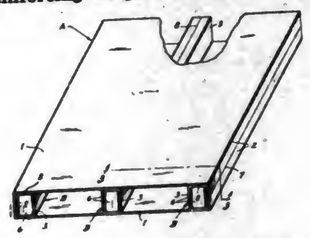
2,446,913

PROCESS OF UTILIZING PROTEINACEOUS WASTE LIQUIDS

Victor L. Erlich, New York, N. Y.

Application November 10, 1944, Serial No. 562,906
7 Claims. (Cl. 99—5)

1. The method of utilizing proteinaceous waste liquids, comprising recovering the insoluble proteins and carbohydrates by mechanical separation, then subjecting the clarified liquids to ion exchange to eliminate anions and cations, regenerating the cation exchanger by passing thereover an aqueous acid solution of a pH-value around 0, readjusting the pH of the outflowing regenerant solution again to 0–1.5 by adding fresh quantities of acids, passing the latter solution over the cation exchanger, continuing reinforcement and recycling until the concentration in solids reaches 10 to 20% of the regenerant liquid, and recovering the solids from the concentrated solution.



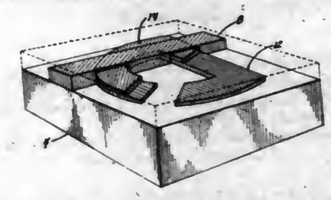
2,446,914

PALLET CONSTRUCTION

Clifford D. Fallert and John W. Meinhardt, St. Louis, Mo., assignors to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland

Application September 30, 1944, Serial No. 556,539
6 Claims. (Cl. 248—120)

1. A pallet construction comprising upper and lower decks and separate preformed sills interposed between and secured to said decks, all of corrugated board or the like, each of said preformed sills comprising a complete tubular casing and reinforcing strips mounted in said casing



and extending in a nested zig-zag fashion substantially from end to end thereof.

2,446,915

PHOTOGRAPHIC PROCESS OF PRODUCING A PRINTING IMAGE

Philip G. Filmer, Pleasant Ridge, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application July 13, 1946, Serial No. 683,374
3 Claims. (Cl. 95—5.6)

1. A method of producing a photographic printing image including coating of a transparent backing plate with an opaque lacquer, applying an identification coating of colored lacquer to the first coat of opaque lacquer applying a coating of light sensitive colloid to the lacquer, exposing the light sensitive coating to light rays under a master negative and developing to remove the colloid from the light affected areas over the lacquer, removing the lacquer over the area where the colloid is removed by dissolving with a lacquer solvent, and then removing the remaining colloid with water.

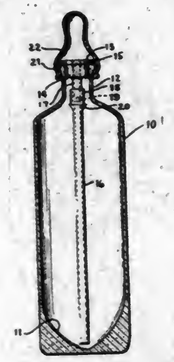
2,446,916

THERAPEUTIC COMPOSITION

Louis Freedman, Mount Vernon, N. Y., assignor to U. S. Vitamin Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application February 27, 1946, Serial No. 650,742
7 Claims. (Cl. 167—55)

1. A composition of matter comprising a hexahydric alcohol hexanitrate, a desensitizing agent therefor, a xanthine derivative having diuretic properties, and a member of the group consisting of nicotinic acid and salts thereof.



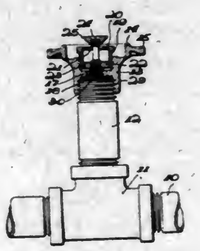
2,446,917

NURSING BOTTLE

Angelo L. Gaimari, Chicago, Ill.

Application December 28, 1946, Serial No. 719,063
5 Claims. (Cl. 215—11)

1. A nursing bottle providing a neck, a plug mounted in the neck, a hollow stem carried by the plug and extending into the bottle and having an opening formed therein adjacent to and below said plug, and a valve sleeve slidably



mounted upon said stem for controlling passage through said opening.

2,446,918

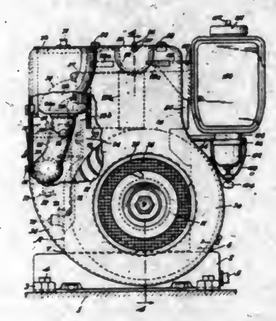
LAWN SPRINKLER HEAD

Holly R. Goddard, North Hollywood, Calif.

Application August 1, 1946, Serial No. 687,563
1 Claim. (Cl. 299—18)

A sprinkler head including a shell, a plug mounted therein, and a spray-pattern screw carried by said plug and provided with an inverted substantially pyramidal head having flat substantially triangular side faces and an upper face, said triangular side faces being separated by elongated flat faces extending substantially from the inverted apex substantially to the upper face.

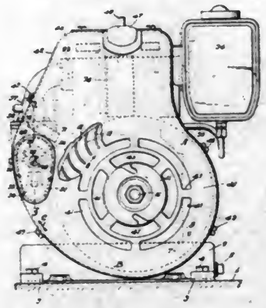
2,446,919



ENGINE UNIT

Harry Goldberg, Stanley Z. Siwek, Arthur R. Long, and William J. Carter, Chicago, Ill., assignors, by mesne assignments, to Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware

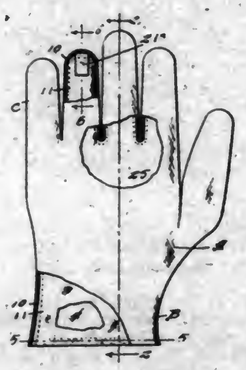
Application August 18, 1944, Serial No. 549,984
7 Claims. (Cl. 123—195)



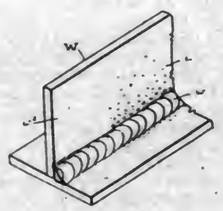
1. In an engine assembly, an internal combustion engine including an engine block and a crank shaft and fly wheel, with a fan component, a side plate, associated with the engine block, having an integral outward air inlet offset, an air

cleaner mounted on said offset, and a carburetor at the side of said plate opposite to said offset, in

the line of delivery of air from the air cleaner through said offset.



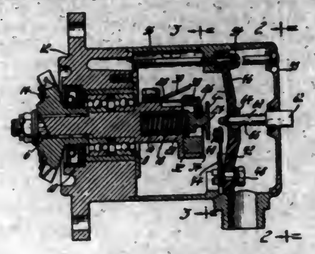
2,446,920
INTERNAL-COMBUSTION ENGINE AND AIR CLEANER THEREFOR
Harry Goldberg, Stanley Z. Siwek, and William J. Carter, Chicago, Ill., assignors, by mesne assignments, to Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware
Application January 8, 1945, Serial No. 571,844
14 Claims. (Cl. 123—195)



1. For use with a shroud and a fan in said shroud, an air cleaner assembly adapted to clean air drawn into said shroud by said fan, said assembly including a housing, mounted within said shroud, in the general line of delivery of air from said fan, said housing having an air inlet aperture masked by the housing itself from the direct delivery of air by the fan, and an air outlet duct extending from the interior of said housing to the exterior of the shroud.

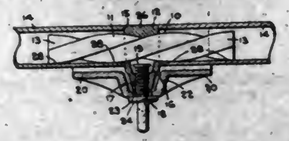
2,446,921
LINED RUBBER GLOVE
William F. Grant, Miami, Fla.
Application March 20, 1946, Serial No. 655,806
2 Claims. (Cl. 2—168)

1. A glove comprising an outer rubber member, an inner glove member formed of fibrous material, said inner glove member including tabs extending rearwardly from the finger tips, and means securing said tabs to the insides of the finger tips of said outer glove member, and providing a reinforcing lamination on one side of the finger tip.



2,446,922
WELDING SPATTER PREVENTION
Louis Grundner, Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a corporation of Ohio
Application November 3, 1944, Serial No. 561,754
5 Claims. (Cl. 117—6)

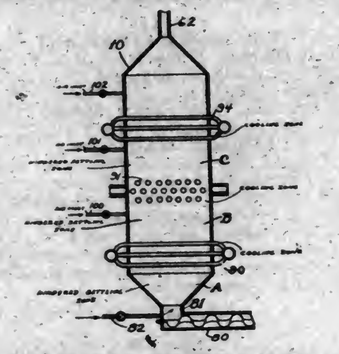
1. The method of preventing adherence on a workpiece of spatter from an arc-welding operation, which comprises applying to the surface to be protected a water suspension having a pH not substantially higher than 7 of a resinate containing principally an alkali metal salt of abietic acid, the water being readily evaporable to leave a thin adherent film of such resinate on such surface.



2,446,923
CENTRIFUGAL SWITCH
Vaughn H. Hardy, Rochester, N. Y., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 26, 1944, Serial No. 542,122
10 Claims. (Cl. 200—80)

1. In a centrifugal switch, the combination of a rotatable shaft, a spring-pressed circuit operating means on said shaft, a centrifugally-operated latch mounted on said shaft adapted to normally engage and hold said means in retracted position, and magnetic means cooperating with said latch adapted to modify the action of the

centrifugal force tending to release said latch on rotation of said shaft.



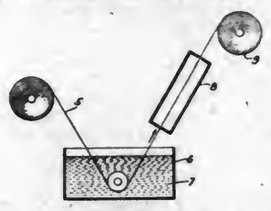
2,446,924
SCAFFOLDING
Albert Henry Hawes, Erdington, Birmingham, England, assignor, by mesne assignments, to Kwikform Limited, Small Heath, Birmingham, England, a British company
Application December 4, 1946, Serial No. 713,869
In Great Britain December 19, 1945
5 Claims. (Cl. 287—2)

1. A coupling for connecting a pair of scaffolding tubes in end-to-end relationship comprising a length of helically twisted polygonal metal bar, the ends of which are adapted each to enter one of the opposed ends of a pair of tubes to be connected, a collar secured permanently on the bar intermediate the ends thereof, a hollow boss on said collar integral therewith, said boss having a tapped hole, a clamping screw working in said hole, said clamping screw having an enlarged head on its inner end retaining it permanently on the collar, a clamping member having an outwardly extending central boss, said central boss having a hole in its outer end through which said clamping screw extends, said clamping member being of channel form in cross section and being adapted at its longitudinal edges only to engage with the tubes, a flange on the clamping screw for engaging the outer end of said clamping member boss, and a head on the screw adapted to be turned to rotate the screw and apply pressure to the clamping member and grip the tubes between the helically twisted bar and the longitudinal edges of the channel shaped clamping member.

2,446,925
CRACKING OF HYDROCARBONS WITH SUSPENDED CATALYST
Charles E. Hemminger, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 5, 1941, Serial No. 401,183
1 Claim. (Cl. 196—52)

A method of catalytically cracking hydrocarbons which comprises suspending powdered catalyst in hydrocarbon vapors, passing the suspension with an initial vapor velocity of less than 5 ft. per second upwardly in a reaction zone through a plurality of spaced heating zones disposed in said reaction zone, said heating zones being separated by unobstructed zones and arranged in such a manner that the velocity of the vapors within said heating zones rises above 5 ft. per second and drops again in said unobstructed zones below 5 ft. per second, withdrawing cracked products and fouled catalyst from said reaction zone, separating the fouled catalyst from the cracked products, suspending the separated catalyst in a regenerating gas and passing the suspension with an initial gas velocity of less than 5 ft. per second through a plurality of spaced cooling zones disposed in said regeneration zone, said cooling zones being separated by unobstructed zones, adding additional regenerating gas between the said cooling zones to the suspension in order to increase the rate of burning of the carbonaceous matter remaining on the catalyst, separating regenerated catalyst from the regeneration gases and recycling the regenerated catalyst to said reaction zone, said heating and cooling zones being arranged in such a manner that the velocity of the vapors and gas in said unobstructed zones is less than 5 ft. per second and that in the heating and cooling zones above 5 ft. per second, whereby hindered settling and thorough mixing of the catalyst and vapors in said unobstructed zones in said reaction zone and of the catalyst and gas in said unobstructed zones in said regeneration zone occur.

2,446,926
ELECTRIC SOCKET
Walter Edward Hill, Streetly, and Thomas Daniel Guy Wintle, Walsall, England
Application March 6, 1946, Serial No. 652,325
In Great Britain May 26, 1945
2 Claims. (Cl. 173—328)

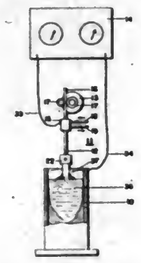


1. A socket for an electric coupling comprising coacting, semi-cylindrical parts each having adjacent complementary end portions which together form a socket shaped internally for engagement with a similarly shaped formation on a

plug adapted for insertion between said complementary end portions, the adjacent opposite end portions of each of said parts being closed except for a centrally located, substantially semi-circular cut out portion, a spring in the form of a sleeve disposed around the said adjacent complementary end portions and adapted for maintaining them in resilient pressure engagement with the inserted plug, a mounting screw extending through alined openings in said parts, and a spool-like bush positioned between the adjacent closed ends of said parts with the said closed ends positioned between the end flanges of said bush and with the walls defining the semi-circular cut out portions of said closed ends engaging the hub of said bush.

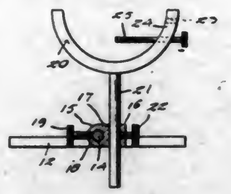
2,446,927
THICKENED LUBRICANT
Harris D. Hineline, Mount Vernon, N. Y., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application January 1, 1943, Serial No. 471,008
4 Claims. (Cl. 252—48.8)

1. A liquid lubricant comprising in combination a hydrocarbon oil, a polymer in solution therein comprising a major proportion of isobutylene interpolymerized with a minor proportion of a butadiene having from 4 to 15 carbon atoms per molecule, and a curing agent comprising sulfur chloride in chemical combination with the dissolved polymer.



2,446,928
METHOD OF MAKING DIELECTRIC MATERIALS
Frank B. Hodgdon, Naperville, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 13, 1943, Serial No. 482,866
2 Claims. (Cl. 117—138.8)

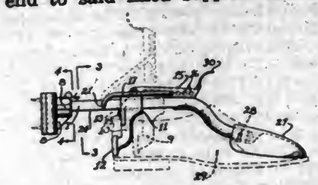
1. A method of making a condenser dielectric which comprises dissolving a binder selected from the group consisting of cellulose acetate and cellulose acetate butyrate in a solvent composed of 10% to 50% acetone and the remainder butyl alcohol, which alcohol substantially reduces the softening action of acetone or polystyrene, mixing comminuted titanium dioxide with the binder composition, coating the composition on a thin film of polystyrene, and drying the coated film.



2,446,929
METHOD AND APPARATUS FOR ELECTRICALLY HEATING MATERIAL
Robert K. Hopkins, New York, N. Y., assignor to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application December 22, 1945, Serial No. 636,991
12 Claims. (Cl. 219—15)

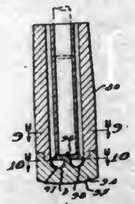
1. In the method of treating material by the discharge of electric current, beneath the surface of a depth of molten flux, from the end of an electrode substantially indestructible when its discharge end is submerged in a depth of molten flux, the steps comprising, depositing a depth of flux on the material to be treated, discharging electric current from the end of an electrode while

maintaining said indestructible electrode out of contact with said flux to heat a volume of said flux to a molten condition, submerging the discharge end of said substantially indestructible electrode in said volume of molten flux, and discharging electric current from said flux submerged discharge end.



2,446,930
DRAIN ASSISTER
Bruce A. Hower, Gary, Ind.
Application July 3, 1945, Serial No. 603,018
1 Claim. (Cl. 27—21)

An arm supporting means for a cadaver comprising a plate for positioning beneath the cadaver, an elongated arm extending horizontally from said plate and having a polygonal configuration in transverse section, a sleeve formed with a polygonal bore slidable along said arm, means locking said sleeve in adjusted position, a laterally projecting lug carried by said sleeve formed with a vertically disposed opening, a vertically disposed saddle supporting bar engaging through said opening, means securing said bar in adjusted position, a saddle carried by the upper end of said bar, and an arm clamping screw threaded through one side of said saddle for binding an arm thereon.

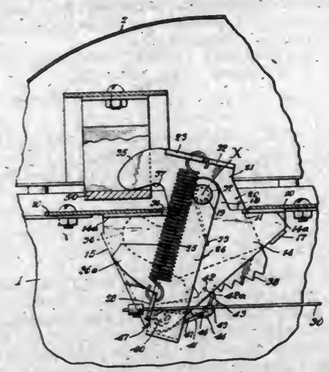


2,446,931
SHOE SHINING BRACKET WITH ADJUSTABLE SHOE TREE
Horace J. Jackson, Columbus, Ohio
Application September 10, 1946, Serial No. 695,923
4 Claims. (Cl. 12—128.6)

1. An improved shoe-shining bracket comprising a support, relatively movable shoe engaging members carried on said support, a lever fulcrumed upon and having a motion of translation with a moving member, and a link pivoted at one end to said fixed support and pivoted

at its other end to said lever at a point spaced from its pivot.

2,446,932
WELDING APPARATUS
Fred H. Johnson, Pleasant Ridge, Mich.
Application March 27, 1943, Serial No. 480,742
14 Claims. (Cl. 219—4)

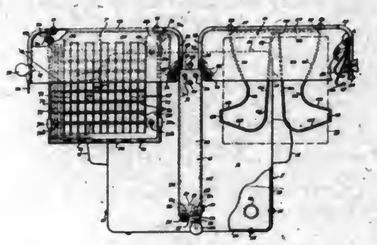


1. An electrode having a body provided with a work engaging face, and provided with means adapting it for removable connection to a supporting member having inflow and outflow coolant passages, said body having means defining separate inflow and outflow passages communicating respectively with said first-mentioned passages and through which coolant may be circulated between the supporting member and the body, said body passage defining means being immovable relative to each other, being in communication with each other in the region of said face, and being concentrically arranged.

2,446,933
ADJUSTABLE CYCLE SADDLE
Charles A. Jones, North Easthope Township, Ontario, Canada, assignor to Jones Manufacturing Company, Limited, North Easthope Township, Ontario, Canada, a corporation
Application January 6, 1945, Serial No. 571,646
13 Claims. (Cl. 155—5.24)

1. In a cycle saddle, means for adjustably mounting the saddle on a post comprising a pair of spaced apart saddle seat reach members, a clamp disposed between the reach members adapted to embrace the post, said clamp having a pair of leg members, one of the aforesaid pairs of members having registering longitudinal slots formed therein, and each member of the other of the aforesaid pairs of members having a hole and a substantially vertical slot, the hole in one member of said pair being opposite to and substantially in registration with the hole in the other member of said pair, the holes likewise being in registration with registering longitudinal slots in the first mentioned pair of members, and the vertical slot in one member of said pair, being opposite to and substantially in registration with the vertical slot in the other member of said pair, the vertical slots intersecting registering longitudinal slots in the first mentioned pair of members; and means for clamping the seat on the post and retaining same at a suitable angle relative to the post, said means comprising bolts extending through registering longitudinal slots and the holes and through registering longitudinal slots and the vertical slots, and means for tightening the bolts.

2,446,934
RATCHET TYPE LATCH
Walter H. Krause, Chicago, Ill., assignor, by mesne assignments, to Chicago Forging and Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application February 7, 1946, Serial No. 646,138
12 Claims. (Cl. 292—332)



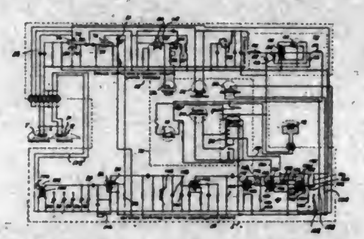
1. In a latch assembly adapted releasably to secure relatively movable members, a base, a latch member, pivoted on said base, having a set of ratchet teeth, a lever pivoted on said base concentrically with said latch member, a pawl on said base, adapted to oppose said ratchet teeth, yielding means for urging said pawl toward said teeth, means for releasing said pawl from said ratchet teeth during unlatching movement of said lever and an over-center yielding connection between said lever and said latch member, adapted to hold said latch member selectively in open or closed position in response to the relative positions of said lever and said latch member.

2,446,935
AUTOMATIC ELECTRIC TOASTER
Oscar G. Kreer, Detroit, Mich.
Application July 5, 1944, Serial No. 543,545
4 Claims. (Cl. 99—338)

1. An automatic electric toaster, comprising a base, a stationary vertical frame thereon, a pair of movable casing sections hinged to said frame to swing horizontally in opposite directions into closing engagement with said frame and form a toasting chamber therebetween, heating elements carried by one of said casing sections and arranged in superposed vertically-spaced relation, and food holders carried by said other casing sec-

tion and swingable therewith into positions disposed between adjacent heating elements when

said sections are in closed engagement with said frame.

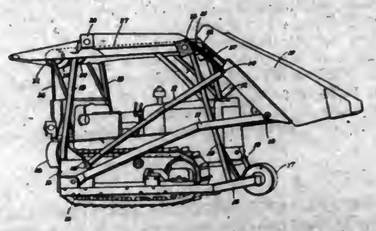


2,446,936
CONVEYER
Warren J. Leithmann, Jr., Roxborough, and Alpheus O. Hurxthal, Wyncote, Pa., assignors to Proctor & Schwartz, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application February 11, 1947, Serial No. 727,746
8 Claims. (Cl. 198—195)

2. In a conveyor, an apron comprising a plurality of slats having aligned spaced apart hinge portions along opposite edges thereof disposed in complementary interfitting association with the hinge portions of adjacent slats, the hinge portions in preselected locations along opposite edges of the slats being omitted to provide clearance space between adjacent slats, pads associated with said slats and extending continuously about the interior of the conveyor apron to provide a substantially continuous smooth bearing surface for the apron, hinge portions arranged in aligned spaced apart relation at opposite edges of said pads and positioned in said clearance space in complementary interfitting association with the hinge portions of adjacent pads and in alignment with the interfitting hinge portions of the slats, common means pivotally connecting said interfitting hinge portions of the slats and pads to provide an articulated structure, and support means for the conveyor in the working course of travel thereof disposed in underlying relation to the pads.

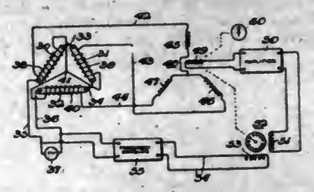
2,446,937
ECHO SOUNDING INDICATOR
George T. Lorance, Chappaqua, N. Y., assignor to International Projector Corporation, New York, N. Y., a corporation of Delaware
Application March 10, 1945, Serial No. 582,117
2 Claims. (Cl. 177—386)

1. In an echo sounding indicator, a reflector containing two magnetostriction oscillators one for transmitting a pulse when energized and the other for receiving the echo of such pulse, a pulse transmitter circuit comprising a capacitor, a direct current charging circuit connected to said capacitor, a grid-controlled gas-filled tube adapted when fired to discharge said capacitor through the pulse transmitting magnetostriction oscillator, an electronic oscillator coupled to said tube for firing the tube at a predetermined uniform rate such that the interval between pulses is sufficient to allow the first echo of each pulse to be received before the next pulse is transmitted, means for adjusting the firing rate of said tube, and a frequency meter connected to indicate such firing rate, a receiver amplifier circuit the input of which is coupled to the echo receiving magnetostriction oscillator, a timing circuit comprising two grid-controlled space discharge devices, the input circuit of the first device being coupled to said capacitor and the input circuit of the second device being coupled to the output of said receiver amplifier circuit, a network of resistors connecting the input and output circuits of said devices so that a trigger circuit is provided and direct current flows in the output circuit of the second device only during



the time interval between the instant a pulse is transmitted and the instant the first echo of such pulse is received, and a direct current measuring instrument calibrated in terms of depth and responsive to the average value of such current over a series of such successive intervals of time, and a coupling between said receiver amplifier circuit and said second device comprising a grid-controlled vacuum tube the grid of which is normally biased a little beyond cut-off to prevent accidental operation from noise, the plate voltage of said vacuum tube being derived from said timing circuit in such a way that such voltage is at a maximum value until an echo pulse has been received, whereupon such voltage drops to a minimum value, providing protection against accidental operation by echoes other than the first.

2,446,938
OVERHEAD LOADER
Albert Arthur Losch, Rydalmere, New South Wales, Australia, assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Application December 18, 1946, Serial No. 717,014
In Australia December 21, 1945
1 Claim. (Cl. 214—131)



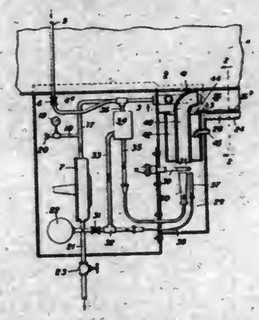
An overhead loading unit for attachment to a tractor, such unit comprising a chassis frame, means for attaching the chassis frame to a tractor, a scoop, push beams and articulated arms interposed between and pivotally connected with the chassis frame and scoop respectively, an upstanding front frame and an upstanding rear frame on the chassis frame, an overhead structure supported by said upstanding frames, a hauling shaft journaled in said overhead structure adjacent the rear end thereof, a central drum on said hauling shaft, a cable reeved on the drum

and adapted for connection with an operating winch on the tractor, a pair of spaced hauling shaft, a pair of sheaves journaled on the overhead structure adjacent the forward end thereof, a pair of sheaves journaled on the overhead structure adjacent the rear end thereof, a pair of spaced guide sheaves supported in the overhead structure at a point intermediate the said front and rear sheaves, another pair of guide sheaves

supported adjacent the forward end of the overhead structure in substantial alinement with said first named guide sheaves, a lift sheave swivelmounted at the forward end of each of the push beams, and a cable secured about one of the hauling drums and then reeved through all the sheaves and being secured at its other end about the other hauling drum, all whereby upon rotation of the hauling shaft the scoop will be lifted and swung rearwardly into discharging position.

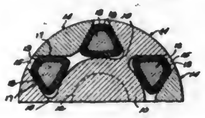
2,446,939
FREQUENCY DOUBLING TRANSFORMER
Alan M. MacCallum, Maywood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application September 16, 1944, Serial No. 554,511
9 Claims. (Cl. 177—380)

1. A magnetic induction device comprising a core of magnetically permeable material adapted to be traversed by the flux of a magnetic field, means for passing energizing current through said core to periodically vary the permeability of said core whereby said flux periodically enters and leaves said core, and coil means wound on and inductively coupled with said core energized by the passage of said flux in said core.



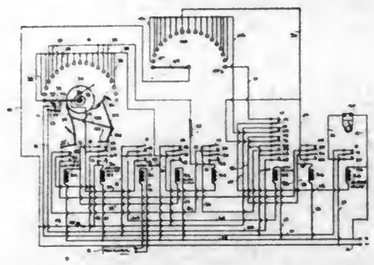
2,446,940
AIR PRESSURE STAGE LIFT
Bently L. Mahon, Grand Prairie, Tex.
Application July 2, 1946, Serial No. 681,109
5 Claims. (Cl. 103—233)

1. An air stage lift including in combination with an elongated tubular housing, a pipe positioned within said housing, means for introducing air into said pipe, a multiplicity of spaced apart exhaust units connected in said pipe, each of said units having a plurality of adjustable jets circumferentially spaced thereon and means attached to the lower end of said tubular housing for pre-cleaning instant foreign matter entrained



in the liquid drawn into said housing by the fluid displacing action of said units.

2,446,941
VAPORIZING APPARATUS FOR LIQUEFIED GASES
James Woodward Martin, Dallas, Tex., assignor to Lone Star Gas Company, Dallas, Tex.
Application August 6, 1946, Serial No. 688,767
5 Claims. (Cl. 62—1)

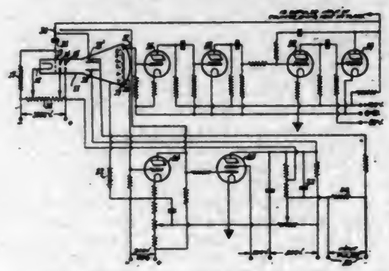


1. Heating apparatus comprising a tank to contain a medium to be heated, a casing at the lower side of said tank including a burner box and an elongated heat chamber above said burner box, said heat chamber extending along the tank so that the latter may be heated from the heat chamber, a flue establishing communication between said burner box and said heat chamber, said flue including a leg extending into said burner box and terminating in an inlet and a portion extending into said heat chamber and terminating in an outlet, means for admitting air into said burner box, a burner in said burner box aligned with said leg of said flue, whereby products of combustion pass directly from said burner into said inlet of said flue, a receptacle in the burner box surrounding the flue and adapted to be heated by hot gases passing therethrough, and means whereby water condensed in the heat chamber may gravitate therefrom into said receptacle.

2,446,942
ELASTIC ROTATIONAL SYSTEM
Forest R. McFarland, Huntington Woods, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 18, 1942, Serial No. 466,002
9 Claims. (Cl. 64—14)

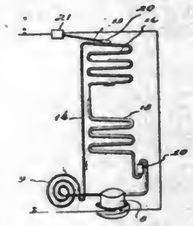
9. A coupling for two rotatable members comprising overlapping jaw members having substantially flat outwardly converging driving and driven contact surfaces, resilient means engaging said contact surfaces, and centrifugally actuated members associated with the resilient means to shift outwardly the contact of the resilient means with said contact surfaces of the jaw members in proportion to increase of speed.

2,446,943
AUTOMATIC RADIO CALL APPARATUS
William Walter McGoffin, Olympia, Wash., assignor of one-fifth to S. S. Baker, New York, N. Y.
Application October 28, 1944, Serial No. 560,862
8 Claims. (Cl. 177—353)



1. In a signalling system for identifying a transmission of Morse code letters constituting a desired call, the combination of an alarm, electrical circuit means to operate said alarm, a dual selector device connected on the one hand to dot or dash, and on the other hand to interval or space circuits, and operating to effectively advance from a starting position to a position where it closes said electrical circuit means when a complete desired transmission has been received, first relay means for actuating said selector device in the desired advance, second relay means for returning the device to said starting position when an improper signal is received during said transmission, a first time delay relay closing on incoming signals of dash length whereby the operation of said first time delay relay characterizes the reception of a dash as distinguished from a dot, non-operation thereof determining the dot character of the pulsation and being operative to withhold operating power from said second relay means so as to permit the advance of said selector device when said selector device has been set to a dot position, and operation thereof permitting the advance of the selector device when it has been set to a dash position by similarly withholding operating power to said second relay means, a second time delay relay operated by incoming signals and releasing at signal interruptions of space length whereby the release of said second time delay relay characterizes the reception of a space as distinguished from an interval, non-release thereof determining the interval character of the interruption so as to permit the advance of said selector device when it is set to interval position by withholding operating power from said second relay means and operation thereof permitting the selector device to advance when set to space position by similarly withholding operating power from said second relay means whereby both of said time delay relays are operable on said second relay means so as to cause said selector device to be returned to starting position when an improper character or interruption is received.

2,446,944
HIGH CAPILLARITY LUBRICATING OIL
John D. Morgan, South Orange, N. J., assignor to Cities Service Oil Company, a corporation of Pennsylvania
No Drawing. Application July 17, 1945, Serial No. 605,629
4 Claims. (Cl. 252—49.8)

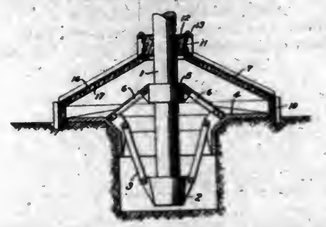


1. A lubricating oil composition comprising from about forty to sixty per cent of a light bodied mineral lubricating oil, from about fifteen to thirty per cent of a petroleum solvent selected from the group consisting of kerosene, No. 2 furnace oil and Stoddard solvent, from about ten to fifteen per cent of secondary butyl alcohol, from about five to fifteen per cent of commercial xylol, and from about two to about three per cent of tri-n-butyl phosphate.

2,446,945
ELECTRONIC COMPUTING DEVICE
George A. Morton, Haddon Heights, and Leslie E. Flory, Oaklyn, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application August 25, 1942, Serial No. 456,012
17 Claims. (Cl. 250—27)

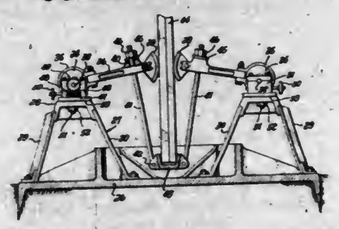
2. A cathode ray tube circuit for counting voltage pulses including a cathode ray tube having ray generating means, ray deflecting means, at least one target electrode, and an apertured electrode positioned between said deflecting means and said target electrodes for screening said target electrodes, means for applying said pulses to said ray deflecting means to deflect said beam across said target electrodes and means including said target electrode for accurately positioning said beam in one of said apertures in said apertured electrode after each application of said pulses to said deflecting means.

2,446,946
TWO-TEMPERATURE REFRIGERATION SYSTEM
Evans T. Morton, Indianapolis, Ind., assignor, by mesne assignments, to Admiral Corporation, Chicago, Ill., a corporation of Delaware
Application March 8, 1943, Serial No. 478,342
12 Claims. (Cl. 62—116)



1. The combination with an insulated cabinet having a food storage chamber therein, of partition means dividing said chamber into compartments one underlying another, and refrigerating apparatus for cooling said chamber; said refrigerating apparatus including a liquefying unit and a continuous length of tubing connected at its opposite ends to said unit; said tubing being formed to provide an evaporator and a capillary expansion tube device arranged to discharge into said evaporator; said evaporator being made up of sections of successively increasing internal cross section and arranged one in heat exchange relation with each of said compartments; the bore of each of said sections being of uniform cross sectional area from the inlet end thereof to the outlet thereof; and the evaporator being so arranged that the section having the bore of smallest cross sectional area cools the uppermost compartment while the section having the bore of largest cross sectional area cools the lowermost compartment.

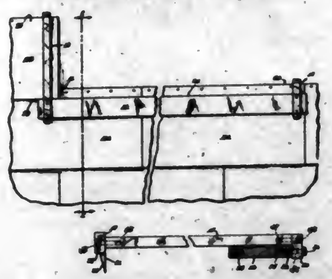
2,446,947
POLYMERIZATION PROCESS
John C. Munday, Cranford, and Robert V. J. McGee, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application January 19, 1946, Serial No. 642,393
10 Claims. (Cl. 260—683.15)



1. In a process of producing isobutene trimer, the steps which comprise contacting isobutene monomer with sulfuric acid of between 70% and 80% strength at a polymerization temperature between about 35° F. and 140° F., limiting contact of the monomer with the acid to a period less than 5 minutes whereby C_{12} polymers are formed in a major volume proportion with respect to lighter and heavier polymers, and separating the resulting polymer product from the acid before increased formation of said heavier polymers makes their volume proportion exceed a final volume proportion of said lighter polymers and before the volume per cent of said heavier polymers exceeds 10 volume per cent of total polymers formed.

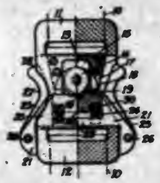
2,446,948
DEVICE FOR PREVENTING UNDERGROUND FREEZING
Richard J. Neutra, Los Angeles, Calif.
Original application January 4, 1943, Serial No. 471,307. Divided and this application September 18, 1944, Serial No. 554,706
3 Claims. (Cl. 189—42)

1. The combination with an upright column having its lower end supported in a column-supporting member, of a cover enclosing and preventing the freezing of the soil adjacent the column-supporting member, said cover comprising a sectional hollow metal shell laterally assembled about the column-supporting member, a layer of heat-insulating material upon one of the surfaces of the shell, an opening at the top of the shell for passing the column, said shell being open at its bottom and the lower edge of the shell being penetrable into the soil to seal the lower end of the shell, a tubular member surrounding the opening and a packing of compressible material confined within the tubular member and closing the space between the tubular member and the column.



2,446,949
FOUNDATION DEVICE FOR LOAD SUPPORTING COLUMNS
Richard J. Neutra, Los Angeles, Calif.
Application August 4, 1945, Serial No. 608,938
8 Claims. (Cl. 189—42)

1. A foundation device for load supporting columns for houses and buildings of any kind, comprising a base member intended to be placed upon the surface of the ground, a shoe for the bottom of a column intended to be fixed by the foundation in an upright position, a plurality of cams arranged around the space where a column is to be placed, so that they suitably fit to jam the column from different sides between one another at a level above the said shoe, eccentrically positioned pivots for the said jamming cams, a lever for each of the jamming cams, these levers being arranged around the space for the column in radial planes, the outer end of each of these levers being pivotally connected with the said base member, and the inner end of each of these levers containing the bearings for the pivots of the corresponding jamming cam, and bars, by means of which these levers are connected to the

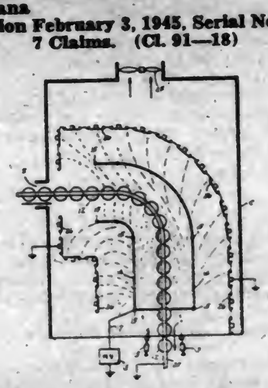


said shoe and which transmit the weight and load of the column, to be supported by the shoe, to the said levers, turning these levers downward in order to press the jamming cam toward the column when the column is positioned in said shoe.

2,446,950
APPLICATOR'S GUIDE
Elmer Parkhurst, Indianapolis, Ind.
Application September 9, 1946, Serial No. 695,790
4 Claims. (Cl. 33—187)

4. An applicator's guide for use in installing lapped siding or the like, including a pair of hangers, each comprising an elongated body, a sharpened element removably secured to one end of said body and presenting a plane surface projecting laterally from said body and facing toward the other end of said body, said element further providing a surface spaced longitudinally beyond said plane surface, substantially perpendicular thereto, located near the root of said surface, and facing in the direction of projection thereof, a supporting block at said other end of said body and presenting a plane surface projecting laterally from said body, facing said first-named plane surface, substantially parallel therewith, but of less lateral extent, and a straight-edge bar extending between and supported near its opposite ends upon the plane surfaces of said blocks, the distance between said two plane surfaces of one hanger exceeding the distance between said two plane surfaces of the other hanger by an amount slightly greater than the height of a siding element or the like to be used, reduced by the desired amount of lap.

2,446,951
DISCONNECTIBLE PUSH COUPLING
John Raymond Cuthbert Quilter, Woking, England
Application October 14, 1946, Serial No. 703,234
In Great Britain October 31, 1945
7 Claims. (Cl. 24—211)

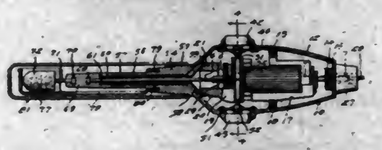


1. A disconnectible push coupling, comprising two coupling members, retaining means upon one of said members for engaging the other of said members, a spring-biased slide upon said one member normally locking said retaining means in engaged position, and spring-biased releasing means mounted upon said one member, said releasing means being adapted for sliding movement axially of the coupling and independently of said slide, and spring biasing means common to said slide and said releasing means.

2,446,952
FRUIT AND VEGETABLE COMMINUTOR AND DRIER
Oliver W. Randolph, Toledo, Ohio
Application April 11, 1942, Serial No. 438,653
3 Claims. (Cl. 241—65)

1. Material subdividing drying apparatus comprising a housing section, material subdividing beater means adapted to act upon supplied material to effect comminution thereof during drying, supply means to the section for material-to-be-dried-and-subdivided, supply means to the section for drying air, a screen wall portion for the housing at the beater providing a discharge therethru for fines passing thru the screen, and an additional discharge into which the beater is effective to deliver material not passing thru the screen.

2,446,953
APPARATUS FOR ELECTROSTATICALLY COATING ARTICLES
Harold P. Ransburg, Indianapolis, Ind., assignor, by mesne assignments, to Ransburg Electro-Coating Corp., Indianapolis, Ind., a corporation of Indiana
Application February 3, 1945, Serial No. 575,955
7 Claims. (Cl. 91—18)



1. Apparatus for electrostatically coating articles including a discharge electrode spaced from said articles, a collecting electrode having a surface spaced from said discharge electrode on the other side thereof from said articles, means for establishing a primary electrostatic field between said discharge electrode and articles and a secondary electrostatic field between said discharge electrode and collecting surface, and means for atomizing coating material into said primary field for electrostatic deposition on said articles, said secondary field acting to precipitate on to said collecting surface material escaping from said primary field into said secondary field.

2,446,954
SOYA MEAL-SEWAGE SLUDGE ADHESIVE
Donald V. Redfern, Seattle, Wash., assignor to Adhesive Products Company, Seattle, Wash.
Application October 9, 1943, Serial No. 505,641
2 Claims. (Cl. 106—154)

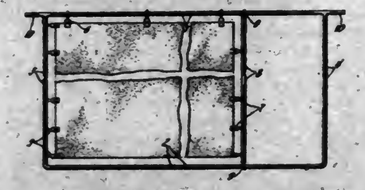
1. A proteinaceous adhesive consisting essentially of soya meal, undigested activated sewage sludge, and an alkali metal hydroxide in an aqueous medium; said sludge being present in sufficient amount to give a more uniform viscosity with respect to time, a lower rate of break down, a greater water resistance and holding power, and a lower foam value.

2,446,955
ROTARY TOOTHBRUSH
William G. Robey, Grafton, W. Va.
Application May 28, 1945, Serial No. 596,157
4 Claims. (Cl. 172—36)

3. In a device of the kind described, a motor casing, a motor supported concentrically therein and extending longitudinally therein, a pair of diametrically oppositely arranged push buttons carried by said casing movable interiorly thereof, means guiding said push buttons in movement, resilient means in opposition to which said push buttons move, and a pair of fixed and movable contacts arranged on said motor opposite to each push button, the parts of each set of contacts being engageable by one of said push buttons selectively.

2,446,956
MEAT TESTING FORK
Matthew Ross, Rego Park, N. Y., assignor to Hi-Seat Corporation, New York, N. Y., a corporation of New York
Application March 19, 1946, Serial No. 655,425
1 Claim. (Cl. 73—81)

A fork for testing the tenderness of meat and the like, comprising a fork bar of flat material having meat penetrating fork tines at one end, a flat, narrow shank portion in back of said fork tines, a flat, narrow shank portion at the opposite end and a wider, intermediate portion between said narrow shank portions, a handle in two opposed parts having narrow, flat channels in the mating faces at opposite ends of the same slidingly receiving said narrow, flat shank portions of the bar and an elongated intermediate enlarged chamber portion freely receiving the wider intermediate portion of the flat bar, a spring surrounding said narrow shank portion at said opposite end of the bar and engaged between the inner end of said wider portion of the bar and the back wall of said chamber in the handle for thrusting said bar outward of the handle to the extent permitted by engagement of the outer end of the wider bar portion with the front wall of said chamber and cooperative markings on the



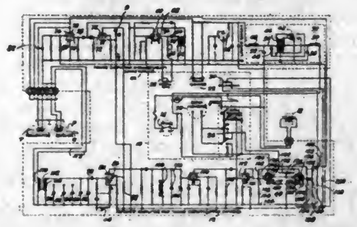
bar and handle serving, in relatively repressed positions of the fork bar in the handle, to indicate grades of meat tenderness and the like.

2,446,957
PROCESS FOR PRODUCING NICOTINAMIDE
Hans R. Rosenberg, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 14, 1943, Serial No. 472,383
3 Claims. (Cl. 260—295.5)

1. A process for producing nicotinamide which comprises heating 3-cyano-pyridine in the presence of water and an organic amine.

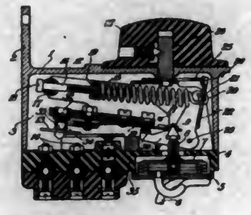
2,446,958
FILM-DEVELOPING HOLDER
Charles W. Rowland, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 31, 1945, Serial No. 585,845
3 Claims. (Cl. 95—100)

1. For protectively holding stretched out a photographic film sheet to facilitate handling during the development process, a light-weight frame comprising top and bottom rails and a pair of vertical end rails fixedly joined in rectangular outline, a vertical spreader rail having slider members swivelly and rockably mounted at opposite ends and selectively clutchable with said top and bottom rails of the rectangular frame in any position of relative adjustment in the space between said end rails, inwardly facing clips fixedly secured on one only of the vertical end rails to engage a side edge of a film sheet, cooperating clips fixed on the spreader rail to engage the opposite edge of the sheet in both



positions of swivelled adjustment of the spreader bar either facing toward or away from the first mentioned clips dependent on whether the sheet is shorter or longer, respectively, than the frame space and weight supporting clips for the intermediate sheet portion engageable with the top edge of the sheet and with the top rail to prevent sheet sag.

2,446,959
COAT FOUNDATION
Nicholas Sacchetti, Upper Darby, Pa.
Application May 9, 1946, Serial No. 668,581
7 Claims. (Cl. 2—97)

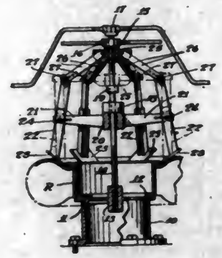


1. A garment foundation unit having a neck recess, an armhole recess, and a suture edge extending from one to the other of said recesses; said unit comprising a plurality of superposed plies of textile materials including a stiffening ply and each having a marginal edge corresponding to said suture edge, said stiffening ply having a second edge substantially parallelling said marginal edge thereof and having an overlap formed therein along said second edge to effect bulging of said stiffening ply from a normally planar state into a non-planar state underlying the remaining plies in said structure, and a boot-shaped gusset inserted in each of at least some of said remaining plies with a leg portion disposed perpendicularly to said marginal edge thereof and a foot portion extending from said leg portion toward said armhole recess at a diverging angle with respect to said suture edge.

2,446,960
ECHO SOUNDING INDICATOR
Fred L. Seebinger, Jr., Vallejo, Calif., assignor to International Projector Corporation, New York, N. Y., a corporation of Delaware
Application March 10, 1945, Serial No. 582,149
6 Claims. (Cl. 177—386)

1. In combination, an echo sounding transmitter circuit including means for electronically generating and transmitting pulses at a constant frequency and fixed rate, a gas-filled grid-controlled tube, circuit means for impressing said electronically generated pulses on the input circuit of said gas-filled grid-controlled tube causing it to fire each time a pulse is transmitted, an echo sounding receiver circuit including a screen-grid vacuum tube amplifier having a screen-grid circuit, a resistance connected in said screen-grid circuit and in the output circuit of said gas-filled grid-controlled tube for reducing the gain of said amplifier, when said gas-filled tube fires, to such an extent that said receiver circuit is incapable of passing pulses transmitted directly from said transmitting means to said receiver circuit, and means for restoring the gain of said amplifier before an echo pulse is received.

2,446,961
THERMOSTATICALLY OPERATED ELECTRICAL SWITCHING DEVICE
John Edward Sherlock, Sunbury-on-Thames, England, assignor to The British Thermostat Company Limited, Sunbury-on-Thames, England, a British company
Application January 5, 1946, Serial No. 639,373
In Great Britain July 3, 1945
3 Claims. (Cl. 200—140)

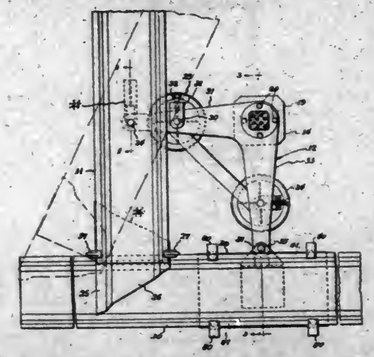


1. A thermostatically operated electrical switching device comprising, in combination, a pivotally mounted switch component, fixed switch components, a self-aligning contact element carried by said pivotally mounted switch component and cooperable with the fixed switch components, a flexible bellows movable in response to variations in temperature of the apparatus under control, means actuated by said bellows to rock the pivotally mounted switch component on its pivotal axis, a pivotally mounted two-armed lever, a spring connecting one arm of said lever to the pivotally mounted switch component at a point remote from its pivotal axis, means carried by the second arm of said lever and operative to lift the pivotally mounted switch component to an inoperative position, and a manually operable cam device for adjusting the position of said two-armed lever to vary the load imposed on the spring and for adjusting said lever to a further extent to lift the pivotally mounted switch component to an inoperative position.

2,446,962
HEAD SUPPORT FOR HAIR DRIERS
Kenneth B. Spring, Des Moines, Iowa
Application August 14, 1946, Serial No. 690,406
3 Claims. (Cl. 34—90)

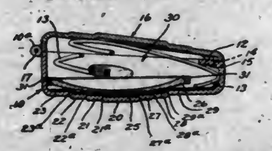
1. In combination with a hair dryer having a rimmed opening, a detachable continuous circular spring member capable of engaging the inner side of said dryer for rigidly securing the same to said hair dryer at times, diametrically opposed loop portions formed in said spring member and extending downwardly to a point below the bottom plane of said rimmed opening, and a chin strap having its two ends secured to said two loop portions, respectively; said loop portions also providing sufficient flexibility to said spring member to permit its collapsing for placement in and removal from said hair dryer.

2,446,963
AXIALLY SHIFTING TYPE SCREW SHAFT ACTUATED TIRE REMOVING DEVICE
Henry Stolz, Bound Brook, N. J.
Application February 8, 1945, Serial No. 576,759
1 Claim. (Cl. 157—6)



In tire removing apparatus for removing tires from solid rims having a fixed flange, means to support the rim at its unflanged edge, a jack screw axially threadedly engaging the support, a spider carried by said screw and within which the screw may rotate, a plurality of circumferentially spaced vertical levers pivoted to the spider and each provided at its lower end with a rigidly attached tire engaging iron, a thrust collar on said jack screw to engage said spider, means to simultaneously shift the levers about the pivots thereof to engage the irons with the rim beneath the flange thereof comprising a collar slidable on the jack screw, links pivotally connected to said levers and said collar, means to shift the collar longitudinally of the jack screw and means to rotate the jack screw.

2,446,964
SEWER MOLE
Frank Stone, Lakewood, Ohio
Application June 26, 1944, Serial No. 542,193
4 Claims. (Cl. 287—108)

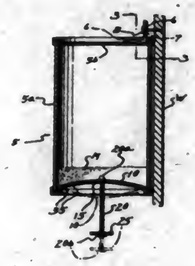


1. A sewer mole drive shaft comprising a plurality of flexible rods and a universal coupling connecting adjacent rods comprising a sleeve carried by one rod, a transverse pivot pin carried by said sleeve, and a reverse bend in the end of an adjacent rod, said reverse bend being loosely engaged within said sleeve and said pin being loosely engaged within said reverse bend, whereby said coupling permits limited universal angular movement of one rod with respect to an adjacent rod.

2,446,965
ANGLE DRIVE FOR SHAKER CONVEYERS
Howard C. Sweeten, Hazard, Ky., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 13, 1946, Serial No. 683,467
5 Claims. (Cl. 198—220)

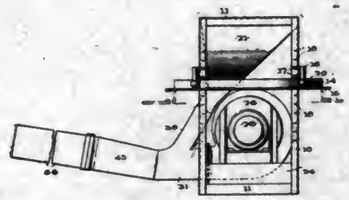
1. A right angle drive for a shaker conveyor including a conveyor trough line, a feeder trough adapted to discharge into said trough line, a bell crank for driving said feeder trough from said trough line, and means for detachably connecting one lever arm of said bell crank to said trough line at various desired points therealong for permitting said feeder trough to discharge into said trough line at various desired positions along said trough line including an adapter trough conforming substantially to the form of the troughs of the trough line, and clamping means for clamping said adapter trough to said trough line.

2,446,966
SPECTACLE CASE
George Swikart, Yonkers, N. Y., assignor to Plastal Corporation, New York, N. Y., a corporation of New York
Application April 20, 1945, Serial No. 589,348
1 Claim. (Cl. 206—6)



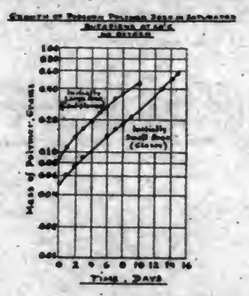
In a case for spectacles, a hinged top portion and a bottom portion, said bottom portion having a depression extending longitudinally and substantially medially of the case, said depression being bounded on each side by a plurality of step portions leading upwardly toward each side of the case, said step portions extending the length of the depression and connected at their ends by transverse step portions, said step portions forming ribs adapted to support the lenses when the spectacles are positioned in the cases.

2,446,967
SOAP DISPENSER
Wesley P. Sykes, North Hollywood, Calif., assignor to Turco Products, Inc., Los Angeles, Calif., a corporation of California
Application June 26, 1944, Serial No. 542,160
3 Claims. (Cl. 222—202)



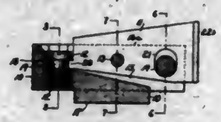
1. A dispensing device comprising a container adapted to contain a powdered material, said con-

tainer having a perforated flexible material dispensing end wall so concaved that it is capable of automatically suddenly flexing into convex



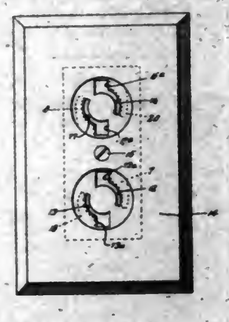
shape when its central portion is moved past the plane of its periphery, and a pull member affixed to the central portion of said end wall.

2,446,968
GRAIN TRIMMER
George E. Toner, Philadelphia, Pa., assignor to Benjamin H. Sobelman, Philadelphia, Pa.
Application November 23, 1945, Serial No. 630,526
3 Claims. (Cl. 302—36)



1. In a grain trimmer, the combination of a skeleton frame adapted for insertion and movement within the hold of a vessel, a grain hopper supported on said frame and provided with a downwardly inclined outlet spout, a fan casing mounted on said frame beneath said hopper having a peripheral outlet duct, a manifold disposed at one side of said frame having an air intake duct at one end and a discharge conduit at the opposite end thereof, said manifold having a mixing chamber disposed adjacent said air intake duct and in proximity to said fan casing outlet duct, means for connecting said air intake duct of said manifold to said fan casing outlet duct for supporting said manifold on said frame, an inclined grain duct extending upwardly from said manifold at said mixing chamber and having a telescopic fit with said hopper outlet spout for delivering of grain to said mixing chamber, means disposed in said manifold adjacent the air intake end of said mixing chamber for producing a venturi in said manifold, and a high capacity fan in said fan casing for moving air at high speed through said venturi of said manifold for creating a suction to draw the grain into said mixing chamber and conveying the grain from the mixing chamber and manifold through said manifold discharge conduit.

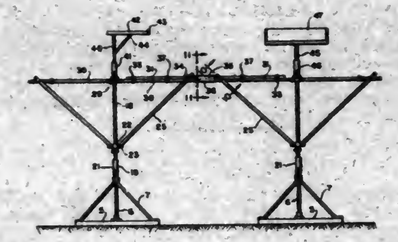
2,446,969
INHIBITION OF DIOLEFIN POLYMER GROWTH
Lester Marshall Welch, Madison, and Samuel B. Lippincott, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application August 14, 1946, Serial No. 690,558
6 Claims. (Cl. 260—666.5)



1. The process for handling diolefins normally tending to form insoluble self-propagating polymers which eventually plug the handling equipment comprising handling said diolefins until a small amount of said self-propagating polymer is formed, removing the diolefins from the polymer, treating the said polymer in the absence of said diolefin with a vapor containing an oxime whereby the further growth of said polymer is inhibited and then recontacting the diolefin with treated polymer.

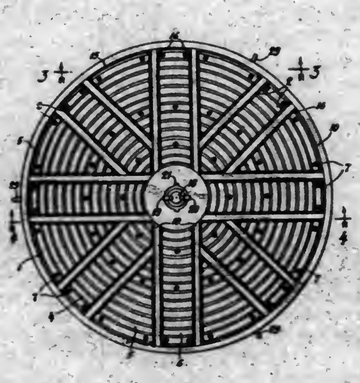
2,446,970
ADJUSTABLE FRONT SIGHT FOR SMALL ARMS
George A. Wilson, Hamden, Conn., assignor to The High Standard Manufacturing Corporation, New Haven, Conn., a corporation of Connecticut
Application January 11, 1945, Serial No. 572,321
4 Claims. (Cl. 33—58)

1. An adjustable front-sight for small-arms, including in combination: a sight-body having a longitudinal recess therein; a sight-blade movably mounted in the recess in the said sight-body; pivot-means carried by the said sight-body and constructed and arranged to provide for the swinging movement of the said sight-blade intermediate its front and rear ends about a substantially-horizontal axis transverse to the sight-blade; a substantially-vertical adjusting-screw carried by the said sight-body and operatively connected to the said sight-blade adjacent one end thereof to turn the same about the said pivot-means; and releasable clamping-means including a clamping-screw extending in substantial parallelism with the said pivot-means but located adjacent the opposite end of the sight-body from the said substantially-vertical adjusting-screw and constructed and arranged to clamp the said sight-blade to the said sight-body.



2,446,971
SAFETY PLUG-IN ELECTRICAL RECEPTACLE
Homer F. Wittig, Green Bay, Wis., assignor of one-half to Diedrich J. Wittig, Green Bay, Wis.
Application March 29, 1945, Serial No. 585,489
1 Claim. (Cl. 173—330)

An electrical conductor coupling comprising an elongated rectangular base of non-conducting material, a contact spring fixed midway between opposite ends of the base, opposite ends of the spring curving away from the base and terminating in arcuate contacts which extend toward adjacent ends of the base adjacent opposite sides thereof, said arcuate contacts lying in spaced relation to the base, a conductor strip lying along one side of the base, spring contact members at opposite ends of the conductor strip, an arcuate contact on each spring contact member, said last-named arcuate contacts being spaced from the base for cooperating with the contacts carried by the spring to provide a pair of spaced arcuate contacts adjacent each end of the base, a cover for said base, said cover having a pair of arcuate slots lying concentric with and inside the inner edges of each pair of arcuate contacts, a plug connector carrying spaced contacts adapted to enter a pair of arcuate slots in the cover, laterally extending ears on the contacts of the plug connector adapted upon rotation of the plug to engage the arcuate contacts, stops at the free ends of the arcuate contacts to engage the ears and arrest rotation of the plug when the ears are in full contact with the arcuate contacts and the cover having a notch opening into each arcuate slot to accommodate the ear on a plug contact.



2,446,972
ADJUSTABLE SCAFFOLD STRUCTURE
Peter A. Wyen, Minster, Ohio
Application September 11, 1946, Serial No. 696,082
11 Claims. (Cl. 304—10)

1. Scaffolding comprising at least four base units and four upright extension units, each said base unit including an upright support standard, and each said extension unit including an extension standard having removable telescopic socket connection with a base standard, an upper collar and a lower collar on each extension standard, two support members extending horizontally in longitudinal alignment from each upper collar, two brace members extending diagonally upwardly from each lower collar and secured in bracing relation to the support members on the same standard, said base and extension units being arranged in sets of two units each aligned transversely with respect to a wall before which the scaffolding is erected and with the support members of each set arranged parallel and in

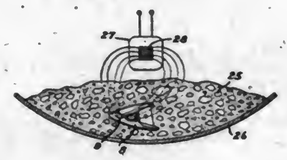
longitudinal alignment with those of the adjacent set, means rigidly securing all said units in rigid assembly, and means traversing said parallel support members for supporting planking thereon.

2,446,973
MAGNETIC CHUCK AND LOADING DEVICE THEREFOR
Philip B. Zeigler, Saginaw, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 8, 1943, Serial No. 486,191
3 Claims. (Cl. 175—21)

1. A unit loadable magnetic chuck comprising a chuck having a face, grooves positioned in the face of said chuck, a loading part comprising a frame having rods to support the work during loading, said rods positioned and dimensioned for entry and removal from the grooves of said chuck face, the height of said frame rods being less than the depth of said grooves so that the work supported on the rods will rest in direct contact on the face of the magnetic chuck adjacent said grooves.

2,446,974
SYNTHESIS OF A PENICILLIN-PROTEIN REACTION PRODUCT
Bacon F. Chow, Highland Park, N. J., assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application September 23, 1944, Serial No. 555,598
6 Claims. (Cl. 260—117)

1. The method which comprises interacting a penicillin and a water-soluble, non-antigenic, non-conjugated protein in aqueous solution, treating the reaction mixture with a protein-precipitant, and purifying the precipitated compound.

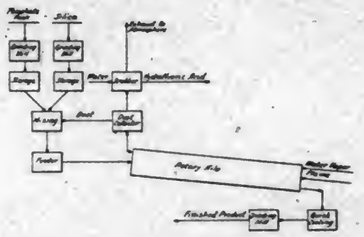


2,446,975
SILICA BRICK
Charles Conley, Canton, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
No Drawing. Application October 19, 1944, Serial No. 559,475
7 Claims. (Cl. 106—69)

1. A silica brick having an apparent specific gravity of from 2.34 to 2.48 and composed of a mixture of coarse, medium and fine sized grains consisting essentially of tridymite and cristobalite, the coarse grains ranging in size from .371" to .093" and constituting from 8% to 32% of said mixture, the medium grains ranging in size from .046" to .0059" and constituting from 46% to 56% of the mixture, and the fine grains ranging in size from .0041" to finer and constituting from 24% to 31% of the mixture.

2,446,976
STABILIZATION OF VINYL RESINS
Edward Cousins, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application August 28, 1944, Serial No. 551,618
3 Claims. (Cl. 260—23)

1. A resin composition color-stable at 300° F. which comprises a resin containing polymeric vinyl chloride as its principal constituent, from 0.5% to 10% (based on the resin) of zinc stearate and from 0.5% to 10% (based on the resin) of a stearate of a metal of the group consisting of the alkali metals and the alkaline earth metals.

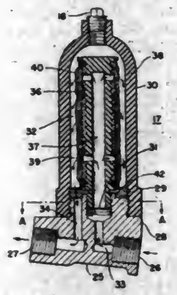


2,446,977
ART OF DETECTING TRAMP MATERIAL
Robert L. Manegold, Shorewood, and Ira H. Wynne, Milwaukee, Wis., assignors to Dings Magnetic Separator Co., Milwaukee, Wis., a corporation of Wisconsin
Application December 22, 1945, Serial No. 636,870
1 Claim. (Cl. 177—311)

The method of detecting in a moving mass of magnetic primary material the presence of non-magnetic batches of tramp material accidentally broken away from equipment which has previously handled the primary material, which method comprises, embedding intensely and permanently magnetized local cores in various portions of the equipment which are subject to breakage and release of non-magnetic tramp batches containing one or more of said cores into the magnetic primary mass, and utilizing the inherent intense magnetization of said released cores to indicate the location of and to facilitate removal of the non-magnetic tramp batches from the mass of magnetic primary material while in motion.

2,446,978
DEFLUORINATION OF PHOSPHATE ROCK
Ernest J. Maust, Lakeland, Fla., assignor to Coronet Phosphate Company, New York, N. Y., a corporation of New York
Application April 8, 1944, Serial No. 530,156
9 Claims. (Cl. 71—47)

1. In defluorinating phosphate rock by calcination in the presence of water vapor where the rock is finely divided and finely divided silica is included in the calcining charge in intimate association with the rock, the improvement which comprises including in the calcining charge at least 35% by weight of finely divided silica and calcining the charge at a temperature of at least 2600° F. in the absence of substantial sintering



and fusion, and flowing a gaseous atmosphere containing a substantial amount of water vapor into positive and continuous contact with the charge under such conditions that substantially all of the particles of said charge are contacted by said water vapor during the entire period of calcination.

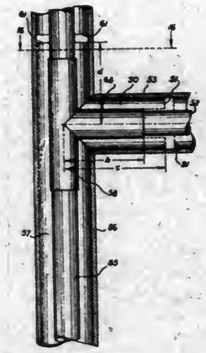
2,446,979
CANDLE-FILTER MOUNTING
Kenneth M. McLellan, Cleveland, Ohio, assignor to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
Application June 30, 1944, Serial No. 542,965
4 Claims. (Cl. 210—164)

4. A candle-filter for filtering flowing cellulose solutions and entrapping gases therefrom comprising a base member adapted to be positioned in a substantially vertical line having separate inlet and outlet passages having a common axis, a boss positioned on said base member at an upwardly inclined angle having passages communicating with said inlet and outlet passages of said base member, a concentric ridge on said boss and around one of said passages, a removable filtering element for filtering said solutions positioned in said ridged passage at substantially the same said upwardly inclined angle and having a base adapted to engage said ridge to form a seal therewith, a collar surrounding said boss, a removable

housing mounted on said boss at substantially the same upwardly inclined angle and having a base adapted to engage said collar to form a seal therewith, said housing being adapted to en-

trap gases from said flowing solutions, and a removable means in substantially the top of said upwardly inclined housing being adapted to be removed therefrom for a periodic venting of said housing.

2,446,980
PROCESS FOR PREPARING GUANAMINES
Daniel Elmer Nagy, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 30, 1941, Serial No. 409,151
7 Claims. (Cl. 260—249.5)



1. A method of producing a guanamine which comprises reacting a biguanide salt with a compound included in the group consisting of carboxylic acid anhydrides and carboxylic acid chlorides in the presence of aqueous caustic alkali and a large proportion of acetone.

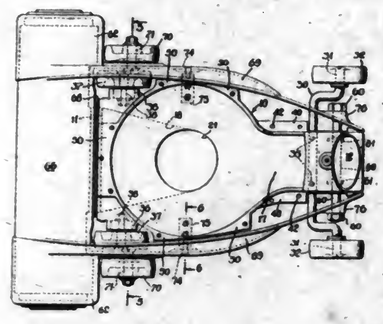
2,446,981
ALUMINUM HYDROXIDE ANTACID COMPOSITION
Frederick Constant Ninger, Flushing, N. Y., assignor to Vick Chemical Company, New York, N. Y., a corporation of Delaware
No Drawing. Application December 6, 1945, Serial No. 633,274
5 Claims. (Cl. 167—55)

1. An improved aluminum hydroxide antacid composition including the reaction product of aluminum hydroxide and a water soluble salt of a lower aliphatic hydroxy acid heated together in an aqueous medium and further characterized by an accelerated neutralization reaction time for gastric juice relative to that of unreacted aluminum hydroxide.

2,446,982
APPARATUS FOR BROAD-BAND RADIO TRANSMISSION
Robert V. Pound, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of Navy
Application February 8, 1943, Serial No. 475,149
27 Claims. (Cl. 178—44)

1. A supporting stub structure for two-conductor transmission lines adapted for the transmission of a band of frequencies which includes a short-circuited stub line and a pair of sections of the supported transmission line each of a length equal to an odd number of quarter-wave lengths

for a frequency in said band and of a characteristic admittance different from that of the main portions of said line, said sections of said line being symmetrically disposed about the axis of said stub line.

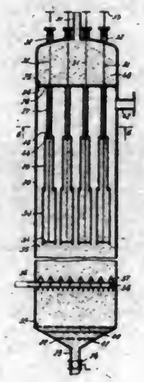


2,446,983
ZINC PLATING PROCESS AND ELECTROLYTE
Alvin Frederick Prust, Warren, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
No Drawing. Application January 19, 1945, Serial No. 573,637
10 Claims. (Cl. 204—28)

1. An aqueous zinc plating electrolyte containing, per gallon thereof, from 10 ounces to 20 ounces of zinc chloride, from 10 ounces to 20 ounces of sodium chloride, from .15 ounce to 1.0 ounce of fluorine in the form of an alkali salt, and about 0.2 ounce of chloride of a metal selected from the group consisting of alkaline earth metals and aluminum, said electrolyte having a pH value of from 4.8 to 5.4.

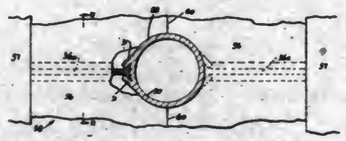
2,446,984
THERMOSETTING VINYL CHLORIDE-CONTAINING PLASTICS
Thomas H. Rogers, Jr., and Robert D. Vickers, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application April 21, 1944, Serial No. 532,216
11 Claims. (Cl. 260—86)

1. The method of preparing a thermoset copolymer which comprises mixing a copolymer of 10 to 25 percent of vinylidene chloride and 75 to 90 percent of vinyl chloride with from 1 to 10 percent by weight of the copolymer of a heterocyclic amine containing only carbon, hydrogen and amino nitrogen atoms and heating said mixture at a temperature between 240° F. and 360° F. for a period of between 10 and 60 minutes.



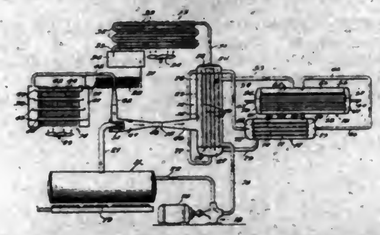
2,446,985
VACUUM CLEANER HAVING A FLOATING NOZZLE
Howard A. Shumaker, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application June 1, 1944, Serial No. 538,304
2 Claims. (Cl. 15—8)

1. A vacuum cleaner having a chassis comprising a frame supported by front and rear wheels, an air conduit constructed therein having an intake toward the front and an outlet toward the rear thereof, the intake portion of said air conduit extending below the main forward portion of said cleaner frame, a motor mounted on the frame, a fan in the conduit operated by the motor to impel air through the conduit toward the outlet, a vacuum nozzle member comprising a nozzle proper and a pair of horizontally disposed and rearwardly extending spaced arms substantially embracing said frame and pivoted to the rear portion thereof in substantial axial alignment with said rear wheels, auxiliary wheels supporting said nozzle, and positioned in substantial axial alignment with said front wheels, a lost-motion connection between said frame and nozzle member, forwardly of said pivot, to limit the relative movement between said frame and member, a rotary brush in said nozzle, means to drive the brush from the motor, and flexible conduit means connecting a portion of the nozzle and said intake for relative motion.



2,446,986
APPARATUS FOR CONTACTING GASES WITH PARTICLE FORM SOLID MATERIAL
Thomas P. Simpson, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application April 8, 1944, Serial No. 530,221
2 Claims. (Cl. 23—288)

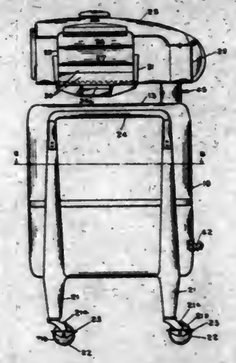
1. In an apparatus of the type described for conversion of fluid hydrocarbons in the presence of a particle-form contact material, a closed vertical vessel, a partition within the upper end of said vessel extending horizontally thereacross forming thereabove a closed surge chamber for particle-form solid material; conduit means to admit said solid material to said chamber through the top of said vessel; a plurality of uniformly spaced telescopic arrangements depending from said partition, each one of said telescopic arrangements comprising a plurality of open end pipes of substantially equal length and different diameters of which the pipes of smallest diameter is dependent from said partition and of which the remaining pipes are of progressively increasing diameter with their downward position when said arrangement is extended, the total vertical length of any one of said telescopic arrangements when fully extended amounting to at least one half of the length of said vessel; means connected to the lower ends of the pipes of largest diameter in each of said arrangements and extending upwards through all the pipes therein and through the top of said vessel to permit vertically extending and contracting each of said telescopic arrangements from points outside said vessel, thereby permitting selective introduction of said solid material



to any of a number of vertical locations along a major portion of the length of said vessel; overlapping stop members near the end of each pipe to limit the downward extension of said telescopic arrangements so as to prevent the upper end of each pipe from passing below the lower end of the pipe of next smaller diameter; outlet conduit means on the bottom of said vessel for solid material withdrawal, flow throttle means upon said outlet conduit; reactant gas inlet means near one end of said vessel and reactant product outlet means near the opposite end thereof.

2,446,987
BUILDING CONSTRUCTION
Abraham Fishko, Brooklyn, N. Y.
Application March 13, 1944, Serial No. 526,198
10 Claims. (Cl. 285—30)

1. A pipe element having at least one projection adapted for engagement with a wall member to combine said element and said member into a unitary structure.



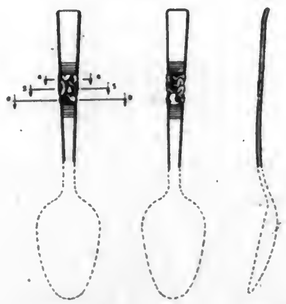
2,446,988
ABSORPTION REFRIGERATION APPARATUS
Andrew Flukes and James T. Smith, Chicago, Ill., assignors to Mills Industries, Incorporated, Chicago, Ill., a corporation of Illinois
Application September 25, 1944, Serial No. 555,710
9 Claims. (Cl. 62—119)

1. Absorption refrigeration apparatus comprising a closed system, including a boiler, a generator, a condenser, an evaporator and an absorber and containing a refrigerant, an absorption liquid and a heating fluid, means for conducting the heating fluid in vapor form from the boiler to the generator, means for conducting the refrigerant in vapor form from the evaporator to the absorber, and a device comprising a diffuser in which said vapors are combined and a restricted passage through which the combined vapors pass for increasing, through the action of the heating fluid in passing through said device, the pressure of said refrigerant vapor while said vapors are being so conducted.

2,446,989
AUTOMATIC HEAT CONTROLLED APPARATUS FOR PREPARING PADS
Peres G. Polhemus, Roselle, N. J.
Application April 27, 1945, Serial No. 590,656
5 Claims. (Cl. 219—38)

5. The combination in a mobile unit for heating pads for poliomyelitis, of an insulated water tank, a well in the bottom of said tank, electrical heating units in said well for maintaining water in said tank at 210° F., a strainer over said well to protect said heating units, a foraminous plate dividing said tank into a plurality of working

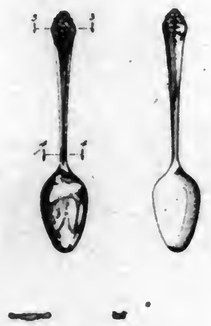
compartments, a thermo switch regulating said water temperature at 210° F., a second thermo switch shutting off the electrical heating units upon exposure of said second thermo switch to the air.



2,446,990
WATER-SETTING CEMENT COMPOSITION
Clyde C. Schuetz, Mount Prospect, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application November 29, 1943, Serial No. 512,249
5 Claims. (Cl. 106—99)

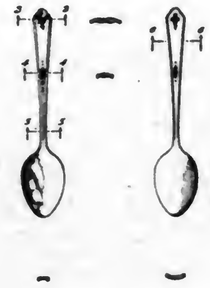
1. A water-setting cementitious mixture consisting of 15% of asbestos fiber, 64% of water-granulated blast furnace slag, dried and ground to a fineness of 87% through a 325 mesh sieve, 13% of Portland cement, and 8% of fly ash.

DESIGNS



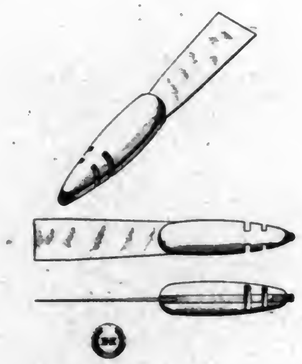
AUGUST 10, 1948

150,485
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Grosvenor N. Allen and William H. Gerth, Oneida, N. Y., assignors to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,700
Term of patent 14 years
(Cl. D54—12)



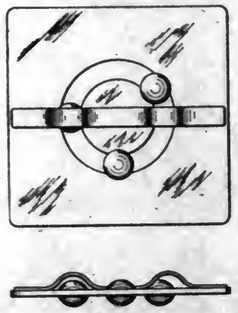
The ornamental design for a spoon or similar article, substantially as shown and described.

150,486
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Grosvenor N. Allen, Oneida, and Mary Parker Fleming, Fulton, N. Y., assignors to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application December 12, 1947, Serial No. 143,110
Term of patent 14 years
(Cl. D54—12)



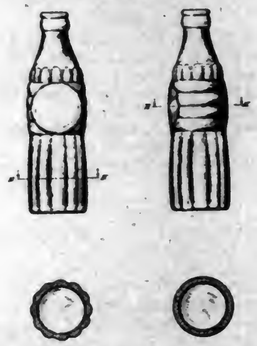
The ornamental design for a spoon or similar article, substantially as shown and described.

150,487
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Grosvenor N. Allen and William H. Gerth, Oneida, N. Y., assignors to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,524
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or similar article, substantially as shown and described.

150,488
DESIGN FOR A COMBINED PUTTY KNIFE AND GLASS CUTTER
Walter R. Amstutz, Chicago, Ill., assignor to Butler Brothers, Chicago, Ill., a corporation of Illinois
Application February 20, 1947, Serial No. 137,053
Term of patent 14 years
(Cl. D93—4)

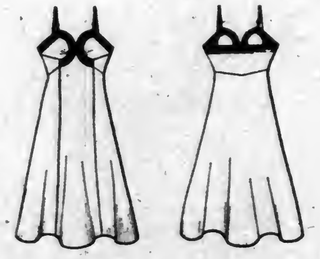


The ornamental design for a combined putty knife and glass cutter, substantially as shown.

150,489
DESIGN FOR A PANEL TOY
Rubert C. Bockus, Gardner, Mass., assignor to Gem Crib & Cradle Company, Gardner, Mass., a corporation of Massachusetts
Application August 22, 1946, Serial No. 132,725
Term of patent 14 years
(Cl. D34—15)

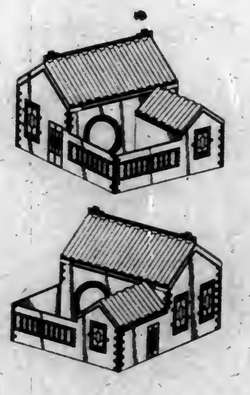
The ornamental design for a panel toy, as shown.

150,490
DESIGN FOR A BOTTLE
George B. Brown, Kansas City, Mo., assignor to The Cinch Company, Kansas City, Mo., a corporation of Missouri
Application February 17, 1947, Serial No. 136,951
Term of patent 3½ years
(Cl. D58—8)



The ornamental design for a bottle, as shown.

150,491
DESIGN FOR A SERVICE STATION
Hobert C. Brown, Amarillo, Tex.
Application August 23, 1946, Serial No. 132,788
Term of patent 3½ years
(Cl. D13—1)



The ornamental design for a service station, as shown and described.

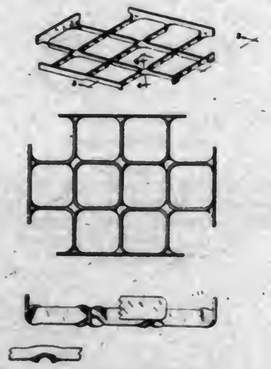
150,492
DESIGN FOR A LADY'S SLIP
Harold Caplin, New York, N. Y., assignor to Seamprufe, Incorporated, New York, N. Y., a corporation of New York
Application February 4, 1947, Serial No. 136,674
Term of patent 7 years
(Cl. D3—26)

The ornamental design for a lady's slip, as shown.

150,493
DESIGN FOR A TOY HOUSE
Stanley Chin, New York, N. Y.
Application May 31, 1946, Serial No. 130,251
Term of patent 7 years
(Cl. D34—15)

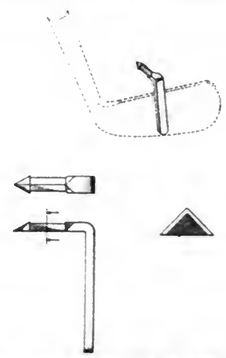
The ornamental design for a toy house, as shown and described.

150,494
DESIGN FOR AN ENVELOPE OR SIMILAR ARTICLE
Herman S. Davis, New York, N. Y., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J.
Application December 13, 1946, Serial No. 135,483
Term of patent 3½ years
(Cl. D59—8)



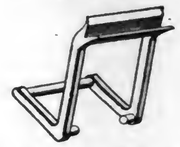
The ornamental design for an envelope or similar article, as shown and described.

150,495
DESIGN FOR A CIGARETTE DISPENSER
David W. Dunberg, New York, N. Y.
Application April 23, 1947, Serial No. 138,556
Term of patent 14 years
(Cl. D85—2)



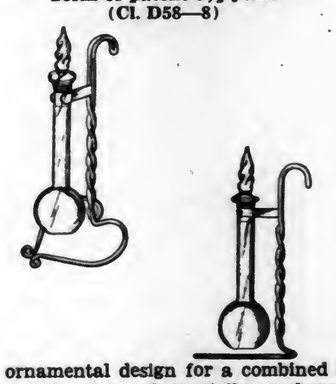
The ornamental design for a cigarette dispenser, substantially as shown.

150,496
DESIGN FOR A DIVIDER FOR A MILK BOTTLE CASE OR THE LIKE
Ernest R. Erickson, Des Moines, Iowa, assignor to C. E. Erickson Company, Inc., Des Moines, Iowa, a corporation of Iowa
Application March 5, 1946, Serial No. 127,117
Term of patent 14 years
(Cl. D58—13)



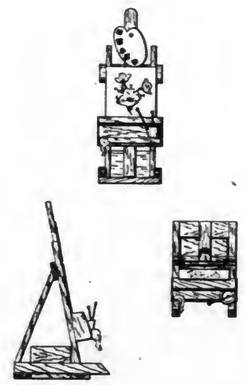
The ornamental design for a divider for a milk bottle case or the like, substantially as shown.

150,497
DESIGN FOR A PUTTING AID DEVICE FOR A GOLF CLUB
Carl F. Forsell, Rockford, Ill.
Application March 15, 1946, Serial No. 127,541
Term of patent 3½ years
(Cl. D34—5)



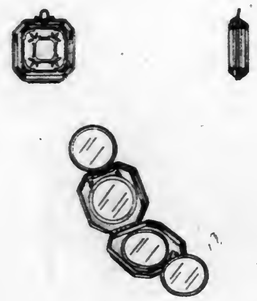
The ornamental design for a putting aid device for a golf club, substantially as shown and described.

150,498
DESIGN FOR A TAPE DISPENSER FRAME
Charles J. Hazelton, Tournapull, Ga.
Application February 11, 1947, Serial No. 136,832
Term of patent 3½ years
(Cl. D74—1)



The ornamental design for a tape dispenser frame, as shown.

150,499
DESIGN FOR A COMBINED BOTTLE AND STAND THEREFOR
Jacques Heim, Paris, France
Application February 26, 1947, Serial No. 137,187
Term of patent 3½ years
(Cl. D58—8)



The ornamental design for a combined bottle and stand therefor, substantially as shown.

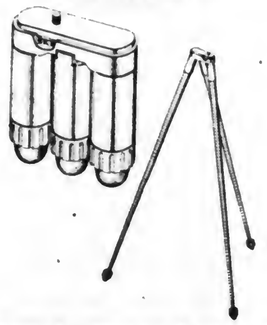
150,500
DESIGN FOR A DISPLAY CONTAINER
Florence Perry Holden, Los Angeles, Calif.
Application July 29, 1946, Serial No. 132,076
Term of patent 7 years
(Cl. D80—9)

The ornamental design for a display container, substantially as shown.

150,501
DESIGN FOR A LOCKET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,698
Term of patent 7 years
(Cl. D45—15)

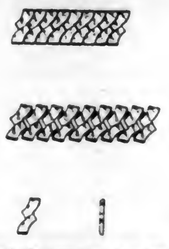
The ornamental design for a locket or similar article, substantially as shown and described.

150,502
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,617
Term of patent 7 years
(Cl. D45—16)



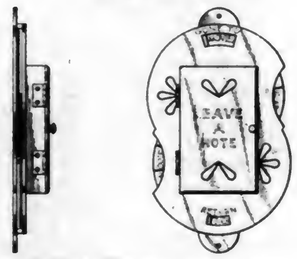
The ornamental design for a necklace or similar article, substantially as shown and described.

150,503
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,688
Term of patent 7 years
(Cl. D45—16)



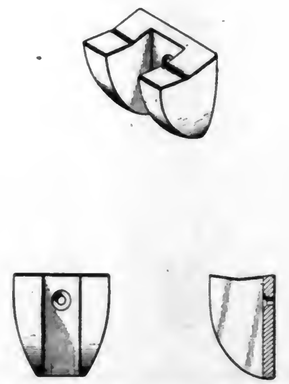
The ornamental design for a necklace or similar article, substantially as shown and described.

150,504
DESIGN FOR A TRIPOD
Wolcott S. Kinnard, Milwaukee, Wis.
Application February 21, 1948, Serial No. 144,654
Term of patent 14 years
(Cl. D57—1)



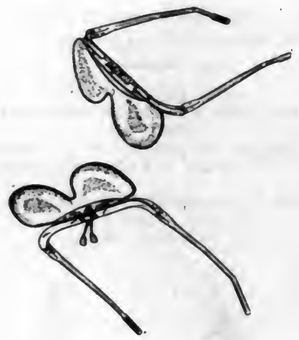
The ornamental design for a tripod, as shown.

150,505
DESIGN FOR AN EXPANSIBLE CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Arthur W. Koppell, Upper Nyack, N. Y., assignor to Jay Kel Inc., New York, N. Y., a corporation of New York
Application November 20, 1947, Serial No. 142,692
Term of patent 14 years
(Cl. D45—4)



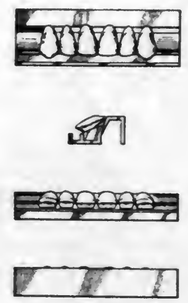
The ornamental design for an expansible chain for a bracelet or similar article, as shown.

150,506
DESIGN FOR A MEMORANDUM HOLDER UNIT
William Le Blanc, Fort Worth, Tex.
Application August 26, 1946, Serial No. 132,846
Term of patent 3½ years
(Cl. D74—5)



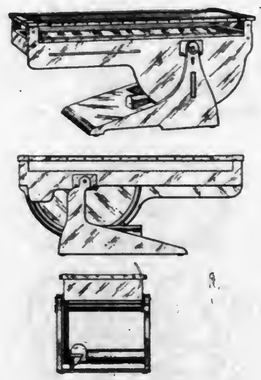
The ornamental design for a memorandum holder unit, substantially as shown.

150,507
DESIGN FOR A SAFETY RAZOR HOLDER
Kenneth S. McEntire, Kansas City, Mo.
Application January 29, 1947, Serial No. 136,493
Term of patent 3½ years
(Cl. D4—3)



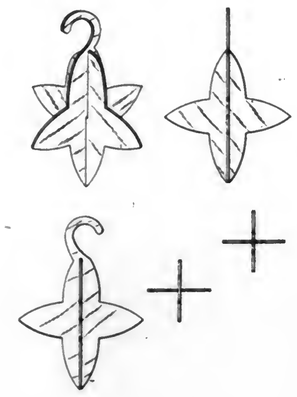
The ornamental design for a safety razor holder, as shown.

150,508
DESIGN FOR AN EYESHIELD OR SIMILAR ARTICLE
William A. Mendelsohn, Chicago, Ill.
Application August 9, 1947, Serial No. 140,792
Term of patent 14 years
(Cl. D57—1)



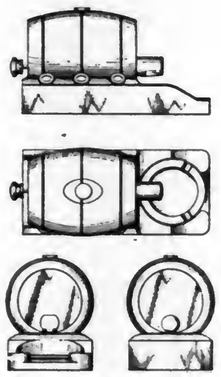
The ornamental design for an eyeshield or similar article, substantially as shown.

150,509
DESIGN FOR A CARD FOR ARTIFICIAL TEETH OR SIMILAR ARTICLE
Simon Myerson, Brookline, Mass.
Application November 20, 1946, Serial No. 134,959
Term of patent 14 years
(Cl. D24—1)



The ornamental design for a card for artificial teeth or similar article, substantially as shown.

150,510
DESIGN FOR AN X-RAY TABLE
Herbert A. Newman, Delavan, Wis., assignor to The George W. Borg Corporation, Chicago, Ill., a corporation of Delaware
Application August 26, 1946, Serial No. 132,875
Term of patent 14 years
(Cl. D83—1)



The ornamental design for an X-ray table, substantially as shown.

150,511
DESIGN FOR A CHRISTMAS TREE ORNAMENT
Vincent P. O'Brien, Belle Harbor, N. Y.
Application October 21, 1947, Serial No. 142,059
Term of patent 14 years
(Cl. D29—1)

The ornamental design for a Christmas tree ornament, as shown.

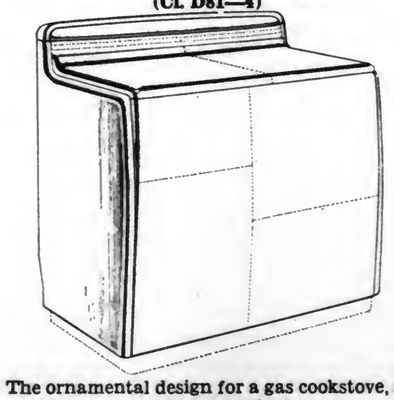
150,512
DESIGN FOR A TOBACCO HUMIDOR
Michael Pendriss, Burlington, Vt.
Application May 2, 1947, Serial No. 138,770
Term of patent 3½ years
(Cl. D85—2)

The ornamental design for a tobacco humidor, as shown.

150,513
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,591
Term of patent 7 years
(Cl. D45—16)

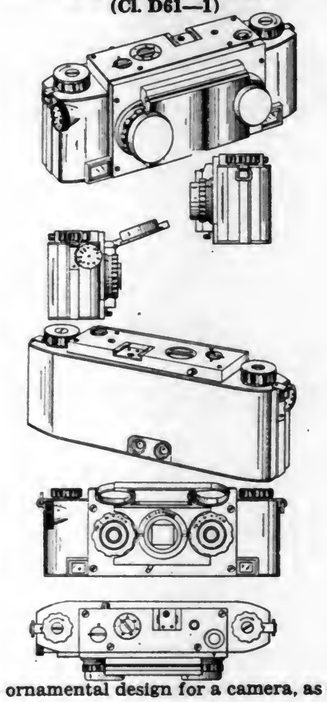
The ornamental design for a necklace or similar article, substantially as shown and described.

150,514
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1947, Serial No. 142,547
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,515
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 28, 1947, Serial No. 142,836
Term of patent 7 years
(Cl. D45—19)

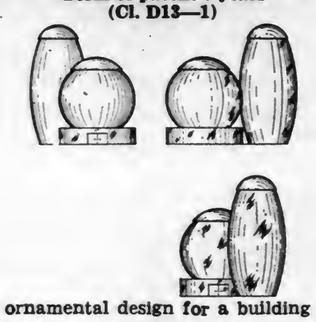


The ornamental design for a brooch or similar article, substantially as shown.

150,516
DESIGN FOR A GAS COOKSTOVE
Herbert M. Reeves, Kankakee, Ill., and Montgomery Ferar, Detroit, Mich., assignors to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application April 11, 1947, Serial No. 138,314
Term of patent 7 years
(Cl. D81—4)

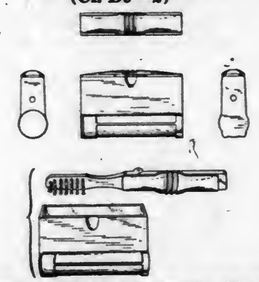
The ornamental design for a gas cookstove, substantially as shown and described.

150,517
DESIGN FOR A CAMERA
Seton I. Rochwite, Wauwatosa, Wis., assignor to David White Company, Milwaukee, Wis.
Application January 24, 1947, Serial No. 136,401
Term of patent 14 years
(Cl. D61—1)



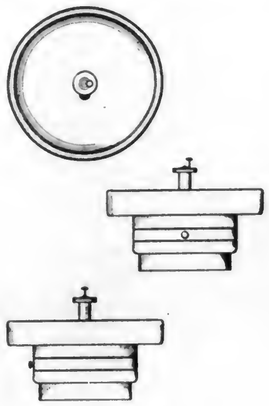
The ornamental design for a camera, as shown.

150,518
DESIGN FOR A DRESS
Katheryn Rost, New York, N. Y.
Application November 7, 1947, Serial No. 142,382
Term of patent 3½ years
(Cl. D3—26)



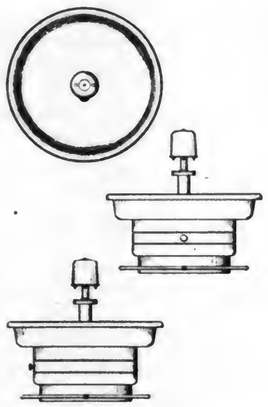
The ornamental design for a dress, substantially as shown.

150,519
DESIGN FOR A BUILDING UNIT
Pearl L. Schluttig, Kansas City, Mo.
Application November 19, 1946, Serial No. 134,890
Term of patent 7 years
(Cl. D13—1)



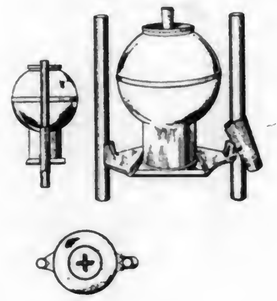
The ornamental design for a building unit, as shown.

150,520
DESIGN FOR A COMBINED FOLDING TOOTHBRUSH AND RECEPTACLE THEREFOR
Ted R. Stacey, Chicago, Ill., assignor to Gem Die & Mold Company, Chicago, Ill., a corporation of Illinois
Application August 9, 1947, Serial No. 140,791
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a combined folding toothbrush and receptacle therefor, substantially as shown.

150,521
DESIGN FOR A WASH FOUNTAIN
Clifford Brooks Stevens, Milwaukee, Wis., assignor to Bradley Washfountain Co., Milwaukee, Wis., a corporation of Wisconsin
Application April 23, 1947, Serial No. 138,567
Term of patent 14 years
(Cl. D4—2)



The ornamental design for a wash fountain, as shown.

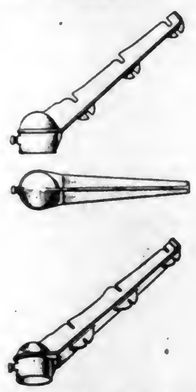
150,522
DESIGN FOR A WASH FOUNTAIN
Clifford Brooks Stevens, Milwaukee, Wis., assignor to Bradley Washfountain Co., Milwaukee, Wis., a corporation of Wisconsin
Application April 23, 1947, Serial No. 138,568
Term of patent 14 years
(Cl. D4—2)

The ornamental design for a wash fountain, as shown.

150,523
DESIGN FOR A MASTICATOR FOR FRUITS, VEGETABLES, OR THE LIKE
Charley Stuart, San Francisco, Calif.
Application July 29, 1946, Serial No. 132,095
Term of patent 14 years
(Cl. D44—1)

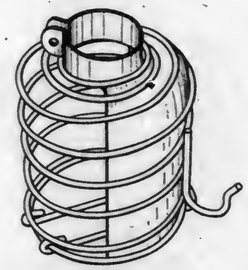
The ornamental design for a masticator for fruits, vegetables, or the like, as shown.

150,524
DESIGN FOR A BELT
Alex Unger, New York, N. Y., assignor to Advance Creations, Inc., New York, N. Y., a corporation of New York
Application February 24, 1947, Serial No. 137,122
Term of patent 3½ years
(Cl. D3—10)



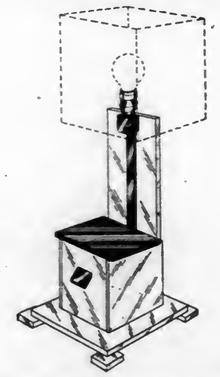
The ornamental design for a belt, as shown.

150,525
DESIGN FOR A DRESS
Joset Walker, New York, N. Y.
Application December 6, 1947, Serial No. 142,992
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

150,526
DESIGN FOR A BARBED WIRE SUPPORTING ARM FOR FENCES
William A. Webster, Wilmar, Calif., assignor to Southern California Fence Co., a corporation of California
Application June 11, 1946, Serial No. 130,639
Term of patent 3½ years
(Cl. D28—1)



The ornamental design for a barbed wire supporting arm for fences, substantially as shown.

150,527
DESIGN FOR A LAMP GUARD
Ira E. Wright, Kokomo, Ind., assignor of one-third to Maurice B. Ades and one-third to Lou Marks, both of Louisville, Ky.
Application September 28, 1946, Serial No. 133,637
Term of patent 14 years
(Cl. D48—24)

The ornamental design for a lamp guard, as shown.

150,528
DESIGN FOR A COMBINED CIGARETTE CONTAINER AND LAMP
Carl J. Zahn, Detroit, Mich.
Application November 14, 1946, Serial No. 134,792
Term of patent 3½ years
(Cl. D85—2)

The ornamental design for a combined cigarette container and lamp, as shown and described.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application awaiting Office action	Oldest amended application awaiting Office action	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	†Feb. 8	Nov. 18	2896
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	Nov. 7	July 13	3141
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†Oct. 2	†Sept. 12	1486
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Dec. 23	†Jan. 3	3869
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	Nov. 20	June 18	1933
6. SURLE, H., Carbon Chemistry (part)	†Sept. 10	†Mar. 15	1869
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†Aug. 20	†June 13	1775
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	Nov. 2	July 3	4336
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	†Apr. 26	Aug. 2	2226
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Oct. 31	†Oct. 1	1798
11. BENHAM, E. V., Boots, Shoes, and Leggings, Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†Oct. 31	†Nov. 17	743
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†Sept. 17	Aug. 7	2122
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	Sept. 20	Aug. 19	2519
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Oct. 24	†July 19	1326
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	†Apr. 21	Dec. 6	2129
16. LOVEWELL, N. N., Television; Telephony	†Sept. 11	†June 5	1508
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	†Jan. 13	Sept. 10	2107
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combusion Engines.	†May 15	Aug. 2	1958
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	†June 18	Oct. 29	1851
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	†Feb. 8	Nov. 14	1999
21. MADER, R. C., Textiles	†Aug. 8	†July 17	1215
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	†Sept. 15	Sept. 6	1706
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	†Feb. 13	July 24	1206
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†Aug. 4	†July 25	2509
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Sept. 2	Oct. 7	1751
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Oct. 7	Nov. 6	1369
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	†Mar. 24	Nov. 18	3407
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	†June 12	†June 9	1119
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	†Jan. 21	Sept. 28	3186
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Nov. 1	†May 10	1415
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†Nov. 12	†Nov. 12	2144
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	†Jan. 28	Aug. 15	3185
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	Oct. 5	July 6	3478
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	Nov. 9	July 19	1822
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	†Apr. 17	Sept. 20	3308
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Oct. 12	Aug. 2	1999
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Oct. 25	†Jan. 25	1463
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	†May 20	†Mar. 24	1909

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

A P Parts Corporation, The, Toledo, Ohio. Cutting tools, knives and blades. Serial No. 503,031, Aug. 17. Class 23.

Academy Award Products, Inc., New York, N. Y. Mechanical games. Serial No. 500,349, Aug. 17. Class 22.

Alar, Inc., New York, N. Y. Publications. Serial No. 543,257, Aug. 17. Class 38.

Alber Remedy Co.: *See*—
Tonge, Elizabeth H.

Alex Products Co.: *See*—
Smidth, Alex.

Allstate Engineering Service: *See*—
Koepnick, Edward W.

Alrose Chemical Co., Inc., Cranston, R. I. Surface active agent. Serial No. 546,936, Aug. 17. Class 6.

Aluminum Company of Canada, Limited, Montreal, Quebec, Canada. Aluminum sulphate and lime. Serial No. 507,702, Aug. 17. Class 6.

Aluminum Company of Canada, Limited, Montreal, Quebec, Canada. Aluminum and aluminum alloy ingot, sheet, tubes and extruded forms, etc. Serial No. 507,703, Aug. 17. Class 14.

Amco Sports Distributors, St. Louis, Mo. Athletic and sporting goods. Serial No. 531,180, Aug. 17. Class 22.

American Broach & Machine Co., Ann Arbor, Mich. Broaching machines, broaching tools and broaching tool sharpening machines. Serial No. 530,051, Aug. 17. Class 23.

American Emblem Company, New Hartford, N. Y. Service insignia. Serial No. 513,093, Aug. 17. Class 50.

American Enka Corporation, Enka, N. C. Rayon yarns. Serial No. 531,002, Aug. 17. Class 43.

Appleton Wood Products Company, Appleton, Wis. Die blocks, cutting boards and cutting blocks, etc. Serial No. 483,001, Aug. 17. Class 23.

Arco Company, The, Cleveland, Ohio. Glove to be used as a paint applicator. Serial No. 529,432, Aug. 17. Class 29.

Arden, Elizabeth, Sales, Corp., New York, N. Y. Liquid undercoat for nail polish. Serial No. 530,707, Aug. 17. Class 6.

Armour and Company, Chicago, Ill. Sausage. Serial No. 528,413, Aug. 17. Class 46.

Armour and Company, Chicago, Ill. Coated abrasive products. Serial No. 528,674, Aug. 17. Class 4.

Armour and Company, Chicago, Ill. Sausage. Serial No. 528,675, Aug. 17. Class 46.

Armour and Company, doing business as North American Provision Company, Chicago, Ill. Imitation chili con carne. Serial No. 529,861, Aug. 17. Class 46.

Armour and Company, Chicago, Ill. Strings for tennis, badminton and squash rackets. Serial No. 533,431, Aug. 17. Class 22.

Armour and Company, Chicago, Ill. Soap. Serial No. 540,965, Aug. 17. Class 4.

Armour-Smallberg, Inc., New York, N. Y. Men's under shorts. Serial No. 510,993, Aug. 17. Class 39.

Atlantic Refining Company, The, Philadelphia, Pa. All-purpose cleaning compound. Serial No. 543,053, Aug. 17. Class 4.

Atlantic Supply Company, The, Baltimore, Md. Mineral feed for livestock and poultry. Serial No. 539,478, Aug. 17. Class 6.

Automatic Draft & Stove Co., Inc., Lynchburg, Va. Automatically-controlled wood burning heaters. Serial No. 529,739, Aug. 17. Class 34.

Automatic Ice Corporation, Blue Island, Ill. Machines for freezing ice. Serial No. 532,795, Aug. 17. Class 31.

Babson Bros. Co., Chicago, Ill. Milk cooling machines. Serial No. 526,552, Aug. 17. Class 31.

Baltimore Hardware Company, Baltimore, Md. Screwdrivers, hammer, pliers, etc. Serial No. 528,685, Aug. 17. Class 23.

Baltimore & Ohio Railroad Company, The, Baltimore, Md. Railroad passenger and freight transportation service. Serial No. 532,996, Aug. 17. Class 55.

Catalyst, Alumina-silica gel. Davison Chemical Corporation. 501,620, Aug. 17; Serial No. 529,968, published May 25, 1948.
Catalyst and coloring products. Arnold, Hoffman & Co. Incorporated. 440,170, Aug. 17; Serial No. 504,655, published May 25, 1948.
Chemical compound having cleansing, detergent, and water-softening qualities, etc. Oakite Products, Inc. 249,419, renewed Nov. 13, 1948. O. G. Aug. 17.
Chemical compounds adapted for the treatment of allergic disorders. Nepera Chemical Company, Inc. 501,673, Aug. 17; Serial No. 535,173, published May 18, 1948.
Chemical solvent, Concentrated. Fischer Industries Inc. 501,560, Aug. 17; Serial No. 502,604, published May 18, 1948.
Coating compound used to impregnate fabrics. American Finishing Company. 501,712, Aug. 17; Serial No. 519,993.
Colours, Coal-tar. Society of Chemical Industry in Basle. 242,644, renewed May 29, 1948. O. G. Aug. 17.
Compositions for treating cotton, wool, silk, etc. Dri-Wear, Inc. 501,672, Aug. 17; Serial No. 535,139, published May 18, 1948.
Compounds for application to carpet and upholstery. W. Walker. 401,349, May 11, 1943. Republished Aug. 17.
Compounds, Surface active. Monsanto Chemical Company. 501,687, Aug. 17; Serial No. 538,154, published May 25, 1948.
Cosmetics. A. Roskopf. 440,160, Aug. 17; Serial No. 503,004, published May 25, 1948.
Dentifrices. M. A. Milne. 501,685, Aug. 17; Serial No. 531,492, published May 18, 1948.
Disinfectants. Sanitary Products Corporation. 186,179, Oct. 26, 1920. Republished Aug. 17.
Dyes and dyestuffs. General Dyestuff Corporation. 501,575–6, Aug. 17; Serial Nos. 514,026–7, published May 18, 1948.
Dyes, Hair. Inecto, Inc. 281,063, Mar. 10, 1931. Republished Aug. 17.
Dyes, Hair. C. Nessler. 242,668, renewed May 29, 1948. O. G. Aug. 17.
Emulsion of mineral oil for lubricating the bowels. United Drug Company. 243,302, renewed June 19, 1948. O. G. Aug. 17.
Flea and lice preparation for animals. William Cooper & Nephews, Incorporated. 272,556, July 30, 1930. Republished Aug. 17.
Gas and propane, Liquefied petroleum. Fuelane Corporation. 440,227, Aug. 17; Serial No. 518,668, published May 18, 1948.
Gasoline and fuel oil conditioner. De Mert & Dougherty, Inc. 501,565, Aug. 17; Serial No. 509,506, published May 25, 1948.
Insecticide. William Cooper & Nephews, Incorporated. 286,260, Aug. 25, 1931. Republished Aug. 17.
Insecticide. Peoples Drug Stores, Inc. 249,016, renewed Nov. 6, 1948. O. G. Aug. 17.
Insecticides. William Cooper & Nephews, Incorporated. 318,525, Nov. 6, 1934. Republished Aug. 17.
Insecticides and dressing for the destruction of sarcoptic mange on the skin of animals. William Cooper & Nephews, Incorporated. 318,904, Nov. 6, 1934. Republished Aug. 17.
Internal preparation possessing alterative properties. Firm of R. W. Gardner. 373,029, Nov. 21, 1939. Republished Aug. 17.
Lipsticks. Hattie Carnegie, Inc. 501,624, Aug. 17; Serial No. 530,464, published May 18, 1948.
Lipsticks. Schildkraut Products Corporation. 501,667, Aug. 17; Serial No. 534,478, published May 18, 1948.
Liquid chemical composition for dissolving gum and removing solid deposits. Pure Oil Company. 501,593, Aug. 17; Serial No. 527,412, published May 18, 1948.
Liquid starch. Chemicals, Inc. 440,182, Aug. 17; Serial No. 508,268, published May 11, 1948.
Lotions for bleaching and softening the hair. C. Nessler. 242,669, renewed May 29, 1948. O. G. Aug. 17.
Lotions, hair dressing, perfumes, etc, After-shaving. John Hudson Moore, Inc. 501,571, Aug. 17; Serial No. 512,075, published May 18, 1948.
Lotions, Hand, face, and body. E. Norris. 440,204, Aug. 17; Serial No. 513,636, published May 18, 1948.
Materials and solutions for developing photographically applied images on printing plates. Multigraph Company. 299,129, Nov. 22, 1932. Republished Aug. 17.
Materials and solutions for printing plates. Multigraph Company. 336,482, July 7, 1936. Republished Aug. 17.
Materials and solutions for treating printing plates. American Multigraph Co. 294,844, June 7, 1932. Republished Aug. 17.
Materials and solutions for treating printing plates to render them repellent to grease, ink, etc. American Multigraph Co. 294,845, June 7, 1932. Republished Aug. 17.
Materials for drawing and writing on planographic printing plates. Multigraph Company. 299,130, Nov. 22, 1932. Republished Aug. 17.
Medication for supplying bile salts and synthetic vitamin K., Internal. Bullington's, Incorporated. 501,555, Aug. 17; Serial No. 494,015, published May 18, 1948.

Medicine and tonic, Dog. William Cooper & Nephews, Incorporated. 327,943, Sept. 10, 1935. Republished Aug. 17.
Medicines used in the treatment of asthmatic affections. American Felsol Company. 199,780, June 16, 1925. Republished Aug. 17.
Ointment. Danette Products, Inc. 501,693, Aug. 17; Serial No. 539,287, published May 18, 1948.
Oxygen consuming preparation. Bailey Meter Company. 390,796, Oct. 7, 1941. Republished Aug. 17.
Pads, Astringent-impregnated. Campana Corporation. 432,494–6, Sept. 2, 1947. Republished Aug. 17.
Parenteral medications. Invenex Laboratories. 440,222, Aug. 17; Serial No. 518,002, published May 25, 1948.
Perfume and cologne. G. Begley, Jr. 440,143, Aug. 17; Serial No. 481,048, published July 16, 1946.
Perfume, sachet, cold cream, toilet water, etc. H. Heubschman. 254,663, Mar. 26, 1929. Republished Aug. 17.
Perfume, toilet water, and cologne. Avon Products, Inc. 432,523, Sept. 2, 1947. Republished Aug. 17.
Perfumes and essential oils. Van Ameringen-Haebler, Inc. 501,685, Aug. 17; Serial No. 537,377, published May 25, 1948.
Perfumes and hygienic products. Henri Bendel, Inc. 249,774, renewed Nov. 20, 1948. O. G. Aug. 17.
Perfumes and toilet creams. John Wanamaker. 239,197, renewed Feb. 28, 1948. O. G. Aug. 17.
Perfumes and toilet waters. Cigogne, Inc. 501,674, Aug. 17; Serial No. 535,486, published May 25, 1948.
Perfumes, toilet waters, rouge, etc. Les Parfums Verchere, (Parfums Jerome), Societe A Responsabilite Limitee. 501,606, Aug. 17; Serial No. 528,870, published May 25, 1948.
Pharmaceutical preparation. Sharp & Dohme, Incorporated. 501,700, Aug. 17; Serial No. 541,972, published May 25, 1948.
Photographic sensitizing materials and solutions. American Multigraphing Co. 293,894, May 10, 1932. Republished Aug. 17.
Plasticizer binder, and extender, Thermoplastic hydrocarbon. Harwick Standard Chemical Company. 501,554, Aug. 17; Serial No. 493,771, published May 11, 1948.
Pomade, Hair. H. G. Douglas. 403,727, Oct. 19, 1943. Republished Aug. 17.
Powder, Face. Colgate & Company. 242,781, renewed June 5, 1948. O. G. Aug. 17.
Preparation for imparting a glossy appearance to the hair. R. H. Cromwell. 172,977, Sept. 11, 1923. Republished Aug. 17.
Preparations in the form of wax, powder, and liquid. C. Howard. 246,483, renewed Sept. 11, 1948. O. G. Aug. 17.
Remedies for whooping cough. E. Bischoff. 75,353, Sept. 18, 1909. Republished Aug. 17.
Resin, Synthetic. Beck, Koller & Co., Inc. 330,251, Nov. 26, 1935. Republished Aug. 17.
Rinse, cold wave lotion, Cold wave. R. G. Shakour, Inc. 440,173, Aug. 17; Serial No. 505,771, published May 4, 1948.
Salve preparation, Ointment. M. K. Wolverton. 501,691, Aug. 17; Serial No. 538,838, published May 18, 1948.
Section of a periodical publication. Chain Store Publishing Corporation. 242,678, renewed June 5, 1948. O. G. Aug. 17.
Shampoo preparation. William Cooper & Nephews, Incorporated. 269,546, Apr. 8, 1930. Republished Aug. 17.
Sizing for textile materials, Dry amylaceous warp. Stein, Hall & Company, Inc. 501,553, Aug. 17; Serial No. 487,057, published May 18, 1948.
Solution of quaternary ammonium compounds. Monarch Soap & Chemical Co. 501,699, Aug. 17; Serial No. 541,870, published May 25, 1948.
Solutions, Contact lens. Barnes-Hind Laboratories. 501,577, Aug. 17; Serial No. 514,747, published May 25, 1948.
Starch. J. C. Hubinger Bros. Co. 26,882, July 30, 1895. Republished Aug. 17.
Tablets, Iodine. Neoco Corporation. 501,707, Aug. 17; Serial No. 490,393.
Tablets, iodine tablets, etc., Calcium carbonate and magnesium trisilicate. Neoco Corporation. 501,588, Aug. 17; Serial No. 519,893, published May 18, 1948.
Vitamin preparation. Horlick Laboratories, Inc. 411,548, Jan. 23, 1945. Republished Aug. 17.
Water treatment chemicals. J. H. Heal. 440,187, Aug. 17; Serial No. 509,279, published May 25, 1948.
Wetting agent, Chemical. Demert & Dougherty, Inc. 501,659, Aug. 17; Serial No. 533,283, published May 25, 1948.

CLASS 7

Cord, Fibrous. Parker-Meyer-Dennis Company. 326,143, July 16, 1935. New certificate. O. G. Aug. 17.
Cords, lines, twines, and ropes. J. P. Tohnan. 11,210, May 27, 1884. Republished Aug. 17.
Rope. Plastic Wire & Cable Corporation. 501,684, Aug. 17; Serial No. 537,353, published May 18, 1948.
Rope, cord, and twine. American Manufacturing Company. 501,605, Aug. 17; Serial No. 528,852, published May 4, 1948.
Rope, Rawhide. Chas. A. Schieren Company. 501,628, Aug. 17; Serial No. 530,854, published Apr. 27, 1948.
Sash-cord, Braided. Samson Cordage Works. 23,509, Aug. 15, 1893. Republished Aug. 17.
Twine, clothes lines, sash cord, etc., Sisal binder. Oakes & Company. 440,255, Aug. 17; Serial No. 525,381, published Feb. 17, 1948.
Window or sash cord, Braided cotton. Samson Cordage Works. 24,411, Mar. 27, 1894. Republished Aug. 17.

CLASS 8

Ash trays. Radio Corporation of America. 440,258, Aug. 17; Serial No. 525,948, published May 25, 1948.
Cases and cigarette holders, Cigarette. Eisenstadt Manufacturing Company. 410,755, Dec. 19, 1944. Republished Aug. 17.
Cigar and cigarette lighters, Pyrophoric. Eisenstadt Manufacturing Company. 410,754, Dec. 19, 1944. Republished Aug. 17.
Cigar lighters, Pyrophoric. Galter Manufacturing Company. 414,003, May 22, 1945. Republished Aug. 17.
Cigar lighters, Pyrophoric. Galter Manufacturing Company. 415,639, Aug. 14, 1945. Republished Aug. 17.
Cigarette and cigar lighters, Pyrophoric. Eisenstadt Manufacturing Company. 283,260, May 19, 1931. Republished Aug. 17.
Pipes and cigarette and cigar holders, Tobacco. William Demuth & Co., Inc. 501,666, Aug. 17; Serial No. 534,250, published May 25, 1948.
Pipes, Smokers'. Gaylords. 501,711, Aug. 17; Serial No. 512,115.
Pipes, Smoking. Samhara Pipes, Inc. 440,219, Aug. 17; Serial No. 517,203, published May 25, 1948.
Pipes, Tobacco. William Demuth & Co., Inc. 501,676, Aug. 17; Serial No. 535,691, published May 25, 1948.

CLASS 9

Matches. Nitedals Taendstikfabrik. 68,000, re-renewed Mar. 3, 1948. O. G. Aug. 17.
Matches. Nitedals Taendstikfabrik. 242,378, renewed May 22, 1948. O. G. Aug. 17.

CLASS 10

Fertilizer, Ammonium sulphate. Ford Motor Company. 249,344, renewed Nov. 13, 1948. O. G. Aug. 17.

CLASS 12

Blocks for furnaces, Refractory. Corhart Refractories Company. 246,879, renewed Sept. 18, 1948. O. G. Aug. 17.
Brick, refractory shapes, ceramic laying mixtures, etc., Fire. Massillon Refractories Company. 500,504, June 1, 1948. Corrected. O. G. Aug. 17.
Building materials, Composition. Continental Building Specialties. 246,880, renewed Sept. 18, 1948. O. G. Aug. 17.
Building products, Sheet-metal. Milwaukee Corrugating Company. 179,554, Feb. 12, 1924. Republished Aug. 17.
Buildings and structural parts thereof, Prefabricated. PHC Housing Corporation. 415,417, Aug. 7, 1945. Republished Aug. 17.
Cement, Non-staining waterproofed mortar. Medusa Portland Cement Company. 288,535, Nov. 3, 1931. Republished Aug. 17.
Cement, Non-staining water-proofed mortar. Medusa Portland Cement Company. 328,114, Sept. 17, 1935. Republished Aug. 17.
Cement, Plastic. Paraffine Companies, Inc. 248,211, renewed Oct. 16, 1948. O. G. Aug. 17.
Cement, Portland. Medusa Portland Cement Company. 357,756, June 14, 1938. Republished Aug. 17.
Ceramic, clay wall tile, glazed and unglazed. Cambridge Tile Manufacturing Co. 349,073, Aug. 17, 1937. Republished Aug. 17.
Ceramic, clay, wall tile, glazed and unglazed. Cambridge-Wheatley Co. 345,608, May 4, 1937. Republished Aug. 17.
Clapboard siding. Reynolds Metals Company. 440,206, Aug. 17; Serial No. 513,768, published May 18, 1948.
Coatings, Stucco and other cement. Lasting Products Company. 440,211, Aug. 17; Serial No. 514,901, published May 18, 1948.
Covering, Plastic asphaltic roof. Lehon Company. 440,153, Aug. 17; Serial No. 496,641, published May 18, 1948.
Flooring, Lumber and wood. W. M. Ritter Lumber Company. 501,621–2, Aug. 17; Serial Nos. 530,024–5, published May 18, 1948.
Insulation, composition roofing, building paper, roofing paper, etc., Roofing. Oakes & Company. 440,256, Aug. 17; Serial No. 525,383, published Feb. 17, 1948.
Lath, Metal. Milwaukee Corrugating Company. 224,909, Mar. 8, 1927. Republished Aug. 17.
Lime. National Mortar and Supply Company of Pittsburgh. 169,341, June 12, 1923. Republished Aug. 17.
Lime. National Mortar and Supply Company of Pittsburgh. 345,630, May 4, 1937. Republished Aug. 17.
Linemen's platforms, platform railings, and live line guards. A. B. Chance Company. 401,462, May 18, 1943. Republished Aug. 17.
Mortar, stucco, artificial stone, etc., Specially prepared, treated and compounded. C. R. Rex. 352,797, Dec. 14, 1937. Republished Aug. 17.

Panels, Brick design siding. Celotex Corporation. 440,146, Aug. 17; Serial No. 490,101, published May 18, 1948.
Plywood. Darlington Veneer Company, Inc. 409,231, Sept. 26, 1944. Republished Aug. 17.
Poles, Steel. Truscon Steel Company. 501,663, Aug. 17; Serial No. 533,795, published May 18, 1948.
Tile, Floor and wall. Pacific Tile & Porcelain Company. 501,589, Aug. 17; Serial No. 519,895, published May 18, 1948.
Trims, mouldings, and edgings. F. B. Hill, Jr. 440,158–9, Aug. 17; Serial Nos. 502,973–4, published May 18, 1948.

CLASS 13

Anchor rods, bolts, nuts, etc. A. B. Chance Company. 401,922, June 15, 1943. Republished Aug. 17.
Cookware, Cast aluminum. Advance Aluminum Castings Corp. 423,576–8, Sept. 3, 1946. Republished Aug. 17.
Cookware, Cast aluminum. Advance Aluminum Castings Corp. 425,281, Nov. 12, 1946. Republished Aug. 17.
Cooking utensils. Advance Aluminum Castings Corp. 326,870, Aug. 6, 1935. Republished Aug. 17.
Cooking utensils, Cast-aluminum. Advance Pattern & Foundry Company. 215,525, July 20, 1926. Republished Aug. 17.
Cooking utensils, etc., Aluminum and iron. Griswold Manufacturing Company. 205,244, Nov. 3, 1925. Republished Aug. 17.
Cooking utensils of base metal. Utility Products, Inc. 302,888, May 2, 1933. Republished Aug. 17.
Grounding clamps, grounding rods, grounding cluster supports, etc. A. B. Chance Company. 401,576, May 25, 1943. Republished Aug. 17.
Horse nails. Capewell Horse Nail Company. 228,103, May 24, 1927. Republished Aug. 17.
Pressure cookers. Advance Aluminum Castings Corp. 319,114, Nov. 13, 1934. Republished Aug. 17.
Sprinkler systems, Lawn. National Muellermist Company. 261,770, Sept. 24, 1929. Republished Aug. 17.
Traps, Steam. V. D. Anderson Company. 287,259, Sept. 15, 1931. Republished Aug. 17.
Traps, Steam. V. D. Anderson Company. 399,883, Feb. 2, 1943. Republished Aug. 17.
Traps, Steam. V. D. Anderson Company. 402,120, June 29, 1943. Republished Aug. 17.
Wood screws, washer-head screws, machine screws, etc. Elco Tool and Screw Corporation. 206,139, Nov. 24, 1925. Republished Aug. 17.

CLASS 14

Aluminum or its alloys, Rough or unfinished castings of. Advance Aluminum Castings Corp. 356,869, May 17, 1938. Republished Aug. 17.
Drop forgings, castings, stampings, etc. J. H. Williams & Co. 151,644, Feb. 7, 1922. Republished Aug. 17.
Forgings made of iron, steel, copper, etc., Metal. J. H. Williams & Co. 331,756, Jan 12, 1936. Republished Aug. 17.
Forgings, Metal. J. H. Williams & Co. 80,202, Nov. 15, 1910. Republished Aug. 17.
Metal, Bearing. Lumen Bearing Company. 180,872, Mar. 11, 1924. Republished Aug. 17.
Metal in sheet and strip form. Cold Metal Products Company. 501,740, Aug. 17; Serial No. 544,709.
Sheets, Galvanized. Superior Sheet Steel Company. 364,004, Jan. 17, 1939. Republished Aug. 17.
Steel in various forms and finishes, Rolled. Superior Sheet Steel Company. 149,740, Dec. 20, 1921. Republished Aug. 17.
Steel, Strip and sheet. Sharon Steel Hoop Company. 312,781, May 8, 1934. Republished Aug. 17.
Steels and high-speed steels. J. H. Williams & Co. 104,813, June 15, 1915. Republished Aug. 17.

CLASS 15

Lubricants. Keystone Lubricating Company. 154,987, May 16, 1922. Republished Aug. 17.
Oil, Vacuum pump. Eitel-McCullough, Inc. 419,314, Feb. 12, 1946. Republished Aug. 17.
Oils, Lubricating. Marquette Petroleum Products, Inc. 243,139, renewed June 12, 1948. O. G. Aug. 17.

CLASS 16

Carbon black. United Carbon Company. 249,072, renewed Nov. 6, 1948. O. G. Aug. 17.
Colors, Trim. Phelan-Faust Paint Mfg. Co. 413,563, May 1, 1945. Republished Aug. 17.
Enamel-paint. Birnecke and Salmstein. 71,334, renewed Nov. 17, 1948. O. G. Aug. 17.
Lacquers. Morgan Company. 229,566, June 28, 1927. Republished Aug. 17.
Oil paint, Washable. Phelan-Faust Paint Manufacturing Company. 154,364, Apr. 11, 1922. Republished Aug. 17.
Paint and paint enamel, Ready-mixed. Boston Varnish Company. 216,018, Aug. 3, 1926. Republished Aug. 17.
Paint and varnish remover. Phelan-Faust Paint Manufacturing Company. 183,493, Apr. 29, 1924. Republished Aug. 17.
Paint enamels and varnishes. Boston Varnish Company. 216,019, Aug. 3, 1926. Republished Aug. 17.
Paints, colors, and pigments, Artists'. B. K. Elliott Company. 265,423, Dec. 24, 1929. Republished Aug. 17.
Paints, Ready mixed. Boston Varnish Company. 431,090–1, July 8, 1947. Republished Aug. 17.
Resin, Synthetic. Bec, Koller & Co., Inc. 329,061, Oct. 15, 1935. Republished Aug. 17.
Varnish. Patek Brothers, Inc. 501,644, Aug. 17; Serial No. 531,831, published Apr. 13, 1948.
Varnish. Phelan-Faust Paint Manufacturing Company. 187,879, Aug. 12, 1924. Republished Aug. 17.
Varnish, japan, driers, and liquid fillers. Boston Varnish Company. 53,948, June 19, 1906. Republished Aug. 17.
Varnish, japan, driers, and liquid fillers. Boston Varnish Company. 60,123, Jan. 29, 1907. Republished Aug. 17.
Varnishes. Morgan Company. 229,700, July 5, 1927. Republished Aug. 17.
Varnishes, japans, ready-mixed paints, etc. Clover Leaf Paint & Varnish Corporation. 299,217, Dec. 22, 1942. Republished Aug. 17.
Varnishes, paint enamels, stain, and ready-mixed paints. Boston Varnish Company. 299,371, Nov. 29, 1932. Republished Aug. 17.
Wood-finishing solution in the nature of a filler and sealer. American Crayon Company. 249,870, renewed Nov. 20, 1948. O. G. Aug. 17.
Filler, sealer, and extender, Size. Phelan-Faust Paint Manufacturing Company. 204,137, Oct. 6, 1925. Republished Aug. 17.

CLASS 17

Cigars. Justin Seubert, Inc. 79,303, Aug. 23, 1910. Republished Aug. 17.
Cigars. Peninsular Cigar Co. 425,799, Dec. 3, 1946. Republished Aug. 17.
Cigars, cigarettes, and smoking tobacco. Moss & Lowenhaupt Cigar Co. 501,654, Aug. 17; Serial No. 532,665, published May 18, 1948.

Tobacco, Chewing. P. Lorillard Company. 501,689, Aug. 17; Serial No. 538,555, published May 18, 1948.
Tobacco, Smoking. John Sinclair Limited. 158,812, renewed Sept. 12, 1942. O. G. Aug. 17.
Tobacco, Smoking and chewing. P. Lorillard Company. 501,688, Aug. 17; Serial No. 538,554, published May 18, 1948.

CLASS 19

Automobiles. Buffalo Commercial Body Co. Inc. 247,615, renewed Oct. 2, 1948. O. G. Aug. 17.
Bicycles and structural parts thereof. Huffman Manufacturing Company. 440,223, Aug. 17; Serial No. 518,147, published May 11, 1948.
Bicycles and structural parts thereof. Huffman Manufacturing Company. 440,224–5, Aug. 17; Serial Nos. 518,150–1, published May 11, 1948.
Bicycle parts. J. S. Niendorff. 440,202, Aug. 17; Serial No. 512,691, published May 18, 1948.
Boats, Sail. Scott, Palmer & Company, Inc. 501,573, Aug. 17; Serial No. 512,751, published May 18, 1948.
Brakes, Vehicle. Hydraulic Brake Company. 180,945, Mar. 11, 1924. Republished Aug. 17.
Carriers, Wheeled. John Chatillon & Sons. 440,228, Aug. 17; Serial No. 519,171, published May 18, 1948.
Cruisers and motor-driven pleasure boats, Cabin. Imperial Lifeboat & Davit Co., Inc. 440,214, Aug. 17; Serial No. 516,359, published May 11, 1948.
Device for attachment to sun visors on automobiles. Landis Manufacturing Company. 440,241, Aug. 17; Serial No. 522,762, published May 11, 1948.
Equipment, Automotive vehicle. Universal Metal Products Co., Inc. 501,619, Aug. 17; Serial No. 529,839, published May 11, 1948.
Heaters and parts thereof, vehicle windshield wipers, vehicle mirrors, etc., Vehicle. E. A. Laboratories, Inc. 501,640, Aug. 17; Serial No. 531,685, published May 11, 1948.
Sailboats. Henry R. Hinckley Co., Inc. 440,163, Aug. 17; Serial No. 503,815, published May 11, 1948.
Seat attachments to grocery carts in the nature of a child's seat. F. A. Tichenor. 440,245, Aug. 17; Serial No. 523,015, published May 11, 1948.
Seat covers, Automobile. Fraser Products Company. 440,195, Aug. 17; Serial No. 510,945, published May 11, 1948.
Seat covers, Automobile. Glostex Products, Inc. 501,694, Aug. 17; Serial No. 539,412, published May 18, 1948.
Seat covers, Vehicle. Schoellkopf Co. 440,249, Aug. 17; Serial No. 524,085, published May 11, 1948.
Springs, Overload and stabilizer. East Bay Auto Spring & Tool Works. 440,232, Aug. 17; Serial No. 521,059, published May 11, 1948.
Trailers, Vending. Legionaire Dinette Corp. 440,203, Aug. 17; Serial No. 512,914, published May 18, 1948.
Trucks and constructive parts thereof, Motor. Divco-Detroit Corporation. 248,683, renewed Oct. 30, 1948. O. G. Aug. 17.
Trucks and wheelbarrows, Hand. Fairbanks Company. 501,664, Aug. 17; Serial No. 533,871, published May 11, 1948.

Trucks, Hand. A. C. Avril. 440,197, Aug. 17; Serial No. 511,662, published May 18, 1948.
Trucks, Motor. International Motor Company. 202,629, Sept. 1, 1925. Republished Aug. 17.
Trucks, Motor. International Motor Company. 205,100, Nov. 3, 1925. Republished Aug. 17.
Vehicles. Societe Anonyme Nouvelle de Constructions Mecaniques de la Loire "Automoto." 440,171, Aug. 17; Serial No. 505,528, published May 11, 1948.
Wagons, Farm. Avco Manufacturing Corporation. 440,253, Aug. 17; Serial No. 524,759, published May 11, 1948.
Water craft, Lightweight. Aqua-Skid Company. 440,243, Aug. 17; Serial No. 522,985, published May 11, 1948.
Weight, Balance. Perfect Equipment Corp. 440,185, Aug. 17; Serial No. 508,917, published May 11, 1948.

CLASS 20

Coverings and tiles of linoleum, Hard surface floor. Home Furnishings Style Council. 440,217, Aug. 17; Serial No. 517,129, published May 18, 1948.
Linoleum, cork carpet, felt-base floor coverings. Armstrong Cork Company. 247,581, renewed Oct. 2, 1948. O. G. Aug. 17.
Linoleum, plain linoleum, and cork carpet, Printed. Congoleum-Nairn, Inc. 248,860, renewed Oct. 30, 1948. O. G. Aug. 17.

CLASS 21

Acousticons, church acousticons, acousticon batteries; etc. Dictograph Products Company. 247,328, renewed Sept. 25, 1948. O. G. Aug. 17.
Condensers, Vacuum. Eitel-McCullough, Inc. 420,697, Apr. 30, 1946. Republished Aug. 17.
Devices for controlling or modifying electrical currents. Raytheon Manufacturing Company. 369,432, July 25, 1939. Republished Aug. 17.
Electric current rectifiers, electric battery chargers and rectifier battery chargers. Raytheon Manufacturing Company. 367,404, May 16, 1939. Republished Aug. 17.
Electric goods and apparatus. Edwards and Company, Inc. 294,309–10, May 24, 1932. Republished Aug. 17.
Electric lamps. Raytheon Manufacturing Company. 429,305, Apr. 29, 1947. Republished Aug. 17.
Electrical goods and apparatus. Edwards and Company, Inc. 294,312, May 24, 1932. Republished Aug. 17.
Electrical goods and apparatus. Edward and Company Inc. 340,440, Nov. 10, 1936. Republished Aug. 17.
Electrical rectifying and filtering devices and condensive elements. Square D Company. 295,888, July 19, 1932. Republished Aug. 17.
Insulation material, Electrical. New Jersey Wood Finishing Company. 399,821, Feb. 2, 1943. Republished Aug. 17.
Irons, Garment or other material pressing steam electric hand. J. Galter. 380,835, Sept. 3, 1940. Republished Aug. 17.
Irons, Garment or other material pressing steam hand. J. Galter. 385,293, Feb. 25, 1941. Republished Aug. 17.
Lens for electric head lamps, etc., Filtered or colored. W. F. Broer, Jr. 440,251, Aug. 17; Serial No. 524,521, published Jan. 20, 1948.
Spark plugs. B. G. Corporation. 245,675, renewed Aug. 21, 1948. O. G. Aug. 17.
Spark plugs. B. G. Corporation. 246,760, renewed Sept. 11, 1948. O. G. Aug. 17.
Spark plugs and parts thereof. Defiance Spark Plug Company. 220,338, Nov. 9, 1926. Republished Aug. 17.
Standards or bases, exterior metal lighting fixtures, etc. Metal lighting. Union Metal Manufacturing Company. 242,397, renewed May 22, 1928. O. G. Aug. 17.
Timing mechanisms for electric circuits. Eagle Signal Corporation. 344,385, Mar. 23, 1937. Republished Aug. 17.
Tubes, Electrical space discharge. Raytheon Production Corporation. 395,169, May 12, 1942. Republished Aug. 17.
Tubes, Rectifying, regulating, and smoothing. Raytheon Production Corporation. 265,832, Jan. 7, 1930. Republished Aug. 17.
Tubes, Rectifying, regulating, and smoothing. Raytheon Production Corporation. 265,856, Jan. 7, 1930. Republished Aug. 17.
Tubes, Vacuum. Eitel-McCullough, Inc. 375,118, Feb. 6, 1940. Republished Aug. 17.
Vacuum tubes, valves, and television lamps. Raytheon Production Corporation. 266,330, Jan. 14, 1930. Republished Aug. 17.

CLASS 22

Airplanes and parts thereof, Toy and model. J. Galter. 375,131, Feb. 6, 1940. Republished Aug. 17.
Amusement apparatus, Coin-controlled. Exhibit Supply Company. 501,612, Aug. 17; Serial No. 529,245, published Apr. 27, 1948.
Amusement apparatus, Coin-controlled. Exhibit Supply Company. 501,613, Aug. 17; Serial No. 529,247, published Apr. 27, 1948.
Bags and bowling bags, Golf. H. Hotze & Sons Company. 501,567, Aug. 17; Serial No. 510,515, published Apr. 6, 1948.
Baits, Artificial fishing. Williams Gold Refining Company, Inc. 299,915, Dec. 27, 1932. Republished Aug. 17.
Belts with attachments, Hunters'. M. Keim. 440,186, Aug. 17; Serial No. 509,010, published Apr. 6, 1948.
Board games. C. A. George, Jr. 440,191, Aug. 17; Serial No. 510,505, published May 18, 1948.
Card and chart games, Amusement. W. W. Peterman. 440,193, Aug. 17; Serial No. 510,538, published Apr. 27, 1948.
Cribbage score boards. H. A. Sicotte. 440,266, Aug. 17; Serial No. 498,866.
Dolls. Imperial Crown Toy Corp. 440,261, Aug. 17; Serial No. 526,233, published Apr. 27, 1948.
Dolls and toys in the shape of human figures, etc. C. Bannister. 440,265, Aug. 17; Serial No. 496,421.
Fish lures. H. E. Ojala. 440,166, Aug. 17; Serial No. 504,285, published Apr. 27, 1948.
Fish lures and artificial fish baits, Artificial. Hugger Bait Company. 440,201, Aug. 17; Serial No. 512,505, published Apr. 27, 1948.
Fishing-lines. E. J. Martin's Sons. 70,994, re-renewed Oct. 20, 1948. O. G. Aug. 17.
Fishing rods, fishing reels, fishing reel seats, etc. Royal Engineering Co. 501,557, Aug. 17; Serial No. 498,931, published Apr. 27, 1948.
Fishing tackle. A. M. Holter Hardware Co. 368,354, June 13, 1939. Republished Aug. 17.
Foot balls, basketballs, boxing gloves. Mortimer Newman Company. 501,608–9, Aug. 17; Serial Nos. 529,079–80, published Apr. 27, 1948.
Game board. Albarr Products Co. 440,207, Aug. 17; Serial No. 513,794, published Apr. 27, 1948.
Golf clubs. R. H. Macy & Co., Inc. 247,844, renewed Oct. 9, 1948. O. G. Aug. 17.
Golf clubs. R. H. Macy & Co., Inc. 249,093, renewed Nov. 6, 1948. O. G. Aug. 17.
Life preservers, life-preserver cushions. Atlantic-Pacific Manufacturing Corp. 249,090, renewed Nov. 6, 1948. O. G. Aug. 17.
Playground equipment. R. E. Soderholm. 440,194, Aug. 17; Serial No. 510,863, published Apr. 27, 1948.
Pool and croquet game, Combination. C. L. Yancey. 440,152, Aug. 17; Serial No. 496,188, published Apr. 6, 1948.
Rattle and teether, Combination baby. Mistletoe Plastics Co. 501,709, Aug. 17; Serial No. 509,096.
Scalers, Fish. F. M. Koon. 440,220, Aug. 17; Serial No. 517,250, published Apr. 27, 1948.
Skates, ice skates, convertible ice and roller skates, etc., Roller. George K. Garrett Company, Inc. 501,594. Aug. 17; Serial No. 527,509, published Apr. 27, 1948.
Skates, ice skates, convertible ice and roller skates, etc., Roller. George K. Garrett Company, Inc. 501,596. Aug. 17; Serial No. 527,845, published Apr. 27, 1948.
Toy carpet sweepers, toy house cleaning sets, etc. P. A. Jones. 394,239, Mar. 24, 1942. Republished Aug. 17.
Toy houses. H. J. J. Whitecavage. 501,603, Aug. 17; Serial No. 528,596, published Apr. 27, 1948.

CLASS 23

Blade, Band saw. American Saw & Manufacturing Company. 397,111, Aug. 18, 1942. Republished Aug. 17.
Blades, Hack saw. American Saw & Manufacturing Company. 345,920, May 11, 1948. Republished Aug. 17.
Blades, Hack saw. American Saw & Manufacturing Company. 402,359, July 13, 1943. Republished Aug. 17.
Blades, Hack saw. Capewell Manufacturing Company. 384,248–9, Jan. 7, 1941. Republished Aug. 17.
Blades, Hack saw. Capewell Manufacturing Company. 388,778, July 8, 1941. Republished Aug. 17.
Blades, Hack saw. Capewell Manufacturing Company. 392,328, Dec. 23, 1941. Republished Aug. 17.
Bottle-washing machinery. Liquid Carbonic Corporation. 243,153, June 12, 1928. Republished Aug. 17.
C-clamps, strap-clamps, lathe dogs, etc. J. H. Williams & Co. 88,987. Oct. 29, 1912. Republished Aug. 17.
C-clamps, strap-clamps, lathe dogs, etc. J. H. Williams & Co. 95,381, Feb. 10, 1914. Republished Aug. 17.
C-clamps, strap clamps, lathe-dogs, etc. J. H. Williams & Co. 104,112, Apr. 27, 1915. Republished Aug. 17.
Chains for tongs and pipe vises. J. H. Williams & Co. 344,556, Mar. 30, 1937. Republished Aug. 17.
Clippers, Bolt. H. K. Porter. 153,825, Mar. 28, 1922. Republished Aug. 17.
Clippers, Bolt and rivet. H. K. Porter. 126,195, July 29, 1919. Republished Aug. 17.
Clippers, rod cutters, wire cutters, etc., Bolt. H. K. Porter, Inc. 246,233, Sept. 4, 1928. Republished Aug. 17.
Engineering appliances, Certain. Schutte and Koerting Company. 210,530, Mar. 16, 1926. Republished Aug. 17.
Engines, Motor vehicle internal combustion. Mack Manufacturing Corporation. 370,523, Aug. 29, 1939. Republished Aug. 17.
Extractors, Fruit juice. F. L. Talge. 346,876, June 8, 1937. Republished Aug. 17.

Hammers, tampers, riveters, etc., Power operated. Barco Manufacturing Co. 321,641, Feb. 5, 1935. Republished Aug. 17.
Handles for machine tools, For machine. Cincinnati Ball Crank Co. 353,110, Dec. 28, 1937. Republished Aug. 17.
Jaws for tongs and pipe vises. J. H. Williams & Co. 344,774, Apr. 6, 1937. Republished Aug. 17.
Knives, Pocket. P. J. Cummings. 200,446, June 30, 1925. Republished Aug. 17.
Lubricating equipment, etc., Automotive and industrial. Aro Equipment Corporation. 358,240, July 5, 1938. Republished Aug. 17.
Machine, and parts thereof, Nut cracking and processing. Champion Pecan Machine Company. 394,202, Mar. 24, 1942. Republished Aug. 17.
Machinery and parts. Duriron Castings Company. 96,259, Apr. 14, 1914. Republished Aug. 17.
Machines for drilling, etc. Gulbert Steel Company. 284,763, July 7, 1931. Republished Aug. 17.
Motors, Internal and combustion. J. Galter. 375,311, Feb. 13, 1940. Republished Aug. 17.
Planes and hammers. Capewell Manufacturing Company. 367,872, May 30, 1939. Republished Aug. 17.
Plates before and after embossing, Printing. Addressograph Company. 338,449, Sept. 8, 1936. Republished Aug. 17.
Plow and cultivator parts, etc. Columbus Loom Works Company. 432,286, Aug. 26, 1947. Republished Aug. 17.
Presses for removing oils and liquids. V. D. Anderson Company. 323,755, Apr. 30, 1935. Republished Aug. 17.
Presses, Printing. Miehle Printing Press & Manufacturing Company. 242,514, re-renewed May 29, 1948. O. G. Aug. 17.
Pumps, Fuel, vacuum, and oil. Pump Engineering Service Corporation. 381,212, Dec. 31, 1935. Republished Aug. 17.
Pumps, Vacuum. Eitel-McCullough, Inc. 419,107, Feb. 5, 1946. Republished Aug. 17.
Rolls, Cast rolling mill. United Engineering and Foundry Company. 380,963, Sept. 10, 1940. Republished Aug. 17.
Saws and machine-knives. Simonds Manufacturing Company. 71,418, re-renewed Nov. 24, 1948. O. G. Aug. 17.
Tools and parts thereof, Portable two-hand cutting-off metal working. H. K. Porter, Inc. 270,480, May 6, 1930. Republished Aug. 17.
Tools and parts thereof, Portable two-hand cutting-off metal-working. H. K. Porter, Inc. 286,003, Aug. 11, 1931. Republished Aug. 17.
Tools, Metal cutting. Lavallee & Ide, Inc. 432,267, Aug. 26, 1947. Republished Aug. 17.
Tools, Portable two-hand cutting-off. H. K. Porter, Inc. 349,385, Aug. 24, 1937. Republished Aug. 17.
Trench-excavating machines, concaves for gyratory crushers, etc., Parts for. Kensington Steel Company. 242,308, May 22, 1928. Republished Aug. 17.
Twist drills, chucks, reamers, taps, etc. Standard Tool Company. 422,475, July 23, 1946. Republished Aug. 17.
Utensils, Aluminum culinary. F. L. Talge. 325,973, July 9, 1935. Republished Aug. 17.
Valve closing and opening machines, Automatic. Limitorque Corporation. 267,816, Feb. 18, 1930. Republished Aug. 17.
Valves, etc., Manually operable hydraulic operable control. Hydraulic Engineering Co., Inc. 419,596, Feb. 26, 1946. Republished Aug. 17.
Vises, Tongs and pipe. J. H. Williams & Co. 344,775, Apr. 6, 1937. Republished Aug. 17.
Washing machines, Laundry. Easy Washing Machine Corporation. 375,757, Feb. 27, 1940. Republished Aug. 17.
Winding-machines for thread, yarn, cord, etc. Universal Winding Company. 138,885, Jan. 11, 1921. Republished Aug. 17.
Wood cutting tool. H. K. Porter, Inc. 310,125, Feb. 13, 1934. Republished Aug. 17.
Wrenches. J. H. Williams & Co. 209,075, Feb. 16, 1926. Republished Aug. 17.
Wrenches, tool holders, lathe dogs, clamps. J. H. Williams & Co. 152,551, Feb. 28, 1922. Republished Aug. 17.
Wrenches, wrench sets, wrench sockets, etc. J. H. Williams & Co. 277,808, Nov. 11, 1930. Republished Aug. 17.
Wrenches, wrench sets, wrench sockets, etc. J. H. Williams & Co. 283,105, May 19, 1931. Republished Aug. 17.
Wrenches, wrench sets, wrench sockets, etc. J. H. Williams & Co. 303,210, May 16, 1933. Republished Aug. 17.
Writing machines, Signature. Hedman Manufacturing Company. 283,799, June 9, 1931. Republished Aug. 17.

CLASS 25

Locks. International Time Recording Company of New York. 248,460, renewed Oct. 23, 1948. O. G. Aug. 17.
Locks, ignition switch locks, and keys. Ford Motor Company. 249,345, renewed Nov. 13, 1948. O. G. Aug. 17.

CLASS 26

Blanks and lenses tinted to reduce glare, Ophthalmic. Continental Optical Company, Inc. 368,916, July 4, 1939. Republished Aug. 17.
Blanks and lenses tinted to reduce glare, Ophthalmic. Continental Optical Company, Inc. 369,948, Aug. 8, 1939. Republished Aug. 17.
Calculating machines. Reliable Typewriter & Adding Machine Corporation. 244,386, renewed July 17, 1948. O. G. Aug. 17.
Cameras, photographic lenses, and sensitized photographic films. Match King, Inc. 374,127, Jan. 2, 1940. Republished Aug. 17.
Cameras with built in batteries, etc. Match King, Inc. 376,296, Mar. 19, 1940. Republished Aug. 17.
Fatigue testing machines, and photographic articles, etc., Electromagnetically operated. Raytheon Manufacturing Company. 416,778, Sept. 25, 1945. Republished Aug. 17.
Lens blanks and lenses, Ophthalmic. Continental Optical Company, Inc. 375,016, Feb. 6, 1940. Republished Aug. 17.
Lens frames and mountings therefor, Ophthalmic. Continental Optical Company, Inc. 428,528, Mar. 25, 1947. Republished Aug. 17.
Lenses for eye protection, Glass. New York Eye Protection Co., Inc. 393,760, Mar. 3, 1942. Republished Aug. 17.
Lenses, Ophthalmic. Continental Optical Company, Inc. 377,833, May 14, 1940. Republished Aug. 17.
Photographic film and paper, Sensitised. AGFA Ansco Corporation. 316,947, Sept. 11, 1934. Republished Aug. 17.
Printing paper, Sensitized. B. K. Elliott Company. 288,193, Oct. 20, 1931. Republished Aug. 17.
Regulating and control apparatus. Bailey Meter Company. 341,884, Dec. 8, 1936. Republished Aug. 17.
Rules and levels, Plumb. J. Sand & Sons. 110,434, May 23, 1916. Republished Aug. 17.
Scientific apparatus. National Detection of Deception Laboratories, Inc. 440,268, Aug. 17; Serial No. 502,657.
Spectacles, goggles, and lenses for the same. New York Eye Protection Co., Inc. 401,262, May 4, 1943. Republished Aug. 17.
Spectacles, goggles, and lenses for the same. New York Eye Protection Co., Inc. 410,263, May 4, 1943. Republished Aug. 17.
Systems and apparatus for temperature, Measuring and controlling. Bailey Meter Company. 388,235, June 17, 1941. Republished Aug. 17.
Tools, Machinists' small. Union Tool Company. 153,886, Mar. 28, 1922. Republished Aug. 17.
Valve with sensitivity and standardization adjustments, Assembled combination of an air pilot. Bailey Meter Company. 348,964, Aug. 17, 1937. Republished Aug. 17.

CLASS 27

Watch-movements and watchcases. Louis Manheimer & Bros. 58,025, Dec. 4, 1906. Republished Aug. 17.
Watches and clocks. Invicta-Seeland, Inc. 425,488, Nov. 26, 1946. Republished Aug. 17.
Watches and clocks and parts thereof. E. Mathey Tissot et Co. 346,108, May 18, 1937. Republished Aug. 17.
Watches and parts thereof. Felca Watch Corporation. 428,689, Apr. 1, 1947. Republished Aug. 17.
Watches and parts thereof. René Brandt, Fabrique d'Horlogerie Ogival. 440,205, Aug. 17; Serial No. 513,652, published May 18, 1948.
Watches and watch movements. Invicta-Seeland, Inc. 428,716, Apr. 1, 1947. Republished Aug. 17.

Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control system and apparatus. 2,447,388, Aug. 17.

Babcock & Wilcox Company, The, assignee: *See*—
Bailey, Ervin G., and Hardgrove.

Babcy, Charles, Basel, Switzerland, and F. L. Goodall, Burley-in-Wharfedale, England, assignors to J. R. Geigy A.-G., Basel, Switzerland. Production of pure white discharging effects on cellulosic materials. 2,446,992, Aug. 17.

Bachman, Fred E.: *See*—
Schlegel, Walter L., Jr., and Bachman.

Bachman, Fred E., assignor to American Steel Foundries, Chicago, Ill. Snubber. 2,447,305, Aug. 17.

Bacon, Leslie R.: *See*—
Wegst, Walter F., Bacon, and Vaughn.

Bailey, Ervin G., Easton, Pa., and R. M. Hardgrove, Westfield, assignors to The Babcock & Wilcox Company, Rockleigh, N. J. Fluid heater. 2,447,306, Aug. 17.

Bailey Meter Company, assignee: *See*—
Hornfeck, Anthony J.

Baker, Harry J., Speedway, Ind., assignor to Union Carbide and Carbon Corporation. Arrester element. 2,447,048, Aug. 17.

Baker, Henry C., Muskegon, Mich. Flag for mail boxes. 2,447,152, Aug. 17.

Baker, William F., and I. J. Pickering, Birmingham, assignors to The General Electric Company, Limited, London, England. Electrode holder. 2,447,307, Aug. 17.

Barber-Colman Company, assignee: *See*—
Peterson, Burt A.

Barber, Ethel P., Phoenix, Ariz. Machine for manufacturing cement tile. 2,447,153, Aug. 17.

Barker, George A., Rochester, N. Y. Explosive-operated shears. 2,446,994, Aug. 17.

Barrows, Donald S., assignor to The Symington-Gould Corporation, Rochester, N. Y. Brake beam support. 2,447,458, Aug. 17.

Baubach, M. B., assignee: *See*—
O'Leary, Jerry.

Bauwens, Romain, Burton, Wash. Electric fuse box. 2,447,049, Aug. 17.

Bay, Thomas J., U. S. Navy. Engine cooling system and apparatus. 2,446,995, Aug. 17.

Beardsley, Guy E., Jr., West Hartford, Conn., assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,447,264, Aug. 17.

Beardsley, Guy E., Jr., West Hartford, Conn., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind. Fuel control device. 2,447,265, Aug. 17.

Beardsley, Guy E., Jr., West Hartford, Conn., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind. Fuel control device. 2,447,266, Aug. 17.

Beckham, Leland J., Geddes, and W. A. Fessler, Camillus, N. Y., assignors to Allied Chemical & Dye Corporation. Improving the color of surface-active agents. 2,447,308, Aug. 17.

Behr-Manning Corporation, assignee: *See*—
Smyser, James S.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Bouton, George M., and Phipps, and Schumacher.
Harrison, Henry C.
Shann, Oscar A.

Bendix Aviation Corporation, assignee: *See*—
Beardsley, Guy E., Jr.
Evans, Le Roy J.
Kucher, Andrew A.
Miller, Donald L.
Mock, Frank C.
Ruscito, Anthony J.
Tognola, Tullio.

Bennett, Donald E., Larkspur, Calif. Emergency wheel. 2,447,225, Aug. 17.

Bennett, Donald E., Larkspur, Calif. Sign for electric doorbell switches. 2,447,226, Aug. 17.

Berger, Elwood A.: *See*—
Olson, Malven L., and Berger.

Bergstrom, Carl P., Millbury, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Support for warp beam in looms. 2,447,227, Aug. 17.

Bernard, George G.: *See*—
Bond, Donald C., and Bernard.

Billeter, Henry R., Highland Park, Ill., assignor to Ammco Tools, Inc. Torque measuring wrench. 2,447,109, Aug. 17.

Bitzenburger, Frank C., Los Angeles, Calif. Soldering iron. 2,447,110, Aug. 17.

Blaisdell, Harold L., Little Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Tuning indicator system. 2,447,309, Aug. 17.

Blaw-Knox Company, assignee: *See*—
Joseph, Lawrence E.

Bludworth, Joseph E., and D. P. Easter, Cumberland, Md., assignors to Celanese Corporation of America. Organic hydroxy compound and derivatives thereof. 2,447,050, Aug. 17.

Bolté, Brown: *See*—
Sidnam, Alan N., Bolte, and Neary.

Bond, Donald C., Northbrook, and N. B. Russell, Winnetka, assignors to The Pure Oil Company, Chicago, Ill. Removing acidic sulfur compounds from hydrocarbon distillates. 2,447,051, Aug. 17.

Bond, Donald C., Northbrook, and G. G. Bernard, Evanston, assignors to The Pure Oil Company, Chicago, Ill. Paint remover. 2,447,052, Aug. 17.

Boral, Emil: *See*—
Florjancic, Peter, and Boral.

Borchers, Earl M., assignor to American Cabinet Hardware Corporation, Rockford, Illinois, Rockford, Ill. Pull for sliding glass panels. 2,447,389, Aug. 17.

Bosley, James L., Oakland, Calif. Photometer carrying case. 2,447,053, Aug. 17.

Boston, Elmer S., Earlville, Ill. Bracket construction. 2,447,228, Aug. 17.

Bouton, George M., Madison, G. S. Phipps, Chatham, and E. E. Schumacher, Maplewood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Metal objects coated with lead alloys. 2,446,996, Aug. 17.

Bowes, Arthur S., assignee: *See*—
Amberg, Walter E.

Bowlus, Omer E., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Electrical control system. 2,447,111, Aug. 17.

Boynton, Earl S.: *See*—
O'Brien, Joseph F., and Boynton.

Bradley, George T., Miami, Fla. Shotgun forearm. 2,447,229, Aug. 17.

Brand, Earl E., Berlin, N. J. Liquid cooled metallic beer keg. 2,447,390, Aug. 17.

Brandes, Samuel A., New York, and F. L. Greenfield, Brooklyn, N. Y.; said Brandes assignor to said Greenfield. Laterally folding chair with tray. 2,447,391, Aug. 17.

Brenninger, Alfred W., Philadelphia, Pa. Safety razor and safety razor blade clamp. 2,447,310, Aug. 17.

Brewer, Aubrey K., Richland Center, Wis., and S. L. Madorsky, Chicago, Ill., assignors, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission. Molecular distillation process and apparatus for the separation of isotopes, etc. 2,446,997, Aug. 17.

Brewer-Titchener Corporation, assignee: *See*—
Card, Charles S.

Brickman, Alan E., New Haven, Conn., assignor to The American Steel and Wire Company of New Jersey. Making torpedo nets. 2,447,154, Aug. 17.

Brickman, Alan E., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Method and apparatus for swaging and bending. 2,447,155, Aug. 17.

Bristol Company, The, assignee: *See*—
Ertzman, William F.

Brittain, Louis B., Los Angeles, Calif. Radio control system. 2,447,156, Aug. 17.

Brown, Chester W., Milwaukee, assignor to Line Material Company, South Milwaukee, Wis. Switch construction. 2,447,112, Aug. 17.

Brown, Harold J., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibrator. 2,447,230, Aug. 17.

Bruckner, Edward K., New York, N. Y. Orthopedic insole. 2,447,231, Aug. 17.

Bruce, Sophie E., assignee: *See*—
Nightingale, William J.

Bucher, Max, assignee: *See*—
Florjancic, Peter, and Boral.

Budd Company, The, assignee: *See*—
Gaensele, Paul W.

Bulgarini, Luis: *See*—
De Olariaga, Sara M. L., Bulgarini, and Forster.

Bullock, Harry L.: *See*—
Smith, Carlos B., and Bullock.

Burk, Robert E., Cleveland Heights, assignor to The Standard Oil Company, Cleveland, Ohio. Catalytically treating hydrocarbons with hydrogen fluoride and boron trifluoride in the presence of hydrogen. 2,446,998, Aug. 17.

Burrell, George G. and L.; said L. Burrell assignor to K. P. Burrell, Cedar Rapids, Iowa. Spark plug shield. 2,447,157, Aug. 17.

Burrell, Kittie P., assignee: *See*—
Burrell, George and L.

Burrell, Leo: *See*—
Burrell, George G. and L.

Burrows, Lawton A.: *See*—
Wester, Alfred B., Burrows, and Johnson.

Burt, Ralph, assignor to Syntron Company, Homer City, Pa. Expansible chamber fluid motor with piston actuated valve and pressure absorbing flexible envelope in cylinder. 2,447,311, Aug. 17.

Burt, Ralph, assignor to Syntron Company, Homer City, Pa. Expansible chamber motor with piston actuated valve for jolting machines. 2,447,312, Aug. 17.

Burton, Donald: *See*—
Alexander, James R., Burton, and Hausmann.

Bush, Ruth L., assignee: *See*—
Edens, James S.

Butterbaugh, Darrel J., Abington, and L. U. Spence, Elkins Park, assignors to Rohm & Haas Company, Philadelphia, Pa. Silica-magnesia catalyst and preparation thereof. 2,447,181, Aug. 17.

Buyken, Frank E.: *See*—
Fredrich, Edwin T., Mitchell, and Buyken.

Byrne, John F., Wellesley Hills, Mass., assignor to the United States of America as represented by the Secretary of War. System for aligning receiver and transmitter circuits. 2,447,392, Aug. 17.

Bywater, William G.: *See*—
Cheney, Lee C., and Bywater.

California Research Corporation, assignee: *See*—
Furby, Neal W.

Cambridge Thermionic Corporation, assignee: *See*—
Franklin, Constance W.

Camilli, Guglielmo, Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,446,999, Aug. 17.

Campion, Donald C., Sr., Detroit, Mich., assignor to Loftus Engineering Corporation, Pittsburgh, Pa. Shuffle conveyer. 2,447,393, Aug. 17.

Candee, Clifton C., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Preparation of a-barium lithol red. 2,447,394, Aug. 17.

Candy, Albert M., La Grange, assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill. Holding mechanism for welding stud ferrules. 2,447,113, Aug. 17.

Canfield, William B.: *See*—
Rust, John B., and Canfield.

Cantrell, Troy L.: *See*—
Smith, Herschel G., Cantrell, and Hill.

Card, Charles S., assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Insulator cap. 2,447,114, Aug. 17.

Carlson, Joseph J.: *See*—
Pick, Eric, and Carlson.

Carmody, Don R., Dallas, and L. G. Sharp, Irving, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Polymerization process. 2,447,313, Aug. 17.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Rendel, George H.
Westerholm, Gustaf.

Carroll, James J., Grosse Pointe Park, Mich. Internal-combustion engine. 2,447,314, Aug. 17.

Cartotto, Edward, assignor to Illinois Testing Laboratories, Inc., Chicago, Ill. Circuit for obtaining pulsating current output as a function of direct-current input. 2,447,232, Aug. 17.

Cartun, Paul O., Cleveland Heights, Ohio, assignor to General Electric Company. Sealing-in method for lamps and similar devices. 2,447,158, Aug. 17.

Cartun, Paul O., Cleveland Heights, Ohio, assignor to General Electric Company. Lamp terminal structure and manufacture. 2,447,159, Aug. 17.

Case, J. I., Company, assignee: *See*—
Jackson, Melvin F.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., and Easter.

Chaffin, Norman L., New York, assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington-on-Hudson, N. Y. Piezoelectric apparatus. 2,447,160, Aug. 17.

Chatterjea, Prafulla K., and L. W. Houghton, assignors to Standard Telephones and Cables Limited, London, England. Pulse time modulation multiplex receiver. 2,447,233, Aug. 17.

Cheney, Lee C., Detroit, and W. G. Bywater, Grosse Pointe Woods, assignors to Parke Davis & Company, Detroit, Mich. Morpholine substituted esters. 2,447,395, Aug. 17.

Chonacki, Frank: *See*—
Van Cleef, Paul, and Chonacki.

Christensen, Norman V., assignor to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,447,115, Aug. 17.

Chrysler Corporation, assignee: *See*—
Bowlus, Omer E.
Matulaitis, Victor E., Edwards, Voorhees.
Nims, Paul T.
Smith, Robert F., and Clark.

Cincinnati Milling Machine Co., The, assignee: *See*—
Wilder, Warren, and Horlacher.

Clark, Charles A.: *See*—
Anish, Alfred W., and Clark.

Clark Equipment Company, assignee: *See*—
Dence, Donald S.

Clarke, Samuel H., Baltimore, Md. Ammunition structure and launching device therefor. 2,447,315, Aug. 17.

Clayton Manufacturing Company, assignee: *See*—
Griswold, Donald G.

Coates, Cecil C., Prescott, Ariz. Dispensing cabinet. 2,447,054, Aug. 17.

Coghill, James T., assignor to Consolidated Machine Tool Corporation, Rochester, N. Y. Apparatus for the manufacture of paper and other felted fibrous products. 2,447,161, Aug. 17.

Colgate-Palmolive-Peet Company, assignee: *See*—
Gebhart, Arthur I., and Ross.

Collier-Keyworth Company, assignee: *See*—
Sheldrick, Henry W.

Collins, Robert B., Downers Grove, assignor to Universal Oil Products Company, Chicago, Ill. Vacuum stripping of moving catalyst in hydrocarbon conversion process. 2,447,116, Aug. 17.

Conrad, Harry E., Pomona, Calif. Dolly block with serrated work-engaging faces. 2,447,162, Aug. 17.

Consolidated Machine Tool Corporation, assignee: *See*—
Coghill, James T.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Schmidt, Howard F.

Control Instrument Company, Inc., assignee: *See*—
Lebde, Henry.

Conzetti, Achille, assignor to the firm J. R. Geigy A. G., Basel, Switzerland, o:o'-dihydroxy azo dyestuffs and making same. 2,447,163, Aug. 17.

Conzetti, Achille, assignor to J. R. Geigy A. G., Basel, Switzerland. Chromable monoazo dyes. 2,447,164, Aug. 17.

Cooke, Maurice D.: *See*—
Staudinger, Hanns P., and Cooke.

Cooper, Alfred, assignor to Expanded Rubber Company Limited, Croydon, England. Production of expanded plastic materials. 2,447,055, Aug. 17.

Cooper, Alfred, assignor to Expanded Rubber Company Limited, Croydon, England. Manufacture of expanded thermoplastic materials. 2,447,056, Aug. 17.

Cooper Oven Thermometer Company, The, assignee: *See*—
Whittier, Elmer S.

Coplans, Myer, Hendon, London, England. Preparation of stable medicinal salts of acetylsalicylic acid. 2,447,396, Aug. 17.

Costello, Thomas W., Everett, Wash. Can opener. 2,447,165, Aug. 17.

Craig, Burnie J., Los Angeles County, Calif. Vehicle compartment hood and fender. 2,447,397, Aug. 17.

Crane Co., assignee: *See*—
Hoch, Arthur E.

Crompton & Knowles Loom Works, assignee: *See*—
Bergstrom, Carl P.
Turner, Richard G.

Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Diversity receiving system. 2,447,057, Aug. 17.

Crucible Steel Company of America, assignee: *See*—
Payson, Peter.

Curtis, Leslie F., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Variable frequency oscillatory system. 2,447,316, Aug. 17.

Curtiss-Wright Corporation, assignee: *See*—
Eaton, Bruce G., Jr., and Moses.
Harris, Leslie M.
McKinnie, William P., and Trammell.

Cutler-Hammer, Inc., assignee: *See*—
Lawsen, Elvind U., and Johnson.

Daffer, Irven W., Mount Pleasant, Tex. Reversible stopper. 2,447,166, Aug. 17.

Darmody, William J., Philadelphia, Pa. Play-minimizing means for adjustable gauging members. 2,447,000, Aug. 17.

Davenport, Granger, Montclair, assignor to Gould & Eberhardt, Incorporated, Irvington, N. J. Gear changing mechanism for shaping machines. 2,447,317, Aug. 17.

Davis, Francis H., O. C. Emerson, and P. A. Newman, assignors to Ross Gear & Tool Company, Lafayette, Ind. Reverse brake. 2,447,167, Aug. 17.

Davis, J. F., assignee, et al.: *See*—
Edmondson, Joseph D.

Dazley, Frederick C., Stratford, and J. M. Pistey, Fairfield, Conn., assignors to General Electric Company. Starting switch. 2,447,318, Aug. 17.

Dean, John N., Westerham, E. W. Smith, Beechcroft, Chislehurst, and R. Sear, London, assignors to Telegraph Construction & Maintenance Company, Limited, Greenwich, London, England. High-frequency electric conductors and cables. 2,447,168, Aug. 17.

Dean, Russell T., Stamford, Conn., and V. L. King and N. A. Laury, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Recovery of nicotinic acid from dilute solutions. 2,447,234, Aug. 17.

Deere & Company, assignee: *See*—
Silver, Walter H.

De Fourchambault, Maurice D., assignor to Schneider & Cie, Paris, France. Friction clutch with multiple disks. 2,447,319, Aug. 17.

Dence, Donald S., Berrien Springs, assignor to Clark Equipment Company, Buchanan, Mich. Multiple clutch mechanism. 2,447,058, Aug. 17.

Denton, Harvey R., Oakland, assignor to Moist-R-Proof Container Co., San Francisco, Calif. Machine for making containers from pulpy fibrous material. 2,447,235, Aug. 17.

De Olariaga, Sara M. I., L. Bulgarini, and P. Forster, Buenos Aires, Argentina. Electrical switch. 2,447,320, Aug. 17.

Dery, Aldege L., Pine Meadow, Conn. Work holding fixture. 2,447,236, Aug. 17.

De Sousa, Eugenio, Rio de Janeiro, Brazil. Surgical instrument and technique. 2,447,169, Aug. 17.

De Supinski, Bronislaw, Parkville, assignor to The Glenn L. Martin Company, Middle River, Md. Making polyvinyl resin solutions. 2,447,398, Aug. 17.

Dey, Charles L., Princeton Junction, N. J. Digging and sorting machine. 2,447,399, Aug. 17.

Dietz, R. E., Company, assignee: *See*—
Wadsworth, Charles J.

Distillers Company, Limited, The, assignee: *See*—
Salt, Francis E.
Staudinger, Hanns P., and Cooke.

Donley Brothers Company, The, assignee: *See*—
Donley, George W.

Donley, George W., assignor to The Donley Brothers Company, Cleveland, Ohio. Roof ventilator. 2,447,472, Aug. 17.

Duncan, Daniel D., Glendale, Calif. Lacing punch. 2,447,237, Aug. 17.

Dunmire, Russell P., Orange, Ohio. Freezing liquid and apparatus therefor. 2,447,170, Aug. 17.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Wester, Alfred B., Burrows, and Johnson.

Duro Metal Products Co., assignee: *See*—
Odlum, William H.

Dyer, Howard J.: *See*—
Simonton, Budd E., and Dyer.

Easter, Donald P.: *See*—
Bludworth, Joseph E., and Easter.

Eastman Kodak Company, assignee: *See*—
Hamer, Frances M., and Knott.

Easton, Russell P.: *See*—
Famulener, Keith, and Easton.

Eaton, Bruce G., Jr., Buffalo, N. Y., and R. E. Moses, Jr., Tunkhannock, Pa., assignors to Curtiss-Wright Corporation. Windshield mounting device. 2,447,059, Aug. 17.

Eaton Manufacturing Company, assignee: *See*—
Voorhies, Harry E.

Eby, Hugh H., assignee: *See*—
Fox, Benjamin.

Edens, James S., Baltimore, Md., assignor to R. L. Bush, Greenville, S. C. Commode chair. 2,447,239, Aug. 17.

Edmondson, Joseph D., assignor of one-fourth to J. F. Davis, one-fourth to J. B. Goodrich, and one-fourth to J. Ruffner, Dayton, Ohio. Attachment for motion-picture projecting machines. 2,447,238, Aug. 17.

Edwal Laboratories, Inc., assignee: *See*—
Krueger, John, and Hayes.

Edwards, Franklin W.: *See*—
Matulaitis, Victor E., Edwards, and Voorhees.

Eisler, Henry G., Wilmette, Ill. Container supporting and closing mechanism. 2,447,240, Aug. 17.

Ekco Products Company, assignee: *See*—
Kollman, Jack.

Elastrator Company Limited, assignee: *See*—
Hammond, Arthur O.

Electrical Engineering and Manufacturing Corporation, assignee: *See*—
Hoover, Vaino A.

Ellis-Foster Company, assignee, et al.: *See*—
Rust, John B., and Canfield.

Emerson, Ovid C.: *See*—
Davis, Francis H., Emerson, and Newman.

Emerson, William S.: *See*—
Kosmin, Milton, and Emerson.

Emerson, William S., and J. W. Heyd, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Oxidation of aromatic hydrocarbons. 2,447,400, Aug. 17.

Emery, Walter F., Arbutus, Md. Portable crank journal grinder. 2,447,117, Aug. 17.

Englund, Leonard H., assignor to James H. Rhodes & Company, Chicago, Ill. Cleansing and scouring pad and method. 2,447,241, Aug. 17.

Erickson, Carl V., Kansas City, Kans., assignor to Speer & Koenig, Kansas City, Mo., a co-partnership composed of J. G. Speer and H. G. Koenig. Mounting assembly. 2,447,171, Aug. 17.

Erickson, Clayton A., U. S. Navy. Safety latch. 2,447,001, Aug. 17.

Ertzman, William F., assignor to The Bristol Company, Waterbury, Conn. Electrical detector network. 2,447,321, Aug. 17.

Evans, Le Roy J., Orlando, Fla., assignor to Bendix Aviation Corporation, South Bend, Ind. Charge forming device. 2,447,268, Aug. 17.

Expanded Rubber Company Limited, assignee: *See*—
Cooper, Alfred.

Famulener, Keith, Owego, and R. P. Easton, Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Solutions of cellulose triacetate and preparing the same. 2,447,459, Aug. 17.

Faust, William R., and H. O. Lorenzen, Washington, D. C. Permeability tuned intermediate frequency transformer. 2,447,002, Aug. 17.

Feisst, Walter: *See*—
Roelen, Otto, and Feisst.

Feldman, Samuel: *See*—
Irish, Frank L., and Feldman.

Ferguson, Harry C.: *See*—
Ferguson, William H., and Ferguson.

Ferguson, William H., Malden, and H. C. Ferguson, Melrose, assignors to H. K. Porter, Inc., Everett, Mass. Spreading tool for reshaping deformed automobile bodies. 2,447,401, Aug. 17.

Fessler, William A.: *See*—
Beckham, Leland J., and Fessler.

Finch, William G. H., Newtown, Conn. Variable drum facsimile scanning mechanism. 2,447,473, Aug. 17.

Florjancic, Peter, and E. Boral, assignors to M. Bucher, Zurich, Switzerland. Hand warping device for hand looms. 2,447,402, Aug. 17.

Focal Company, assignee: *See*—
Wenger, Frederick R.

Folkers, Karl: *See*—
Peck, Robert L., Harris, Mozingo, Wolf, and Folkers.

Fonda, Gorton R., Schenectady, N. Y., assignor to General Electric Company. Infrared-responsive phosphors. 2,447,322, Aug. 17.

Fontana, Celeste M., Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Oxygen absorbent media. 2,447,323, Aug. 17.

Forbes, James E., Dallas, Tex. Utility light. 2,447,403, Aug. 17.

Ford Roofing Products Company, assignee: *See*—
O'Reilly, Martin G.

Forster, Percy: *See*—
De Olariaga, Sara M. I., Bulgarini, and Forster.

Forsyth, Edmond J., Chicago, Ill. Easel stand. 2,447,460, Aug. 17.

Fox, Benjamin, Philadelphia, Pa., assignor, by mesne assignments, to H. H. Eby, Fort Wayne, Ind. Spring binding post. 2,447,324, Aug. 17.

Franck, George E., Riverside, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. High-pressure coupling. 2,447,060, Aug. 17.

Frankenstein, William P., assignee: *See*—
Freel, William G., and Jones.

Franklin, Constance W., Belmont, assignor to Cambridge Thermionic Corporation, Cambridge, Mass. Piezoelectric system. 2,447,061, Aug. 17.

Fraser, Malcolm W., trustee: *See*—
Parson, John B.

Fredericksen, James P., Braintree, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for lasting shoes. 2,447,062, Aug. 17.

Fredrich, Edwin T., W. B. Mitchell, and F. E. Buyken, Seattle, Wash. Wire straightener. 2,447,242, Aug. 17.

Freel, William G., and S. F. Jones, London, Ontario, Canada, assignors, by mesne assignments, to W. P. Frankenstein, Cincinnati, Ohio. Double-walled foldable carton. 2,447,243, Aug. 17.

Frey, Charles N., Scarsdale, and G. E. Miller, Bronx, assignors to Standard Brands Incorporated, New York, N. Y. Drying egg substance and resulting product. 2,447,063, Aug. 17.

Furby, Neal W., El Cerrito, assignor to California Research Corporation, San Francisco, Calif. Decolorizing petroleum hydrocarbon resins. 2,447,404, Aug. 17.

Gabar, Harry W., and L. Horowitz, Arlington, Va. Fireplace flue system. 2,447,405, Aug. 17.

Gaenssle, Paul W., Grosse Pointe Farms, Mich., assignor to The Budd Company, Philadelphia, Pa. Brake arrangement. 2,447,244, Aug. 17.

Gallagher, Thomas F., Chicago, Ill., assignor to Research Corporation, New York, N. Y. Production of 3, 11-oxygenated steroids. 2,447,325, Aug. 17.

Gamson, Bernard W., Chicago, assignor to Great Lakes Carbon Corporation, Morton Grove, Ill. Production of carbon bisulfide. 2,447,003, Aug. 17.

Gamson, Bernard W., Chicago, assignor to Great Lakes Carbon Corp., Morton Grove, Ill. Sulfocompositions and their manufacture. 2,447,004, Aug. 17.

Gamson, Bernard W., Chicago, assignor to Great Lakes Carbon Corp., Morton Grove, Ill. Method and apparatus for producing sulfo-compositions. 2,447,005, Aug. 17.

Gamson, Bernard W., Chicago, assignor to Great Lakes Carbon Corp., Morton Grove, Ill. Production of sulfo-compositions. 2,447,006, Aug. 17.

Garland, Elmer C., La Conner, Wash. Meat pattie molding and cutting device. 2,447,245, Aug. 17.

Gates, Charles W., and W. P. Woods, Elmira, Ontario, Canada, assignors to United States Rubber Company, New York, N. Y. Recovery of fluosulfonic acid and use as condensing agent in production of D. D. T. 2,447,326, Aug. 17.

Gebhart, Arthur I., Union City, and J. Ross, Ramsey, assignors to Colgate-Palmolive-Peet Company, Jersey City, N. J. Preparation of aluminum salts. 2,447,064, Aug. 17.

Geigy, J. R., A.-G., assignee: *See*—
Babey, Charles, and Goodall.
Conzetti, Achille.
Grün, Adolf.
Martin, Henry G., and Zaeslin, and Margot.

General Aniline & Film Corporation, assignee: *See*—
Anish, Alfred W., and Clark.
Famulener, Keith, and Easton.
Harsh, Harold C., Haff, and Kaszuba.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Camilli, Guglielmo.
Cartun, Paul O.
Dazley, Frederick C., and Pistey.
Fonda, Gorton R.
Merrill, George S.
Roberts, Willard A.
Wightman, Lawrence W.

General Electric Company, The, Limited, assignee: *See*—
Baker, William F., and Pickering.

General Mills, Inc., assignee: *See*—
Widen, Gunnar G., and Helgerud.

General Refractories Company, assignee: *See*—
Heuer, Russell P.

George, Joseph J.: *See*—
Tweedale, Ralph L., and George.

George, Joseph J., Wyandotte, assignor to Vickers Incorporated, Detroit, Mich. Hydraulic power transmission with flow control by-pass valve. 2,447,406, Aug. 17.

Germ-Ex Mask Company Limited, assignee: *See*—
Williams, Spencer R.

Gerrits, Adrian E., and H. E. Gygi, Appleton, Wis. Abrasive tool. 2,447,327, Aug. 17.

Gerrits, Paul H., Appleton, Wis. Golf club gripper. 2,447,328, Aug. 17.

Glass, Paul: *See*—
Gundersen, Daniel T., and Glass.

Glidden Company, The, assignee: *See*—
Hampton, Burt L.

Gluhareff, Michael E., Stratford, assignor to United Aircraft Corporation, East Hartford, Conn. Rotor blade. 2,447,118, Aug. 17.

Goldblatt, Charles, New York, N. Y. Adjustable coupling for wrist watch bands. 2,447,329, Aug. 17.

Goodall, Frederic L.: *See*—
Babey, Charles, and Goodall.

Goodrich, Jess B., assignee, et al.: *See*—
Edmondson, Joseph D.

Goodwin, John H., Pittsburgh, assignor to Overly Manufacturing Company, Greensburg, Pa. Roofing construction. 2,447,065, Aug. 17.

Goodyer, Harold J., Chicago, Ill. Device for separating liquid or foreign matter in suspension from fluid under pressure. 2,447,119, Aug. 17.

Gordon, James, Chicago, Ill. Floor waxing and polishing means. 2,447,172, Aug. 17.

Gordon, Leonard E., Oakland, Calif. Air charger. 2,447,173, Aug. 17.

Gorton, George, Machine Co., assignee: *See*—
Miller, Theodore.

Goss Printing Press Company, The, assignee: *See*—
Pollock, Willard M.

Gould & Eberhardt, Incorporated, assignee: *See*—
Davenport, Granger.

Gouy, Léon, Geneva, Switzerland, vested in the Attorney General of the United States. Unitary vapor eliminator and fuel meter for use in fuel feed systems of aircraft. 2,447,008, Aug. 17.

Grain, Mark, New York, N. Y. Gem. 2,447,407, Aug. 17.

Grams, Norman A., assignee, et al.: *See*—
Warring, Alfred.

Grand Rapids Store Equipment Company, assignee: *See*—
Vanderveld, Anthony.

Granite Trust Company, executor: *See*—
Smyser, James S.

Graver Tank & Mfg. Co., Inc., assignee: *See*—
Prager, Frank D.

Gravina, Michel, and M. Hawadier, Paris, France, vested in the Attorney General of the United States. Clutch device. 2,447,007, Aug. 17.

Great Lakes Carbon Corp., assignee: *See*—
Gamson, Bernard W.

Great Lakes Carbon Corporation, assignee: *See*—
Gamson, Bernard W.

Grebmeier, Joseph, Menlo Park, Calif. Rotor for ultra-centrifuge machines. 2,447,330, Aug. 17.

Greenfield, Frank L.: *See*—
Brandes, Samuel A., and Greenfield.

Griffith, Le Roy A., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control apparatus. 2,447,331, Aug. 17.

Griffith, William B., Stone Harbor, N. J. Dry pipe valve. 2,447,174, Aug. 17.

Griswold, Donald G., assignor to Clayton Manufacturing Company, Alhambra, Calif. Power-operated check valve. 2,447,408, Aug. 17.

Groboski, John P., River Forest, and J. G. Groboski, Chicago, Ill. Adjustable angular bracket means for sun visors. 2,447,246, Aug. 17.

Groboski, Joseph G.: *See*—
Groboski, John P. and J. G.

Grün, Adolf, deceased, by F. Grün, administrator, assignor to J. R. Geigy A. G., Basel, Switzerland. Guanamine compounds. 2,447,175, Aug. 17.

Grün, Adolf, deceased, by F. Grün, administrator, assignor to J. R. Geigy A. G., Basel, Switzerland. Guanamine compounds. 2,447,176, Aug. 17.

Grün, Adolf, deceased, by F. Grün, administrator, assignor to J. R. Geigy A. G., Basel, Switzerland. Guanamine compounds. 2,447,177, Aug. 17.

Grün, Frans, administrator: *See*—
Grün, Adolf.

Gulf Oil Corporation, assignee: *See*—
Smith, Herschel G., Cantrell, and Hill.

Gulow, Erwin M., Turners Falls, Mass. Delivery cabinet. 2,447,409, Aug. 17.

Gundersen, Daniel T., and P. Glass, assignors to Askania Regulator Company, Chicago, Ill. Electric arc furnace control system. 2,447,066, Aug. 17.

Gygi, Harvey E.: *See*—
Gerrits, Adrian E., and Gygi.

Gysin, Hans: *See*—
Martin, Henry, Gysin, Zaeslin, and Margot.

Hackman, George M.: *See*—
Sharp, Brice E., and Hackman.

Haeff, Andrew V., Washington, D. C., assignor to Radio Corporation of America. Resonant cavity circuits. 2,447,461, Aug. 17.

Haff, Richard M.: *See*—
Harsh, Harold C., Haff, and Kaszuba.

Hahn, Adolf E.: *See*—
Norton, Orlo C., and Hahn.

Hall, Richard C., Alhambra, assignor to Petroleum Essentials, Incorporated, Glendora, Calif. Flame arrester. 2,447,120, Aug. 17.

Hamer, Frances M., and E. B. Knott, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y. Trimethine cyanine dyes. 2,447,332, Aug. 17.

Hameseder, Carl, Stratford, Conn. Rotary airplane mount and synchronized wing adjustment. 2,447,247, Aug. 17.

Hamilton, James K., Plainfield, N. J., assignor to Air Reduction Company, Incorporated. Valve assembly for pressure regulators and the like. 2,447,067, Aug. 17.

Hammon, Alberta M., executrix: *See*—
Hammon, James H.

Hammon, James H., deceased, by A. M. Hammon, executrix, Vincennes, Ind. Making multifocal ophthalmic lens blanks. 2,447,068, Aug. 17.

Hammond, Arthur O., assignor, by mesne assignments, to Elastrator Company Limited, Blenheim, New Zealand. Device for expanding rubber rings. 2,447,474, Aug. 17.

Hampel, Clifford A., Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation. Pyrolysis of carbon chlorides. 2,447,410, Aug. 17.

Hampton, Burt L., Jacksonville, Fla., assignor, by mesne assignments, to The Glidden Company, Cleveland, Ohio. Refining polymerized rosin. 2,447,009, Aug. 17.

Hardgrove, Ralph M.: *See*—
Bailey, Ervin G., and Hardgrove.

Hardy, Edgar E.: *See*—
Slocombe, Robert J., and Hardy.

Harris, John S.: *See*—
Kaberg, Russell A., and Harris.

Harris, Leslie M., Williamsville, N. Y., assignor to Curtiss-Wright Corporation. Stabilized oscillator. 2,447,248. Aug. 17.

Harris, Stanton A.: *See*
Peck, Robert L., Harris, Mozingo, Wolf, and Folkers.

Harrison, Henry C., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Crossbar switch. 2,447,010, Aug. 17.

Harsh, Harold C., R. M. Haff, and F. J. Kaszuba, Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Dye composition for color photography. 2,447,462, Aug. 17.

Hart, Ormal W.: *See*—
Shaw, Milton C., and Hart.

Hartford National Bank and Trust Company, trustee: *See*—
Strutt, Maximiliaan J. O., and van der Ziel.

Harvel Corporation, The, assignee: *See*—
Schaufelberger, William F.

Hatchette, Andrew H., Cleveland, Ohio. Scrub pail with pivotally attached floating strainer. 2,447,178, Aug. 17.

Hausmann, Frederick: *See*—
Alexander, James R., Burton, and Hausmann.

Hawadler, Marcel: *See*—
Gravina, Michel, and Hawadler.

Hayes, Douglass R., Arlington, Va. Method and device for mounting letters to a support. 2,447,011, Aug. 17.

Hayes, Harvey C., Washington, D. C., assignor to United States of America as represented by the Secretary of the Navy. Ultra-audible sound reception. 2,447,333, Aug. 17.

Hayes, John G., San Mateo, Calif., assignor to American Can Company, New York, N. Y. Welding of keys to can ends. 2,447,012, Aug. 17.

Hayes, Robert L.: *See*—
Krueger, John, and Hayes.

Haynes, Harold E., Indianapolis, Ind., assignor to Radio Corporation of America. Proportional remote control. 2,447,121, Aug. 17.

Haseltine Research, Inc., assignee: *See*—
Bielsdell, Harold L.
Curtis, Leslie F.
Taylor, Maurice K., and Vaughn-Jones.

Healy, Francis P., assignor to Van Norman Company, Springfield, Mass. Crankshaft regrinding chuck. 2,447,334, Aug. 17.

Hegener, William, assignee: *See*—
Warner, Gilbert S.

Heilig, Charles E., Jr., Upper Darby, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Refrigerating apparatus with means for indicating the quantity of solid refrigerant therein. 2,447,335, Aug. 17.

Helfrecht, Fred A., assignor to National Motor Bearing Co., Inc., Redwood City, Calif. Fluid seal. 2,447,411, Aug. 17.

Helgerud, Robert J.: *See*—
Widen, Gunnar G., and Helgerud.

Herabberg, Emanuel B., West Orange, assignor to Schering Corporation, Bloomfield, N. J. Regeneration of steroid ketones. 2,447,463, Aug. 17.

Heuer, Russell P., Villa Nova, Pa., assignor to General Refractories Company. Treating artificial magnesium hydrate to produce magnesia. 2,447,412, Aug. 17.

Heuver, Herbert M., Dayton, Ohio, and E. A. Rutan, Elmira, N. Y. Motion transmitting device. 2,447,013, Aug. 17.

Heyd, Josef W.: *See*—
Emerson, William S., and Heyd.

Hill, Mark L.: *See*—
Smith, Herschel G., Cantrell, and Hill.

Hill, Robert H., assignor to The Marison Company, Elgin, Ill. Refrigerating an article by contact with a vaporizable refrigerant. 2,447,249, Aug. 17.

Hisserich, Charles A., San Diego, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Fluxion meter. 2,447,336, Aug. 17.

Hoch, Arthur E., Trenton, N. J., assignor to Crane Co., Chicago, Ill. Method and apparatus for glazing circuitous passages. 2,447,337, Aug. 17.

Hoffmann-La Roche, Inc., assignee: *See*—
Solmssen, Ulrich V.

Hofmann, Albert: *See*—
Stoll, Arthur, and Hofmann.

Holcomb, Philo, Jr., Great Neck, N. Y. Signaling buoy. 2,447,069, Aug. 17.

Holder, Clinton H.: *See*—
Welty, Albert B., Jr., and Holder.

Holloway, Albert R., West Palm Beach, Fla. Vehicle tow bar. 2,447,250, Aug. 17.

Holloway, Berkely M., Filbert, W. Va. Swivel connector. 2,447,179, Aug. 17.

Hooper, Lester B., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Making last shells. 2,447,070, Aug. 17.

Hoover, Valno A., assignor to Electrical Engineering and Manufacturing Corporation, Los Angeles, Calif. Cooling of electric machines. 2,447,339, Aug. 17.

Horlacher, Herman: *See*—
Wilder, Warren, and Horlacher.

Hornfeck, Anthony J., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Temperature responsive measuring system. 2,447,338, Aug. 17.

Horowitz, Leon: *See*—
Gabar, Harry W., and Horowitz.

Horrigan, John G., London, assignor of one-half to B. A. Pettitt, Stanmore, England. Stock feeding mechanism for lathes. 2,447,180, Aug. 17.

Horst, E. Clemens, Company, assignee: *See*—
Horst, Emil E., Jr.

Horst, Emil C., Jr., assignor to E. Clemens Horst Company, San Francisco, Calif. Hop picking machine. 2,447,122, Aug. 17.

Hotpoint Inc., assignee: *See*—
Johnson, Harry R.

Houghton, Leslie W.: *See*—
Chatterjea, Prafulla K., and Houghton.

Huetta, Lyle R., Fairbury, Ill. Electric fence insulator. 2,447,251, Aug. 17.

Huffman, Harry W., Toledo, Ill. Concrete mixer. 2,447,071, Aug. 17.

Hutchinson, Emerson J., Los Angeles, Calif. Doughnut maker. 2,447,182, Aug. 17.

Illinois Testing Laboratories, Inc., assignee: *See*—
Cartotto, Edward.

Imperial Brass Manufacturing Company, The, assignee: *See*—
Franck, George E.

Irish, Frank L., De Witt, and S. Feldman, Syracuse, N. Y. Sterilizing apparatus. 2,447,183, Aug. 17.

Irmscher, Hans O., Roslyn, N. Y., assignor to National Urn Bag Co., Inc. Manufacture of essence containing packages for brewing beverages. 2,447,014, Aug. 17.

Isaacson Iron Works, assignee: *See*—
Allin, George S.

J. & L. Tool & Findings Co., assignee: *See*—
Nelson, William.

Jackson, Melvin F., assignor to J. I. Case Company, Racine, Wis. Packed joint for cylinder barrels. 2,447,340, Aug. 17.

Jacobs, Samuel S., San Mateo, and H. B. Peterson, San Francisco, Calif., assignors to American Can Company, New York, N. Y. Type locking means for marking mechanism. 2,447,015, Aug. 17.

Jenkins, Frederick T., Seattle, Wash. Retort door. 2,447,464, Aug. 17.

Jiménes, Ramón C., Winthrop, Mass. Heating apparatus for provision for utilizing combustion gases. 2,447,252, Aug. 17.

Johns-Manville Corporation, assignee: *See*—
Van Cleef, Paul, and Chonacki.

Johnson, Almon A.: *See*—
Lassen, Elvind U., and Johnson.

Johnson, Harry R., Fort Atkinson, Wis., assignor to Hotpoint Inc. Oven door. 2,447,341, Aug. 17.

Johnson & Johnson, assignee: *See*—
Shelton, Elbert M., and Thompson.

Johnson, Winford B.: *See*—
Wester, Alfred B., Burrows, and Johnson.

Jonas, Frank D., East Williston, assignor to Oxford Filing Supply Co. Inc., Brooklyn, N. Y. Automatic locking drum file. 2,447,253, Aug. 17.

Jones, Frank E., assignor to The Jones Metal Products Company, West Lafayette, Ohio. Conveyer system. 2,447,072, Aug. 17.

Jones, Harry S., Chicago, Ill. Therapeutic device. 2,447,123, Aug. 17.

Jones Metal Products Company, The, assignee: *See*—
Jones, Frank E.

Jones, Samuel F.: *See*—
Freel, William Glidden and Jones.

Jones, William R., Cleveland, Ohio. Broiler compartment. 2,447,184, Aug. 17.

Jorgensen, Jesse J., Ancon, C. Z. Electric terminal. 2,447,254, Aug. 17.

Joseph, Lawrence E., Fox Chapel Borough, Allegheny County, assignor to Blaw-Knox Company, Pittsburgh, Pa. Charging hopper and door mechanism for rotary-drum mixers. 2,447,413, Aug. 17.

Kaberg, Russell A., St. Louis, and J. S. Harris, Richmond Heights, assignors to Monsanto Chemical Company, St. Louis, Mo. Emulsifiable oils. 2,447,475, Aug. 17.

Kalitinsky, Andrew, Eagleville, assignor to United Aircraft Corporation, East Hartford, Conn. Compressor piston ring. 2,447,125, Aug. 17.

Kalitinsky, Andrew, Eagleville, and D. E. Meitzler, Manchester, assignors to United Aircraft Corporation, East Hartford, Conn. Fuel control for power plants. 2,447,124, Aug. 17.

Kaszuba, Frank J.: *See*—
Harsh, Harold C., Haff, and Kaszuba.

Kaufmann, Frank H., Elkins Park, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Comb and reed for textile machines. 2,447,342, Aug. 17.

Kearby, Kenneth K., Cranford, N. J., assignor to Standard Oil Development Company. Catalytic reforming of hydrocarbons. 2,447,016, Aug. 17.

Kearby, Kenneth K., Cranford, N. J., assignor to Standard Oil Development Company. Catalysts for hydrocarbon conversions. 2,447,017, Aug. 17.

Kelm, Charles J., Oil City, Pa., assignor to Oil Well Supply Company. Detachable fluid line manifold. 2,447,185, Aug. 17.

Kelnath, George, Larchmont, N. Y. Three-magnitude recorder. 2,447,018, Aug. 17.

Kelly, Herbert W., Chicago, Ill., assignor to Mechanite Metal Corporation. Electromagnet positioning device. 2,447,343, Aug. 17.

Kerst, Donald W., and R. Serber, assignors to Board of Trustees of The University of Illinois, Urbana, Ill. Magnetic induction accelerator with small X-ray source. 2,447,255, Aug. 17.

King, Robert G., Norwalk, and R. J. King, New Canaan, assignors to The Photo Technical Corporation, Norwalk, Conn. Producing lower alkyl esters. 2,447,186. Aug. 17.

King, Robert J.: *See*—
King, Robert G. and R. J.

King, Victor L.: *See*—
Dean, Russell T., King and Laury.

Kliever, Waldo H., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Photoelectric system for remote indication of angular positions. 2,447,344, Aug. 17.

Knott, Edward B.: *See*—
Hamer, Frances M., and Knott.

Knowles, Edward R., Nashua, N. H. Plastics molding apparatus. 2,447,256, Aug. 17.

Koltman, Jack, assignor to Ekco Products Company, Chicago, Ill. Baking pan assembly. 2,447,126, Aug. 17.

Kosmin, Milton, and W. S. Emerson, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Oxidation of isopropylbiphenyl. 2,447,414, Aug. 17.

Kovacs, Rene J. H., Paris, France. Apparatus for spinning and winding textile threads. 2,447,345, Aug. 17.

Krantz, Walter M., asisgnor to Ace Storm Window Company, Youngstown, Ohio. Corner piece structure. 2,447,346, Aug. 17.

Krantz, Walter M., asisgnor to Ace Storm Window Company, Youngstown, Ohio. Corner structure. 2,447,347, Aug. 17.

Kreutzer, Robert A., Menomonee Falls, Wis. Grapple for lifting milk cans. 2,447,073, Aug. 17.

Krueger, John and R. L. Hayes, assignors to The Edwal Laboratories, Inc., Chicago, Ill. Preparation of diaminocresol. 2,447,019, Aug. 17.

Krueger, John and R. L. Hayes, assignors to The Edwal Laboratories, Inc., Chicago, Ill. Preparation of diaminophenol. 2,447,020, Aug. 17.

Kucher, Andrew A., Grosse Pointe Farms, assignor to Bendix Aviation Corporation, Detroit, Mich. Hydraulic drive. 2,447,348, Aug. 17.

Kulka, Marshall, Guelph, Ontario, Canada, assignor to United States Rubber Company, New York, N. Y. Recovery of fluorsulfonic acid and use as condensing agent in production of DDT. 2,447,476, Aug. 17.

Kunkler, Clarence A., Columbus, Ohio. Parachute. 2,447,187, Aug. 17.

Kuzma, Joseph, New York, N. Y. Blade sharpener. 2,447,257, Aug. 17.

Lacer, Delmar: *See*—
Smith, Fay E., Lacer, and McLeod.

Landauer, Fred, Rockville Centre, N. Y. Electric treatment appliance. 2,447,127, Aug. 17.

Langley, William L., Locust Grove, Okla. Receptacle for vehicles. 2,447,188, Aug. 17.

Lassen, Elvind U., Whitefish Bay, Wis., and A. A. Johnson, Forest Hills, N. Y., said Lassen assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Controller for towing winches and other machines. 2,447,074, Aug. 17.

Laury, Napoleon A.: *See*—
Dean, Russell T., King and Laury.

Lehde, Henry, assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Ship's log indicator. 2,447,349, Aug. 17.

Lerche, Myron H., Mobile, Ala. Fuel gauge. 2,447,189, Aug. 17.

Leveseque, Arthur H., North Attleboro, assignor, by mesne assignments, to R. F. Simmons Company, Attleboro, Mass. Clamping means for ear ornaments and other articles of jewelry. 2,447,350, Aug. 17.

Licktelg, Albert F., assignor to National Brass Company, Grand Rapids, Mich. Door lock. 2,447,190, Aug. 17.

Lilly, Eli, and Company, assignee: *See*—
Mills, Jack.

Linde Air Products Company, The, assignee: *See*—
Miller, Alfred J., and Thompson.

Line Material Company, assignee: *See*—
Brown, Chester W.

Lingel, Frederick J., assignor to The Triplett Electrical Instrument Co., Bluffton, Ohio. Vibrating reed frequency meter. 2,447,191, Aug. 17.

Lobley, Frederick A., assignor to Miles Laboratories, Inc., Elkhart, Ind. Means and method for reducing to powder form materials packaged as tablets. 2,447,258, Aug. 17.

Loftus Engineering Corporation, assignee: *See*—
Campion, Donald C., Sr.

Logan, Ulysses S., Shorewood, Wis. Hanger bracket. 2,447,128, Aug. 17.

Lorant, Hugo, New York, N. Y. Extrusion press. 2,447,129, Aug. 17.

Lorenzen, Howard O.: *See*—
Faust, William R., and Lorenzen.

Lucke, Charles E., New York, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Condenser. 2,447,259, Aug. 17.

Ludington, Clyde, Billings, Mont. Stocking turner. 2,447,192, Aug. 17.

Lyon, George A., Allenhurst, N. J. Trim ring for vehicle wheels. 2,447,021, Aug. 17.

Lyon, George A., Allenhurst, N. J. Plastic forming apparatus and method. 2,447,415, Aug. 17.

MacDonald, George A., Los Angeles, Calif. Fountain inkwell. 2,447,193, Aug. 17.

Mackal, Henry H., Paramus, N. J. Axially rotating reciprocating piston pump. 2,447,416, Aug. 17.

Maclochlan, Allan, assignee: *See*—
Walker, Stanley W.

Madorsky, Samuel L.: *See*—
Brewer, Aubrey K., and Madorsky.
Madsen, Alvin R., Rupert, assignor of one-half to R. E. Messler, Boise, Idaho. Signal and danger flag. 2,447,075, Aug. 17.
Magnesen, Charles D., Chicago, Ill. Reusable tamper proof sealed closure. 2,447,076, Aug. 17.
Mallory, P. R., & Co., Inc., assignee: *See*—
Aust, Robert J.
Brown, Harold J.
Wall, Alexander C.
Marchant Calculating Machine Company, assignee: *See*—
Avery, Harold T.
Margot, Alfred: *See*—
Martin, Henry, Gysin, and Zaeslin, and Margot.
Marinsky, Davis, deceased, and L. H. Morin, Bronx, N. Y.; L. H. Morin, executor of estate of said Davis Marinsky. Bobbin waxing machine. 2,447,351, Aug. 17.
Marison Company, The, assignee: *See*—
Hill, Robert H.
Marshall, Preston E., Wayne, Mich. Apparatus for treating foods. 2,447,417, Aug. 17.
Martin, Donald E.: *See*—
Martin, Virgil E. C. and D. E.
Martin, Glenn L. Company, The, assignee: *See*—
De Supinski, Bronislaw.
Martin, Henry, Hans Gysin, Basel, and Hans Zaeslin, Riehen, near Basel, and A. Margot, assignors to J. R. Geigy A. G., Basel, Switzerland. Tetrahydropyrane-4:4-dicarboxylic acid bis-diethylamide. 2,447,194, Aug. 17.
Martin, Henry, Hans Gysin, Basel, and Hans Zaeslin, Riehen, near Basel, and A. Margot, assignors to J. R. Geigy A. G., Basel, Switzerland. Diamides of alkane dicarboxylic acids. 2,447,195, Aug. 17.
Martin, Henry, Hans Gysin, Basel, and Hans Zaeslin, Riehen, near Basel, and A. Margot, assignors to J. R. Geigy A. G., Basel, Switzerland. Diamides of methane-1:1-dicarboxylic acids. 2,447,196, Aug. 17.
Martin, Virgil E. C., and D. E. Martin, Hayward, Calif. Canned food heating device. 2,447,077, Aug. 17.
Marton, Ladislaus, Menlo Heights, Calif., assignor to Research Corporation, New York, N. Y. Electron microspectroscope. 2,447,260, Aug. 17.
Material Company, assignee: *See*—
Runke, Glenn R.
Mathieson Chemical Corporation, assignee: *See*—
Hampel, Clifford A.
Matter, Roger E., Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass. Sharpening apparatus. 2,447,418, Aug. 17.
Matulaitis, Victor E., Rochester, N. Y., and F. W. Edwards, Detroit, and H. R. Voorhees, Grosse Pointe Farms, assignors to Chrysler Corporation, Highland Park, Mich. Accessory drive. 2,447,130, Aug. 17.
Maxant Button & Supply Co., assignee: *See*—
Maxant, Robert E.
Maxant, Robert E., Riverside, assignor to Maxant Button & Supply Co., Chicago, Ill. Ear muff. 2,447,078, Aug. 17.
May, Benjamin, assignor to May Machine Company, New York, N. Y. Battery core machine and method. 2,447,197, Aug. 17.
May Machine Company, assignee: *See*—
May, Benjamin.
McCarl, Howard H., Washington, D. C. Stacking receptacle. 2,447,022, Aug. 17.
McCoy, Howard M., Patterson Field, Ohio. Selective control mechanism for governor-controlled aircraft propellers. 2,447,023, Aug. 17.
McDermott, Henry J., Collingdale, Pa., assignor to American Viscose Corporation, Wilmington, Del. Yarn feed and distributor wheel. 2,447,131, Aug. 17.
McGranahan, Willard B., assignee: *See*—
Riddick, William M.
McKinnie, William P., Kenmore, N. Y., and W. H. Trammell, Columbus, Ohio, assignors to Curtiss-Wright Corporation. Folding rudder pedals. 2,447,079, Aug. 17.
McLeod, Clarion B.: *See*—
Smith, Fay E., Lacer, and McLeod.
Meehanite Metal Corporation, assignee: *See*—
Kelly, Herbert W.
Meier, Walter H., Englewood, N. J. Musical instrument support. 2,447,080, Aug. 17.
Meitzler, Donald E.: *See*—
Kalitinsky, Andrew, and Meitzler.
Meitzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Automatic timing control for free piston units. 2,447,352, Aug. 17.
Merck & Co., Inc., assignee: *See*—
Peck, Robert L., Harris, Mozingo, Wolf, and Folkers.
Weijlard, John, and Tishler.
Merrill, George S., Cleveland, Ohio, assignor to General Electric Company. Tubular lamp holder. 2,447,353, Aug. 17.
Messler, Raymond E., assignee: *See*—
Madsen, Alvin R.
Metcalf, Arthur G. B., Milton, assignor to North American Research Corporation, Cambridge, Mass. Apparatus for photoelectric measurement of areas. 2,447,024, Aug. 17.
Meyer, Siegfried, New York, N. Y. Hanger device for garments. 2,447,132, Aug. 17.
Miles Laboratories, Inc., assignee: *See*—
Lobley, Frederick A.
Miller, Alfred J., Garwood, and I. P. Thompson, Elizabeth, N. J., assignor to The Linde Air Products Company. Apparatus for conditioning metal bodies. 2,447,081, Aug. 17.
Miller, Donald L., Pine City, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Starter for internal-combustion engines. 2,447,198, Aug. 17.
Miller, Edward F., Chicago, Ill. Toggle link operated hand clamp. 2,447,199, Aug. 17.
Miller, Fred S., Pasadena, assignor to Aerojet Engineering Corporation, Azusa, Calif. Exhaust nozzle for rocket motors. 2,447,200, Aug. 17.
Miller, Glennard E.: *See*—
Frey, Charles N., and Miller.
Miller, Theodore, assignor to George Gorton Machine Co., Racine, Wis. Tracer and tracer controlled operation of machine tools and other cutting machines. 2,447,201, Aug. 17.
Miller, Wilbur H., Springdale, Conn., assignor to American Cyanamid Company, New York, N. Y. 6-(alpha-ethylpropyl)-2-thiouracil and preparation of the same. 2,447,465, Aug. 17.
Miller, William A., Port Jefferson, N. Y., assignor to Radio Corporation of America. Generator circuit. 2,447,082, Aug. 17.
Mills, Jack, assignor to Eli Lilly and Company, Indianapolis, Ind. Preparation of diphenylacetonitrile. 2,447,419, Aug. 17.
Minneapolis-Honeywell Regulator Company, assignee: *See*—
Baak, Albert E.
Griffith, Le Roy A.
Kliever, Waldo H.
Schoeppel, John F.
Mitchell, Walter B.: *See*—
Frederich, Edwin T., Mitchell, Buyken.
Mock, Frank C., assignor to Bendix Aviation Corporation, South Bend, Ind. Charge forming device. 2,447,261, Aug. 17.
Mock, Frank C., assignor to Bendix Aviation Corporation, South Bend, Ind. Charge forming device. 2,447,262, Aug. 17.
Mock, Frank C., assignor to Bendix Aviation Corporation, South Bend, Ind. Charge forming device. 2,447,263, Aug. 17.
Mock, Frank C., assignor to Bendix Aviation Corporation, South Bend, Ind. Fuel feeding system. 2,447,267, Aug. 17.
Moeller, William C., assignor to A. F. Parmalee, doing business as United States Safety Service Co., Kansas City, Mo. Covering shield mount for safety helmets. 2,447,083, Aug. 17.
Moist-R-Proof Container Co., assignee: *See*—
Denton, Harvey R.
Monsanto Chemical Company, assignee: *See*—
Emerson, William S., and Heyd.
Kaberg, Russell A., and Harris.
Kosmin, Milton, and Emerson.
Monclair Research Corporation, assignee, et al.: *See*—
Rust, John B., and Canfield.

Pure Oil Company, The, assignee: *See*—
Bond, Donald C., and Bernard.
Bond, Donald C., and Russell.
Puts, Thomas J., Upper Darby, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Locomotive reversing gearing apparatus. 2,477,136, Aug. 17.
Rabinowitz, Harold M., Brooklyn, N. Y. Compound of urobilinogen and hippuric acid as antipressor. 2,447,363, Aug. 17.
Radio Corporation of America, assignee: *See*—
Crosby, Murray G.
Haeff, Andrew V.
Haynes, Harold E.
Miller, William A.
Moore, John B., and Mathes.
Pessel, Leopold.
Williams, Ferd E.
Rakos, Nicholas, Cleveland, Ohio. Internal-combustion engine and lubricating system therefor. 2,447,277, Aug. 17.
Ray, Eugene J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gun ammunition magazine. 2,447,092, Aug. 17.
Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Fluid control valve. 2,447,207, Aug. 17.
Raymond De-Icer Co., Inc., assignee: *See*—
Raymond, Horace H.
Raymond, Horace H., Berlin, Conn., assignor, by mesne assignments, to Raymond De-Icer Co., Inc., Los Angeles, Calif. Apparatus for preventing the formation of ice on windshields. 2,447,430, Aug. 17.
Raytheon Manufacturing Company, assignee: *See*—
Spencer, Percy L.
Reed, Thomas F.: *See*—
Rendell, George H., and Reed.
Rendel, George H., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Extensometer for indicating percent elongation. 2,447,208, Aug. 17.

Rendel, George H., and T. F. Reed, Mount Lebanon, Pa., assignors of one-half to Carnegie-Illinois Steel Corporation, and one-half to United States Steel Corporation of Delaware. Extensometer for indicating amount of elongation of strip material. 2,447,209, Aug. 17.

Renshaw, Lewis H., Washington, D. C. Elevatable stove oven. 2,447,364, Aug. 17.

Research Corporation, assignee: *See*—
Gallagher, Thomas F.
Marton, Ladislaus.

Reyniers, James A., Niles, Mich. Film holder and film envelope to be used therewith. 2,447,468, Aug. 17.

Rhodes, James H., & Company, assignee: *See*—
Englund, Leonard H.

Richfield Oil Corporation, assignee: *See*—
Travers, William J., Jr.

Riddick, William M., Houston, Tex., assignor of one-tenth to W. B. McGranahan, Los Angeles, Calif. Freight handling device. 2,447,028, Aug. 17.

Roberts, Edna W., executrix: *See*—
Roberts, Willard A.

Roberts Willard A., deceased, Euclid, by E. W. Roberts, executrix, Cleveland, Ohio, assignor to General Electric Company. Erythemal phosphor. 2,447,210, Aug. 17.

Roelen, Otto, and W. Feisst, Oberhausen-Holten, Germany, vested in the Attorney General of the United States. Preparing catalysts for benzine synthesis. 2,447,029, Aug. 17.

Rohm & Haas Company, assignee: *See*—
Butterbaugh, Darrel J., and Spence.

Rogers, Melville F., Ottawa, Ontario, Canada. Shirt collar. 2,447,431, Aug. 17.

Roper, Richard F., Washington, D. C. Air conditioning apparatus. 2,447,278, Aug. 17.

Rosefield, Joseph L.: *See*—
Avera, Fitzhugh L., and Rosefield.

Rosenfeld, Anton, New York, N. Y. Cardcase. 2,447,279, Aug. 17.

Rosenlof, Sven H., Newark, N. J., assignor to American Can Company, New York, N. Y. Type locking means for marking mechanism. 2,447,030, Aug. 17.

Ross Gear & Tool Company, assignee: *See*—
Davis, Francis H., Emerson, and Newman.

Ross, John: *See*—
Gebhart, Arthur I., and Ross.

Rousseau, Edward, Jewett City, Conn. Dual combustion system for combustion tube burners. 2,447,211, Aug. 17.

Rowe, Fred W., Seattle, Wash. Trawling winch. 2,447,280, Aug. 17.

Ruesch, Herman, Peoria, Ill. Mounting or receptacle and circuit breaker for tubes or lamps and their circuits. 2,447,365, Aug. 17.

Ruffner, John, assignee, et al.: *See*—
Edmondson, Joseph D.

Rugg, Herbert A.: *See*—
Saari, Paul A., and Rugg.

Rundt, John W., assignor to The Timken Roller Bearing Company, Canton, Ohio. Grinding machine with wheel dresser. 2,447,478, Aug. 17.

Runke, Glenn R., Racine, assignor to Line Material Company, South Milwaukee, Wis. Switch construction. 2,447,137, Aug. 17.

Ruscito, Anthony J., Unadilla, assignor to Bendix Aviation Corporation, New York, N. Y. Coil and mounting therefor. 2,447,366, Aug. 17.

Rush, Harry A., Glendale, Calif. Liquid dosing apparatus. 2,447,031, Aug. 17.

Russell, Nelson B.: *See*—
Bond, Donald C., and Russell.

Rust, John B., and W. B. Canfield, Montclair, N. J., assignors of one-half to Montclair Research Corporation, and one-half to Ellis-Foster Company. Reaction product of rosin-polyhydric alcohol esters and making same. 2,447,367, Aug. 17.

Rutan, Edward A.: *See*—
Heuver, Herbert M., and Rutan.

Saari, Paul A., and H. A. Rugg. Minneapolis, Minn. Form relief grinder. 2,447,138, Aug. 17.

St. Regis Paper Company, assignee: *See*—
Simonton, Budd E., and Dyer.

Salt, Francis E., Banstead, England, assignor to The Distillers Company, Limited, Edinburgh, Scotland. Separation of ethyl benzene from xylenes. 2,447,479, Aug. 17.

Sandoz Ltd., assignee: *See*—
Stoll, Arthur and Hofmann.

Sandoz Limited, assignee: *See*—
Wehrli, Walter, and Petitjean.

Schaufelberger, William F., Pleasant Grove, N. J., assignor, by mesne assignments, to The Harvel Corporation. Destructive distillation of cashew nut shell liquid and product thereof. 2,447,432, Aug. 17.

Schering Corporation, assignee: *See*—
Hershberg, Emanuel B.

Schlegel, Walter L., Jr., and F. E. Bachman, assignors to American Steel Foundries, Chicago, Ill. Snubber. 2,447,368, Aug. 17.

Schley, Charles C., George West, Tex. Wire tightener. 2,447,093, Aug. 17.

Schlote, G. F., & Company, Inc., assignee: *See*—
Schlote, Royal H.

Schlote, Royal H., assignor to G. F. Schlote & Company, Inc., Milwaukee, Wis. Helical spring actuated sliding side jaw wrench. 2,447,004, Aug. 17.

Schmerling, Louis, Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Production of halocycloalkanes. 2,447,139, Aug. 17.

Schmidt, Howard F., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Airplane anticing system. 2,447,096, Aug. 17.

Schneider, Cale J., Toledo, Ohio. Partitioning means for partible bodies. 2,447,006, Aug. 17.

Schneider & Cie., assignee: *See*—
de Fourchambault, Maurice de B.

Schnetz, Herman, Chicago, Ill. Container filler. 2,447,281, Aug. 17.

Schoeppel, John F., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Variable inductance pickup device. 2,447,212, Aug. 17.

Schroeder, Russell N., Inglewood, Calif. Protective hood. 2,447,433, Aug. 17.

Schumacher, Earle E.: *See*—
Bouton, George M., Phipps, and Schumacher.

Schwarzkopf, Paul, assignor to American Electro Metal Corporation, Yonkers, N. Y. Compacting metal powder into complicated shapes. 2,447,434, Aug. 17.

Schweitzer, Herbert C., assignor to The American Metal Company, Limited, New York, N. Y. Retort for distillation furnaces. 2,447,369, Aug. 17.

Scinta, Anthony C., assignor to Trico Products Corporation, Buffalo, N. Y. Gauge. 2,447,282, Aug. 17.

Sear, Reginald: *See*—
Dean, John N., Smith, and Sear.

Serber, Robert: *See*—
Kerst, Donald W., and Serber.

Settle, Nila R., executrix: *See*—
Settle, Walter A.

Settle, Walter A., deceased, Jefferson, Oreg.; N. R. Settle, executrix. Tire truck. 2,447,435, Aug. 17.

Shann, Oscar A., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Contact maker and breaker. 2,447,032, Aug. 17.

Shapiro, Michael, Franklin Square, N. Y. Dummy projectile. 2,447,033, Aug. 17.

Sharp, Brice E., and G. M. Hackman, Knoxville, Tenn., said Hackman assignor to said Sharp. Distance meter. 2,447,436, Aug. 17.

Sharp, Lorid G.: *See*—
Carmody, Don R., and Sharp.

Shaw, Milton C., and O. W. Hart, Cleveland, Ohio. Centrifugal fluid seal. 2,447,034, Aug. 17.

Sheldrick, Henry W., assignor to Collier-Keyworth Company, Gardner, Mass. Chair iron for tilting chairs. 2,447,283, Aug. 17.

Shell, Elwood F., San Francisco, Calif. Tire repair apparatus. 2,447,035, Aug. 17.

Shelton, Elbert M., and W. L. Thompson, Pittsburgh, Pa., assignors to Johnson & Johnson. Treating polyvinyl alcohol filaments and treated filament. 2,447,140, Aug. 17.

Shillady, Marion C., Norristown, Pa. Table. 2,447,141, Aug. 17.

Short, Frank, East Berlin, Conn. Grenade. 2,447,036, Aug. 17.

Sidnam, Alan N., New York, N. Y., B. Bolté, New Canaan, Conn., and T. C. Neary, New York, N. Y. Shoe protector. 2,446,284, Aug. 17.

Silver, Walter H., assignor to Deere & Company, Moline, Ill. Overload yielding hitch device. 2,447,097, Aug. 17.

Silverman, Daniel, assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Signaling system. 2,447,098, Aug. 17.

Silverman, Daniel, Richmond, Va. Amusement and educational device. 2,447,370, Aug. 17.

Simmons, R. F., Company, assignee: *See*—
Levesque, Arthur H.

Simonton, Budd E., and H. J. Dyer, Watertown, assignors to St. Regis Paper Company, New York, N. Y. Pallet. 2,447,285, Aug. 17.

Sipsma, Stewart and B. Askerlı, Kenosha, Wis. Single wheel ratchet pipe cutter. 2,447,371, Aug. 17.

Sitzer, Philip, Irvington, assignor to Tung-Sol Lamp Works, Inc., Newark, N. J. Signal system. 2,447,037, Aug. 17.

Sledge, Eula F., Dallas, Tex. Musical educational appliance. 2,447,213, Aug. 17.

Slocombe, Robert J., and E. E. Hardy, Anniston, Ala. Carbamyl chloride and producing same. 2,447,372, Aug. 17.

Smith, Carleton H., Montreal, Quebec, Canada, assignor to National Lead Company, New York, N. Y. Soft metal casting. 2,447,437, Aug. 17.

Smith, Carlos B., and H. L. Bullock, New York, N. Y. Sludge settling and dewatering tank. 2,447,286, Aug. 17.

Smith, Esmond W.: *See*—
Dean, John N., Smith, and Sear.

Smith, Fay E., Cleveland, D. Lacer, Lakewood, and C. B. McLeod, assignors to F. E. Smith, D. Lacer and C. B. McLeod, doing business as Smith, Lacer, McLeod Dental Laboratories, Cleveland, Ohio. Adjustable intraoral tracer. 2,447,287, Aug. 17.

Smith, Herschel G., Wallingford, T. L. Cantrell, Lansdowne, and M. L. Hill, Yeadon, assignors to Gulf Oil Corporation, Pittsburgh, Pa. Primary aliphatic amine salts of di-aliphatic substituted mono-thiophosphoric acids. 2,447,288, Aug. 17.

Smith, Lacer, McLeod Dental Laboratories: *See*—
Smith, Fay E., Lacer, and McLeod.

Smith, Robert F., and B. E. Clark, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Master cylinder. 2,447,142, Aug. 17.

Smoot, Theophilus H., Baltimore, Md., assignor to Anchor Post Products, Inc. Oil burner system comprising a vaporizing block. 2,447,373, Aug. 17.

Smyser, James S., deceased, late of Quincy, Mass., by Granite Trust Company, Quincy, Mass., executor, assignor, by mesne assignments, to Behr-Manning Corporation, Troy, N. Y. Applying coating materials. 2,447,374, Aug. 17.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Carmody, Don R., and Sharp.
Fontana, Celeste M.

Solmssen, Ulrich V. Essex Fells, assignor to Hoffmann-La Roche, Inc., Roche Park, Nutley, N. J. 2-phenylindene derivatives and manufacture of same. 2,447,099, Aug. 17.

Speer & Koenig, assignee: *See*—
Erickson, Carl V.

Spence, Le Roy U.: *See*—
Butterbaugh, Darrel J., and Spence.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Cathode structure. 2,447,038, Aug. 17.

Spraragen, Louis, assignor to Automatic Locking Devices, Incorporated, Bridgeport, Conn. Quadrant control. 2,447,469, Aug. 17.

Stabler, Dwight W., Venice, Calif. Egg boiler. 2,447,039, Aug. 17.

Stalker, Edward A., Bay City, Mich. Propulsion and boundary layer control for aircraft. 2,447,100, Aug. 17.

Standard Brands Incorporated, assignee: *See*—
Frey, Charles N., and Miller.

Standard Oil Company, The, assignee: *See*—
Burk, Robert E.

Standard Oil Development Company, assignee: *See*—
Kearby, Kenneth K.
Welty, Albert B., Jr., and Holder.
Wier, Lloyd D.

Standard Telephones and Cables Limited, assignee: *See*—
Chatterjea, Prafulla K., and Houghton.

Stanley, Richard W., Drexel Hill, assignor to American Viscose Corporation, Wilmington, Del. Thread advancing reel. 2,447,143, Aug. 17.

Stanolind Oil and Gas Company, assignee: *See*—
Silverman, Daniel.

Staudinger, Hanns P., Ewell, and M. D. Cooke, Banstead, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland. Polymerization of vinyl and vinylidene chlorides. 2,447,289, Aug. 17.

Steel Heddle Manufacturing Company, assignee: *See*—
Kaufmann, Frank H.

Stewart-Warner Corporation, assignee: *See*—
Palm, George H.

Stock, Hubert A., Peterborough, England. Die casting machine. 2,447,101, Aug. 17.

Stodola, Edwin K., Neptune, N. J. Modulation system. 2,447,040, Aug. 17.

Stoll, Arthur, and A. Hofmann, Basel, assignors to Sandoz Ltd., Fribourg, Switzerland. Optically active salts of the lysergic and isolysergic acid derivatives and their preparation and isolation. 2,447,214, Aug. 17.

Stovall, Gertrude, Los Angeles, Calif. Shield. 2,447,215, Aug. 17.

Strand, Alfred G., Longmont, Colo. Sanding disk. 2,447,102, Aug. 17.

Strutt, Maximiliaan J. O., and A. van der Ziel, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit for transmitting high-frequency electric oscillations. 2,447,438, Aug. 17.

Stubbs, Robert E., Duluth, Minn. Combined table and ironing board. 2,447,480, Aug. 17.

Sues, Carl B., Los Angeles, Calif. Two-cycle engine, combined pump and motor cylinder. 2,447,041, Aug. 17.

Sun-Kraft, Inc., assignee: *See*—
Atkins, Carl E.

Susen, Theodore A., assignor to Phoenix Dye Works, Chicago, Ill. Knitting machine. 2,447,103, Aug. 17.

Symington-Gould Corporation, The, assignee: *See*—
Barrows, Donald S.

Syntron Company, assignee: *See*—
Burt, Ralph.

Taylor, Maurice K., and I. N. Vaughn-Jones, Hollinwood, England, assignors, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill. Wave-signal translating system. 2,447,375, Aug. 17.

Telegraph Construction & Maintenance Company, Limited, assignee: *See*—
Dean, John N., Smith, and Sear.

Tennessee Corporation, assignee: *See*—
Oakley, Llewellyn C., Jr.

Thompson, Ivan P.: *See*—
Miller, Alfred J., and Thompson.

Thompson, Roy E., Seattle, Wash. Self-locking screw. 2,447,439, Aug. 17.

Thompson, Walter L.: *See*—
Shelton, Elbert M., and Thompson.

Thorn, Maurice S.: *See*—
Tognola, Tullio, and Thorn.

Thornton, Marion V., Spokane, Wash. Oil purifier. 2,447,144, Aug. 17.

Thurston, Jack T., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Amino substituted aryl guanamines. 2,447,440, Aug. 17.

Tidwell, John L., Homedale, Idaho. Track tool. 2,447,216, Aug. 17.

Timken Roller Bearing Company, The, assignee: *See*—
Rundt, John W.

Tishler, Max: *See*—
Weijlard, John, and Tishler.

Tognola, Tullio, Sidney, assignor to Bendix Aviation Corporation, New York, N. Y. Ignition apparatus. 2,447,376, Aug. 17.

Tognola, Tullio, Sidney, and M. S. Thorn, Oneonta, assignors to Bendix Aviation Corporation, New York, N. Y. Device for regulating electrical discharge. 2,447,377, Aug. 17.

Trammell, Will H.: *See*—
McKinnie, William P., and Trammell.

Travers, William J., Jr., assignor to Richfield Oil Corporation, Los Angeles, Calif. Well cementing method. 2,447,217, Aug. 17.

Trbojevich, Nikola, Detroit, Mich. Variable leverage gearing. 2,447,104, Aug. 17.

Trico Products Corporation, assignee: *See*—
Scinta, Anthony C.

Triplett Electrical Instrument Co., The, assignee: *See*—
Lingel, Frederick J.

Truninger, Alfred, Kreuzlingen, Switzerland. Door latch. 2,447,290, Aug. 17.

Trzemiewski, Stanley, Milwaukee, Wis. Bar bell. 2,447,218, Aug. 17.

Tung Sol Lamp Works, Inc., assignee: *See*—
Sitzer, Philip.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Thread separator for weft replenishing looms. 2,447,291, Aug. 17.

Tweedale, Ralph L., Birmingham, assignor to Vickers Incorporated, Detroit, Mich. Hydraulic power transmission with flow control by-pass valve. 2,447,441, Aug. 17.

Tweedale, Ralph L., Birmingham, and J. J. George, Wyandotte, assignors to Vickers Incorporated, Detroit, Mich. Hydraulic power transmission with flow control valve. 2,447,442, Aug. 17.

Udall, Philip A., Distributing Co., Inc., assignee: *See*—
Vogel, Frank.

Union Carbide and Carbon Corporation, assignee: *See*—
Baker, Harry J.
Olson, Malven L., and Berger.

Union Special Machine Company, assignee: *See*—
Christensen, Norman V.

United Aircraft Corporation, assignee: *See*—
Ghahreff, Michael E.
Kalitinsky, Andrew.
Kalitinsky, Andrew, and Meitzler.
Meitzler, Donald E.

United Engineering Company, assignee: *See*—
Velie, Orville O.

United Shoe Machinery Corporation, assignee: *See*—
Fredericksen, James P.
Hooper, Lester B.
Ray, Eugene J.

United States Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
Brewer, Aubrey K., and Madorsky.

United States Rubber Company, assignee: *See*—
Gates, Charles W., and Woods.
Kulka, Marshall.

United States Safety Service Co.: *See*—
Moeller, William C.

United States Steel Corporation of Delaware, assignee, et al.: *See*—
Rendel, George H., and Reed.

Universal Oil Products Company, assignee: *See*—
Collins, Robert B.
Schmerling, Louis.

University of Illinois, Board of Trustees of the, assignee: *See*—
Kerst, Donald W., and Serber.

Valentine, Joseph E., Plainfield, assignor to Oxxyn Company, Clifton, N. J. Noise insulating ring for earphones. 2,447,470, Aug. 17.

Van Acker, Joseph E., Haledon, N. J. Gas-actuated turbine-driven compressor. 2,447,292, Aug. 17.

Van Cleef, Paul, and F. Chonacki, Chicago, Ill., assignors, by mesne assignments, to Johns-Manville Corporation, New York, N. Y. Tape dispenser. 2,447,145, Aug. 17.

Vanderveld, Anthony, assignor to Grand Rapids Store Equipment Company, Grand Rapids, Mich. Sliding door lock. 2,447,219, Aug. 17.

Van der Ziel, Aldert: *See*—
Strutt, Maximiliaan J. O., and van der Ziel.

Van Norman Company, assignee: *See*—
Healy, Francis P.
Vang, Alfred, New York, N. Y. Filling of code slots or notches in embossed printing plates or stencils. 2,447,293, Aug. 17.
Vanott Machine Corp., assignee: *See*—
Abbott, Walter De F.
Vaughn-Jones, Ian N.: *See*—
Taylor, Maurice K., and Vaughn-Jones.
Vaughn, Thomas H.: *See*—
Wegst, Walter F., Bacon, and Vaughn.
Velie, Orville O., Bellingham, Wash., deceased; O. W. Norton, executor, assignor to United Engineering Company, Bellingham, Wash. Closure mechanism. 2,447,042, Aug. 17.
Vickers Incorporated, assignee: *See*—
George, Joseph J.
Tweedale, Ralph L.
Tweedale, Ralph L., and George.
Vickery, Ralph W. E., Brockton, Mass. Self-regulating electric steam generator. 2,447,294, Aug. 17.
Vogel, Frank, Philadelphia, Pa., assignor to Philip A. Udall Distributing Co., Inc. Bottle cap. 2,447,146, Aug. 17.
Vogel, Louis W., Chicago, Ill. Container for fishhooks. 2,447,105, Aug. 17.
Voorhees, Henry R.: *See*—
Matuaitis, Victor E., Edwards, and Voorhees.
Voorhies, Harry E., Grosse Pointe Woods, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio. Valve. 2,447,443, Aug. 17.
Wadsworth, Charles J., Nutley, N. J., assignor to R. E. Dietz Company, New York, N. Y. Road signal device or the like. 2,447,378, Aug. 17.
Waggoner, Frank H., Ramsay, N. J. Andiron. 2,447,295, Aug. 17.
Wagner, William A., assignor to The Perfection Steel Body Company, Galion, Ohio. Vehicle platform. 2,447,471, Aug. 17.
Waite, Philip M., Corry, Pa. Ground stake. 2,447,444, Aug. 17.
Walker, Stanley W., Workington, assignor of one-half to A. Maclochlan, Wolverhampton, England. Moving floor for vehicles. 2,447,220, Aug. 17.
Walker, William, & Sons, Limited, assignee: *See*—
Alexander, James R., Burton, and Hausmann.
Wall, Alexander C., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Mechanical flashlight. 2,447,296, Aug. 17.
War, United States of America, as represented by the Secretary of, assignee: *See*—
Byrne, John F.
Warner, Gilbert S., Palma Sola, assignor to W. Hegener, Sarasota, Fla. Animal trap. 2,447,147, Aug. 17.
Warring, Alfred, Detroit, Mich., assignor, by mesne assignments, of one-third to said Warring, one-third to N. A. Grams, and one-third to W. Noponen. Pipe coupling and fastening device. 2,447,221, Aug. 17.
Wegener, Alfred J., Jr., Kansas City, Mo. Adjustable shirt sleeve and cuff assembly. 2,447,106, Aug. 17.
Wegst, Walter F., and L. R. Bacon, Wyandotte, and T. H. Vaughn, Grosse Ile, assignors, by mesne assignments, to Wyandotte Chemicals Corporation, Wyandotte, Mich. Protection of glass surface against alkali attack. 2,447,297, Aug. 17.
Wehril, Walter, and C. Petitjean, Basel, assignor to Sandoz Limited, Fribourg, Switzerland. Metallizable polyazo dyestuffs and their preparation. 2,447,222, Aug. 17.
Weijlard, John, Westfield, and M. Tishler, assignors to Merck & Co., Inc., Rahway, N. J. Producing derivatives of pyrazine. 2,447,149, Aug. 17.
Welty, Albert B., Jr., Mountainside, and C. H. Holder, Cranford, N. J., assignors to Standard Oil Development Company. Hydroforming process. 2,447,043, Aug. 17.
Wenger, Frederick R., Los Angeles, assignor to Focal Company, Downey, Calif. Metalising nonmetallic articles. 2,447,379, Aug. 17.
Wenger, Frederick R., Los Angeles, assignor to Focal Company, Downey, Calif. Metalising nonmetallic articles. 2,447,380, Aug. 17.
Wester, Alfred B., L. A. Burrows, and W. B. Johnson, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Diphenylamine manufacture. 2,447,044, Aug. 17.
Westerholm, Gustaf, Hobart, Ind., assignor to Carnegie-Illinois Steel Corporation. Rail turning device. 2,447,223, Aug. 17.
Westinghouse Electric Corporation, assignee: *See*—
Putz, Thomas J.
White, Harold A., Aylmer, Ontario, Canada. Bottle opener. 2,447,381, Aug. 17.
Whitlock, Raymond C., San Francisco, Calif. Chain saw. 2,447,298, Aug. 17.
Whittier, Elmer S., Bristol, assignor to The Cooper Oven Thermometer Company, Pequabuck, Conn. Thermometer. 2,447,382, Aug. 17.
Widen, Gunnar G., and R. J. Helgerud, Minneapolis, Minn., assignors to General Mills, Inc. Gear tester. 2,447,445, Aug. 17.
Wier, Lloyd D., East Baton Rouge, La., assignor to Standard Oil Development Company. Catalytic conversion of hydrocarbons. 2,447,140, Aug. 17.
Wightman, Lawrance W., Fort Wayne, Ind., assignor to General Electric Company. Rotatable electrical device. 2,447,383, Aug. 17.
Wilder, Warren, and H. Horlacher, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Pattern controlled machine tool. 2,447,446, Aug. 17.
Williams, Ferd E., Princeton, N. J., assignor to Radio Corporation of America. Phosphor material. 2,447,447, Aug. 17.
Williams, Ferd E., Princeton, N. J., assignor to Radio Corporation of America. Magnesium germanate phosphors. 2,447,448, Aug. 17.
Williams, Ferd E., Princeton, N. J., assignor to Radio Corporation of America. Phosphor material. 2,447,449, Aug. 17.
Williams, Spencer R., assignor to Germ-Ex Mask Company Limited, Toronto, Ontario, Canada. Surgical mask. 2,447,450, Aug. 17.
Williams, William A., assignor to The American Pulley Company, Philadelphia, Pa. Fastening means. 2,447,299, Aug. 17.
Williams, William A., assignor to The American Pulley Company, Philadelphia, Pa. Grasp device. 2,447,300, Aug. 17.
Windmoeller, Minnie M., Mooresville, Ind. Brush mounted nail file. 2,447,451, Aug. 17.
Wirgin, Joseph, Mount Vernon, N. Y. Extension for tripods. 2,447,107, Aug. 17.
Wolf, Donald E.: *See*—
Peck, Robert L., Harris, Mosinko, Wolf, and Folkers.
Wolff, Otto E., Chestnut Hill, assignor of one-fourth to Polaroid Corporation, Cambridge, Mass. Torque-transmitting apparatus. 2,447,384, Aug. 17.
Woods, William P.: *See*—
Gates, Charles W., and Woods.
Worthington Pump and Machinery Corporation, assignee: *See*—
Lucke, Charles E.
Wright, Marshall M., Pierpont, Ohio. Corn remover for cooked sweet corn. 2,447,301, Aug. 17.
Wyandotte Chemicals Corporation, assignee: *See*—
Wegst, Walter F., Bacon, and Vaughn.
Zaeslin, Hans: *See*—
Martin, Henry, Gysin, Zaeslin, and Margot.
Zee, Leo C., now by judicial change of name: *See*—
Zehnpfennig, Leo C.
Zehnpfennig, Leo C., Merkel, Tex., now by judicial change of name Leo C. Zee. Electrical switch. 2,447,452, Aug. 17.
Zehnpfennig, Leo C., Merkel, Tex., now by judicial change of name Leo C. Zee. Electrical switch. 2,447,453, Aug. 17.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 17TH DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Apparatus for printing and notching. R. Connor. Re. 23,026. Aug. 17.

Desk for use with dictating machine transcribing devices, Typewriter. J. S. Burdick and C. S. Fairbank. Re. 23,025, Aug. 17.

Telegraph exchange system, Staellite. K. E. Fitch and C. W. Lucek. Re. 23,027, Aug. 17.

Telegraph system, Printing. J. B. Moore and R. E. Mathes. Re. 23,028, Aug. 17.

3,3-Bis-(4-dimethylaminophenyl)-6-dimethylaminophthalide. C. S. Adams. Re. 23,024, Aug. 17.

LIST OF DESIGN INVENTIONS

Advertising device or the like. J. J. Reinhold. 150,656, Aug. 17.

Andiron or similar article. O. P. Kurrle. 150,631–2, Aug. 17.

Applicator, Cosmetic. M. S. Landsman. 150,635, Aug. 17.

Ash tray and receptacle or similar article, Combined. N. E. Graven. 150,565, Aug. 17.

Automobile. K. Henrichsen. 150,571, Aug. 17.

Automobile or similar article. E. J. Kasnicka. 150,578, Aug. 17.

Belt, Short dress. L. R. Baggett. 150,533, Aug. 17.

Bottle opener. W. A. Kropp. 150,629, Aug. 17.

Bracelet and spoon, Combined. J. O. Reinecke. 150,635, Aug. 17.

Bracelet and watch case, Combined wrist watch. H. Pommier. 150,653, Aug. 17.

Bracelet, Charm. R. W. Grefe. 150,566, Aug. 17.

Bracelet, Expansible watch. A. Albanese. 150,530, Aug. 17.

Bracelet or similar article. A. Katz. 150,591, Aug. 17.

Bracelet or similar article. A. Katz. 150,595, Aug. 17.

Bracelet or similar article. A. Katz. 150,605, Aug. 17.

Bracelet or similar article. A. Katz. 150,607–8, Aug. 17.

Bracelet or similar article. A. Katz. 150,614, Aug. 17.

Bracelet or similar article. A. Philippe. 150,651, Aug. 17.

Brooch or similar article. A. Katz. 150,579–83, Aug. 17.

Brooch or similar article. A. Katz. 150,588–9, Aug. 17.

Brooch or similar article. A. Katz. 150,593, Aug. 17.

Brooch or similar article. A. Katz. 150,598–602, Aug. 17.

Brooch or similar article. A. Katz. 150,604, Aug. 17.

Brooch or similar article. A. Katz. 150,611–12, Aug. 17.

Brooch or similar article. A. Katz. 150,615, Aug. 17.

Brooch or similar article. A. Katz. 150,620–5, Aug. 17.

Brooch or similar article. A. Philippe. 150,648, Aug. 17.

Brooch, Separable. A. Katz. 150,616, Aug. 17.

Button for electric iron, Control. J. N. Polivka. 150,652, Aug. 17.

Cabinet. A. J. Buckner. 150,548, Aug. 17.

Cabinet casing, Organ tone. V. I. Zuck. 150,668–9, Aug. 17.

Cabinet grille, Organ tone. V. I. Zuck. 150,667, Aug. 17.

Cabinet, Radio. B. T. Setchell. 150,660, Aug. 17.

Cart, Golf bag. T. A. Hutsell. 150,572, Aug. 17.

Case, Eyeglass. A. Karp. 150,577, Aug. 17.

Casing for a fan or the like. H. W. Eckles. 150,559, Aug. 17.

Chair. S. Barrile. 150,537, Aug. 17.

Chair back. C. J. Barecki. 150,535, Aug. 17.

Change purse and wallet, Combined. J. Rosenfeld. 150,658, Aug. 17.

Clock. T. D. Di Addario. 150,555–6, Aug. 17.

Clock or similar article. J. M. Janes. 150,574, Aug. 17.

Cornice or similar article, Window. S. G. Cline. 150,554, Aug. 17.

Dial, Watch. A. Goodkind. 150,628, Aug. 17.

Doll or similar article. L. G. McDonald. 150,638, Aug. 17.

Dry cleaning machine. C. F. Diniey. 150,558, Aug. 17.

Earring. M. Boucher. 150,546, Aug. 17.

Earring or similar article. M. Chernow. 150,549–50, Aug. 17.

Earring or similar article. M. Chernow. 150,553, Aug. 17.

Earring or similar article. A. Katz. 150,584, Aug. 17.

Earring or similar article. A. Katz. 150,586, Aug. 17.

Earring or similar article. A. Katz. 150,590, Aug. 17.

Earring or similar article. A. Katz. 150,594, Aug. 17.

Earring or similar article. A. Katz. 150,597, Aug. 17.

Earring or similar article. A. Katz. 150,610, Aug. 17.

Earring or similar article. A. Katz. 150,617, Aug. 17.

Earring or similar article. A. Philippe. 150,649, Aug. 17.

Earring or the like. M. Chernow. 150,551-2, Aug. 17.

Fabric, Textile. W. Mitschke. 150,641–3, Aug. 17.

Fabric, Textile. E. M. Patterson. 150,645–6, Aug. 17.

Fabric, Textile. E. Ralphaels. 150,654, Aug. 17.

Fence panel, Concrete. W. Ashenfelter. 150,532, Aug. 17.

Figurine. A. Bancroft and D. Bennett. 150,534, Aug. 17.

Figurine. E. Lanning. 150,636, Aug. 17.

Fountain pen or similar article, Ball pointed. J. Pearl. 150,647, Aug. 17.

Frame or similar article, Clock. K. A. Van Dyck. 150,663, Aug. 17.

Front panel for music boxes or cabinets. R. P. Miller. 150,640, Aug. 17.

Gas stove. R. I. Felver. 150,561, Aug. 17.

Handbag. A. Lamel. 150,633–4, Aug. 17.

Heater, Space. M. Ferar. 150,562, Aug. 17.

Helicopter. A. M. Young and M. H. Gleason. 150,665, Aug. 17.

Holder, Telephone. H. H. Webb. 150,664, Aug. 17.

Jacket. S. Etkin. 150,560, Aug. 17.

Knife, fork, and spool, Combination. A. L. Kuhlman. 150,630, Aug. 17.

Lamp. M. Gest. 150,563, Aug. 17.

Lamp, Table. J. Gordon. 150,564, Aug. 17.

Liturgical fabric or similar article. A. Baumgartner. 150,539–43, Aug. 17.

Mirror. P. Muller-Munk. 150,644, Aug. 17.

Necklace. N. A. Bauer. 150,538, Aug. 17.

Necklace or similar article. A. Katz. 150,585, Aug. 17.

Necklace or similar article. A. Katz. 150,587, Aug. 17.

Necklace or similar article. A. Katz. 150,592, Aug. 17.

Necklace or similar article. A. Katz. 150,596, Aug. 17.

Necklace or similar article. A. Katz. 150,603, Aug. 17.

Necklace or similar article. A. Katz. 150,606, Aug. 17.

Necklace or similar article. A. Katz. 150,609, Aug. 17.

Necklace or similar article. A. Katz. 150,613, Aug. 17.

Necklace or similar article. A. Katz. 150,618–19, Aug. 17.

Necklace or similar article. A. Philippe. 150,650, Aug. 17.

Opener or similar article, Letter. D. M. Richardson. 150,657, Aug. 17.

Orphrey or similar article. A. Baumgartner. 150,544. Aug. 17.

Orphrey or similar article. O. A. Scheurmann. 150,659, Aug. 17.

Outlet, Electrical wall. M. S. Adler. 150,529, Aug. 17.

Parabolic reflector for microwave antennae. D. S. Kennedy. 150,626, Aug. 17.

Piano and xylophone unit, Combination. B. F. Jay. 150,575, Aug. 17.

Picture viewer. F. B. Ingram. 150,573, Aug. 17.

Power driven tool unit, Portable. F. O. Albertson. 150,531, Aug. 17.

Respirator. R. B. Haller. 150,569, Aug. 17.

Saucer and cream pitcher holder, Combination. E. J. Zachary. 150,666, Aug. 17.

Scythe. H. L. Heineke. 150,570, Aug. 17.

Shoe, Infant's. S. Griffin. 150,568, Aug. 17.

Solvent recovery machine. C. F. Diniey. 150,557, Aug. 17.

Spectacles, Pair of. A. G. McNeill. 150,639, Aug. 17.

Stickpin or similar article. G. S. Krajian. 150,627, Aug. 17.

Switch or similar article, Push-button. L. J. Kalwo. 150,576, Aug. 17.

Table. A. J. Buckner. 150,547, Aug. 17.

Table. R. A. Thornquist. 150,662, Aug. 17.

Toy barrow. P. F. Lewis. 150,637, Aug. 17.

Truck, Hand tank. R. H. Barrett. 150,536, Aug. 17.

Vegetable masher. D. H. Bergstedt. 150,545, Aug. 17.

Vehicle body. J. W. Greig. 150,567, Aug. 17.

Ventilator, Window. W. Siebels. 150,661, Aug. 17.

PATENTS WERE ISSUED ON THE 17TH DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive tool. A. E. Gerrits and H. E. Gygi. 2,447,327, Aug. 17.
Accelerator with small X-ray source, Magnetic induction. D. W. Kerst and R. Serber. 2,447,255, Aug. 17.
Accessory drive. V. E. Matulaitis, F. W. Edwards, and H. R. Voorhees. 2,447,130, Aug. 17.
Acidic sulfur compounds from hydrocarbon distillates, Removing. D. C. Bond and N. B. Russell. 2,447,051, Aug. 17.
Air charger. L. E. Gordon. 2,447,173, Aug. 17.
Air conditioning apparatus. R. F. Roper. 2,447,278, Aug. 17.
Airplane anti-icing system. H. F. Schmidt. 2,447,095, Aug. 17.
Aluminum hydroxide from silicates, Obtaining. G. Antonoff. 2,447,386, Aug. 17.
Aluminum salts, Preparation of. A. L. Gebhart and J. Ross. 2,447,064, Aug. 17.
Amino substituted aryl guanamines. J. T. Thurston. 2,447,440, Aug. 17.
Ammunition structure and launching device therefor. S. H. Clarke. 2,447,315, Aug. 17.
Amusement and educational device. D. Silverman. 2,447,370, Aug. 17.
Andiron. F. H. Waggoner. 2,447,295, Aug. 17.
Animal trap. G. S. Warner. 2,447,147, Aug. 17.
Apparatus for conditioning metal bodies. A. J. Miller and L. P. Thompson. 2,447,081, Aug. 17.
Apparatus for photoelectric measurement of areas. A. G. B. Metcalf. 2,447,024, Aug. 17.
Apparatus for preventing the formation of ice on windshields. H. H. Raymond. 2,447,430, Aug. 17.
Apparatus for spinning and winding textile threads. R. J. H. Kovacs. 2,447,345, Aug. 17.
Apparatus for the manufacture of paper and other felted fibrous products. J. T. Coghill. 2,447,161, Aug. 17.
Apparatus for treating foods. P. E. Marshall. 2,447,417, Aug. 17.
Appliance, Electric treatment. F. Landauer. 2,447,127, Aug. 17.
Appliance, Musical educational. E. F. Sledge. 2,447,213, Aug. 17.
Applying coating materials. J. S. Smyser. 2,447,374, Aug. 17.
Arrester element. H. J. Baker. 2,447,048, Aug. 17.
Arrester, Flame. R. C. Hall. 2,447,120, Aug. 17.
Attachment for motion-picture projecting machines. J. D. Edmondson. 2,447,238, Aug. 17.
Axially rotating reciprocating piston pump. H. H. Mackal. 2,447,416, Aug. 17.
Backfire arrester and flashback preventer. M. L. Olson and E. A. Berger. 2,447,086, Aug. 17.
Baking pan assembly. J. Kollman. 2,447,126, Aug. 17.
Bar: *See*—
Vehicle tow bar.
Barium lithol red, Preparation of a. C. C. Candee. 2,447,394, Aug. 17.
Battery core machine and method. B. May. 2,447,197, Aug. 17.
Beer keg, Liquid cooled metallic. E. E. Brand. 2,447,390, Aug. 17.
Bell, Bar. S. Trzesniewski. 2,447,218, Aug. 17.
Binding post, Spring. B. Fox. 2,447,324, Aug. 17.
Blade, Rotor. M. E. Giuhareff. 2,447,118, Aug. 17.
Boiler: *See*—
Egg boiler.
Boring apparatus. W. J. Nightingale. 2,447,424, Aug. 17.
Bottle cap. F. Vogel. 2,447,146, Aug. 17.
Box: *See*—
Electric fuse box.
Bracket: *See*—
Hanger bracket.
Bracket construction. E. S. Boston. 2,447,228, Aug. 17.
Bracket means for sun visors, Adjustable angular. J. P. and J. G. Groboski. 2,447,246, Aug. 17.
Brake: *See*—
Reverse brake.
Brake arrangement. P. W. Gaenssle. 2,447,244, Aug. 17.
Brake beam support. D. S. Barrows. 2,447,458, Aug. 17.
Broiler compartment. W. R. Jones. 2,447,184, Aug. 17.
Brush mounted nail file. M. M. Windmoeller. 2,447,451, Aug. 17.
Buffing and polishing machine. W. De F. Abbott. 2,447,454, Aug. 17.
Buoy, Signaling. P. Holcomb, Jr. 2,447,069, Aug. 17.
Cabinet: *See*—
Dispensing cabinet. Delivery cabinet.
Cap: *See*—
Insulator cap. Bottle cap.
Carbon bisulfide, Production of. B. W. Gamson. 2,447,003, Aug. 17.
Carburetor. G. E. Beardsley, Jr. 2,447,264, Aug. 17.
Cardcase. A. Rosenfeld. 2,447,279, Aug. 17.
Case: *See*—
Photometer carrying case.
Casting, Soft metal. C. H. Smith. 2,447,437, Aug. 17.
Catalysts for benzine synthesis, Preparing. O. Roelen and W. Feisst. 2,447,029, Aug. 17.
Catalysts for hydrocarbon conversions. K. K. Kearby. 2,447,017, Aug. 17.
Catalytic conversion of hydrocarbons. L. D. Wier. 2,447,149, Aug. 17.
Catalytic reforming of hydrocarbons. K. K. Kearby. 2,447,016, Aug. 17.
Cathode structure. P. L. Spencer. 2,447,038, Aug. 17.
Chair: *See*—
Commode chair.
Chair iron for tilting chairs. H. W. Sheldrick. 2,447,283, Aug. 17.
Chair with tray, Laterally folding. S. A. Brandes and F. L. Greenfield. 2,447,391, Aug. 17.
Chamber motor with piston actuated valve for jolting machines, Expansible. R. Burt. 2,447,312, Aug. 17.
Charge forming device. Le Roy J. Evans. 2,447,268, Aug. 17.
Charge forming device. F. C. Mock. 2,447,261, Aug. 17.
Charge forming device. F. C. Mock. 2,447,262, Aug. 17.
Charge forming device. F. C. Mock. 2,447,263, Aug. 17.
Chloride and producing same, Carbamyl. R. J. Slocombe and E. E. Hardy. 2,447,372, Aug. 27.
Chuck, Crankshaft regrinding. F. P. Healy. 2,447,334, Aug. 17.
Circuit: *See*—
Generator circuit.
Circuit for miniature lamps. C. E. Atkins. 2,447,304, Aug. 17.
Circuit for obtaining pulsating current output as a function of direct-current input. E. Cartotto. 2,447,232, Aug. 17.
Circuit for transmitting high-frequency electric oscillations. M. J. O. Strutt and A. van der Ziel. 2,447,438, Aug. 17.
Circuits, Resonant cavity. A. V. Haeff. 2,447,461, Aug. 17.
Clamp: *See*—
Toggle link operated hand clamp.
Clamping means for ear ornaments and other articles of jewelry. A. H. Levesque. 2,447,350, Aug. 17.
Clasp, Chain. W. Nelson. 2,447,422, Aug. 17.
Cleansing and scouring pad and method. L. H. Englund. 2,447,241, Aug. 17.
Closure control. C. A. Olson. 2,447,271, Aug. 17.
Closure mechanism. O. O. Velie. 2,447,042, Aug. 17.
Clutch device. M. Gravina and M. Hawadler. 2,447,007, Aug. 17.
Clutch mechanism, Multiple. D. S. Dence. 2,447,058, Aug. 17.
Clutch with multiple disks, Friction. M. de Borniol de Fourchambault. 2,447,319, Aug. 17.
Coating materials, applying. J. S. Smyser. 2,447,374, Aug. 17.
Coil and mounting therefor. A. J. Ruscito. 2,447,366, Aug. 17.
Collar, Shirt. M. F. Rogers. 2,447,431, Aug. 17.
Color of surface-active agents, Improving the. L. J. Beckham and W. F. Fessler. 2,447,308, Aug. 17.
Comb and reed for textile machines. F. H. Kaufmann. 2,447,342, Aug. 17.
Combined table and ironing board. R. E. Stubbs. 2,447,480, Aug. 17.
Combustion system for combustion tube burners, Dual. E. Rousseau. 2,447,211, Aug. 17.
Commode chair. J. S. Edens. 2,447,239, Aug. 17.
Compound of urobilinogen and hippuric acid as antipressor. H. M. Rabinowitz. 2,447,363, Aug. 17.
Compressor, Gas-actuated turbine-driven. J. E. Van Acker. 2,447,292, Aug. 17.
Compressor piston ring. A. Kalitinsky. 2,447,125, Aug. 17.
Concrete mixer. H. W. Huffman. 2,447,071, Aug. 17.
Condenser. C. E. Lucke. 2,447,259, Aug. 17.
Conductors and cables, High-frequency electric. J. N. Dean, E. W. Smith, and R. Sear. 2,447,168, Aug. 17.

Cone, Ice cream. W. E. Amberg. 2,447,045, Aug. 17.
Connector: *See*—
Swivel connector.
Connector unit for electric conduits. J. F. O'Brien and E. S. Boynton. 2,447,026, Aug. 17.
Contact maker and breaker. O. A. Shann. 2,447,032, Aug. 17.
Container for fishhooks. L. W. Vogel. 2,447,105, Aug. 17.
Container supporting and closing mechanism. H. G. Eisler. 2,447,240, Aug. 17.
Control apparatus. L. A. Griffith. 2,447,331, Aug. 17.
Control, Quadrant. L. Spraragen. 2,447,469, Aug. 17.
Control system and apparatus. A. E. Baak. 2,447,388, Aug. 17.
Controller for towing winches and other machines. E. U. Lassen and A. A. Johnson. 2,447,074, Aug. 17.
Controllers, Input. J. Morton. 2,447,356, Aug. 17.
Conveyer, Shuttle. D. C. Campion, Sr. 2,447,393, Aug. 17.
Conveyer system. F. E. Jones. 2,447,072, Aug. 17.
Cooling of electric machines. V. A. Hoover. 2,447,339, Aug. 17.
Cooling system and apparatus, Engine. T. J. Bay. 2,446,995, Aug. 17.
Corn remover for cooked sweet corn. M. M. Wright. 2,447,301, Aug. 17.
Corner piece structure. W. M. Krantz. 2,447,346–7, Aug. 17.
Coupling: *See*—
High-pressure coupling.
Coupling and fastening device, Pipe. A. Warring. 2,447,221, Aug. 17.
Coupling for wrist watch bands, Adjustable. C. Goldblatt. 2,447,329, Aug. 17.
Covering shield mount for safety helmets. W. C. Moeller. 2,447,083, Aug. 17.
Crossbar switch. H. C. Harrison. 2,447,010, Aug. 17.
Crushing machine for rocks and the like. E. H. Anderson. 2,447,303, Aug. 17.
Crystals, Production of. L. Pessel. 2,447,362, Aug. 17.
Cutter: *See*—
Single wheel ratchet pipe cutter.
Cylinder liner. W. E. Pielop, Jr. 2,447,027, Aug. 17.
Cylinder, Master. R. F. Smith and B. E. Clark. 2,447,142, Aug. 17.
di-N-cyclohexylacetylserine hexahydrobenzyl amide. R. L. Peck, S. A. Harris, R. Mozingo, D. E. Wolf, and K. Folkers. 2,447,361, Aug. 17.
Delivery cabinet. E. M. Gulow. 2,447,409, Aug. 17.
Destructive distillation of cashew nut shell liquid and product thereof. W. F. Schaufelberger. 2,447,432, Aug. 17.
Device for expanding rubber rings. A. O. Hammond 2,447,474, Aug. 17.
Device for facilitating circuit design. J. Alter. 2,446,993, Aug. 17.
Device for regulating electrical discharge. T. Tognola and M. S. Thorn. 2,447,377, Aug. 17.
Device for separating liquid or foreign matter in suspension from fluid under pressure. H. J. Goodyer. 2,447,119, Aug. 17.
Diamides of alkane dicarboxylic acids. H. Martin, H. Gysin, H. Zaeslin, and A. Margot. 2,447,195, Aug. 17.
Diamides of methane-1:1-dicarboxylic acids. H. Martin, H. Gysin, H. Zaeslin, and A. Margot. 2,447,196, Aug. 17.
Diaminocresol, Preparation of. J. Krueger and R. L. Hayes. 2,447,019, Aug. 17.
Diaminophenol, Preparation of. J. Krueger and R. L. Hayes. 2,447,020, Aug. 17.
Die-casting machine. L. H. Morin. 2,447,355, Aug. 17.
Die casting machine. H. A. Stock. 2,447,101, Aug. 17.
Digging and sorting machine. C. L. Dey. 2,447,399, Aug. 17.
Diphenylamine manufacture. A. B. Wester, L. A. Burrows, and W. B. Johnson. 2,447,044, Aug. 17.
Disk, Sanding. A. G. Strand. 2,447,102, Aug. 17.
Dispenser: *See*—
Tape dispenser.
Dispensing cabinet. C. C. Coates. 2,447,054, Aug. 17.
Disposal of refuse. O. C. Norton and A. E. Hahn. 2,447,425, Aug. 17.
Distance meter. B. E. Sharp and G. M. Hackman. 2,447,436, Aug. 17.
Dolly block with serrated work-engaging faces. H. E. Conrad. 2,447,162, Aug. 17.
Door: *See*—
Oven door. Retort door.
Door latch. A. Truninger. 2,447,290, Aug. 17.
Door lock. A. F. Lickteig. 2,447,190, Aug. 17.
Double-walled foldable carton. W. G. Freel and S. F. Jones. 2,447,243, Aug. 17.
Doughnut maker. E. J. Hutchinson. 2,447,182, Aug. 17.
Drum file, Automatic locking. F. D. Jonas. 2,447,253, Aug. 17.
Dry pipe valve. W. B. Griffith. 2,447,174, Aug. 17.
Drying egg substance and resulting product. C. N. Frey and G. E. Miller. 2,447,063, Aug. 17.
Dye composition for color photography. H. C. Harsh, R. M. Haff, and F. J. Kaszuba. 2,447,462, Aug. 17.
Dyes, Chromable monoazo. A. Conzetti. 2,447,164, Aug. 17.
Dyes, Trimethine cyanine. F. M. Hamer and E. B. Knott. 2,447,332, Aug. 17.
Easel stand. E. J. Forsyth. 2,447,460, Aug. 17.
Egg boiler. D. W. Stabler. 2,447,039, Aug. 17.
Electric fuse box. R. Bauwens. 2,447,049, Aug. 17.
Electric terminal. J. J. Jorgensen. 2,447,254, Aug. 17.
Electrical control system. O. E. Bowles. 2,447,111, Aug. 17.
Electrical control system. P. T. Nims. 2,447,134, Aug. 17.
Electrical detector network. W. F. Ertsman. 2,447,321, Aug. 17.
Electrical switch. S. M. I. de Olariaga and P. Forster. 2,447,320, Aug. 17.
Electrical switch. L. C. Zehnpfennig. 2,447,452–3, Aug. 17.
Electrode holder. W. F. Baker and I. J. Pickering. 2,447,307, Aug. 17.
Electromagnet positioning device. H. W. Kelly. 2,447,343, Aug. 17.
Electron microspectroscope. L. Marton. 2,447,260, Aug. 17.
Electroplating apparatus. R. H. Olsen. 2,447,270, Aug. 17.
Electrotherapeutic apparatus. F. Myers. 2,447,269, Aug. 17.
Emergency wheel. D. E. Bennett. 2,447,225, Aug. 17.
Engine: *See*—
Internal-combustion engine.
Engine and lubricating system therefor, Internal-combustion. N. Rakos. 2,447,277, Aug. 17.
Erythemal phosphor. W. A. Roberts. 2,447,210, Aug. 17.
Esters, Producing lower alkyl. R. G. and R. J. King. 2,447,186, Aug. 17.
Ethyl benzene from xylenes, Separation of. F. E. Salt. 2,447,479, Aug. 17.
Exhaust nozzle for rocket motors. F. S. Miller. 2,447,200, Aug. 17.
Extension for tripods. J. Wirgin. 2,447,107, Aug. 17.
Extensometer for indicating amount of elongation of strip material. G. H. Rendel and T. F. Reed. 2,447,209, Aug. 17.
Extensometer for indicating percent elongation. G. H. Rendel. 2,447,208, Aug. 17.
Extrusion press. H. Lorant. 2,447,129, Aug. 17.
Fastening means. W. A. Williams. 2,447,290, Aug. 17.
Feed and distributor wheel, Yarn. H. J. McDermott. 2,447,131, Aug. 17.
Feed, Cigarette machine. C. Arelt. 2,447,457, Aug. 17.
Feeding mechanism for lathes, Stock. J. G. Horrigan. 2,447,180, Aug. 17.
Filler, Container. H. Schneir. 2,447,281, Aug. 17.
Filling of code slots or notches in embossed printing plates or stencils. A. Yang. 2,447,293, Aug. 17.
Fixture, Work holding. A. L. Dery. 2,447,236, Aug. 17.
Flag for mail boxes. H. C. Baker. 2,447,152, Aug. 17.
Flag, Signal and danger. A. B. Madsen. 2,447,075, Aug. 17.
Flashlight, Mechanical. A. C. Wall. 2,447,296, Aug. 17.
Flavors accessible in nut butters and stabilization thereof, Rendering. F. L. Avera and J. L. Rosefield. 2,447,387, Aug. 17.
Floor for vehicles, Moving. S. W. Walker. 2,447,220, Aug. 17.
Flue system, Fireplace. H. W. Gabar and L. Horowitz. 2,447,405, Aug. 17.
Fluid control valve. W. A. Ray. 2,447,207, Aug. 17.
Fluid heater. E. G. Bailey and R. M. Hardgrove. 2,447,306, Aug. 17.
Fluid line manifold, Detachable. C. J. Keim. 2,447,185, Aug. 17.
Fluxion meter. C. A. Hisserich. 2,447,336, Aug. 17.
Fluosulfonic acid and use as condensing agent in production of D. D. T., Recovery of. M. Kulka. 2,447,476, Aug. 7.
Forearm, Shotgun. G. T. Bradley. 2,447,229, Aug. 17.
Freezing liquid and apparatus therefor. E. P. Dunmire. 2,447,170, Aug. 17.
Freight handling device. W. M. Riddick. 2,447,028, Aug. 17.
Frequency conversion system. P. T. Nims. 2,447,133, Aug. 17.
Frequency transformer, Permeability tuned intermediate. W. R. Faust and H. O. Lorenzen. 2,447,002, Aug. 17.
Fuel control device. G. E. Beardsley, Jr. 2,447,265–6, Aug. 17.
Fuel control for power plants. A. Kalitinsky and D. E. Meltzler. 2,447,124, Aug. 17.
Fuel feeding system. F. C. Mock. 2,447,267, Aug. 17.
Fuel gauge. M. H. Lerche. 2,447,189, Aug. 17.
Furnace control system, Electric arc. D. T. Gundersen and P. Glass. 2,447,066, Aug. 17.
Garment hanger. A. Piotrowski. 2,447,204, Aug. 17.
Gauge: *See*—
Fuel gauge.
Gauge. A. C. Scinta. 2,447,282, Aug. 17.
Gear changing mechanism for shaping machines. G. Davenport. 2,447,317, Aug. 17.

Gearing, Variable leverage. N. Trbojevich. 2,447,104, Aug. 17.
Gem. M. Grain. 2,447,407, Aug. 17.
Generator: *See*—
Self-regulating electric steam generator.
Generator circuit. W. A. Miller. 2,447,082, Aug. 17.
Glass surface against alkali attack, Protection of. W. E. Wegst, L. R. Bacon, and T. H. Vaughn. 2,447,297, Aug. 17.
Glazing circuitous passages, Method and apparatus for. A. E. Hoch. 2,447,337, Aug. 17.
Grapple for lifting milk cans. R. A. Kreutzer. 2,447,073, Aug. 17.
Grasp device. W. A. Williams. 2,447,300, Aug. 17.
Grenade. F. Short. 2,447,036, Aug. 17.
Grinder, Form relief. P. A. Saari and H. A. Rugg. 2,447,138, Aug. 17.
Grinder, Portable crank journal. W. F. Emory. 2,447,117, Aug. 17.
Grinding machine with wheel dresser. J. W. Rundt. 2,447,478, Aug. 17.
Gripper, Golf club. P. H. Gerrits. 2,447,328, Aug. 17.
Guanamine compounds, A. Grün. 2,447,175–7, Aug. 17.
Gun barrel and stock, Interchangeable. A. J. Pope. 2,447,091, Aug. 17.
Halocycloalkanes, Production of. L. Schmerling. 2,447,139, Aug. 17.
Hanger: *See*—
Garment hanger.
Hanger bracket. U. S. Logan. 2,447,128, Aug. 17.
Hanger device for garments. S. Meyer. 2,447,132, Aug. 17.
Heater: *See*—
Fluid heater.
Heating apparatus with provision for utilizing combustion gases. R. C. Jiménez. 2,447,252, Aug. 17.
Heating device, Canned food. V. E. C. and D. E. Martin. 2,447,077, Aug. 17.
Heddle release mechanism. B. A. Peterson. 2,447,274, Aug. 17.
Helical spring actuated sliding side jaw wrench. R. H. Schlote. 2,447,094, Aug. 17.
High-pressure coupling. G. E. Franck. 2,447,060, Aug. 17.
Hitch device, Overload yielding. W. H. Silver. 2,447,097, Aug. 17.
Holder: *See*—
Electrode holder.
Tubular lamp holder.
Holder and drier, Smoking pipe. W. H. Moore. 2,447,084, Aug. 17.
Holder and film envelope to be used therewith, Film. J. A. Reyniers. 2,447,468, Aug. 17.
Holding mechanism for welding stud ferrules. A. M. Candy. 2,447,113, Aug. 17.
Hood and fender, Vehicle compartment. B. J. Craig. 2,447,397, Aug. 17.
Hood, Protective. R. N. Schroeder. 2,447,433, Aug. 17.
Hopper and door mechanism for rotary-drum mixers, Charging. L. E. Joseph. 2,447,413, Aug. 17.
Hydraulic drive. A. A. Kucher. 2,447,348, Aug. 17.
Hydraulic power transmission with flow control by-pass valve. J. J. George. 2,447,406, Aug. 17.
Hydraulic power transmission with flow control by-pass valve. R. L. Tweedale. 2,447,441, Aug. 17.
Hydraulic power transmission with flow control valve. R. L. Tweedale and J. J. George. 2,447,442, Aug. 17.
Hydrocarbons with hydrogen fluoride and boron trifluoride in the presence of hydrogen, Catalytically treating. R. E. Burk. 2,446,998, Aug. 17.
Hydroforming process. A. B. Welty, Jr., and C. H. Holder. 2,447,043, Aug. 17.
Ignition apparatus. T. Tognola. 2,447,376, Aug. 17.
Indicator: *See*—
Ship's log indicator.
Infrared-responsive phosphors. G. R. Fonda. 2,447,322, Aug. 17.
Inkwell, Fountain. G. A. MacDonald. 2,447,193, Aug. 17.
Input controllers. J. Morton. 2,447,356, Aug. 17.
Insole, Orthopedic. E. K. Bruckner. 2,447,231, Aug. 17.
Insulator cap. C. S. Card. 2,447,114, Aug. 17.
Insulator, Electric fence. L. R. Huette. 2,447,251, Aug. 17.
Internal-combustion engine. J. J. Carroll. 2,447,314, Aug. 17.
Intraoral tracer, Adjustable. F. E. Smith, D. Lacer, and C. B. McLeod. 2,447,287, Aug. 17.
Iron: *See*—
Soldering iron.
Joint: *See*—
Welded joint.
Joint for cylinder barrels, Packed. M. F. Jackson. 2,447,340, Aug. 17.
Keyboard clearing mechanism. H. T. Avery. 2,447,108, Aug. 17.
Keying system. D. Parson, Jr. 2,447,088, Aug. 17.
Keys to can ends, Welding of. J. G. Hayes. 2,447,012, Aug. 17.
Knitting machine. T. A. Susen. 2,447,103, Aug. 17.
Last shells, Making. L. B. Hooper. 2,447,070, Aug. 17.
Latch: *See*—
Door latch.
Safety latch.
Light: *See*—
Position light.
Utility light.
Liquid dosing apparatus. H. A. Rush. 2,447,031, Aug. 17.
Locomotive reversing gearing apparatus. T. J. Futs. 2,447,136, Aug. 17.
Lock: *See*—
Door lock.
Sliding door lock.
Machine for lasting shoes. J. P. Fredericksen. 2,447,062, Aug. 17.
Machine for making containers from pulpy fibrous material. H. R. Denton. 2,447,235, Aug. 17.
Machine for manufacturing cement tile. E. P. Barber. 2,447,153, Aug. 17.
Magazine, Gun ammunition. E. J. Bay. 2,447,092, Aug. 17.
Magnesium hydrate to produce magnesia, Treating artificial. R. P. Heuer. 2,447,412, Aug. 17.
Magnetic core. G. Camilli. 2,446,999, Aug. 17.
Manufacture of essence containing packages for brewing beverages. H. O. Irmscher. 2,447,014, Aug. 17.
Mask, Surgical. S. R. Williams. 2,447,450, Aug. 17.
Material handling apparatus. T. K. Andersen. 2,447,150, Aug. 17.
Measuring system, Temperature responsive. A. J. Hornfeck. 2,447,388, Aug. 17.
Meat product and process. E. N. Oftedahl. 2,447,427, Aug. 17.
Melamine-formaldehyde resins plasticized with alkali lactate. J. R. Alexander, D. Burton, and F. Hausmann. 2,446,991, Aug. 17.
Metal objects coated with lead alloys. G. M. Bouton, G. S. Phippe, and E. E. Schumacher. 2,446,996, Aug. 17.
Metal powder into complicated shapes, Compacting. P. Schwarzkopf. 2,447,434, Aug. 17.
Metallizing nonmetallic articles. F. R. Wenger. 2,447,379–80, Aug. 17.
Metallisable polyazo dyestuffs and their preparation. W. Wehrli and C. Petitjean. 2,447,222, Aug. 17.
Meter: *See*—
Distance meter.
Vibrating reed frequency meter.
Flexion meter.
Mixer: *See*—
Concrete mixer.
Mud mixer.
Modulation system. E. K. Stodola. 2,447,040, Aug. 17.
Molding and cutting device, Meat pattie. E. C. Garland. 2,447,245, Aug. 17.
Molecular distillation process and apparatus for the separation of isotopes, etc. A. K. Brewer and S. L. Madorsky. 2,446,997, Aug. 17.
Morpholine substituted esters. L. C. Cheney and W. G. Bywater. 2,447,395, Aug. 17.
Motion transmitting device. H. M. Heuver and E. A. Rutan. 2,447,013, Aug. 17.
Motor with piston actuated valve and pressure absorbing flexible envelope in cylinder, Expansible chamber fluid. R. Burt. 2,447,311, Aug. 17.
Mounting assembly. C. V. Erickson. 2,447,171, Aug. 17.
Mounting device, Windshield. B. G. Eaton, Jr., and R. E. Moses, Jr. 2,447,059, Aug. 17.
Mounting letters to a support, Method and device for. D. R. Hayes. 2,447,011, Aug. 17.
Mounting or receptacle and circuit breaker for tubes or lamps and their circuits. H. Ruesch. 2,447,365, Aug. 17.
Mud mixer. J. R. Nowery. 2,447,202, Aug. 17.
Muff, Ear. R. E. Maxant. 2,447,078, Aug. 17.
Multifocal ophthalmic lens blanks, Making. J. H. Hammon. 2,447,068, Aug. 17.
Musical instrument support. W. H. Meier. 2,447,080, Aug. 17.
Muzzle device, Shotgun. E. B. Powell. 2,447,205, Aug. 17.
Nicotinic acid from dilute solutions, Recovery of. R. T. Dean, V. L. King, and N. A. Laury. 2,447,234, Aug. 17.
o: o-dihydroxy azo dyestuffs and making same. A. Conzetti. 2,447,163, Aug. 17.
Oil burner system comprising a vaporizing block. T. H. Smoot. 2,447,373, Aug. 17.
Oil purifier. M. V. Thornton. 2,447,144, Aug. 17.
Oils, Emulsifiable. R. A. Kaberg and J. S. Harris. 2,447,475, Aug. 17.
Opener, Can. T. W. Costello. 2,447,165, Aug. 17.
Opener, Bottle. H. A. White. 2,447,381, Aug. 17.
Organic hydroxy compound and derivatives thereof. J. E. Bludworth and D. P. Easter. 2,447,050, Aug. 17.
Oscillator, Stabilized. L. M. Harris. 2,447,246, Aug. 17.
Oscillatory system, Variable frequency. L. F. Curtis. 2,447,316, Aug. 17.
Oven door. H. R. Johnson. 2,447,341, Aug. 17.
Oven, Elevatable stove. L. H. Renshaw. 2,447,364, Aug. 17.
Oxidation of aromatic hydrocarbons. W. S. Emerson and J. W. Heyd. 2,447,400, Aug. 17.
Oxidation of isopropylbiphenyl. M. Kosmin and W. S. Emerson. 2,447,414, Aug. 17.
Oxygen absorbent media. C. M. Fontana. 2,447,323, Aug. 17.

Packing, Piston ring. W. S. Adams. 2,447,385, Aug. 17.
Pail with pivotally attached floating strainer, Scrub. A. H. Hatchette. 2,447,178, Aug. 17.
Paint remover. D. C. Bond and G. G. Bernard. 2,447,052, Aug. 17.
Pallet. B. E. Simonton and H. J. Dyer. 2,447,285, Aug. 17.
Panel, Insulated. R. C. Parkes. 2,447,272, Aug. 17.
Parachute. C. A. Kunkler. 2,447,187, Aug. 17.
Partitioning means for partible bodies. C. J. Schneider. 2,447,096, Aug. 17.
Pattern controlled machine tool. W. Wilder and H. Horlacher. 2,447,446, Aug. 17.
Pedals, Folding rudder. W. P. McKinnie and W. H. Trammell. 2,447,079, Aug. 17.
Petroleum hydrocarbon resins, Decolorizing. N. W. Furby. 2,447,404, Aug. 17.
Phosphor material. F. E. Williams. 2,447,447, Aug. 17.
Phosphor material. F. E. Williams. 2,447,449, Aug. 17.
Phosphors, Magnesium germanate. F. E. Williams. 2,447,448, Aug. 17.
Photoelectric system for remote indication of angular position. W. H. Kliever. 2,447,344, Aug. 17.
Photometer carrying case. J. L. Bosley. 2,447,053, Aug. 17.
Picking machine, Hop. E. C. Horst, Jr. 2,447,122, Aug. 17.
Piezoelectric apparatus. N. L. Chalfin. 2,447,160, Aug. 17.
Piezoelectric system. C. W. Franklin. 2,447,061, Aug. 17.
Pipe shipping package and forming the same. E. G. Price. 2,447,206, Aug. 17.
Pitcher. J. C. Procter. 2,447,429, Aug. 17.
Plastic coated article. S. D. Moore. 2,447,420, Aug. 17.
Plastic forming apparatus and method. G. A. Lyon. 2,447,415, Aug. 17.
Plastic materials, Production of expanded. A. Cooper. 2,447,055, Aug. 17.
Plastics molding apparatus. E. R. Knowles. 2,447,256, Aug. 17.
Platform, Vehicle. W. A. Wagner. 2,447,471, Aug. 17.
Play-minimizing adjustable gauging members. W. J. Darmody. 2,447,000, Aug. 17.
Polymerization of vinyl and vinylidene chlorides. H. P. Staudinger and M. D. Cooke. 2,447,289, Aug. 17.
Polymerization process. D. R. Carmody and L. G. Sharp. 2,447,313, Aug. 17.
Polymerized rosin, Refining. B. L. Hampton. 2,447,009, Aug. 17.
Polyvinyl alcohol filaments and treated filament, Treating. E. M. Shelton and W. L. Thompson. 2,447,140, Aug. 17.
Polyvinyl resin solutions, Making. B. de Supinski. 2,447,398, Aug. 17.
Position light. C. Adler, Jr. 2,447,302, Aug. 17.
Powder form materials packaged as tablets, Means and method for reducing to. F. A. Lobley. 2,447,258, Aug. 17.
Power-operated check valve. D. G. Griswold. 2,447,408, Aug. 17.
Preparation of diphenylacetonitrile. J. Mills. 2,447,419, Aug. 17.
Preparation of 2-acetonylazoles. A. W. Anish and C. A. Clark. 2,447,456, Aug. 17.
Press: *See*—
Extrusion press.
Rotary intaglio printing press.
Primary aliphatic amine salts of di-aliphatic substituted mono-thiophosphoric acids. H. G. Smith, T. L. Cantrell and M. L. Hill. 2,447,288, Aug. 17.
Production of carbon monoxide. J. A. B. Ödberg. 2,447,426, Aug. 17.
Projectile, Dummy. M. Shapiro. 2,447,033, Aug. 17.
Propulsion and boundary layer control for aircraft. E. A. Stalker. 2,447,100, Aug. 17.
Protector: *See*—
Shoe protector.
Pull for sliding glass panels. E. M. Borchers. 2,447,389, Aug. 17.
Pump. G. H. Palm. 2,447,467, Aug. 17.
Punch, Lacing. D. D. Duncan. 2,447,237, Aug. 17.
Pure white discharging effects on cellulosic materials, Production of. C. Babey and F. L. Goodall. 2,446,992, Aug. 17.
Pyrazine, Producing derivatives of. J. Weijlard and M. Tishler. 2,447,148, Aug. 17.
Pyrolysis of carbon chlorides. C. A. Hampel. 2,447,410, Aug. 17.
Radio control system. L. B. Brittain. 2,447,156, Aug. 17.
Rail turning device. G. Westerholm. 2,447,223, Aug. 17.
Rake, Rotary side delivery. M. A. Morrill. 2,447,354, Aug. 17.
Razor, Fountain safety. W. Neuburger. 2,447,358, Aug. 17.
Receiver, Pulse time modulation multiplex. P. K. Chatterjea and L. W. Houghton. 2,447,233, Aug. 17.
Receiving system, Diversity. M. G. Crosby. 2,447,057, Aug. 17.
Receptacle: *See*—
Stacking receptacle.
Receptacle for vehicles. W. L. Langley. 2,447,188, Aug. 17.
Recorder, Three-magnitude. G. Keinath. 2,447,018, Aug. 17.
Recovery of fluosulfonic acid and use as condensing agent in production of D. D. T. C. W. Gates and W. P. Woods. 2,447,326, Aug. 17.
Reel: *See*—
Thread advancing reel.
Refrigerating and article by contact with a vaporizable refrigerant. R. H. Hill. 2,447,249, Aug. 17.
Refrigerating apparatus with means for indicating the quantity of solid refrigerant therein. C. E. Heilig, Jr. 2,447,335, Aug. 17.
Regeneration of steroid ketones. E. B. Hershberg. 2,447,463, Aug. 17.
Remote control, Proportional. H. B. Haynes. 2,447,121, Aug. 17.
Repair apparatus, Tire. E. F. Shell. 2,447,035, Aug. 17.
Retort door. F. T. Jenkins. 2,447,464, Aug. 17.
Retort for distillation furnaces. H. C. Schweitzer. 2,447,369, Aug. 17.
Reverse brake. F. H. Davis, O. C. Emerson, and P. A. Newman. 2,447,167, Aug. 17.
Rheostat, Liquid. J. K. Ostrander. 2,447,087, Aug. 17.
Ring: *See*—
Compressor piston ring.
Ring for earphones, Noise insulating. J. E. Valentine. 2,447,470, Aug. 17.
Roofing construction. J. H. Goodwin. 2,447,065, Aug. 17.
Rosin-polyhydric alcohol esters and making same, Reaction product of. J. B. Rust and W. B. Canfield. 2,447,367, Aug. 17.
Rotary airplane mount and synchronized wing adjustment. C. Hameseder. 2,447,247, Aug. 17.
Rotary fuel distributing valve. G. L. Nies. 2,447,423, Aug. 17.
Rotary intaglio printing press. W. M. Pollock. 2,447,090, Aug. 17.
Rotatable electrical device. L. W. Wightman. 2,447,383, Aug. 17.
Rotor for ultracentrifuge machines. J. Grebmeier. 2,447,330, Aug. 17.
Roundabout, Occupant propelled. F. F. O'Toole. 2,447,203, Aug. 17.
Safety latch. C. A. Erickson. 2,447,001, Aug. 17.
Safety razor and safety razor blade clamp. A. W. Breninger. 2,447,310, Aug. 17.
Salts of acetylsalicylic acid, Preparation of stable medicinal. M. Coplans. 2,447,396, Aug. 17.
Salts of the lysergic and isolysergic acid derivatives and their preparation and isolation, Optically active. A. Stoll and A. Hofmann. 2,447,214, Aug. 17.
Saw, Chain. R. C. Whitlock. 2,447,298, Aug. 17.
Scanning mechanism, Variable drum facsimile. W. G. H. Finch. 2,447,473, Aug. 17.
Scraper. G. S. Allin. 2,447,455, Aug. 17.
Screw, Self-locking. R. E. Thompson. 2,447,439, Aug. 17.
Seal, Centrifugal fluid. M. C. Shaw and O. W. Hart. 2,447,034, Aug. 17.
Seal, Fluid. F. A. Helfrecht. 2,447,411, Aug. 17.
Sealed closure, Reusable tamper proof. C. D. Magnesen. 2,447,076, Aug. 17.
Sealing-in method for lamps and similar devices. P. O. Cartun. 2,447,158, Aug. 17.
Selective control mechanism for governor-controlled aircraft propellers. H. M. McCoy. 2,447,023, Aug. 17.
Self-regulating electric steam generator. R. W. E. Vickery. 2,447,294, Aug. 17.
Separator and yoke, Cable. B. K. Newman. 2,447,025, Aug. 17.
Sewing machine. N. V. Christensen. 2,447,115, Aug. 17.
Sharpener, Blade. J. Kuxma. 2,447,257, Aug. 17.
Sharpening apparatus. R. E. Matter. 2,447,418, Aug. 17.
Shears, Explosive-operated. G. A. Barker. 2,446,994, Aug. 17.
Shield. G. Stovall. 2,447,215, Aug. 17.
Shield, Spark plug. G. G. and L. Burrell. 2,447,157, Aug. 17.
Shingle, Lock. M. G. O'Reilly. 2,447,466, Aug. 17.
Shingles and clips therefor. J. G. Price. 2,447,275, Aug. 17.
Ship's log indicator. H. Lehde. 2,447,349, Aug. 17.
Shoe, Emergency tire. A. J. Mosley. 2,447,357, Aug. 17.
Shoe protector. A. N. Sidnam, B. Bolté, and T. C. Neary. 2,446,284, Aug. 17.
Sign for electric doorbell switches. D. E. Bennett. 2,447,226, Aug. 17.
Signal device or the like, Road. C. J. Wadsworth. 2,447,378, Aug. 17.
Signal system. P. Sitzer. 2,447,037, Aug. 17.
Signaling system. D. Silverman. 2,447,098, Aug. 17.
Silica-magnesia catalyst and preparation thereof. D. J. Butterbaugh and Le R. U. Spence. 2,447,181, Aug. 17.
Signal wheel ratchet pipe cutter. S. Sipsma and B. Askeris. 2,447,371, Aug. 17.
6-(alpha-ethylpropyl)-2-thiouracil and preparation of the same. W. H. Miller. 2,447,465, Aug. 17.

Sleeve and cuff assembly, Adjustable shirt. A. J. Wegener, Jr. 2,447,106, Aug. 17.
Sliding door lock. A. Vanderveld. 2,447,219, Aug. 17.
Sludge settling and dewatering tank. C. B. Smith and H. L. Bullock. 2,447,286, Aug. 17.
Snubber. F. E. Bachman. 2,447,305, Aug. 17.
Snubber. W. L. Schlegel, Jr., and F. E. Bachman. 2,447,368, Aug 17.
Sodium fluosilicate. L. C. Oakley, Jr. 2,447,359, Aug. 17.
Soldering iron. F. C. Bitzenburger. 2,447,110, Aug. 17.
Solutions of cellulose triacetate and preparing the same. K. Famuliener and R. P. Easton. 2,447,459, Aug. 17.
Stacking receptacle. H. H. McCarl. 2,447,022, Aug. 17.
Stake, Ground. P. M. Waite. 2,447,444, Aug. 17.
Stand: *See*—
Easel stand.
Starter for internal-combustion engines. D. L. Miller. 2,447,198, Aug. 17.
Starting switch. F. C. Dasley and J. M. Pistey. 2,447,318, Aug. 17.
Steel, Low alloy high tensile strength, high impact strength. P. Payson. 2,447,089, Aug. 17.
Sterilizing apparatus. F. L. Irish and S. Feldman. 2,447,183, Aug. 17.
Stopper, Reversible. I. W. Daffer. 2,447,166, Aug. 17.
Strainer. E. Pick and J. J. Carlson. 2,447,135, Aug. 17.
Sulfocompositions and their manufacture. B. W. Gamson. 2,447,004, Aug. 17.
Sulfo-compositions, Method and apparatus for producing. B. W. Gamson. 2,447,005, Aug. 17.
Sulfo-compositions, Production of. B. W. Gamson. 2,447,006, Aug. 17.
Support: *See*—
Brake beam support.
Musical instrument support.
Support for warp beam in looms. C. P. Bergstrom. 2,447,227, Aug. 17.
Surgical instrument and technique. E. De Sousa. 2,447,169, Aug. 17.
Swaging and bending, Method and apparatus for. A. E. Brickman. 2,447,155, Aug. 17.
Switch: *See*—
Crossbar switch.
Electrical switch.
Starting switch.
Switch construction. C. W. Brown. 2,447,112, Aug. 17.
Switch construction. G. R. Runke. 2,447,137, Aug. 17.
Switch for model railway construction. F. O. Patrick. 2,447,273, Aug. 17.
Swivel connector. B. M. Holloway. 2,447,179, Aug. 17.
System for aligning receiver and transmitter circuits. J. F. Byrne. 2,447,392, Aug. 17.
Table. M. C. Shillady. 2,447,141, Aug. 17.
Tank: *See*—
Sludge settling and dewatering tank.
Tape dispenser. P. Van Cleef and F. Chonacki. 2,447,145, Aug. 17.
Temporising or delay device. E. Ascoli. 2,447,151, Aug. 17.
Terminal structure and manufacture, Lamp. P. O. Cartun. 2,447,159, Aug. 17.
Tester, Gear. G. G. Widen and R. J. Helgerud. 2,447,445, Aug. 17.
Tetrahydropyrane-4:4-dicarboxylic acid bis-diethylamide. H. Martin, H. Zaealin, and A. Margot. 2,447,194, Aug. 17.
Therapeutic device. H. S. Jones. 2,447,123, Aug. 17.
Thermometer. E. S. Whittier. 2,447,382, Aug. 17.
Thermoplastic materials, Manufacture of expanded. A. Cooper. 2,447,056, Aug. 17.
Thread advancing reel. R. W. Stanley. 2,447,143, Aug. 17.
Thread separator for weft replenishing looms. R. G. Turner. 2,447,291, Aug. 17.
3,11-oxygenated steroids, Production of. T. F. Gallagher. 2,447,325, Aug. 17.
Tightener, Wire. C. C. Schley. 2,447,093, Aug. 17.
Timing control for free piston units, Automatic. D. E. Meitzler. 2,447,352, Aug. 17.
Tire guard, Automobile. J. O'Leary. 2,447,428, Aug. 17.
Toggle link operated hand clamp. E. F. Miller. 2,447,199, Aug. 17.
Tool: *See*—
Abrasive tool.
Pattern controlled machine tool.
Track tool.
Tool for reshaping deformed automobile bodies, Spreading. W. H. and H. C. Ferguson. 2,447,401, Aug. 17.
Torpedo nets, Making. A. E. Brickman. 2,447,154, Aug. 17.
Torque measuring wrench. H. R. Billeter. 2,447,109, Aug. 17.
Torque-transmitting apparatus. O. E. Wolff. 2,447,384, Aug. 17.
Tracer and tracer controlled operation of machine tools and other cutting machines. T. Miller. 2,447,201, Aug. 17.
Track tool. J. L. Tidwell. 2,447,216, Aug. 17.
Trap: *See*—
Animal trap.
Trim ring for vehicle wheels. G. A. Lyon. 2,447,021, Aug. 17.
Truck, Tire. W. A. Settle. 2,447,435, Aug. 17.
Tubular lamp holder. G. S. Merrill. 2,447,353, Aug. 17.
Tuning indicator system. H. L. Blaisdell. 2,447,309, Aug. 17.
Turbine. W. J. Pugh. 2,447,276, Aug. 17.
Turner, Stocking. C. Ludington. 2,447,192, Aug. 17.
Two-cycle engine, combined pump and motor cylinder. C. B. Sues. 2,447,041, Aug. 17.
2-phenylindene derivatives and manufacture of same. U. V. Solmssen. 2,447,099, Aug. 17.
Type locking means for marking mechanism. S. S. Jacobs and H. B. Peterson. 2,447,015, Aug. 17.
Type locking means for marking mechanism. S. H. Rosenlof. 2,447,030, Aug. 17.
Ultra-audible sound reception. H. C. Hayes. 2,447,333, Aug. 17.
Utility light. J. E. Forbes. 2,447,403, Aug. 17.
Vacuum stripping of moving catalyst in hydrocarbon conversion process. R. B. Collins. 2,447,116, Aug. 17.
Valve: *See*—
Dry pipe valve.
Fluid control valve.

Rotary fuel distributing valve.
Valve. H. E. Voorhies. 2,447,443, Aug. 17.
Valve assembly for pressure regulators and the like. J. K. Hamilton. 2,447,067, Aug. 17.
Vane, Weather. W. Akerman. 2,447,224, Aug. 17.
Vapor eliminator and fuel meter for use in fuel feed systems of aircraft, Unitary. L. Gouy. 2,447,008, Aug. 17.
Variable inductance pickup device. J. F. Schoeppel. 2,447,212, Aug. 17.
Vehicle tow bar. A. R. Holloway. 2,447,250, Aug. 17.
Ventilator, Roof. G. W. Donley. 2,447,472, Aug. 17.
Vibrating reed frequency meter. F. J. Lingel. 2,447,191, Aug. 17.
Vibrator. R. J. Aust. 2,447,047, Aug. 17.
Vibrator. H. J. Brown. 2,447,230, Aug. 17.
Vibrator, Driver contact. R. J. Aust. 2,447,046, Aug. 17.
Warping device for hand looms, Hand. P. Fiorjancic and E. Boral. 2,447,402, Aug. 17.
Wave-signal translating system. M. K. Taylor and I. N. Vaughn-Jones. 2,447,375, Aug. 17.
Waxing and polishing means, Floor. J. Gordon. 2,447,172, Aug. 17.
Waxing machine, Bobbin. D. Marinsky and L. H. Morin. 2,447,351, Aug. 17.
Welded joint. W. H. Odlum. 2,447,085, Aug. 17.
Well cementing method. W. J. Travers, Jr. 2,447,217, Aug. 17.
Wheel: *See*—
Emergency wheel.
Winch, Trawling. F. W. Rowe. 2,447,280, Aug. 17.
Window construction, Swinging. C. G. Nachtrieb. 2,447,421, Aug. 17.
Window regulator mechanism. J. B. Parsons. 2,447,360, Aug. 17.
Wire straightener. E. T. Fredrich, W. B. Mitchell, and F. E. Buyken. 2,447,242, Aug. 17.
Wrench: *See*—
Helical spring actuated Torque measuring wrench.
sliding side jaw wrench.
Zeolite softener, Automatic. F. D. Prager. 2,447,477, Aug. 17.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 17, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

2—	8: 2,447,063	57—	69: 2,447,345	121—	14: 2,447,312	174—	105: 2,447,168	220—	85: 2,447,189	260—	250: 2,447,148

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

DU PONT *v.* CELANESE CORP.

No. 6360. Decided April 2, 1948

[— F.2d —; 77 USPQ 364]

1. TRADE-MARKS—CANCELLATION—EFFECT OF LICENSE AGREEMENTS — ABANDONMENT — SECTION 13 OF TRADE-MARK ACT OF 1905 CONSTRUED.

Where license agreement entered into by appellee, owner of trade-mark "Celanese," authorized its use by licensee on dyestuffs, and it clearly appears from the agreement that it retained not only its right to use, but its full ownership of the trade-mark subject to the right of the licensee to manufacture appellee's dyestuffs in accordance with the quality and standard required by appellee, *Held* that the license agreement is not a naked license agreement and that appellee has not abandoned its mark within the purview of section 13 of the Trade-Mark Act of 1905.

2. SAME—SAME—SAME—SAME.

It is well settled that the owner of a trade-mark may license its use to another and others so long as such agreements are not merely naked license agreements.

APPEAL from the Patent Office. Cancellation No. 4469.

AFFIRMED.

Stone, Boyden & Mack (*J. Hanson Boyden* of counsel) for Du Pont.

C. W. Levinson and *I. Seltzer* for Celanese.

HATFIELD, *J.*:

This is an appeal in a trade-mark cancellation proceeding from the decision of the Commissioner of Patents, 69 USPQ 258, affirming the decision of the Examiner of Interferences granting appellee's motion to dismiss appellant's petition to cancel the registration of appellee's mark "CELANESE," with the word "BRAND" enclosed in smaller letters within the term "CELANESE," for use on dyestuffs.

Appellee's trade-mark, registration No. 189,399, was registered September 16, 1924, under the Trade-Mark Act of February 20, 1905, on an application filed April 15, 1924, by the American Cellulose & Chemical Manufacturing Company, Limited, which, by change of its name later, became the Celanese Corporation of America, a corporation organized under the laws of the State of Delaware. The registration was renewed September 16, 1944, to the Celanese Corporation of America.

On October 26, 1944, appellant, E. I. du Pont de Nemours & Company, filed its petition for cancellation of appellee's registered mark, in which it was claimed that on April 2, 1935, appellee had entered into a non-exclusive license with American Aniline Products, Inc., of New York, N. Y., granting to the latter company "'a non-exclusive license to employ said trade-mark in connection with dyestuffs' and 'the right—to publish advertising matter—in connection with the sale of dyestuffs, to the effect that such dyestuffs are designated by said trade-mark'"; that in accordance with said license agreement, American Aniline Products, Inc., "published from time to time, beginning in the year 1935, and running at least through the year 1943, numerous displays of advertising matter, such advertising matter appearing in the following periodicals (among others), namely: 'American Drycleaner,' 'American Dyestuff Reporter,' 'Cotton,' 'Rayon Textile Monthly,' and 'Textile Colorist,'" and in such advertisements, featured dyestuffs offered under the name "CELANESE"; that said products under said trade-mark were advertised as the product of American Aniline Products, Inc., without any reference in any way to appellee; that it filled the orders received for dyestuffs and placed on such dyestuffs labels bearing the trade-mark and displayed its own name as the source of the goods "CELANESE" and shipped such labeled goods directly to purchasers; that the trade-mark "CELANESE" no longer served to denote origin in appellee and therefore, the trade-mark "CELANESE," as applied to dyestuffs, has ceased to function as a trade-mark; and that appellee's registration has, therefore, been abandoned and is invalid.

Appellant further alleged, in order to establish that it deemed itself injured by the registration of appellee's trade-mark, that appellee had relied on its registration in a cancellation proceeding against appellant's registration No. 365,914, for the mark "ZELAN" by reasons of which cancellation proceeding appellant has been "grievously harrassed and otherwise seriously injured."

Subsequent to the filing of appellant's petition for cancellation, appellee, on November 10, 1944, filed a motion under Rule 12(e) of the Federal Rules of Civil Procedure, requiring appellant to furnish appellee with a further and better statement of appellant's claims. Attached to the motion was a license agreement dated April 2, 1935, between the Celanese Corporation of America and American Aniline Products, Inc., designated as Exhibit A, together with photostat copies of two advertise-

Vol. 613 • No. 3 Tuesday, August 17, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

ments of American Aniline Products, Inc., appearing in Volume 32 of the American Dyestuff Reporter of April 26, 1943, and in Volume 10 of the American Drycleaner of November 1943, each respectively referred to in the motion as Exhibits B and C.

Without quoting the entire agreement between appellee and American Aniline Products, Inc., it is stated therein that American Aniline Products, Inc., was desirous of selling dyestuffs under the trade-mark "CELANESE"; that it agreed "to acknowledge and does hereby acknowledge the validity" of the trade-mark "CELANESE," and "further agrees that it will never do anything or use" * * * the trade-mark "CELANESE" "in any way to infringe the rights" of appellee in its trade-mark. It is further stated in the license agreement that American Aniline Products, Inc., was granted "a non-exclusive, non-transferable and personal license" to employ the trade-mark "CELANESE" "in connection with dyestuffs and no other product"; that American Aniline Products, Inc., was appointed as one of appellee's agents "for the purpose of affixing labels bearing" the trade-mark "CELANESE" to "packages containing said dyestuffs"; that American Aniline Products, Inc., agreed to attach such labels "only to dyestuffs manufactured by it and only so long as the right granted herein has not been terminated as provided in Clause 6 under this agreement"; and that "Nothing herein contained shall be construed to mean" that American Aniline Products, Inc., "has the sole and exclusive right to use" the trade-mark "CELANESE" and appellee reserved the right to use said trade-mark and to appoint other agents to use the same.

It further appears from the license agreement that it was agreed that the trade-mark should be employed by American Aniline Products, Inc., "to designate only such dyestuffs which shall in quality be up to such standard as may be fixed or approved by the party of the first part and that for the purpose of ascertaining the quality of said dyestuffs," appellee "shall through such agents or representatives as it may designate, have the right to inspect and test from time to time, such dyestuffs before they are offered for sale"; that American Aniline Products, Inc., might publish in circulars or other advertising in connection with the sale of dyestuffs "to the effect that such dyestuffs are designated by" the trade-mark "CELANESE" "until such time as the right granted herein has not been terminated as provided in Clause 6 under this agreement"; that notice of the fact that the trade-mark "CELANESE" was registered and owned by appellee should be indicated in all such advertising matter and that before such advertising matter was published it should be submitted to appellee for its approval; and that in Clause 6 of the agreement, it is provided that the license agreement may be terminated by appellee upon six months' notice in writing to the second party.

In Exhibit B, published by American Aniline Products, Inc., it appears that the trade-mark "CELANESE" was merely used to indicate to the public a particular type or quality of dye.

Exhibit C is an advertisement of American Aniline Products, Inc., in which it stated, among other things, that Celanese dyes might properly be used for the purpose intended.

On November 24, 1944, appellant, in response to the motion filed by appellee under Rule 12(e) of the Federal Rules of Civil Procedure, acknowledged the existence of Exhibits A, B, and C, hereinbefore referred to, and stated that there were other advertisements similar to Exhibits B and C and particularly referred to a copy of an advertisement in the American Dyestuff Reporter of July 15, 1935, and apparently attached the same to its bill of particulars. That advertisement, however, does not differ substantially from Exhibits B and C, hereinbefore referred to, and does not indicate that American Aniline Products, Inc., is the owner of the trade-mark "CELANESE."

On December 11, 1944, appellant moved to amend its petition for cancellation by adding thereto the allegation that American Aniline Products, Inc., with the knowledge and approval of appellee, "issued and distributed to the trade color books or 'cards' illustrating various shades of 'CELANESE' colors or dyestuffs which were being offered, such color books or 'cards' bearing only the name American Aniline Products, Inc., as the source of the 'CELANESE' dyestuffs described therein" and displayed its own name as a source of the dyestuffs. The motion to amend was granted by the Examiner of Interferences and appellant was granted until January 4, 1945, in which to furnish the particulars requested in appellee's motion hereinbefore referred to.

Appellee, on December 12, 1944, filed an additional motion under Rule 12(e) of the Federal Rules of Civil Procedure, to require appellant to file an additional bill of particulars.

On December 30, 1944, appellant, in response to the second motion for a bill of particulars, attached two photostat copies of the covers of color books or "cards" and stated further that the original books from which the attached photostats had been made, might be examined either in Room 7090 of the Du Pont Building, Wilmington, Delaware, or in Room 866 of the National Press Building, Washington, D. C.

The two photostat copies attached to the bill of particulars refer to Celanese colors but do not indicate to the purchasing public that the trade-mark "CELANESE" is owned by American Aniline Products, Inc., but rather suggests that the Celanese colors are of a particular quality.

The sole issue in the case, therefore, in accordance with the facts as stated is whether appellant's petition for cancellation, the record not containing any other matter of which we may take judicial notice, is sufficient to state a cause of action in accordance with section 13 of the Trade-Mark Act of February 20, 1905, in view of appellee's motion to dismiss the petition for cancellation, the bills of particulars, and the exhibits attached thereto.

The Examiner of Interference, in a rather lengthy opinion, in which he cited, among others, the cases of *E. F. Prichard Co. et al.* v. *Consumers Brewing Co.*, 136 F.2d 512, 58 USPQ 362, *Socony-Vacuum Oil Co., Inc.* v. *Atomol Mfg. Co.*, 58 USPQ 497, and *Smith* v. *Dental Products Co., Inc.*, 140 F.2d 140, 60 USPQ 260, held that appellant's petition for cancellation should be dismissed in accordance with appellee's motion. In his decision, the Examiner distinguished the case of *R. M. Hollingshead Corp* v. *Davies-Young Soap Co.*, 28 CCPA (Patents) 1286, 121 F.2d 500, 50 USPQ 71, 533 O. G. 267, from the facts in the instant case, reference to which will hereinafter be made.

On appeal, the Commissioner of Patents affirmed the decision of the Examiner of Interferences and in support of his decision cited the cases of *Smith* v. *Dental Products Co., Inc. et al.*, supra, and *Mathy* v. *Republic Metalware Co.*, 35 App. D. C. 151, 154 O. G. 1109. The Commissioner also referred to the cases of *Macmahan Pharmacal Co.* v. *Denver Chemical Mfg. Co.*, 113 Fed. 468, and *Mayer Fertilizer & Junk Co.* v. *Virginia-Carolina Chemical Co.*, 35 App. D. C. 425, 156 O. G. 539.

It is unnecessary that we recite all of the statements contained in the Commissioner's decision. It is sufficient to say that he stated that it was well settled that one who assigns his trade-mark with or without the business with which it has been used, abandons his mark, but that a license agreement, not merely a naked license to use, where the licensor expressly reserves his right to continue the use of the mark and which license agreement provides that the agreement may be terminated by the licensor, is not an abandonment of its registered mark.

[1] In the case at bar, it clearly appears from the license agreement that the licensee agreed to use the trade-mark on such dyestuffs only as were of the quality and of the standard as might be fixed or approved by the licensor, and that the licensor might, through its agents or representatives, have the right to inspect and test from time to time the dyestuffs made by the licensee. The license agreement further provided, as hereinbefore noted, that the licensor reserved the right to use said trade-mark and to appoint other non-exclusive agents for the use thereof; that American Aniline Products, Inc., acknowledged the validity of appellee's registered trade-mark and that it would not do anything in any way to infringe the rights of appellee. The agreement further provided that it might be terminated by appellee by giving six months' notice in writing to the licensee. There is nothing in the license agreement to indicate that appellee had abandoned its mark for use on its dyestuffs. On the contrary, it clearly appears from the agreement that it retained not only its right to use, but its full ownership of the trade-mark, subject to the right of American Aniline Products, Inc., to manufacture appellee's dyestuffs in accordance with the quality and standard required by appellee. It is obvious, therefore, that the license agreement is not a naked license agreement, and that appellee has not abandoned its mark within the purview of section 13 of the Trade-Mark Act of February 20, 1905, as argued by counsel for appellant.

It is noted in the petition for cancellation, as hereinbefore stated, that contrary to the license agreement, American Aniline Products, Inc., did not, at least in some instances, comply with the terms of the contract in that it advertised its dyestuffs under the trade-mark "CELANESE," apparently as the source of such dyestuffs, without reference in any way to appellee.

When it filed its bills of particulars in accordance with the motions by appellee, appellant referred to Exhibits B and C, hereinbefore set forth, as conforming to its allegation that American Aniline Products, Inc., advertised its dyestuffs as though the "CELANESE" trade-mark was its own. It failed, however, to introduce into the record any other advertisements by American Aniline Products, Inc., differing substantially from Exhibits B and C, hereinbefore referred to, but reserved the right to introduce evidence of other advertising which it claimed was contrary to the contract, if such advertising specimens were later discovered.

We have examined Exhibits B and C attached to appellee's motion under Rule 12(e) of the Federal Rules of Civil Procedure, and are of opinion that neither of those exhibits indicates in any way that American Aniline Products, Inc., was the owner of the trade-mark "CELANESE" and the only matter of importance appearing in those exhibits is that the Celanese dyes therein referred to indicated quality and were manufactured by American Aniline Products, Inc. That, we think it had a perfect right to do and that such advertising does not indicate in any way that appellee abandoned, or intended to abandon its registered trade-mark "CELANESE." It is true that Exhibits B and C do not state that the trade-mark "CELANESE" is registered and owned by appellee, and to that extent American Aniline Products, Inc., violated the terms of the license agreement.

In view of the fact that appellee filed a motion to dismiss, it acknowledged that, at least as to Exhibits B and C, American Aniline Products, Inc., violated that portion of the license agreement. However, there is no statement alleged in the petition for cancellation that either the public or anyone else was deceived by the failure of American Aniline Products, Inc., to comply with that portion of the terms of the license agreement. Furthermore, there is no allegation that the other terms of the agreement were not fully carried out by each of the parties to the license agreement.

Counsel for appellant has cited several cases to the effect that the primary object of a trade-mark is to indicate origin, as well as the product of a particular trader and that appellee, having entered into a license agreement, has voluntarily divested itself of

the exclusive use of the mark; that appellee could not register the mark in view of the license agreement and, therefore, has abandoned the mark within the purview of section 13 of the Trade-Mark Act of February 20, 1905.

One of the cases relied on by counsel for appellant is that of *R. M. Hollingshead Corp.* v. *Davies-Young Soap Co.*, supra. That case involved an opposition proceeding between the parties to a contract in which appellee opposed the registration of the mark "WHIZ" to appellant. It appeared that appellant in that case had entered into a contract with appellee in which it voluntarily relinquished its exclusive right to the use of the mark upon grit paste soap and, for the reasons therein stated, was not entitled to the exclusive use of the mark and, therefore, not entitled to register the same under the Trade-Mark Act of February 20, 1905. It is true that in our decision in that case we quoted from Nims on Unfair Competition and Trade-Marks, Third Edition, section 22, page 68, that "'* * * A lease or license of a mark apart from its business with which it is used, constitutes an abandonment of the mark and rightfully so.'" No cases were cited in support of the quoted statement. It is significant that if the quoted statement should be interpreted literally, it is contrary to decisions hereinafter cited. A similar statement appears in Nims on Unfair Competition and Trade-Marks, Fourth Edition, section 22, page 123, and cases are cited in support of the author's statement. However, we have examined all of the Federal cases there involved and find that they are not in point. The author also states that:

> Nevertheless, a trade-mark or trade name may be the subject of a lawful and valid license or lease, even as it may be legally sold. "A trade-name, like a trade-mark, may be assigned, as long as it remains associated with the same product or business with which it has become associated in the public mind . . . And upon the same conditions it may be licensed or lent, and its exclusive use may be resumed by its owner according to the terms of the lending."

Attention is also called by the author, in a footnote to section 22, page 123, to section 408, page 1264, where it is stated, relating to abandonment, that

> "Abandonment in industrial property is an act by which the public domain originally enters or re-enters into the possession of the thing (commercial name, mark or sign), by the will of the legitimate owner. The essential condition to constitute abandonment is that the one having a right should consent to the dispossession. Outside of this there can be no dedication of the right, because there cannot be abandonment in the juridical sense of the word." Abandonment results in a forfeiture and must be strictly proved, and the burden of its establishment is upon the party affirming it.
>
> Abandonment is purely a question of intent.
>
> In 1915, the Supreme Court said that "trade-mark rights, like others that rest in user, may be lost by abandonment, non-user, laches or acquiescence. Abandonment, in the strict sense, rests upon an intent to abandon; and we have no purpose to qualify the authority of *Saelzner* v. *Birner* to that effect."
>
> The rule that intention governs abandonment, is not disputed. When conduct is consistent with the intention to retain trade-mark rights, or when acts which unexplained might establish abandonment are answered by affirmative proof that there never was an intention to give up the right claimed, abandonment is not established.

That that quotation is an accurate statement of the law cannot seriously be challenged. Cases were cited in support thereof.

[2] It is well settled that the owner of a trade-mark may license its use to another and others so long as such agreements are not merely naked license agreements. See *Menendez* v. *Holt*, 128 U. S. 514, 524, 46 O. G. 971; *Bacardi Corporation of America* v. *Domenech et al.*, 311 U. S. 150, 524 O. G. 809; *Shaver et al.* v. *Heller & Merz Co.*, 108 Fed. 821; *Mathy* v. *Republic Metalware Co.*, supra; *Saalfield Pub. Co. et al.* v. *G. & C. Merriam Co.*, 238 Fed. 1; and *E. F. Prichard Co. et al.* v. *Consumers Brewing Co.*, supra.

In the case of *Smith* v. *Dental Products Co., Inc., et al.*, supra, the court, among other things, there said:

> Again defendant relies upon authorities such as *Hanover Star Mill Co.* v. *Metcalf*, supra, and *United Drug* v. *Theodore Rectanus*, supra, which, in our judgment, are not controlling. This is so for the reason that in the instant case defendant's use was definitely limited by the agreements between the parties. In none of the authorities relied upon by the defendant has it been held that the owner of a trade-mark loses such ownership by the mere grant to another of the privilege of its use.

In the case of *Mathy* v. *Republic Metalware Co.*, supra, the court clearly recognized that a proper license was valid.

It is true that in the case of *Mayer Fertilizer & Junk Co.* v. *Virginia-Carolina Chemical Co.*, supra, the court stated that "A trade-mark cannot be assigned, or its use licensed, except as incidental to a transfer of the business or property in connection with which it has been used" and, in support of the quoted statement, cited the case of *Macmahan Pharmacal Co.* v. *Denver Chemical Mfg. Co.*, supra, in which case the sole issue was whether the naked assignment of the trade-mark was valid, and the court there properly held that a mark could not be assigned apart from the business and good will of the owner of the mark. Accordingly, in its statement in the case of *Mayer Fertilizer & Junk Co.* v. *Virginia-Carolina Chemical Co.*, supra, the court was wrong in saying, as the issue was not presented, that a trade-mark could not be legally licensed without a transfer of the business or property and the good will thereof, and the holding in that case in connection to a proper license agreement was contrary to the decision in the case of *Mathy* v. *Republic Metalware Co.*, supra.

Although the case of *Crown Fabrics Corp.* v. *American Viscose Corp.*, 32 CCPA (Patents) 701, 145 F.2d 246, 63 USPQ 149, is not exactly in point, it does approve the rule that a proper license agreement is valid and does not indicate abandonment on the part of the owner of the mark.

It is unnecessary that we cite other cases in support of our holding that a trade-mark registration may be licensed in accordance with the license agreement hereinbefore set forth. We are of opinion, therefore, that for the reasons hereinbefore stated, appellee has not abandoned its mark under section 13 of the Trade-Mark Act of February 20, 1905. It is unnecessary, therefore, that we consider the applicability of the Trade-Mark Act of July 5, 1946 (effective July 5, 1947).

For the reasons hereinbefore stated, the decision of the Commissioner of Patents should be and is, accordingly, affirmed.

AFFIRMED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

O'CONNELL, *J.* (dissenting):

The subject matter of the appeal nowise involves the issue that a proper license agreement is valid and does not indicate abandonment on the part of the owner, since appellant from the outset of the proceedings heretofore begun in the Patent Office has consistently prosecuted its petition upon the basic principle that where the mark is used in no such manner as to cause the mark to lose its significance as an indication of origin and to deceive the public, the owner thereof may authorize others, including subsidiaries and those who are completely independent, to legitimately use the mark on goods produced under his supervision and control or, in other words, without effecting its abandonment.

By the specific terms of the license agreement, the Aniline Corporation was granted a "personal license" and was to act as "one" of appellee's agents "for the purpose of affixing labels" bearing the trade-mark "Celanese" to packages containing the said dyestuffs, and no other product, manufactured by "Aniline" and by it sold to the public. The agreement further contemplated the additional use of appellee's mark by such "other agents" as appellee might appoint for the same or other purpose.

The Aniline Corporation was to have the right on its own account to publish in circulars and other advertising matter that its dyestuffs were designated by the trade-mark "Celanese," and, to protect itself, appellee reserved the right to veto all such circulars and advertising matter, which were first to be submitted to appellee and by it approved in writing prior to the circulation and distribution thereof. Appellee specifically reserved the further right to inspect at any time the quality of "Aniline's" dyestuffs marketed by it under the name "Celanese," and to terminate the license "upon six (6) months notice in writing."

There is no evidence before the court, however, and there was none before the tribunals of the Patent Office, that these rights were actually exercised by appellee, as appellee filed no answer and took no testimony but elected to rely solely upon its motion to dismiss.

The primary issue therefore involves the sole and elementary question raised by the pleadings of whether the registration of the mark "Celanese" is invalid and has become abandoned because that name, by reason of the described license agreement and appellee's conduct in connection with the performance thereof, no longer constitutes a means whereby the goods of appellee may be distinguished from goods of the same class marketed by other vendors under the provisions of the act of 1905.

The Examiner in his dismissal of appellant's petition, it will be noted, relied primarily upon the case of *Mathy* v. *The Republic Metalware Company*, 35 App. D. C. 151, 154 O. G. 1109. In addition to the Mathy case he cited, among others, the case of *Smith* v. *Dental Products Co., Inc., et al.*, 140 F.2d 140, 60 USPQ 280.

The Commissioner in reaching the identical conclusion relied upon the Mathy case; but in further support of his position quoted the excerpt from the opinion in the Smith case which is accurately quoted also in the prevailing opinion, and to which appellant has offered no objection as a correct statement of the law applicable to the facts recited in the Smith case.

The Commissioner of Patents correctly stated the established rule of evidence that the action of an owner who assigns his mark to another for use on goods of the same descriptive properties, and apart from the business with which the mark has been used, thereby effects the abandonment of his mark; and no proof whatever of his clear intent to do so is further required from the person alleging such amandonment, "because the assignment is conclusive evidence of his [assignor's] intent to abandon."

Appellant has contended and here contends that the identical rule of evidence applies to one who has likewise licensed his mark, and relies upon the holding to that effect by this court in the Hollingshead case, supra, and upon other citations or holdings to the same effect by courts throughout the nation, including the Supreme Court of the United States.

The Commissioner overruled appellant's contention on the ground that one who licenses his mark without the business with which the mark has been used does not thereby abandon the mark, and that such a license does not constitute conclusive evidence of an intent to abandon the mark, where the licensor reserves his own right to continue the concurrent use of the mark, and the license granted is nonexclusive and subject to termination by the licensor. This court in the prevailing opinion has approved and ratified that decision.

It is not deemed important to quote the text of the well-known provisions of the sections of the act of 1905 which are here involved, but it is important to note that in addition to sections 5 and 13, sections 2 and 12 of the act have a bearing on the issue.

What Congress had in mind in the enactment of sections 2 and 5 was the clear and obvious intent to prohibit the registration of a trade-mark calculated to deceive the public with respect to the origin of goods by reason of the fact that the applicant for registration did not have the right to the exclusive use of the mark on goods of the same descriptive properties at the date of his application for registration. *In re Laskin Brothers, Inc.*, 32 CCPA (Patents) 820, 146 F.2d 308, 64 USPQ 225, 572 O. G. 353; *Crown Fabrics Corporation* v. *American Viscose Corporation*, 32 CCPA (Patents) 701, 145 F.2d 246, 63 USPQ 149. In the enactment of section 12, Congress provided in effect that an existing registration which has not become abandoned shall be renewable upon request by the registrant or his successors in interest.

However, the action of appellee whereby it voluntarily divested itself of the right to the exclusive use of its mark apart from the business with which the mark has been used, and caused the mark to be used by another on identical goods, constituted an abandonment of the mark within the purview of section 13 of the act of 1905. *R. M. Hollingshead Corp.* v. *The Davies-Young Soap Co.*, 28 CCPA (Patents) 1286, 1292, 121 F.2d 500, 50 USPQ 71, 533 O. G. 267; *Everett O. Fisk & Co., Inc.*, v. *Fisk Teachers' Agency, Inc. et al.*, 3 F.2d 7, 9; *McKesson & Robbins, Inc.*, v. *Charles H. Phillips Chemical Co.*, 53 F.2d 342 and 1011, 285 U. S. 552. See also *American Photographic Publishing Co.* v. *Ziff-Davis Publishing Co.*, 29 CCPA (Patents) 1014, 127 F.2d 308, 53 USPQ 373, 542 O. G. 8; *In re La Monte & Son*, 32 CCPA (Patents) 806, 808, 146 F.2d 302, 64 USPQ 223, 572 O. G. 541; *E. F. Prichard Co. et al.* v. *Consumers Brewing Co.*, 136 F.2d 512, 58 USPQ 362.

The Examiner in the present case found "that in a number of instances, at least," American Aniline Products, Inc. had not complied with the condition contained in the agreement with respect to giving notice in advertisements of appellee's ownership of the mark Celanese. On this point, the Examiner held that failure by appellee's licensee to observe that specific condition of the agreement "could not well enlarge the limited right of use granted the licensee in the agreement."

On the same point, the Commissioner held:

> Contrary to this latter provision of the license agreement, *it appears that the licensee has frequently advertised the mark without reference to respondent's ownership*, and without respondent's approval. But it seems to me that this constitutes nothing more than a breach of contract on the part of the licensee, *which may hardly be said to work an abandonment of its trade-mark rights by respondent, or to evidence* an intent to abandon. [Italics not quoted.]

In rendering those decisions the tribunals of the Patent Office entirely overlooked the predominant fact that such frequent breach of the agreement by appellee's licensee constituted a series of acts each and all of which would be likely to deceive the public as to the origin of the goods. This is doubly true in the case at bar because "Celanese" is not only the appellee's trade-mark but also the appellee's corporate name. Moreover, those decisions completely disregarded the admitted fact that at least a portion of such advertising material was circulated by the Aniline Corporation over a period of years with "the knowledge and approval" of appellee.

In any event the question of such advertising, while important, as an element of deceit, is not in itself of controlling influence herein. The tribunals of the Patent Office had the false conception that the situation in the instant case, as explained by the Examiner, "in its essentials is identical with that involved in the Mathy case, supra." The situation in the Mathy case, in its essentials, is identical with that involved in the Smith case but not with those essentials involved in the instant case.

The situation in each of those two cases in the court of equity discloses that the marketed merchandise during the existence of the license agreement had but the one source of origin in the licensor and no other person, that the mark was used in no such manner as to deceive the public, and that those two decisions were rendered in accordance with the accepted rule of law that, as against his licensee, the owner of a trade-mark does not lose such ownership by the mere grant of the privilege of the use of the mark by his licensee in connection with the owner's business when the goods are produced under his supervision and control. No such situation exists in the case at bar.

The Commissioner of Patents referring to the Smith and Mathy cases properly stated in his decision that "In each of those cases it was held that a license from the original proprietor to use a trademark did not result in abandonment, and the exclusive rights of the licensor were restored upon termination of the license."

In making such a statement the Commissioner failed to consider, however, that in restoring the mark to the licensor, the court in each of those two cases held that the goods were produced under the owner's supervision and control, and properly applied the law that a trade-mark in order to be a valid one must indicate origin of the goods in a particular vendor and that the mark cannot be assigned or its use licensed apart from the business with which the mark is used.

Appellant here, as in the Patent Office, asserted and relied upon the authority of the Hollingshead case. With reference thereto appellee submits the following criticism in its brief:

> The appellant appears to believe that the mere granting of a license constitutes an abandonment of the mark, and relies on the quotation to that effect in *R. M. Hollingshead Corp.* v. *Davies-Young Soap Co.*, 28 CCPA 1286; 121 F.2d 500, 50 USPQ 71. It is pointed out that this is merely dictum and was not required for a decision of the case which was decided on the basis of a contract between the parties directly involved in the case and not on the basis of a contract with a third party as is involved in the present case. The Examiner of Interferences shows fully the irrelevance of this decision (R. 30). * * *

The basic issue in the Hollingshead case was the validity of the appellant's existing trade-mark, by virtue of the license agreement therein set forth, and was there raised in an opposition proceeding. The court, as properly stated in the opinion, might have affirmed the decision appealed from on that ground alone, and thereby required that the issue be deferred and decided in a cancellation proceeding as provided by section 13 of the Trade-Mark Act of 1905. The court, however, was not content to rely upon that procedure and decided the issue on its merits, as had been done in that case by the tribunals of the Patent Office.

With reference to appellee's quoted criticism it is noted that appellant has nowhere contended or evinced a belief that the granting of a proper license constitutes an abandonment of the mark, nor has it relied "on the quotation to that effect" in the Hollingshead case, for there is no quotation to that effect in that case. That quotation together with other pertinent facts of the case are recited in the prevailing opinion herein.

The court there correctly held, in effect, and by a unanimous decision, that a license of a mark for use, as in the present case, on a particular product, and no other, apart from the business with which the mark had been used, constituted an abandonment of the mark and rightfully so. Furthermore, the invalidity of appellee's trade-mark in the present case, as in the Hollingshead case, is challenged by appellant on the basis of a contract between the parties directly involved in the agreement.

The irrelevance of the decision in the Hollingshead case by no means has been shown by the Examiner of Interferences or anyone else. The Examiner's decision was that in the instant case the agreement between the parties

> * * * does not purport to acknowledge the possession of an exclusive right in the mark by other than the respondent [appellee]; and the doctrine enunciated in *R. M. Hollingshead Corp* v. *Davies-Young Soap Co.*, supra, is therefore deemed to have no bearing upon the question of respondent's [appellee's] right of registration.

That decision by the Examiner ignored the fact conceded by appellee from the outset, that it had no right to the exclusive use of the mark under the agreement and that appellee had thereby granted its concurrent use to another for identical goods. Appellee in its brief here states

> * * * In the present case, appellee was not entitled to stop use of its trade-mark by American Aniline, since it was granted a license.

In this connection, it will be noted that six months must elapse under the actual terms of the agreement before appellee's intent to terminate the agreement could possibly take effect.

While the facts are varied, the principle of law applied by this court in refusing the registration of the mark in the La Monte case hereinbefore cited is applicable in the present case to the effect that the exclusive use of a trade-mark is to indicate origin, and when the mark loses that distinguishing feature, it is considered an invalid mark. Furthermore, in the Fisk case hereinbefore cited, which presents a state of facts quite similar to those in the instant case, the court upon the basis of a wide accumulation of competent authority held that the abandonment of a trade-mark may be inferred from circumstances evidencing the intention of the owner to discontinue the distinctiveness of the mark as indicating origin.

Appellant also asserted and relied upon the authority of other cases in the proceedings heretofore begun in the Patent Office. The Commissioner stated with reference to two of such citations:

> Petitioner cites *Macmahon Pharmacal Co.* v. *Denver Chemical Mfg. Co.*, 51 C. C. A. 302, 113 Fed. 468, from which the Court of Appeals of the District of Columbia, in *Mayer Fertilizer & Junk Co.* v. *Virginia-Carolina Chemical Co.*, 35 App. D. C. 425, 1910 C. D. 399, quoted the following statement:
>
> "A trade-mark cannot be assigned, or its use licensed, except as incidental to a transfer of the business or property in connection with which it has been used."
>
> The latter case did not involve a license, however; and it is interesting to note that the decision was rendered less than two months after the decision in the Mathy case, supra, and that both were written by the same judge. And in the opinion from which the quoted language was taken, it may properly be characterized as dictum.

In thus noting with interest that the decision in the Mayer case was rendered less than two months after the decision in the Mathy case and that both opinions were written by the same judge, the Commissioner failed to note that the judge who wrote both opinions applied the same doctrine in his disposition of the Mathy case that he quoted from the Macmahan Pharmacal Co. case. Moreover, this court, in effect, has recently applied the doctrine in question in a case in which no assignment was involved. See *In re Laskin Brothers, Inc.*, supra.

It has been held in any number of cases that the registration of an invalid or abandoned trade-mark cannot be maintained in a cancellation proceeding against a party who deems himself injured or subject to further injury by the maintenance of such registration. See *American Photographic Publishing Co.* v. *Ziff-Davis Publishing Co.*, supra; *The Penetrene Corp. etc.* v. *Plough, Inc.*, 28 CCPA (Patents) 1307, 1312, 121 F.2d 539, 50 USPQ 133, 532 O. G. 512; *McKesson & Robbins, Inc.* v. *Charles H. Phillips Chemical Co.*, supra; *R. M. Hollingshead Corp.* v. *The Davies-Young Soap Co.*, supra.

Therefore, since appellee's mark admittedly no longer serves to indicate origin of the described dyestuffs solely in appellee, and since appellant is deemed injured by appellee's registration, under the provisions of section 13 of the Trade-Mark Act of 1905 and the authorities hereinbefore cited, appellant obviously was entitled to prevail in the proceedings it had heretofore begun in the Patent Office on the ground that appellee's mark has become abandoned.

The prevailing opinion cites no competent authority which constitutes any valid basis for the conclusion therein expressed to the effect that the doctrine of the Hollingshead case on the point here in issue is merely dictum and should be overruled. That is an erroneous action because, in addition to what has been hereinbefore stated, the doctrine of the Hollingshead case is based upon the universally accepted principle that where the mark is used in such manner as to cause the mark to lose its significance as an indication of origin and to deceive the public, such use effects the abandonment of the mark and its registration should be canceled. Appellee by its own admission has established the existence of the same situation in the case at bar, and in accordance with that principle and under the authorities hereinbefore cited, the decision of the Commissioner of Patents should be reversed. In view of that conclusion, it is deemed unnecessary to discuss herein other questionable points which have been made in the prevailing opinion.

With reference to the act of July 5, 1946, which has taken force and effect since the decision was rendered by the Commissioner of Patents, it is my view that, contrary to appellee's contention, the provisions of section 5 of the new act may not be applied to the subject matter of the appeal for appellee's benefit, since such application is not otherwise specifically provided for in the act as required

by section 46(a); and that the equitable principles of estoppel and acquiescence, as applied in the analogous situation in the Fisk case hereinbefore cited, should be applied by the court to the subject matter of the appeal for the benefit of appellant and against the appellee.

For the reasons hereinbefore stated, the decision of the Commissioner of Patents should be reversed.

U. S. Court of Customs and Patent Appeals

IN RE BROWN

No. 5430. Decided May 4, 1948

[166 F.2d 1019; 77 USPQ 593]

1. PATENTABILITY—INVENTION—APPLYING INSULATING ON FOUR SIDES INSTEAD OF TWO.
   Where the structure of the reference patent shows insulating means on two sides only of the plates, *Held* that there can be no invention in applying such insulating means, also, if desired, to the other two sides.
2. SAME—SAME—MOVING UPPER MEMBER OF CLAMP INSTEAD OF LOWER.
   Held that we do not see any patentable distinction between the apparatus of appellant and that of the M patent merely because, in the latter, it is the lower member which is moved to clamp the work rather than the upper member as shown in appellant's device.
3. SAME—MEANS AND METHODS OF VULCANIZING.
   Certain claims to a vulcanizer and method of repairing an inner tube *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 482,595.

AFFIRMED.

Westall and Westall and *Joseph F. Westall* (*Emory L. Groff* of counsel) for Brown.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

The Board of Appeals of the United States Patent Office affirmed the decision of the Primary Examiner rejecting all of the claims, 4 to 7 inclusive and 9 to 15 inclusive, of an application for a patent alleging new and useful improvements in "Means and Methods of Vulcanizing" as unpatentable over the prior art. From the decision of the Board, this appeal was taken.

Claims 4, 5, 6, 7, 9, 10, and 15 are for apparatus. Claims 11, 12, 13, and 14 are directed to method.

Claims 4, 5, and 13 are illustrative of the involved subject matter and read as follows:

4. In a vulcaniser, a housing comprising a floor with side walls perpendicular thereto, heating means within said housing, the floor of said housing constituting a platen for application to work to be vulcanized, insulating means in continuous contact with and surrounding the walls of said housing and platen and flush with the working surface of said platen, a base adapted to support work to be vulcanized, and means to urge said platen and insulating means against said base with the work interposed therebetween.

5. In a vulcanizer, a base, a compressible air inflated pad on said base for the support of work to be vulcanized, a heating platen adapted for application to work on said pad, and heat insulating means surrounding and in close substantially-continuous contact with lateral edges of and flush with the working surface of said heating platen, whereby heat sufficient for vulcanization from said platen is sharply cut off at the point of contact of said insulating means with the lateral edges of said platen, the combined surface area of said pad and base having a width and length substantially equal to corresponding dimensions of said platen, whereby said insulating means is adapted to contact a portion of the work disposed laterally of and adjacent said platen but supported by said base.

13. The method of repairing an inner tube of a tire which comprises: (1) vulcanising a patch over a portion of a tube injury while protecting by an insulating member in contact with an edge of a vulcanising platen from radiating heat of a vulcanizing platen an immediately adjoining portion of said injury; (2) moving an immediately adjoining portion of said tube injury in position for a second repair vulcanization adjoining said first vulcanization; and (3) repeating said successive steps of vulcanization until said whole injury to the tube has been covered.

The references relied upon are French patent, 384,145, January 27, 1908; McNeill, 1,913,126, June 6, 1933; Heintz, 1,949,275, February 27, 1934.

The alleged invention relates to a vulcanizing device and method for the repairing of rubber bodies, such as pneumatic tubes or other inflatable rubber products, wherein the damaged area is greater than that of the heating surface of the apparatus. The device comprises two elements, an air inflatable bag and a heated platen located above the bag. The bag is supported by a metal frame to resist lateral expansion so that when inflated there is an upward movement of the top wall of the bag. The platen, which is of channel cross-section, opens upwardly, and in the channel there is an electric heating element. Surrounding and in close contact with the platen, which has a smooth flat under-surface, is a wooden rectangular frame. During the vulcanizing operation a cover is put on the top of the platen. The cover is pivotally connected with a clamping member which is designed by downward movement to clamp the body to be repaired between the pad and the platen. The use of an inflatable bag in the vulcanizing operation is said to result in uniform pressure on all parts of the article undergoing repair. The purpose of the wooden frame which supports the platen is to prevent premature vulcanizing of the adjoining part of the rubber body which is next to be vulcanized. The flush position of the frame with the lower surface of the platent also prevents the leaking or squeezing out of fused rubber during the vulcanizing operation. When the area to be repaired is relatively extensive, the vulcanizing operations are done successively and as one portion of the damaged workpiece is vulcanized the clamping member is raised and the rubber body is advanced to bring the next area to be treated into position. It will be seen that by that procedure repeated vulcanizing operations are employed until the entire area to be repaired has been acted upon.

The McNeill patent is for a vulcanizing apparatus. It is designed for the repairing of pneumatic rubber inner tubes. There is disclosed an upper heatable platen and a lower pad pressure member, which, by means of having fluid admitted therein, causes the pad to exert upward uniform pressure against the body of the workpiece. The pressure means of the McNeill apparatus is from the bottom of his device.

The Heintz patent relates to a vulcanizing apparatus for repairing or splicing long rubber belts. The device discloses identical upper and lower structures, a heatable platen on the top section as a floor therefor, and the lower half of the structure possesses a heatable platen on its top portion. When the vulcanizing process is in use, the workpiece is squeezed tightly between the two heated platens.

The apparatus comprises a housing, side walls at right angles to the platens, which have heating means within them, and wooden strips or block insulating means in flush continuous contact with the platens. The insulating wooden blocks are on two sides of the platen, whereas the structure, defined by the claims herein, shows the wooden insulating frame completely surrounding the platen. The wooden strips or blocks are stated in the specification as serving "to taper off or to reduce the heating at the edges of the platens so that the belt will not be marked." The specification further states that in repairing large size conveyor belts, it may be necessary to employ two or more heating operations to vulcanize the splice and that when a plurality of heating operations are necessary, the platens are separated so that the belt may be shifted for successive vulcanizing.

The French patent deals with electrically heated vulcanizers and is designed particularly for the vulcanizing of pneumatic tires for automobiles and the like. There is disclosed a metallic vulcanizing surface or platen entirely surrounded by a wooden frame or body and flush therewith. It is stated in the patent that the frame of wood is intended to insulate the device by preventing the heat from being dispersed in any direction other than through the vulcanizing means.

The Examiner in his statement rejected claim 4 as unpatentable over the Heintz patent. He rejected claims 5, 6, 7, 9, 10, and 15 on the McNeill patent in view of either the Heintz or the French reference. All of the method claims, 11, 12, 13, and 14, were rejected by the Examiner on the McNeill patent in view of that to Heintz. The Board of Appeals in its decision expressly affirmed the Examiner in his reasons for rejection.

From a reading of the claims herein quoted and an examination of the disclosures of the prior art set forth herein, it is apparent that if there is any invention in appellant's device and method, it must be because of his providing a wooden frame supporting the heating platen with the lower edge of the frame flush with the lower face of the platen.

[1] With respect to claim 4, the only limitation in that claim, which is not specifically set out in the Heintz reference, is the surrounding of the platen in continuous contact by the wooden frame. While the structure of the Heintz patent shows insulating means on two sides only of the platen, we agree with the tribunals below that there can be no invention in applying such insulating means, also, if desired, to the other two sides. Appellant vigorously contends that the insulating strips or blocks of the Heintz structure are not flush with the platen, but are spaced therefrom. An examination of the drawing, particularly Fig. 6 of that patent, clearly shows that the insulating means are in square intimate contact with the edges of the platen and also in face contact with flanges which are integral with the vertical walls of the housing. We find no error in the rejection of claim 4 for the reasons given by the tribunals below.

[2] With respect to claims 5, 6, 7, 9, 10, and 15, it is quite clear that the structure of the McNeill patent contains every limitation defined by those claims with the exception of that of the wooden frame. In the patent there is shown a flexible rubber pad over the cavity in the metal lower chamber, and appellant discloses a flexible container in a corresponding cavity. However, it is only the upper set of appellant's flexible container that cooperates with his platen. Therefore, there can be no patentable difference between the flexible pad of McNeill and the flexible container defined by appellant. It is true that the side walls of the McNeill apparatus appearing above the platen are not vertical but are in a curved inclined line. Those walls, however, have no contact with the work to be done. Consequently their shape cannot affect the action of the platen. We do not see any patentable distinction between the apparatus of appellant and that of the McNeill patent merely because, in the latter, it is the lower member which is moved to clamp the work rather than the upper member as shown in appellant's device. Therefore, with respect to claims 5, 6, 7, 9, 10, and 15, the only question is whether or not it would require invention to provide in the structure of the McNeill device a wooden insulating band, such as is shown in the French reference, or the wooden strips of the Heintz structure arranged to surround the platen. In our opinion, it would be obvious to so reconstruct the McNeill device. There surely would be no invention in changing the shape of McNeill's walls from curved to vertical, but even without that change, we are of opinion that anyone skilled in the art could, without the exercise of invention, apply a wooden insulating band or frame to the McNeill device.

[3] As far as claims 11 to 14 inclusive are concerned, it is clear to us that the method defined therein is nothing more than using the modified apparatus of McNeill, as above described, in an obvious manner.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

Disclaimers

2,322,041.—*Edward Levy Mayo*, Cleveland, Ohio. AUTOMOTIVE VEHICLE HEATING APPARATUS. Patent dated June 15, 1943. Disclaimer filed May 26, 1948, by the assignee, *The Bishop & Babcock Manufacturing Company.*

Hereby enters this disclaimer to claim 6 of said patent.

2,325,804.—*Malcolm G. Shoemaker*, Abington, Pa. CRANKSHAFT. Patent dated Aug. 3, 1943. Disclaimer filed June 12, 1948, by the assignee, *Philco Corporation.*

Hereby enters this disclaimer to claims 1 to 4 inclusive of said patent.

2,379,368.—*Maryan P. Matuszak*, Bartlesville, Okla. HYDROCARBON ALKYLATION PROCESS. Patent dated June 26, 1945. Disclaimer filed July 19, 1948, by the assignee, *Phillips Petroleum Company.*

Hereby enters this disclaimer to so much of claims 1 and 2 of said patent as is in excess of the following.

1. A process for the catalytic alkylation of an alkylatable hydrocarbon with an alkylating agent in the presence of a liquid alkylation catalyst which comprises introducing the alkylatable hydrocarbon and the liquid alkylation catalyst into a single reaction zone, maintaining a relatively large body of liquid reaction mixture under alkylating conditions in said zone, agitating said body of reaction mixture, introducing the alkylating agent into said body of reaction mixture through an orifice, and throughout said introduction moving said orifice at high speed through the body of reaction mixture in said zone and thereby effecting rapid dispersal of said alkylating agent throughout said body of reaction mixture, preventing local concentrations of the alkylating agent in said body and maintaining the concentration of the alkylating agent throughout said zone at the desired minimum.

2. A process for the catalytic alkylation of an alkylatable hydrocarbon with an alkylating agent in the presence of a liquid alkylation catalyst consisting essentially of substantially anhydrous hydrofluoric acid which comprises introducing the alkylatable hydrocarbon and the liquid alkylation catalyst into a single reaction zone, maintaining a relatively large body of liquid reaction mixture under alkylating conditions in said zone, agitating said body of reaction mixture, introducing the alkylating agent into said body of reaction mixture through an orifice, and throughout said introduction moving said orifice at high speed through the body of reaction mixture in said zone and thereby effecting rapid dispersal of said alkylating agent throughout said body of reaction mixture, preventing local concentrations of the alkylating agent in said body and maintaining the concentration of the alkylating agent throughout said zone at the desired minimum.

2,410,537.—*George T. Wolf*, Chicago, Ill. HEATING APPARATUS. Patent dated Nov. 5, 1946. Disclaimer filed July 8, 1948, by the assignee, *Stewart-Warner Corporation.*

Hereby enters this disclaimer to claims 1 and 3 in said specification.

2,411,106.—*Theodor A. Petry*, Wenonah, and *Grady L. Payne*, Clarksboro, N. J. SEPARATION OF STYRENE FROM ETHYL BENZENE BY AZEOTROPIC DISTILLATION. Patent dated Nov. 12, 1946. Disclaimer filed July 23, 1948, by the assignee, *Socony-Vacuum Oil Company, Incorporated.*

Notice of Tentative Recordation of Trade Name

[T. D. 51978]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C., July 21, 1948

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"Didier Freres," owned by Didier Freres, 11 Rue du Jardin des Plantes, Bordeaux, France, applied to, and used in connection with the manufacture and sale of, alcoholic liqueurs and cordials of all types, manufactured in Bordeaux, France.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after August 15, 1948. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

[T. D. 51979]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C., July 21, 1948

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"Champagne REYERS," owned by Champagne Reyers, 23 Rue des Carmelites, Reims, France, applied to, and used in connection with the manufacture and sale of, champagne wines manufactured in Reims, France.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after August 15, 1948. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

[T. D. 51980]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT

232.2 Group 4 metal containing
232.3 Group 2 metal containing
232.4 Group 5 metal containing
232.8 Group 1 metal containing
233 Group 8 metal containing
234 Structure or physical form
234.1 Manganese containing
234.3 Group 2 metal containing
234.4 Group 1 metal containing
235 Structure or physical form
236 Processes making catalytic products
237 Regeneration reactivation or spent catalyst treatment
238 Including elimination and reassociation with non gaseous carriers or noncatalytic matter
239 Including halogen or acid treatment
240 Including reduction or element liberation
241 Including halogen treatment oxidation or element fixation other than heat decomposition
242 Including oxidation or element fixation other than heat decomposition
243 Including reduction or element liberation
244 Including reduction or element liberation
245 Including incorporation in or under final liquid or low fusing solid
246 Including association with high fusing carrier or noncatalytic matter
247 Including reduction or element liberation
248 Including association with nongaseous final carrier or noncatalytic matter
249 Including making final carrier or noncatalytic matter
250 Including deposition on carrier from fluid suspension or state except from melted or liquid alloy
251 Including deposition on carrier from fluid suspension or state except from melted or liquid alloy
252 Including reduction or element liberation
253 Including deposition on carrier from liquid suspension or solution

254 Including chemical modification of catalystogen
255 Including halogen treatment oxidation or element fixation other than heat decomposition
256 Including reduction or element liberation
257 Including reduction or element liberation
258 Including precipitation from fluid suspension or state except from melted or liquid alloy
259 Including shaping, sizing, agglomerating, hardening, or surface extending
259.2 Including pelleting, molding, or shaping
259.3 Including coating, comminuting, surface extending, or physically activating shaped bodies
260 Adsorbents or solid absorbents
261 Products solid absorbent
262 Free carbon containing
263 Non char type additant containing
264 Inorganic additant containing
265 Silica or silicate additant containing
266 Charred animal matter containing
267 Charred coal or vegetable matter containing
268 Structure or physical form
268.3 Solid organic compound containing
268.5 Inorganic additant containing
268.6 Silica or silicate additant containing
269 Silica or silicates containing
270 With non siliceous matter
271 Diatomaceous
272 Structure or physical form
273 Processes making solid absorbents
274 Regeneration, reactivation or spent absorbent treatment
275 Including halogen treatment
276 Including lixiviation or liquid treatment
277 Including oxidation or extraneous gas treatment
278 Including acid, alkali, or non oxidation chemical treatment
279 Including acid, alkali, or chemical treatment
280 Including oxidation or extraneous gas treatment
281 Including free oxygen containing gaseous agent
282 Free carbon containing making
283 Including charring
284 In presence of non-gaseous-non-c-non-charrable additant except water
285 In presence of non charrable silica or silicate additant
286 Including post charring lixiviation or liquid treatment
287 Including post charring oxidation or extraneous gas treatment
288 Including charring animal matter
289 Including charring coal or vegetable matter
290 Including post charring lixiviation or liquid treatment
291 Including post charring oxidation or extraneous gas treatment
292 Including post charring lixiviation or liquid treatment
293 Including post charring oxidation or extraneous gas treatment
294 Including adding retained non free carbon
295 Including halogen treatment
296 Including lixiviation or liquid treatment
297 Including oxidation or extraneous gas treatment
298 Including oxidation or extraneous gas treatment
298.5 Solid organic compound containing making
299 Silica or silicates containing making
300 Including water soluble silicates forming or using
301 Including strong acid treatment

In *class 293, Vehicle Fenders* (Division 45)

51 Frame-and-web form
52 Automobile
54 Buffer type
55 Bar
56 Metallic spring
57 Side fender

CHANGE SUBCLASS TITLES

In *class 12, Boot and Shoe Making* (Division 11) change the title of subclass 15 to read:

Lasting machines
15 Last inserting

In *class 179, Telephony* (Division 69) change the titles of subclasses 170 and 171 to read:

170 Repeaters (i. e., two-way amplifiers)
171 Relays (i. e., one-way amplifiers)

ESTABLISH SUBCLASSES

In *class 2, Apparel* (Division 24)

Miscellaneous Trimming Stock
279 Adornment handkerchiefs, garment worn

In *class 18, Plastics* (Division 15)

Molding devices
5.1 Anatomical
Processes
Molding
55.05 Anatomical

In *class 73, Measuring and Testing* (Division 36)

Samplers and tollers
421.5 Gas
Implements
425.2 With receptacle
425.4 Liquid
425.6 With suction means

In *class 240, Illumination* (Division 30)

Lanterns
Projectors
Screens
46.01 Moveable
46.03 Automatic
46.05 Slats
46.07 Foldable or collapsible
46.09 Electromagnetic
46.11 Iris shutter
46.13 Fluid
46.15 Curtain
46.17 Mounted on light source
46.19 Electromagnetic
46.21 External pivoted
46.23 Electromagnetic
46.25 Foldable or collapsible
46.27 Electromagnetic
46.29 Slats
46.31 Integral with front closure
46.33 Single sheet type
46.35 Mounted on rods
46.37 Cellular (i. e., tunnel-like openings)
46.39 Concentric
46.41 Radial
46.43 Integral with front closure
46.45 Integral with reflector
46.47 Integral with bulb
46.49 Foraminous (i. e., textile type or plurally apertured thin plate)
46.51 External hood or visor
46.53 With bulb engaging means
46.55 Translucent or colored
46.57 Translucent or colored
46.59

In *class 252, Compositions* (Division 64):

(insert after subclass 259.5)

In subclasses 410 to 477 the groups of metals employed in the titles of various subclasses refer to groups of the Periodic Table of Elements and include the following metals respectively:

Group I: Li, Na, K, Rb, Cs, Cu, Ag and Au.
Group II: Be, Mg, Ca, Sr, Ba, Ra, Zn, Cd and Hg.
Group III: Sc, Y, Al, Ga, In, Tl and the rare earths.

Rare earth group: La, Ce, Pr, Nd, Il, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm, Yb, and Lu.

Group IV: Ti, Zr, Hf, Th, Ge, Sn, and Pb.
Group V: V, Cb, Ta, Pa, As, Sb, and Bi.
Group VI: Cr, Mo, W and U.
Group VII: Mn, Ma, and Re.
Group VIII: Fe, Co, Ni and the noble metals.

Noble metal: Ru, Rh, Pd, Os, Ir and Pt.

410 Catalysts or solid adsorbents
411 Processes of regeneration or reactivation
412 Liquid treatment (except water)
413 With acid
414 With organic liquid
415 Halogen, acid or acid anhydride treatment (except CO_2)
416 Oxidation treatment
417 Suspension
418 Moving bed
419 With control of oxygen content
420 Water treatment

421 Processes including carbonizing
422 With added inorganic material
423 Phosphorus containing
424 Silicon containing
425 Alkali or alkali earth containing
426 Organic compound containing
427 Natural organic fibers
428 With inorganic material (except water)
429 Inorganic halide
430 Metal, metal oxide or hydroxide
431 Metallo-organic compound
432 Boron and boron compound containing
433 Boron halide
434 Non-metal acid or anhydride containing (except silicic acid)
435 Phosphorus containing
436 Sulfur containing
437 Phosphorus compound containing
438 Nitrogen compound containing
439 Sulfur, selenium, or tellurium or compound thereof containing
440 Sulfates
441 Halogen or halogen compound containing
442 Group III metal compound
443 Inorganic carbon compound containing
444 Free carbon containing
445 Processes including oxidation or gas treatment
446 With silica or silicate
447 With metal, metal oxide or hydroxide
448 Bead forming processes
449 Silica or silicate containing
450 Acid treated natural occurring silicate
451 Processes including forming silica gel
452 Coprecipitation
453 Group III metal oxide or hydroxide
454 With metal, metal oxide or hydroxide
455 Group III metal
456 Group V metal
457 Group II metal
458 Group VI metal
459 Group VIII metal
460 Noble metal
461 Metal, metal oxide or hydroxide containing
462 Rare earth metal
463 Group III metal
464 With Group V metal
465 With Group VI metal
466 With Group VIII metal
467 Group VI metal
468 With Group II metal
469 With Group IV metal
470 With Group VIII metal
471 Manganese
472 Group VIII metal
473 With Group II metal
474 With Group I metal
475 Group II metal
476 Group I metal
477 Structure or physical form

In *class 293, Vehicle Fenders* (Division 45)

60 Buffer or bumper type
61 Cycle type
62 Side bumpers
63 With modified vehicle frame or body
64 Vertical and/or auxiliary area increasing impact members
65 Supported solely by impact bar, e. g. guards
66 Spring mounted or pivoted
67 Connected at a single point
68 Combined vehicle spring
69 Combined
70 With bar type impact member
71 Cushioned or covered bar
72 Flexible cord or roller impact member
73 Shiftable or plural position impact members
74 Pivoted end sections
75 Sectional or wing type impact bar
76 Interconnected
77 In impact plane
78 Plural impact bars, vertically spaced
79 Mounted on vehicle spring horn
80 Vertically displaced impact bars
81 Plural impact bars vertically spaced
82 Intersecting in impact plane
83 With mudguard bracing means
84 Lever and shock absorber
85 Directly interposed coil springs and/or reciprocating bars
86 Strut type
87 Resilient mounting elements in vertical plane
88 With rubber mounting means
89 Slidably yielding, shackled or hinged link connected
90 Vertically adjustable impact bar
91 Plural loops in horizontal plane
92 Three or more loops
93 Plural impact bars
94 Center connected to support member
95 Non-side frame attached
96 End connections
97 Plural impact bars
98 Impact bar structure
99 Joints and connections
100 Vertically adjustable
101 Mounted on vehicle spring horn

MISCELLANEOUS CHANGES

On page 206–1, subclass 1 should be moved one space to the left to be coordinate with subclass .8.

On page 252–3, after subclass 259.5, insert the following: *301.1 to 408 follow subclass 477.*

On page 260–2 in subclass 786, the words "Heterocyclic nucleus" should be moved four spaces to the right.

On page 265–1, subclass 73 should read: *Scale pans, load holder adjuncts.*

On page 276–1, subclass 20 should read: *Conveying chutes.*

On page 292–1, subclass 179 should be inserted after subclass 178 as follows:

Bolts
Sliding
Spring retracted
179 Sliding catch

and on page 292–2, the unnumbered subclass title "Rigid shackle ends" should follow and be coordinate with subclass 317.

On page 293–1, subclass 53 should be moved one step of indentation to the left.

On page 294–1, in subclass 23, singularize "tools".

On page 302–1, subclass 59 should read: *Material dischargers*

and insert subclass 60, as follows:

Pneumatic conveyers
Material dischargers
60 Ensilage distributors

IN THE DEFINITIONS:

2, Apparel

establish the following subclass definition.:

279. Devices under subclass 278 comprising handkerchiefs or simulated handkerchiefs having provisions for mounting them on a garment for purposes of adornment.

(1) Note.—Handkerchiefs or folded handkerchiefs claimed in combination with a clasp for attaching to a pocket are to be found herein.

Search this class, subclass—
1—for handkerchiefs not otherwise classifiable.
243+—for garment trimming elements or processes.
Search Class—
D3—APPAREL, subclass 12, for design patents on handkerchiefs.
15—BRUSHING, SCRUBBING AND GENERAL CLEANING, subclass 209+, for fabric devices particularly adapted for wiping, daubing and polishing.
24—BUCKLES, BUTTONS, CLASPS, ETC., subclass 3, for clasps or separable fasteners for securing handkerchiefs or simulated handkerchiefs to a garment when no significant handkerchief structure is claimed.
128—SURGERY, subclass 275, for medicated handkerchiefs.

16, Miscellaneous Hardware

in subclass 1, under (2) Note insert:
74—MACHINE ELEMENTS AND MECHANISMS, subclass 573, for weights for rotors and flywheels.

in subclass 180, add:
Search Class—
293—VEHICLE FENDERS, subclass 66 for spring mounted or pivoted bumper guards, and subclass 74 for hinged end sections of bumpers.

18, Plastics

establish the following subclass definitions:
5.1. Apparatus under subclass 5 for shaping plastic material against a human or animal body.
(1) Note.—This subclass includes devices which involve body manipulation incidental to the molding. For the combination of body treatment and molding, see the appropriate treatment class.
Search this class, subclass—
55.05—for corresponding processes.
Search Class—
32—DENTISTRY, subclass 17+, for devices for taking impressions in plastic material inside of the mouth.

55.05. Processes under subclass 55 for shaping plastic material against a human or animal body.
(1) Note.—This subclass includes processes involving manipulation of the body incidental to the molding. For the combination of body treatment and molding, see the appropriate treatment class.
Search this class, subclass—
5.1—for corresponding apparatus.
Search Class—
32—DENTISTRY, subclass 17+, for taking impressions in plastic material inside of the mouth.

20, Wooden Buildings

in the class definition under II, insert in numerical order: 74 *Moldings*
in subclass 62, add:
Search Class—
240—ILLUMINATION, subclass 46.07+, for light projectors having a pivoted slat light screen.

in subclass 63, add:
Search Class—
240—ILLUMINATION, subclass 46.31+, for light projectors having a fixed slat screen.

23, Chemistry

in subclass 230, under (3) Note, cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*
in subclass 254, under (3) Note, cancel "234, Recorders" and substitute: *346, Recorders.*
abolish the definition of subclass 257.

30, Cutlery

in subclass 123, under (5) Note, insert in numerical order:
55—HARROWS AND DIGGERS, particularly subclass 9+, for cutters combined with machine organizations of the type found there.

in subclass 124, rewrite (7) Note to read as follows:
(7) Note.—See class 294, HANDLING, HAND AND HOISTLINE IMPLEMENTS, subclass 50.6+, for hand shovels or similar blade-like members having means coacting with the shovel or blade member to retain a load therein or thereon. The line between these classes is that the grippers in this class act to hold the material independently of the cutting blade.
and add in numerical order:
(8) Note.—Search class 7, COMPOUND TOOLS, subclass 14.1+, for cutters combined with hand operable beet lifters or beet pullers.

32, Dentistry

in the class definition, in (11) Note, cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*

33, Geometrical Instruments

in the class definition, under "(4) Search Classes", cancel ", and 234, Recorders ---------- purposes." and add in numerical order: *346, Recorders.*
in subclass 18, under "(2) Search Classes", cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*
in subclass 126.4, under "(2) Search Class", cancel the words "137, Water Distribution, subclass 18," and substitute: *73, Measuring and Testing, subclass 425.4.*
in subclass 141.5, under (1) Note and (2) Note, cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*
in subclass 205.5, in the note, cancel "234" and substitute *346.*

34, Drying and Gas or Vapor Contact With Solids

in the class definition under (1) Note, in the reference to class 219, after "Apparatus" insert:
, except that if the claimed process is in fact no more than electric heating of the work the patent is classified in class 219
under (2) Note, in the reference to class 252, change "260" to *410,*
in subclass 89, in (3) Note, cancel the reference to class 137.

35, Education

in subclass 5, in (5) Note, cancel "234" and substitute: *346.*

41, Ornamentation

in subclass 25, under "Search Class" insert in numerical order:
18—PLASTICS, subclasses 5.1 and 55.05 for shaping plastic material against a human or animal body.

51, Abrading

in subclass 194, under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*

70, Locks

in subclass 433, in (2) Note, change "234" to *346.*

73, Measuring and Testing

in the class definition, in (3) Note, under the titles "C. Electrical:", "H. Speed Measuring:", and "J. Time Measuring:", cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclass,* and in (5) Note, cancel the reference to class 234, and add in numerical order: *346, Recorders.*
in subclass 67, under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*
in subclass 115, under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*
in subclass 151, under "Search Class" insert in numerical order:
166—WELLS, subclass 1, for well apparatus comprising devices for sampling well fluids.
in subclass 178, under "Search Class" cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclass.*
in subclass 194, under "Search Class" cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclass.*
in subclass 272, under "Search Class" cancel the reference to class 234, and add in numerical order: *346, Recorders.*
in subclass 312, under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders.*
in subclass 323, in (2) Note, cancel "137, Water Distribution, subclass 18." and substitute: *this class, (73), subclass 425.4.*

under "Search this class, subclass" add: *425.4, see (8) Note.*
and under "Search Class" cancel the reference to class 137.
in subclass 341, under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclasses.*
in subclass 360, under "Search Class" cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclass.*
in subclass 391, under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclasses.*
in subclass 421, in the definition, cancel: "of liquid or solid material"
and under "Search Class", cancel the references to classes 23, 137 and 166, establish the following subclass definitions:

421.5. Devices under subclass 421 for gas sampling.

Search Class—
23—CHEMISTRY, subclass 232 and 254+, for gas sampling involving the use of sorbents or chemical treatment.
230—GAS PUMPS AND FANS, subclass 83, for fluid displacement gas pumps.

425.2. Subject matter under subclass 425 provided with a receptacle for the sample.

425.4. Subject matter under subclass 425.2 for obtaining samples of liquid.
(1) Note.—This subclass includes pipettes per se of general utility.

Search Class—
68—KITCHEN AND TABLE ARTICLES, subclass 28, for ladies.
166—WELLS, subclass 1, for well apparatus comprising devices for sampling well fluids.
216—LIQUID SEPARATION OR PURIFICATION, subclass 51.5, for cream separators.
222—DISPENSING, subclass 419, for pipettes in combination with a container or container closure.

425.6. Subject matter under subclass 425.4 provided with suction means for drawing the liquid sample into the receptacle.

Search Class—
128—SURGERY, subclass 233, for pipettes with suction means peculiarly adapted for medicinal use.
222—DISPENSING, subclass 208, for pipettes with suction means in combination with a container or container closure.

74, Machine Elements and Mechanisms

in subclass 573, add:
(0.5) Note.—See class 16, MISCELLANEOUS HARDWARE, subclass 1, for other weights with or without their supporting means.

84, Music

in the class definition, under (2) Note, cancel "181, Acoustics." and substitute: *274, Sound Recording and Reproducing.*

88, Optics

in subclass 1, add:
Search Class—
240—ILLUMINATION, subclass 46.05 for light projectors having an automatically operated light dimming screen.

in subclass 61, add:
Search Class—
240—ILLUMINATION, subclass 46.01+ for light projectors having various types of light valves.

in subclass 106, add:
Search Class—
240—ILLUMINATION, subclasses 46.57 and 46.59 for light projectors having a colored light screen.

in subclass 107, add:
Search Class—
240—ILLUMINATION, subclass 46.15 for light projectors having a fluid light filter.

95, Photography

in subclass 63, add:
Search Class—
240—ILLUMINATION, subclass 46.13 for light projectors having an iris type light shutter.

in subclass 64, add:
Search Class—
240—ILLUMINATION, subclass 46.13 for light projectors having an iris type light shutter.

101, Printing

in the class definition under "Search Class" cancel the reference to class 234, and add in numerical order: *346, Recorders.*
in subclass 415.1 under "Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclasses.*

116, Signals and Indicators

in the class definition, paragraphs 4 and 5, cancel the references to class 234, and substitute: *346, Recorders, appropriate subclass.*

117, Coating: Processes and Miscellaneous Products

in the class definition under "Notes" in "I. *Coating Processes per se Classified Elsewhere*" in the reference to class 252, change "subclasses 250–253" to: *subclass 410+.*
and after "catalytic" add: *or adsorbent,*
and in "II, *Coated Articles Classified Elsewhere*" in the reference to class 252, change "subclasses 197 and 202 and their indented subclasses" to: *subclass 410+* and add after "catalysts", *or adsorbents.*

128, Surgery

in subclass 2.05, under (4) Note, change "234" to *346,*
in subclass 2.06 in the note, cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*

133, Coin Handling

in subclass 8, in the note, cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*

134, Cleaning and Liquid Contact With Solids

in subclass 2, under "Search Class" in the reference to class 252, change "240 to 244, 277, 278, 280 and 281" to *416+ and 445,*
in subclass 7, under "Search Class" in the reference to class 252, change "261+" to: *410+.*

159, Concentrating Evaporators

in subclass 30, under "Search Class" cancel the reference to class 137, and add: *73, Measuring and Testing, subclass 425.4+.*

160, Closures, Partitions and Panels, Flexible and Portable

in the class definition, add:
Search Class—
240—ILLUMINATION, subclass 46.03+, for light projectors having a foldable or collapsible light screen or for projectors having an operator for a light screen.

in subclass 1, add:
Search Class—
240—ILLUMINATION, subclass 46.05, for light projectors having an automatically operated light dimming means.

in subclass 201, add:
Search Class—
240—ILLUMINATION, subclass 46.17, for light projectors having a flexible light screen.

161, Time-Controlling Mechanism

in the class definition, second paragraph, cancel the reference to class 234 and substitute: *346, Recorders, appropriate subclass,*
in subclasses 20 and 21, under "Search Class" cancel the references to class 234, and substitute: *346, Recorders.*

167, Medicines, Poisons and Cosmetics

in subclass 13, under (4) Note, in the reference to class 252, change "260" to: *410.*

176, Electric Lamps

in subclass 16, under "Search Classes" in the reference to class 240, add: *See subclass 46.01+ for light projectors having a light modifying screen.*

178, Telegraphy

in subclass 2, under "(3) Search Classes" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass,*
in subclass 4, under "(2) Search Classes" change "234" to *346,*
in subclass 6.6, in (3) Note, change "234" to *346,* and change "particularly subclasses 59–77" to: *appropriate subclasses,*
in subclass 6.7, cancel (3) Note, and substitute:
(3) Note.—See class 346, RECORDERS, appropriate subclass.
in subclass 89, under "(2) Search Classes", cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclasses.*

179, Telephony

in subclass 5.5 in (1) Note change "234" to *346,*
in subclass 7, under "Search Classes" change "234" to *346.*

183, Gas Separation

in subclass 4, under "Search Class" in the reference to class 252, change "260" to *410,*
in subclass 4.5, under "Search Class" in the reference to class 252, change "274" to *411,*
in subclass 4.8, under "Search Class" in the reference to class 252, change "260" to *410.*

189, Metallic Building Structures

in subclass 36, under "(3) Search Classes" insert:
293—VEHICLE FENDERS, subclass 96 and 99+, for joints and connections between bumper elements and bumpers and vehicles.
in subclass 62, under "Search Classes" insert:
240—ILLUMINATION, subclass 46.07+, for light projectors having a pivoted slat light screen.
in subclass 63, under "Search Class" add
240—ILLUMINATION, subclass 46.31+, for light projectors having a fixed slat light screen.

202, Distillation

in subclass 35, under "Search Classes" in the reference to class 252, change "subclasses 262 to 268" to *subclass 444+.*

204, Chemistry, Electrical and Wave Energy

in subclass 2, under (4) Note change "234" to *346* and change "subclass 59" to *appropriate subclass.*

206, Special Receptacles and Packages

in subclass 0.7, under (1) Note, change "260" to *410.*

210, Liquid Separation or Purification

in subclass 203, under "Search Class" in the reference to class 252, change "260" to *410.*

220, Metallic Receptacles

in subclass 24, in "(4) Note. Closures in Other Classes:"
under X, in the reference to class 240, cancel "45 and indented subclasses, 48.2 and indented subclasses" and substitute: *46.01+.*

222, Dispensing

in the class definition under "5: Article Dispensing." cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclass.*
under "6. Volume or Rate of Flow Meters, Recorders, Registers" under "Search Class" change "234" to *346,* under "13. Dipping and Sampling" under "Search Class" cancel the references to classes 23 and 137,
in subclass 23, under "Search Class" change "234" to *346.*
in subclass 30, under "Search Class" change "234" to *346,*
in subclass 208, cancel (1) Note, and substitute:
(1) Note.—This subclass includes pipettes in combination with a container or container closure.
and under "Search Class" insert:
73—MEASURING AND TESTING, subclass 425.6, for pipettes per se of general utility.
in subclass 419, insert:
(1) Note.—This subclass includes pipettes in combination with a container or container closure.
and under "Search Class" cancel the reference to class 137, and substitute:
73—MEASURING AND TESTING, subclass 425.4, for pipettes per se of general utility.

236, Filling and Closing Portable Receptacles

in subclass 20, under "Search Class" in the reference to class 252, change "260" to *410.*

235, Registers

in the class definition, first paragraph, change "234" to *346.*

240, Illumination

in subclass 1.1, under "Search this class, subclass" insert: *46.01+, for light projectors having a light modifying screen.*
in subclass 3.1, under "(1) Search this class" add: *See subclasses 46.57 and 46.59 for light projectors having a color screen.*
in subclass 9.5, insert:
Search this class, subclass—
46.01+—for light projectors having a non-polarising light modifying screen.
in subclass 20, in the note, add: *See subclass 46.01+, for light projectors having a light modifying screen.*
in subclass 23, under "Search this class, subclasses" add: *See subclasses 46.57 and 46.59 for light projectors having a color screen.*
in subclass 39, under "Search this class, subclasses" add: *See subclasses 46.57 and 46.59 for light projectors having a color screen.*
in subclass 41.35, under "Search this class, subclasses" add: *See subclass 46.01+, for light projectors having a light modifying screen.*
in subclass 41.4, under "Search this class, subclasses" add: *See subclass 46.01+, for light projectors having a light modifying screen.*
in subclass 41.61, under "Search this class, subclasses" add: *See subclass 46.29 for light projectors having an electromagnetically operated light screen.*
in subclass 44, insert:
Search this class, subclass—
44.03+—for light projectors having a moveable light screen.
in subclass 44.1, insert:
Search this class, subclass—
46.03+—for light projectors having a moveable light screen.
in subclass 44.2, add:
Search this class, subclass—
46.03+—for light projectors having a moveable light screen.
abolish the definitions of subclasses 45, 45.2, 45.4, and 45.6,
establish the following subclass definitions:

46.01. Projectors under subclass 41 provided with a screen adapted to intercept, diffuse or divert some or all of the projected light, and such screen per se when adapted for use with projectors.

Search this class, subclass—
1.1—for illuminating devices having screens for producing a daylight simulating illumination.
3.1—for illuminating devices for illuminating stages, athletic parks, race tracks or other like arenas which have means for producing color effects.
9.5—for light projectors with polarizing screens.
15—for dark lanterns provided with screens or shutters for cutting off the light at will.
20—for photographic dark room lanterns.
23—for signal lanterns having colored transparent or translucent screens.
29—for hand lanterns having colored or translucent screens.
41.35+—for projectors having light diffusing reflectors.
41.4—for projectors having diffusing lenses (antiglare).
106+—for shades not adapted for use with projectors.

Search Class—
88—OPTICS, subclass 61, for miscellaneous light valves which can be adjusted to give various degrees of light absorption or diversion, and subclass 106+ for light filters.
176—ELECTRIC LAMPS, subclass 16+, for incandescent electric lamps having unitary light screen or diffusers.
315—ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclasses 82 and 291+, for electric light systems provided with means for dimming the light by either changing from a high to a low source of current or inserting an impedance in the circuit and subclasses 83 and 322, for electric light systems in which one lamp or filament is substituted for another of different light output, (e. g., multiple filament lamp).

46.03. Projectors under subclass 46.01 in which the screen is moveable, and in which the screen variably affects the light in the course of its motion.
(1) Note.—The motion may be from a light modifying to a light non-modifying position, or from a position where one portion of the beam is modified to a position where another portion of the beam is modified, or may be some other type of motion.

Search this class, subclass—
41—for projectors having a lens and light source adjustable with respect to each other.
44—for projectors having both the light source and the reflector adjustable.
44.1—for projectors having the reflector adjustable.
44.2+—for projectors having the light source adjustable.

46.05. Projectors under subclass 46.03 in which the screen is operated automatically in accordance with a condition.
(1) Note.—Examples of conditions which may be used to control a screen are the direction of the force of gravity or the wind, or the speed, loading or actuation of the steering wheel of a vehicle upon which the projector is mounted, or the glare of the headlights of an approaching vehicle.

Search this class, subclass—
63+—for projectors in which the entire projector is moved automatically in accordance with a condition.

Search Class—
88—OPTICS, subclass 1, for plural vehicles each having headlight screen dimmers which are responsive to the headlights of other vehicles.
160—CLOSURES, PARTITIONS AND PANELS, FLEXIBLE AND PORTABLE, subclass 1+, for automatically controlled flexible closures and partitions of general utility.
250—RADIANT ENERGY, subclass 41.5, for miscellaneous photoelectrically controlled circuits which may be used to control screens.
315—ELECTRIC LAMP AND DISCHARGE DEVICES, SYSTEMS, subclasses 82+ and 149+, for photoelectrically controlled electric lamp circuits (e. g., shifting from "bright" to "dim" filament).

46.07. Projectors under subclass 46.03 in which the screen comprises a plurality of pivoted slats.

Search this class, subclass—
46.31+—for other projectors having stationary slat screens.

Search Class—
20—WOODEN BUILDINGS, subclass 62 for pivoted slat type non-metallic shutters of general utility.
189—METALLIC BUILDING STRUCTURES, subclass 62 for pivoted slat type metallic shutters of general utility.

46.09. Projectors under subclass 46.07 in which the slats may either fold or collapse to an inoperative position.

Search this class, subclass—
46.27—for projectors having foldable or collapsible screens.

Search Class—
160—CLOSURES, PARTITIONS AND PANELS, FLEXIBLE AND PORTABLE, appropriate subclasses, for various types of collapsible screens of general utility.

46.11. Projectors under subclass 46.07 in which the slats are operated by electromagnetic means.

Search this class, subclass—
46.29—and the subclasses specified in the notes thereto for other projectors having moveable screens under subclass 46.03 with electromagnetic operating means, and the subclasses specified in the search notes to subclass 46.29 for other illuminating devices having electromagnetic operating means.

46.13. Projectors under subclass 46.03 in which the screen comprises pivoted shutter blades which move in their own plane to make, close or vary the size of the light emitting opening.

Search Class—
88—OPTICS, subclass 61 for miscellaneous iris shutters.
95—PHOTOGRAPHY, subclass 63 for camera type shutters having pivoted blades which have opposite motion and can completely close or can form a symmetrical opening, and subclass 64 for camera type iris diaphragms which produce openings of different sizes.

46.15. Projectors under subclass 46.03 in which the screen comprises a double walled chamber into which a fluid may be introduced to color, diffuse or deflect the projected beam of light or any portion thereof.

Search this class, subclass—
107—for liquid type refractors especially adapted for illumination.

Search Class—
88—OPTICS, subclass 61 for fluid filters used as light valves and subclass 107 for fluid filters of general application.

46.17. Projectors under subclass 46.03 in which the screen comprises a sheet of flexible material moveable across the light emitting opening of the projector.

Search Class—
160—CLOSURES, PARTITIONS AND PANELS, FLEXIBLE AND PORTABLE, subclasses 201+, for track guided articulated rigid panels forming a flexible sheet screen of general utility, and 238+ for roll type screens of general utility.

46.19. Projectors under subclass 46.03 in which the screen is mounted on the light source.

Search this class, subclass—
46.55—for projectors having non-moveable screens mounted on a light source.
138—for lamp shades and bowls supported on a light bulb by means of a spring frame.

46.21. Projectors under subclass 46.19 in which the screen is operated electromagnetically.

Search this class, subclass—
46.29—and the subclasses specified in the search notes thereto for other projectors having moveable screens under subclass 46.03 with electromagnetic screen operating means, and the subclasses specified in the search notes to subclass 46.29 for other illuminating devices having electromagnetic operating means.

46.23. Projectors under subclass 46.03 in which the screen is external to the projector casing and is pivoted.

Search this class, subclass—
46.53—for projectors having a non-moveable visor or hood fixedly attached to the projector casing at the front thereof.

46.25. Projectors under subclass 46.23 in which the screen is operated electromagnetically.

Search this class, subclass—
46.29—and the subclasses specified in the search notes thereto for other projectors having a moveable screen under subclass 46.03 with electromagnetic screen operating means, and the subclasses specified in the search notes to subclass 46.29 for other illuminating devices having electromagnetic operating means.

46.27. Projectors under subclass 46.03 in which the screen may either fold or collapse to an inoperative position.

Search this class, subclass—
46.09—for this subject matter where the moveable foldable or collapsible screens comprise pivoted slats.

Search Class—
160—CLOSURES, PARTITIONS AND PANELS, FLEXIBLE AND PORTABLE, pertinent subclasses for various types of screens of general utility which can collapse or fold.

46.29. Projectors under subclass 46.03 in which the screens are operated by electromagnetic means.

Search this class, subclass—
41.61—for projectors having a stationary casing in which a reflector and light source are rotated or deflected as a unit by electromagnetic means.
44.25—for projectors in which a light source is moved, with respect to the focus of a reflector, by electromagnetic means.
46.05—for projectors having a screen which is operated automatically.
46.11—for this subject matter where the screen is a moveable pivoted slat screen which is operated by electromagnetic means.
46.31—for this subject matter where the screen is supported by the light source and operated by electromagnetic means.

46.33—for this subject matter where the moveable screen is external to the projector casing, and is pivoted and operated by electromagnetic means.
61.9—for vehicle head lamps which are rotated or tilted by electromagnetic means.
62.4—for rotatable or tiltable light supports which are operated automatically by electromagnetic means.

Search Class—
160—CLOSURES, PARTITIONS AND PANELS, FLEXIBLE AND PORTABLE, pertinent subclasses, for various types of screens of general utility which are provided with operators.

46.31. Projectors under subclass 46.01 in which the screen is composed of a plurality of fixed spaced apart slats or louvers.

Search this class, subclass—
46.07+—for this subject matter, in which the screen comprises moveable pivoted slats.

Search Class—
20—WOODEN BUILDINGS, subclass 63 for fixed non-metallic slat shutters of general application.
98—VENTILATION, subclass 121 for ventilating louvers.
189—METALLIC BUILDING STRUCTURES, subclass 63 for fixed metallic slat shutters of general application.

46.33. Projectors under subclass 46.31 in which the slats are integral with the front closure of the projector.

Search this class, subclass—
41.55—for miscellaneous projector closures.
46.45—for projectors having non-slat screens which are integral with the front closure.

46.35. Projectors under subclass 46.31 in which the slats are formed from a single sheet and in which the sheet is the sole support for the slats.

Search this class, subclass—
46.31—and other indented subclasses under subclass 46.31 for similar slat screens in which the screen is not formed from a single sheet but is assembled from plural pieces.

46.37. Projectors under subclass 46.31 in which the slats are supported on rods which pass through the slats.

46.39. Projectors under subclass 46.31 in which the slats are arranged to form a cellular structure having tunnel-like openings through which the light passes.

Search this class, subclass—
46.51—for other projectors having foraminous screens.

46.41. Projectors under subclass 46.31 in which the slats are situated concentrically of each other.

46.43. Projectors under subclass 46.31 in which the slats are situated radially with respect to the axis of a projector.

46.45. Projectors under subclass 46.01 in which the screen is integral with the front closure of the projector.

Search this class, subclass—
41.55—for miscellaneous projector closures.
46.33—for this subject matter where the screen is a slat screen.

46.47. Projectors under subclass 46.01 in which the screen is an integral portion of a reflector within the projector casing.

46.49. Projectors under subclass 46.01 in which the screen is an integral part of the light source.
(1) Note.—An example of light source is an incandescent lamp.

Search Class—
176—ELECTRIC LAMPS, subclass 16+ for incandescent electric lamps having integral light modifying means (e. g., light diffusers, etc.).

46.51. Projectors under subclass 46.01 in which the screen is a member having plurality of small openings.

Search this class, subclass—
46.39—for this subject matter where the screen is a slat screen in which the slats are arranged to form a cellular structure having tunnel-like openings through which the light passes.

Search Class—
26—TEXTILES, subclass 78+, for miscellaneous textile fabrics.
66—TEXTILES, KNITTING, subclass 169+ for knit fabrics.
87—TEXTILES, BRAIDING, NETTING AND LACE MAKING, subclass 53+, for braided fabrics.
88—OPTICS, subclass 61 for light valves of general utility.
139—TEXTILES, WEAVING, subclass 383+, for woven fabrics.
154—LAMINATED FABRIC AND ANALOGOUS MANUFACTURES, subclass 46+, for laminated fabrics.

46.53. Projectors under subclass 46.01 in which the screen comprises a hood or visor external to the projector casing fixedly attached to the projector at the front thereof.

Search this class, subclass—
46.23+—for this subject matter where the screen is pivoted and moveable.

46.55. Projectors under subclass 46.01 in which the screen is supported by the light source or the support for the light source.
(1) Note.—Examples of light source and light source support are incandescent lamp and lamp socket.

Search this class, subclass—
46.19+—for this subject matter where the screen is moveable.
138—for lamp shades and bowls supported on a light bulb by means of a spring frame.

46.57. Projectors under subclass 46.55 in which the screen is translucent or colored.

Search this class, subclass—
46.59—and the subclasses specified in the notes thereto for other projectors having colored or translucent screens.

46.59. Projectors under subclass 46.01 in which the screen colors or diffuses the light passing therethrough.

Search this class, subclass—
3.1—for color projectors for an arena.
20—for photographic colored light illuminators.
23—for color signal lanterns.
39—for hand color screen lanterns.
46.57—for this subject matter where the screen is supported by the light source of the projector.

Search Class—
88—OPTICS, subclass 106+, for light filters.

abolish the definitions of subclasses 48.2, 48.4 and 48.6,

in subclass 61.9, add:

Search this class, subclass—
46.29—for light projectors having electromagnetically operated light modifying screens.

in subclass 62, add:

Search this class, subclass—
46.05—for light projectors having automatically operated light modifying screens.

in subclass 107, add:

Search this class, subclass—
46.15—for light projectors having a fluid light screen.

in subclass 138, add:

Search this class, subclass—
46.19+—for light projectors having a light screen mounted on the projector light source.

246, Railway Switches and Signals

in subclass 107, under "(2) Search Class" change "234" to *346*, and cancel: ", and also subclasses 6 and 27"
in subclass 123, under "(2) Search Class" cancel the reference to class 234, and substitute: *346, Recorders, appropriate subclass.*
in subclass 162, under "(2) Search Classes" change "234" to *346* and "subclasses 27 and 27.5" to: *appropriate subclasses.*
in subclass 185, under "(2) Search Class" change "234" to *346* and "subclasses 6, 27 and 27.5" to: *appropriate subclasses.*

250, Radiant Energy

in subclass 27, under "Search Class" cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclasses.*
in subclass 49.5 under "(6) Search Classes" change "234" to *346* and "subclass 64" to: *appropriate subclass.*
in subclass 105, under (2) Note, change "45" to *46.01*,
in subclass 141, under "(2) Search Classes" change "234" to *346*, and "subclass 61" to: *appropriate subclass.*

252, Compositions

in subclass 181.1 under "Search this class, subclass" change "260" to *410*,
in subclass 182, under "Search this class, subclass" cancel the references to subclasses 195 and 260, and add: *410+, for catalysts or solid adsorbents or absorbents.*
in subclass 104, under "Search this class, subclass" change "260 to 272" to *410+*,
abolish the definitions of subclasses 195 to 259.3,

in subclass 259.5, under "(1) Search this class", cancel the period and add: *and subclasses 410+ for catalysts or solid adsorbent or absorbents per se.*

abolish the definitions of subclasses 260 to 301,

establish the following subclass definitions:

410. Compositions in this class specialized and designed for use as, in, or in the making of, a catalyst or a solid adsorbent or solid absorbent.

(1) Note.—Processes of preparation of the catalyst or adsorbent are classified, in general, on the basis of the catalyst or adsorbent produced, unless a separate subclass is provided for the process.

(2) Note.—Processes involving the treatment of a material with a catalyst or adsorbent are classified on the basis of the treatment or material treated.

(3) Note.—Combinations of (1) preparation of the catalytic or adsorbent composition and (2) physically shaping or molding to produce catalytic or adsorptive bodies are classified in this or indented subclasses. Such shaping or molding combined with activation or other treatment to improve the catalytic or adsorptive properties is also classified in this or indented subclass. The shaping or molding per se is classified in the class providing therefor; see classes 18, PLASTICS, and 25, PLASTIC BLOCK AND EARTHENWARE APPARATUS.

(4) Note.—The groups of elements employed in the definitions of various subclasses indented hereunder are defined as groups of the periodic system and include the following metals respectively:

Group I: Li, Na, K, Rb, Cs, Cu, Ag and Au.
Group II: Be, Mg, Ca, Sr, Ba, Ra, Zn, Cd and Hg.
Group III: Sc, Y, Al, Ga, In, Tl and the rare earths.

Rare earth group: La, Ce, Pr, Nd, Il, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm, Yb, and Lu.

Group IV: Ti, Zr, Hf, Th, Ge, Sn, and Pb.
Group V: V, Cb, Ta, Pa, As, Sb and Bi.
Group VI: Cr, Mo, W and U.
Group VII: Mn, Ma, and Re.
Group VIII: Fe, Co, Ni and the noble metals.

Noble metal: Ru, Rh, Pd, Os, Ir and Pt.

(5) Note.—For the purpose of classification in this and indented subclasses, metal metallates are considered to be mixtures of metals, metal oxides or hydroxides. For example, nickel chromate is classified as a mixture of nickel oxide and chromium oxide.

(6) Note.—Patents to catalyst or adsorbent compositions wherein a "carrier" is included only broadly in the claims are classified on the basis of the ingredients of the composition other than the carrier. Such patents are not cross referenced on the basis of the disclosed carrier when it is common or well known as a carrier.

Search this class, subclass—
190—for compositions of an acid, sulfur or negative element bindant with an adsorbent.
259.5—for compositions including a liquid and an absorbent as a thickener or filler therefor.
408—for analytical, testing or indicating compositions.

Search Class—
18—PLASTICS, (see (3) Note above).
23—CHEMISTRY, for single inorganic compounds or elements and methods of preparation thereof even though disclosed or claimed as being catalytic or adsorbent, subclass 1 for processes of general application involving the use of a catalyst, and subclass 288+, for catalytic apparatus.
25—PLASTIC BLOCK AND EARTHENWARE APPARATUS (see (3) Note above).
67—ILLUMINATING BURNERS, subclass 19 for catalytic igniters for gaseous fuel burners including igniter structure.
75—METALLURGY, for single metals and the preparation thereof even though the metal is disclosed or claimed as having catalytic properties.
128—SURGERY, subclasses 112+, 290 and 296 for surgical absorbent pads, and subclass 141+, for gas masks including an adsorbent material.
183—GAS SEPARATION, subclass 114.2 for processes of gas separation in which a solid adsorbent is employed.
195—CHEMISTRY, FERMENTATION, for enzyme containing compositions.
196—MINERAL OILS, subclasses 52+ and 78 for processes of treating mineral oil involving the use of a catalyst.
204—CHEMISTRY, ELECTRICAL AND WAVE ENERGY, for processes of electroplating and for synthesizing a chemical compound or element by use of electrical or radiant energy, even though disclosed or claimed as having catalytic or adsorptive properties.
210—LIQUID SEPARATION OR PURIFICATION, particularly subclass 42.5, for processes of purification of liquids in which an adsorbent is employed, and subclass 203+, for non-adsorbent filtering compositions.
260—CHEMISTRY, CARBON COMPOUNDS, for processes of making or treating a carbon compound involving the use of a catalyst or adsorbent, and for single carbon compound and its preparation even though disclosed or claimed as having catalytic or adsorptive properties, and subclass 708 for processes of general application for treating carbon compounds with an adsorbent for removing impurities.

411. Processes under subclass 410 for increasing the catalytic or adsorptive properties of a spent or partially spent catalyst or adsorbent.

(1) Note.—Combinations of regeneration or reactivation of an adsorbent and the recovery of the adsorbed material are classified on the basis of the material recovered.

Search Class—
34—DRYING AND GAS OR VAPOR CONTACT WITH SOLIDS, for processes of regenerating catalysts or adsorbents by drying only.
202—DISTILLATION, for apparatus for making or reactivating bone black and other carbonaceous adsorbents by destructive distillation.

412. Processes under subclass 411 in which the catalyst or adsorbent is treated with a liquid (except water).

Search this class, subclass—
420—for processes of regenerating or reactivating a catalyst or adsorbent by treatment with water.

413. Processes under subclass 412 which include treatment with an acid.

Search this class, subclass—
415—for regeneration or reactivation treatment including a treatment with a gaseous acid or anhydride thereof (except carbon dioxide).

414. Processes under subclass 412 which include treatment with an organic liquid.

(1) Note.—Many processes classified herein are drawn to solvent extraction.

415. Processes under subclass 411 which include a treatment with a halogen, acid or anhydride thereof (except carbon dioxide),

Search this class, subclass—
413—for regeneration or reactivation processes including a treatment with a liquid acid or acid solution.
416+—for regeneration or reactivation treatments employing carbon dioxide as an oxidising agent.

416. Processes under subclass 411 which include treatment with oxidizing gases.

(1) Note.—Many of the processes classified in this and indented subclasses are drawn to the treatment of catalysts or adsorbents, which have become coated with carbon, in order to remove the carbon impurity.

417. Processes under subclass 416 in which the catalyst or adsorbent is treated while suspended in a gaseous medium.

418. Processes under subclass 416 in which a bed or body of the catalyst or adsorbent progresses or is in motion during the regeneration or reactivation treatment.

419. Processes under subclass 416 which include the control of the oxygen content of the gases used in the regeneration or reactivation.

420. Processes under subclass 411 which include a treatment with water.

Search this class, subclass—
412—for regeneration or reactivation treatment including the use of water solutions.
416+—for processes or regeneration or reactivation in which steam is employed as an oxidising agent.

421. Processes under subclass 410 which include charring, carbonizing or the production of elementary carbon from a carbon compound.

Search Class—
23—CHEMISTRY, subclass 209.1+ for processes of preparation or transformation of non-adsorbent carbon and products thereof.
202—DISTILLATION, for apparatus for charring or carbonizing.

422. Processes under subclass 421 which include charring or carbonizing in the presence of added inorganic materials other than water.

423. Processes under subclass 422 wherein the added material contains phosphorus.

424. Processes under subclass 422 wherein the added material contains silicon.

425. Processes under subclass 422 wherein the added material contains Li, Na, K, Rb, Cs, Mg, Ca, Sr, or Ba.

426. Compositions under subclass 410 which contain organic compounds.

Search Class—
195—CHEMISTRY, FERMENTATION, for enzyme-containing compositions.
260—CHEMISTRY, CARBON COMPOUNDS, for single carbon compounds and method of preparation thereof.

427. Compositions under subclass 426 wherein the organic material is a natural occurring fiber.

Search Class—
210—LIQUID SEPARATION OR PURIFICATION, subclass 204, for filter materials in the form of a fibrous unitary mass.

428. Compositions under subclass 426 which contain inorganic material (except water).

429. Compositions under subclass 428 wherein the inorganic material is an inorganic halide.

(1) Note.—Mixtures of the inorganic halides and organic materials are classified herein even though it may be disclosed that a complex is formed.

430. Compositions under subclass 428 wherein the inorganic material is a metal or metal oxide.

431. Compositions under subclass 426 wherein the organic compound contains a metal.

Search this class, subclass—
429—for compositions including a metal halide and an organic compound even though it may be disclosed that a complex is formed.

432. Compositions under subclass 410 which contain boron and boron compounds.

433. Compositions under subclass 432 wherein the boron compound contains a halogen.

434. Compositions under subclass 410 which contain a non-metal acid or anhydride (except silicic acid).

Search this class, subclass—
449+—for catalytic or adsorbent compositions which include silicic acid or silica.
450—for catalysts or adsorbents which are acid treated natural occurring silicate.

435. Compositions under subclass 434 wherein the non-metal acid or anhydride contains phosphorus.

436. Compositions under subclass 434 wherein the non-metal acid or anhydride contains sulfur.

437. Compositions under subclass 410 which contain a phosphorus compound.

Search this class, subclass—
435—for catalytic or adsorbent compositions containing a phosphorus containing acid.

438. Compositions under subclass 410 which contain a nitrogen compound.

(1) Note.—This subclass includes cyanides, cyanates, thiocyanates, cyanamids, nitrides and ammonium compounds.

439. Compositions under subclass 410 which contain sulfur, selenium, tellurium, or a compound, thereof.

Search this class, subclass—
436—for catalytic or adsorbent compositions.

440. Compositions under subclass 439 which contain sulfates.

441. Compositions under subclass 410 which contain halogen or a halogen compound.

442. Compositions under subclass 441 wherein the halogen compound contains a Group III metal.

443. Compositions under subclass 410 which contain inorganic carbon compounds.

Search this class, subclass—
436+—for organic carbon compounds.

444. Compositions under subclass 410 which contain free carbon.

Search this class, subclass—
421+—for free carbon containing catalysts or adsorbents when a process including carbonization is claimed.

Search Class—
23—CHEMISTRY, subclass 209.2 for non-adsorbent or non-catalytic carbon products.

445. Processes under subclass 444 wherein the free carbon containing catalysts or adsorbents are subjected to an oxidation or gas treatment.

Search this class, subclass—
415—for processes of regeneration of catalysts or adsorbents including a treatment with gaseous halogen, acid or acid anhydride (except CO_2).
416—for processes of regeneration of catalysts or adsorbents including oxidation treatment.

446. Compositions under subclass 444 which contain a silica or silicate.

447. Compositions under subclass 444 which contain a metal, metal oxide or hydroxide.

448. Processes under subclass 410 wherein an inorganic hydrosol is gelled as spheroidal particles.

Search this class, subclass—
451+—for processes of producing catalytic or adsorptive compositions including the formation of silica gel other than in the form of beads.

Search Class—
18—PLASTICS, subclass 47.2+, for processes of forming particles by comminuting material in the melted state followed by solidification of the comminuted particles.

449. Compositions under subclass 410 which contain silica or a silicate.

(1) Note.—Synthetic silicates are classified as a mixture of silicon dioxide and a metal oxide. Illustration: synthetic magnesium silicate is classified as SiO_2, MgO and will be found in subclass 457.

450. Compositions under subclass 449 wherein naturally occurring silicate has been treated with an acid (except silicic acid).

Search this class, subclass—
428—for catalytic or adsorbent compositions containing a mixture of an organic acid and a silicate.
434+—for catalytic or adsorbent compositions including an inorganic non-silicic acid.

Search Class—
23—CHEMISTRY, subclass 110 for purifying silicates by treating with an acid.

451. Processes under subclass 449 which include the formation of silica gel.

Search this class, subclass—
317—for silica gel compositions and processes of preparation which are not disclosed as being a catalyst or an adsorbent.
448—for processes including the formation of silica gel wherein a bead or spheroidal particle is formed.
449 and 454+—for catalytic or adsorbent compositions in which pre-formed silica gel is employed as a constituent.

Search Class—
23—CHEMISTRY, subclass 182, for silica gel per se in the dried state.

452. Processes under subclass 451 which include the precipitation of another material simultaneously with the precipitation of the silica gel.

453. Processes under subclass 452 which include the precipitation of a group III metal oxide or hydroxide simultaneously with the precipitation of the silica gel.

Search this class, subclass—
455—for catalysts and adsorbents which are mixtures of silica gel and a group III metal oxide or hydroxide.

Search Class—
23—CHEMISTRY, subclass 111+ for the production of base exchange silicates; e. g. zeolites.

454. Compositions under subclass 449 including a metal, metal oxide or hydroxide in addition to the silica or silicate.

(1) Note.—This and indented subclasses include compositions comprising synthetically produced silicates and processes of making such compositions except those processes involving the formation of silica gel for which see subclass 451+.

Search this class, subclass—
450—for mixtures of metal, metal oxide or hydroxide and an acid treated natural occurring silicate.
451+—(see (1) Note above).

455. Compositions under subclass 454 including a group III metal, metal oxide or hydroxide.

Search this class, subclass—
453—for mixtures of silica gel and group III metal oxide produced by coprecipitation process.

456. Compositions under subclass 454 including a group V metal, metal oxide or hydroxide.

457. Compositions under subclass 454 including a group II metal, metal oxide or hydroxide.

458. Compositions under subclass 454 including a group VI metal, metal oxide or hydroxide.

459. Compositions under subclass 454 including a group VIII metal, metal oxide or hydroxide.

460. Compositions under subclass 459 wherein the group VIII element is a noble metal.

461. Compositions under subclass 410 which contain a metal, metal oxide or hydroxide.

(1) Note.—Metal metallates are considered to be a mixture of metals, or metal oxides or hydroxides for the purpose of classification in this or indented subclasses. For example, nickel chromate is classified as a mixture of nickel oxide and chromium oxide.

462. Compositions under subclass 461 which contain a rare earth metal, metal oxide or hydroxide.

463. Compositions under subclass 461 which contain a group III metal, metal oxide or hydroxide.

464. Compositions under subclass 463 which also include a group V metal, metal oxide or hydroxide.

465. Compositions under subclass 463 which also include a group VI metal, metal oxide or hydroxide.

466. Compositions under subclass 463 which also include a group VIII metal, metal oxide or hydroxide.

467. Compositions under subclass 461 which contain a group VI metal, metal oxide or hydroxide.

468. Compositions under subclass 467 which also include a group II metal, metal oxide or hydroxide.

469. Compositions under subclass 467 which also include a group IV metal, metal oxide or hydroxide.

470. Compositions under subclass 467 which also include a group VIII metal, metal oxide or hydroxide.

471. Compositions under subclass 461 which contain manganese, manganese oxide or hydroxide.

472. Compositions under subclass 461 which contain a group VIII metal, metal oxide or hydroxide.

473. Compositions under subclass 472 which also include a group II metal, metal oxide or hydroxide.

474. Compositions under subclass 472 which also include a group I metal, metal oxide or hydroxide.

475. Compositions under subclass 461 which contain a group II metal, metal oxide or hydroxide.

476. Compositions under subclass 461 which contain a group I metal, metal oxide or hydroxide.

477. Compositions under subclass 410 which possess particular shapes, structure or physical forms.

255, Earth Boring

in subclass 1.4, in (2) Note, cancel: "Class 23, Chemistry subclass 257." and substitute: *Class 73, Measuring and Testing, subclass 151.5.*

in (4) Note, cancel: "Class 137, Water Distribution, subclass 18" and substitute: *Class 73, Measuring and Testing, subclass 425.4+.*

260, Chemistry, Carbon Compounds

in the class definition, (3) Note, change "195" to *410*, in subclass 683.15 under "Search Class" change "195" to *410*.

264, Speed Responsive Devices

in the class definition, cancel the reference to class 234, and add in numerical order: *346, Recorders, appropriate subclasses.*

274, Sound Recording and Reproducing

in the class definition, under (2) Note, change "234" to *346*, and change "subclass 1" to *appropriate subclass.*

280, Land Vehicles

in subclass 152.05, under "Search Class" in the reference to class 224, change "29" to *42.12.*

293, Vehicle Fenders

in the class definition, before the period, add: *or for receiving or fending off blows from other vehicles or objects*

cancel the definition of subclass 30, and substitute:

30. Bumpers at opposite ends of a vehicle interconnected through their mounting means so that impact on one is absorbed by the mounting means of both.

Search this class, subclass—
62—for bumpers extending entirely around a vehicle.

in subclass 34, cancel "track" and substitute: *lowered position,*

in subclass 49, add:

Search this class, subclass—
72—for bar type buffers with rollers.

abolish the definitions of subclasses 51, 52, 54, 55, 56, 57, cancel the definition of subclass 58 and substitute:

58. Individual wheel-guards under the class definition extending downwardly in front of each front wheel to clear objects from the path of the wheel.

establish the following subclass definitions:

60. Protective structure under the class definition comprising bars, plates or other barrier structures, mounted on the body-frame or underframe of the vehicle, for fending off blows from other vehicles or objects.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 45, for bumpers combined with carpet sweepers, and subclass 246 for other bumper combinations.
20—WOODEN BUILDINGS, subclass 74 for moldings which may serve as rub rails if applied to a vehicle.
180—MOTOR VEHICLES, subclass 68 for protective structure mounted on the radiator for the protection of the radiator and for radiator grills in combination with radiator shell structure, and subclass 83 for safety devices operated by impact means.
189—METALLIC BUILDING STRUCTURES, subclasses 82, 83 and 84, for grill structures per se and connections between grills and radiator shells.
213—RAILWAY DRAFT APPLIANCES, subclass 9, for cushioned draft devices combined with car end buffers, and subclass 220+, for end bumpers or buffers for absorbing shocks between railway cars.
223—DISPENSING, subclass 192, for dispensers having bumpers to absorb shock.
257—HEAT EXCHANGE, subclass 132, for casings and shields for radiators having means for varying the degree of radiation.

61. Bumpers under subclass 60 especially designed for attachment to bicycles, tricycles, motorcycles and similar vehicles.

62. Bumpers under subclass 60 which extend entirely around the vehicle or which are mounted on the sides of the vehicle, or which extend from the end bumper along the side of the vehicle body or mudguard and are attached to the vehicle side at least at one point.

(1) Note.—End bumpers that merely project around the vehicle corner and are not attached to the sides are classified on other features.

Search this class, subclass—
63—for end bumpers having impact members or bracing members (not serving as impact members) attached to the mudguards at the ends.

Search Class—
20—WOODEN BUILDINGS, subclass 74, for rub strips or moldings of general utility which may be attached to the sides of vehicles.
280—LAND VEHICLES, subclass 150+, for rub strips and moldings combined with vehicle bodies and mudguards.

63. Bumpers under subclass 60 of such design that they require special adaptation of the vehicle body or frame to support or accommodate them, such body or frame features having no utility except in connection with the bumper or its support.

(1) Note.—Combined bumpers and air scoops have been included here when body modification is involved.

Search this class, subclass—
69—for combined features not involving an alteration in the appearance of adjacent vehicle parts. See (1) Note.

Search Class—
180—MOTOR VEHICLES, subclass 69+, for motor vehicle hoods, and subclass 83, for fender and buffer actuated safety devices.
280—LAND VEHICLES, subclass 152+, for vehicle mudguards.
296—LAND VEHICLES, BODIES AND TOPS, for body structures of land vehicles.

64. Bumpers under subclass 60 having vertical impact members and/or auxiliary impact members which may be attached to horizontal impact structure to increase the effective area of same.

(1) Note.—Vertical impact members are those having (1) greater height than width, and (2) a horizontal extent less than the area to be protected, so that they are ordinarily used in pairs.
(2) Note.—Vertical members which only connect or support horizontal impact members or which form the vertical elements of a grill are not considered vertical impact members within the scope of this subclass.
(3) Note.—Auxiliary impact members are those which are attachable to a complete bumper structure, usually to increase its impact area. They may be supported solely by the impact members of the original bumper structure, or have additional support from the body frame, radiator, bumper supporting means, etc.
(4) Note.—Auxiliary impact members must be shorter than the main impact member to which they are attached, but they may have greater horizontal extent than height.
(5) Note.—The main impact bar in this group of subclasses extends across the entire protected area. Center sections connecting wing type bumpers or bumperettes have been placed in subclass 77+.

Search this class, subclass—
58—for individual wheel guards extending downwardly in front of each front wheel to clear objects from the path of the wheel.
76—for center connected sectional impact members. (See (5) Note.)
78, 81+, 93, 94, 96 and 97—for subclasses involving plural vertically spaced impact bars, i. e. (1) those of varying lengths comprising a permanent part of the main impact structure, or (2) auxiliary bars of a length equal to the main impact structure.
80+—for bumpers with impact bars displaced vertically from a horizontal plane.
87—for bumper supports having vertically extending resilient portions not serving as impact members.

Search Class—
224—PACKAGE AND ARTICLE CARRIERS, subclass 42.03+, for auxiliary luggage carriers attachable to bumpers.

65. Bumpers under subclass 64 in which the vertical guards and/or auxiliary impact members are mounted on the impact bar and have no other support connection to the vehicle.

(1) Note.—This subclass includes both combination and subcombination patents.
(2) Note.—The guard may be an elongated front member of a clamp or connection between plural impact bars or between impact bars and support members.

Search this class, subclass—
71—for cushioned guards which are not designed to increase the area of the horizontal impact bar.

Search Class—
224—PACKAGE AND ARTICLE CARRIERS, subclass 42.03+, for luggage carriers attachable to bumpers.
280—LAND VEHICLES, subclass 33.44+, for impact bar guards designed to serve as trailer hitches.

66. Bumper guards under subclass 65 having (1) springs in the guard or its attachment to the bumper and (2) guards which may pivot for releasing other objects, for permitting access to other vehicle parts, or for other reasons.

Search this class, subclass—
72+—for plural position impact bars or those swinging to non-impact position.

67. Bumper guards under subclass 65 which are attached to the horizontal impact structure at only one place and do not serve as horizontal extensions of the impact bar.

(1) Note.—Guards comprising plural elements attached to the impact bar at a single point are included.

68. Bumpers under subclass 60 having mounting means which form a part of the vehicle spring or are connected to the vehicle spring so that the vehicle spring absorbs impact shock, or are connected to sprung and unsprung vehicle parts so that the mount functions in part as a vehicle spring or modifies the action of the vehicle springs.

Search this class, subclass—
79—for sectional or wing type bumpers mounted on vehicle spring horns and/or shackle bolts.
101—for attaching means to connect bumpers to vehicle spring horns and/or shackle bolts.

69. Bumpers under subclass 60 combined with structure not essential to the bumper and having utility in other respects, where the combination is not classified elsewhere.

(1) Note.—This subclass includes, for example, bumpers combined with jacks, stone deflectors, lights, reflectors, license plate holders, indicators, signs, sweepers, receptacles, insulators, circuit makers and breakers.
(2) Note.—Combinations of bumpers with other vehicle structure where the additional structure serves merely as a support for the bumper are classified below on the basis of features claimed, such as the mounting means.
(3) Note.—As to classes 40 and 88, the combination of a bumper with a sign or reflector is classified in those classes when no more bumper structure is claimed than is necessary to mount the sign or reflector.

Search this class, subclass—
63—for bumpers combined with air scoops or splash guards which involve body modification.
82—for mudguard bracing means combined with impact bar support.
95—for bumpers attached to miscellaneous vehicle structure other than side frame members, including attachments to both the side frame and other vehicle parts, as lamp brackets, tire carriers, tank supports, etc.

Search Class—
40—CARD, PICTURE, AND SIGN EXHIBITING, subclasses 20, 125 and 130+, for signs or license plates mounted on bumpers. See (3) Note.
70—LOCKS, subclass 253, for bumpers combined with means for locking the wheels against steering.
88—OPTICS, subclass 81, for reflectors mounted on bumpers. See (3) Note.
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 264, for static charge dischargers.
180—MOTOR VEHICLES, subclass 83, for bumpers combined with means which may control the vehicle steering, brakes and/or power supply.
224—PACKAGE AND ARTICLE CARRIERS, subclass 42.03+, for bumpers combined with luggage and/or spare tire carriers.
250—RADIANT ENERGY, subclass 33, for bumpers combined with or usable as radio aerials.
280—LAND VEHICLES, subclass 33.44+, for bumpers combined with trailer hitches and towing means and bumpers which may be converted into towing means; subclass 5, for bumpers combined with tank truck dispensing means.

70. Bumpers under subclass 60 in which the main impact structure is a horizontal bar or bars or their equivalent and comprising impact bars per se, attaching means for connecting bar type impact structure to a vehicle, and combinations of said impact structure and attaching means.

(1) Note.—If plural bars are involved, the assembly should not be high enough to mask the upper part of the radiator or corresponding side or rear parts of the vehicle nor low enough to reach substantially to the ground.

Search this class, subclass—
60—for impact structures and barriers extending a material distance above or below the usual bumper zone, i. e., those protecting the upper parts of the vehicle, as radiators, windshields, tops, etc., or extending nearly to the ground. See (1) Note.
62—for impact bars of any vertical extent at the sides of or entirely surrounding a vehicle.
64+—for vertically positioned impact bars including those extending to radiator height or above.
92—for impact bar subcombinations.
99+—for subcombinations consisting of connecting means between various bumper elements and between bumper structure and the vehicle.

71. Bumpers under subclass 70 in which the impact member has a cover thereon or has rubber cushions, air cushions, or equivalent yielding members mounted thereon to come in contact with an obstacle.

(1) Note.—Impact bar covers per se are included.

Search this class, subclass—
64+—for guards projecting from the bars to enlarge the area of protection vertically.
72—for bumpers having impact members made of coil springs or rubber.
88—for bumper mounting means made at least in part of rubber.
98—for impact bars having non-resilient sheaths, decorative strips, or the equivalent mounted thereon, which are a permanent part of the impact bar.

72. Bumpers under subclass 70 having an impact member (1) comprising chains, rope, wire, rubber, or coiled springs, and (2) having anti-friction means such as rollers in the impact member.

Search this class, subclass—
71—for cushioned impact members.

Search Class—
24—BUCKLES, BUTTONS, CLASPS, ETC., subclass 115+, for cord and rope holders.

73. Bumpers under subclass 70 having impact members or portions thereof that may be (1) shifted from operative position or (2) carried in two or more alternative positions relative to the vehicle.
(1) Note.—The alternative positions include positions other than normal impact position such as extended parking guard position, non-use position including those permitting access to the vehicle or parts behind the bumper and those facilitating release of interengaged objects, positions close to the ground, or inverted position, and not mere adjustment of mounting means to bring the impact member into a desired permanent position.
(2) Note.—Yielding or yieldably mounted bumpers that move only upon frontal impact with an object are classified in this class on other features.

Search this class, subclass—
34—for vehicle fenders having sections which may be caused to drop to a lowered position by the operator working a hand lever or foot pedal.
62—for side bumpers with sections that may be moved or removed to give access to wheels, etc.
66—for pivoted guards.
90—for bumpers having mounts which may be adjusted either to control the height of the impact bar or keep the supporting arms horizontal in spite of the varying curves of vehicle spring horns.

Search Class—
224—PACKAGE AND ARTICLE CARRIERS, subclass 42.05, for combined tire carriers and movable section bumpers.
280—LAND VEHICLES, subclass 33.44+, for bumpers movable into position for use as tow bars.

74. Bumpers under subclass 73 having pivoted end sections which may swing relative to the center section.
(1) Note.—The movement is usually to release an object or vehicle with which the bumper has become engaged.

Search this class, subclass—
66—for pivoted vertical guards.

Search Class—
16—MISCELLANEOUS HARDWARE, subclass 180+, for spring hinges per se.

75. Bumpers under subclass 70 having the impact bar or bars each made up of two or more sections in horizontal alignment. The bar sections may or may not be connected, but if connected, must not overlap.
(1) Note.—Single wing type impact devices are included if disclosed as such and limited in the claims to mounting means connected to the vehicle at a single point or at closely adjacent points, and are found in this subclass.

Search this class, subclass—
79—for single wing type bumpers supported solely by the vehicle spring horn.
95—for plural point and non-side frame vehicle connections for bumpers generally.

76. Bumpers under subclass 75 in which means is provided to connect the impact sections.

77. Bumpers under subclass 76 in which the connecting means is positioned to receive impacts.
(1) Note.—The connecting means may be a clamp or other short link if in the impact plane.
(2) Note.—If the end impact sections overlap, the patents will be found in appropriate subclasses below.

78. Bumpers under subclass 77 in which at least one of the impact sections comprises plural vertically spaced impact bars.
(1) Note.—Single bar impact sections with plural bar connecting means in the impact plane are included.

Search this class, subclass—
97—for plural vertically spaced bars and connections between them, and see the search notes to that subclass for a complete search.

79. Bumpers under subclass 75 which are attached to the curved portion of spring horn of the vehicle and not at any other point.

Search this class, subclass—
101— for subcombinations relating to spring horn attachments for impact assemblies, and see the notes thereto.

80. Bumpers under subclass 70 having the impact bar or bars displaced in part from the main horizontal plane of the bar.
(1) Note.—The vertical displacement must be in the impact bar for inclusion in this subclass although it may be in that portion of the bar which is rearwardly turned to form part of the supporting means.
(2) Note.—The vertical displacement is usually for the purpose of increasing the effective height of the impact structure of the bumper for a part of its length.
(3) Note.—One piece impact members having cut-out portions are not considered to involve vertical displacement even though the edges of the member have portions in different horizontal planes.

Search this class, subclass—
65+—for auxiliary or detachable members which may be connected to the conventional impact bar to increase its vertical extent.
98—for one-piece impact members having cut-out portions. See (3) Note.

81. Bumpers under subclass 80 having plural spaced impact bars, one or more of which has a portion or portions thereof vertically displaced.
(1) Note.—Impact bars which have their displacement only in rearwardly turned portions thereof are included, though this displacement is ordinarily only for convenience in attaching the plural bars to the supporting means.

Search this class, subclass—
98—for upper and lower impact members integrally connected by single plane portions which may or may not be turned rearwardly of the main impact plane.

82. Bumpers under subclass 81 in which the bars cross one another or at least have portions in the same horizontal plane at some point on the impact face of the bars.

83. Bumpers under subclass 70 which have impact members connected to mudguards, or which have bracing members (not serving as impact members) attached to the mud guards or mud guard brackets.

Search this class, subclass—
63—for bumpers having impact members attached to the sides of the mudguards.
95—for bumpers which are attached to vehicle parts other than the side frames or to plural vehicle parts.

84. Bumpers under subclass 70 having levers or pivoted members which transmit impact shocks to shock absorbing elements.
(1) Note.—While the levers may be resilient, they must have motion as levers; i. e., swinging or pivoted, in addition to mere bending.

Search this class, subclass—
68—for bumpers having levers and shock absorbing elements connected to sprung or unsprung parts of the vehicle to absorb shocks between them.
89—for interposed yielding members having a sliding motion through a fixed connection.

85. Bumpers under subclass 70 in which movement of the impact bar longitudinally of the vehicle is directly opposed by coil springs and/or rigid elongated members yieldably mounted to reciprocate longitudinally under impact.
(1) Note.—The motion of the reciprocating bar is ordinarily opposed by a shock-absorber, brake, or flat or helical coil spring.
(2) Note.—Rubber shock absorbers are included when they are positioned at the end of the reciprocating bar or act in extension or torsion.

Search this class, subclass—
88—for other mounting means having rubber parts.

86. Bumpers under subclass 85 in which the shock absorbing elements are combined with longitudinally reciprocating rigid elements to form elongated strut connections between the impact structure and the vehicle frame.

87. Bumpers under subclass 70 in which impact forces are absorbed by resilient elements yieldable in a vertical plane which extends longitudinally of the vehicle.

Search this class, subclass—
64+—for vertical impact members which are similarly mounted.
68—for mounts yieldable in a vertical plane and connected between sprung and unsprung vehicle parts or for mounts combined with vehicle springs.

88. Bumpers under subclass 70 having rubber or equivalent material incorporated in the impact bar mount.

Search this class, subclass—
71—for rubber covered impact bars or rubber impact receiving devices attached to the face of impact bars.
73—for elongated rubber devices constituting impact members.
84—for rubber shock absorbing elements in combination with levers.
85—for rubber shock absorbing elements combined with reciprocating support bars.

89. Bumpers under subclass 70 in which (1) portions of the impact bars or mounting means are so related to other portions that relative sliding movement between them occurs under impact conditions, or (2) portions of the bumper structure have means such as shackles to limit their displacement relative to one another or prevent rebound or (3) portions of the support comprise links hinged at both ends.
(1) Note.—The slidably related parts may be frictionally engaged in the unstressed bumper or movably connected, or they may not be in contact with the adjacent support member when the bumper is in unstressed condition.

90. Bumpers under subclass 70 having mounts which may be adjusted to control the position of the impact bar in a vertical plane, either to change its height from the ground or to keep the supporting arms horizontal in spite of the variation in the curve of side frame members forming spring horns.

Search this class, subclass—
73—for plural position impact members and those shiftable out of impact position.
100—for adjustable mounting subcombinations.

91. Bumpers under subclass 70 in which the supporting members and impact members form a plurality of loops in the impact plane, i. e., in plan view.
(1) Note.—Any of these loops may be closed by a vehicle member interposed between two immediately adjacent supporting arms, such as those connected to opposite sides of a spring horn, but the space between supporting and/or impact members and the transverse frame or radiator of the vehicle is not considered a loop.
(2) Note.—At least one loop must have impact member components.

Search this class, subclass—
75+—for sectional or wing type bumpers which may incorporate plural loops.
84—for plural loop supporting structures which have pivoted levers for transmitting impact shocks to shock absorbing elements.
85—for plural loop supporting structures incorporating coil springs which directly oppose longitudinal movement of the impact bar.
89—for supporting structure having plural loops, the elements of which may slide relative to each other upon impact or are connected by shackles or hinged links.

92. Bumpers under subclass 90 having three or more loops.

93. Bumpers under subclass 91 having plural impact bars lying in the same vertical plane.

Search this class, subclass—
97—for plural vertically spaced impact bars and connections therebetween, and see the notes thereto for a complete search.

94. Bumpers under subclass 93 in which two or more of the spaced impact bars are connected with a support member, which is usually a backing bar, at approximately the center of the bumper.

95. Bumpers under subclass 70 which are connected to vehicle structure other than longitudinal frame members. They may or may not be connected also to a longitudinal frame member.

Search this class, subclass—
62—for bumpers attached to vehicle sides.
68—for bumpers attached to vehicle springs.
75—for sectional bumpers which may be connected to vehicle structure other than spring horns.
79—for sectional bumpers attached to vehicle spring horn.
83—for bumpers attached to mudguards or mudguards and other structure.
99+—for vehicle connections per se.

96. Bumpers under subclass 70 having connections between the extreme ends of the impact bar and supporting structure and such bumpers having connections between the ends of plural vertically spaced impact bars.
(1) Note.—End connections per se are included.

Search this class, subclass—
72—for connections between flexible cord impact bars and supporting structure.
81+—for end connections between plural impact bars where the ends of at least one bar are bent out of the horizontal plane for connection to the ends of the other bars.
97 and 99—for other connections between plural impact bars.

97. Bumpers under subclass 70 comprising two or more vertically spaced impact bars.
(1) Note.—Impact bars comprising plural sections overlappingly connected end to end to form a single impact member or having plural vertically spaced portions formed by cutouts in a one piece bar have been classified as single impact bars.

Search this class, subclass—
69–89—for plural bar bumpers which may protect substantially the entire front end of the vehicle.
75—for sectional or wing type bumpers having plural spaced bars.
81+—for bumpers having plural impact bars, one or more of which is displaced in part from its main horizontal plane.
93+—for plural impact bars in structures having plural loop forming supporting means.
96—for connections between the extreme ends of plural vertically spaced impact bars, supporting means being sometimes interconnected.

98. Impact bar subcombinations under subclass 70.
(1) Note.—Bars formed by stamping from a single sheet to give the appearance of plural bars are here.

Search this class, subclass—
64+—for vertical and/or auxiliary area increasing impact members, including bumper guards.
71—for cushioned or covered impact bars and impact bar covers per se, where the cover is not a permanent part of the impact bar.
72—for impact members comprising cables, coil springs, rubber devices without rigid backing means, or rollers.
91+—for impact members formed into loops or similar yielding mounting arrangements.
97—for plural vertically spaced impact bars.

99. Subcombinations under subclass 70 consisting of specific means for connecting the parts of the bumper assembly together or to the vehicle.

Search this class, subclass—
70–97—for attaching means combined with impact bars.
89—for shackles, hinged links, and joints which permit relative sliding between bumper parts upon impact.
95—for attaching means which may or may not be combined with impact members and are connected to vehicle structure other than or in addition to side frame members.
96—for end connections for impact bars.

Search Class—
24—BUCKLES, BUTTONS, CLASPS, ETC., subclass 115+ for cord and rope holders, and subclass 243+, for clasps.
182—METALLIC BUILDING STRUCTURES, subclass 36+, for joints and connections for metallic structures, and see the search notes thereto.
248—SUPPORTS, subclass 200+, for bracket type supports of general utility.
287—ROD JOINTS OR COUPLINGS, for rod joints and couplings.

100. Connecting means under subclass 99 having a bumper supporting strut which is adjustable in a vertical plane extending longitudinally of the vehicle.

Search this class, subclass—
90—for combinations of impact bars with attaching means which allow vertical adjustment of the impact bar.

101. Connecting means under subclass 99 which is attached to the vehicle spring horn.
(1) Note.—A spring horn is the curved side frame of the vehicle to which the end of the spring is ordinarily connected.

Search this class, subclass—
68—for connections between bumpers and vehicle springs.
79—for wing type bumpers combined with means for mounting same on the vehicle spring horn.
90—for vertically adjustable impact bars, which are usually mounted on vehicle spring horns.
99—for straight side frame attachments and those which without change can be used with straight side frames.
100—for vertically adjustable mountings which are usually disclosed for connection to spring horns.

294, Handling, Hand and Hoist-Line Implements

In subclass 50.6, cancel (2) Note and substitute:

(2) Note.—See class 30, CUTLERY, particularly subclass 124+, for cutlery devices having means acting to hold or dispose of material, and see (7) Note to the definition of subclass 124 for a statement of the line.

In (5) Note, change the period to a semicolon and add: *for those equipped with a cutter see class 7, Compound Tools, subclass 14.1+.*

296, Land Vehicles, Bodies and Tops

In subclass 37.2, under "Search Class" in the reference to class 224, change "29" to *42.18.*

309, Fluid Sprinkling, Spraying and Diffusing

in subclass 24, in "(2) Search Classes", in the reference to class 252, change "260" to *410*.

312, Supports, Cabinet Structures

in subclass 31 in "(3) Search Classes", in the reference to class 252, change "260" to *410*.

314, Electric Lamp and Discharge Devices, Consumable Electrodes

in the class definition under "(8) Search Classes" in the reference to class 240, change "45" to *46.01*.

315, Electric Lamp and Discharge Devices, Systems

in subclass 1, under "Search Class" in the reference to class 234, change "234", both occurrences to: *346*; and change "subclass 61" to *appropriate subclass*,

in subclass 82, under "Search Class" add: *See subclass 46.01+, for light projectors having a light dimming screen.*

316, Electric Lamp and Discharge Devices, Manufacture and Repair

in subclass 25, under "Search Class" in the reference to class 252, change "260" to *410*.

322, Electricity, Single Generator Systems

in subclass 99, under "Search Class" change "234" to *346*.

343, Communications, Radiant Energy

in the class definition, in section V, change "234" to *346*, and under "Search Class" change "234" to *346*.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 32

July 19, 1948

The following transfers are ordered to take effect immediately:

Class 181, Acoustics, from Division 5 to Division 69.
Class 274, Sound Recording and Reproducing, from Division 5 to Division 69.
Class 346, Recorders, from Division 41 to Division 69.
Class 240, Illumination, from Division 30 to Division 65.
Class 17, Butchering, from Division 2 to Divison 5.
Class 119, Animal Husbandry, from Division 2 to Division 5.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 33

July 21, 1948

The following transfer is ordered to take effect Monday, July 26, 1948:

Class 272, Amusement and Exercising Devices, from Division 57 to Division 62.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,441,288. POWER TOOL. Patented May 11, 1948. Power-driven tool controlled by a push button on the body has lever for operating the push button mounted in a handle. Handle is attached to the tool body by a yoke fastened to handle and encircling the body. Lever engages the push button at one end and has a finger loop at its other end. The push button is operated by the lever and is maintained in position by pressure on the loop. (Owner) J. A. Bernard Rancourt, P. O. Box 266, St. George, East, Beauce, Quebec, Canada. Group 35—42—69. Reg. No. 9,837.

Pat. 2,428,462. PORTABLE FLUSH-TYPE COMMODE. Patented Oct. 7, 1947. Lightweight stainless steel bed pan for hospital use mounted on a portable tubular wheeled frame maybe moved where needed inasmuch as it is connected to standard plumbing outlets by means of flexible expanding tubes. The frame includes a crank-operated gear and toothed rack bar combination which enables the pan to be raised to bed height for conventional bed pan use or utilized in a lowered position. A flushing valve, operated by patient, is attached to the pan. The device, which may be installed in place of a toilet, cannot overflow in ordinary use even when enema or colonic irrigation is given. A working model, in continuous hospital use for over a year, may be inspected. (Owner) Isadore Levin, Suite 102, 1801 Eye St., N. W., Washington, D. C. Groups 32—61; 33—61—73. Reg. No. 9,838.

Pat. 2,197,079. METHOD AND DEVICE FOR MEASURING PRESSURES. Patented Apr. 16, 1940. A device for accurately measuring low gas or vapor pressures from the current intensity of a glow discharge taking place in the gas. Comprises a discharge tube having an envelope provided with an opening for the introduction of gas. Two spaced electrodes within the envelope form a discharge space. A magnetic field is produced in the discharge space whose lines of force form an angle of more than 40° The electric lines of force between the electrodes determine the pressure of the gas from the intensity of the discharge. For use with diffusion pumps operating with vapors instead of mercury. (Owner) Hartford National Bank and Trust Company, Trustee. Licensing agent, Philips Laboratories, Inc., 100 East 42nd St., New York 17, N. Y. Group 36—13. Reg. No. 9,839.

Pat. 2,217,539. TORSION METER. Patented Oct. 8, 1940. A device for measuring the angle of torque in rotary machine parts. Comprises a condenser system consisting of two variable condensers, one armature of each condenser attached to the rotary member at different points thereon. A second armature of each condenser is attached to the rotary member by elastic means so as to rotate without vibration. The two condensers are connected to an electrical measuring circuit which includes a cathode ray oscillograph. The variation in the capacity of both condensers is indicated on a measuring instrument, and the angular rotation of each condenser rotor may be determined. The angle of torque to be determined is obtained from the difference between the angular rotations of both condenser rotors. (Owner) Hartford National Bank and Trust Company, Trustee. Licensing agent, Philips Laboratories, Inc., 100 East 42nd St., New York 17, N. Y. Group 36—13. Reg. No. 9,840.

Pat. 2,438,272. STATIC ELIMINATOR FOR RADIO RECEIVING SETS. Patented Mar. 23, 1948. A resistor for reducing static interference has resistance units of a narrow pleated foil arranged in series, alternate rows being at right angles to each other and adjacent foil strips in edge-to-face contact. These sets of foil units are included in a case which is divided longitudinally in separate chambers, the case having circuit terminals at the ends of each chamber. (Owner) D. A. Dance, 905 West Washington Blvd., Fort Wayne 2, Ind. Group 36—61. Reg. No. 9,841.

Pat. 2,435,461. SCAFFOLDING. Patented Feb. 3, 1948. Scaffolding is made up of pairs of tubular uprights of square cross section having, on all four sides, a series of spaced slots above each of which is a small round hole. The uprights are connected by brackets of similar cross section provided with V-notched ends. When assembled, the uprights are placed so that the corners of a pair of uprights face each other. The bracket ends are hooked into the slots and staple-like clips are forced into the holes above the slots to form a stop which prevents upward movement of a platform supported on the bracket. Scaffolding may be erected in position by a simple hooking operation without screws, rivets, or the like. (Owner) William Alfred Parker, % F. B. Bossbardt, 31 Regent House, Cannon St., Manchester 4, England. Groups 25—99; 33—81. Reg. No. 9,842.

Pat. 2,435,912. SADDLE CLEANING CRADLE. Patented Feb. 10, 1948. Wooden cleaning cradle is an open wedge-shaped frame adapted to support a flat or English riding saddle. The cradle is composed of front- and rear-facing blocks (one of smaller dimensions than the other) connected by sides having a straight bottom edge and a convexo-concave upper edge further provided with rounded corners that prevent damage to the saddle. In use, the saddle is placed upside down on the cradle so that the undersurface is made accessible for cleaning. (Owner) Marion I. Voorhes, Front Royal, Va. Group 25—99. Reg. No. 9,843.

Pat. 2,442,557. DEVICE FOR HOLDING FOOD DURING STORAGE, COOKING, AND SLICING. Patented June 1, 1948. A tray is used in the home for supporting food to be sliced horizontally, for re-heating food, or for storage in a refrigerator. The tray has shallow side members for catching juices or small particles of food, and an upturned end with a handle for steadying the device. A removable insert plate has upstanding prongs on which the food rests for slicing. A retaining clamp is attached to the insert plate by a pair of tension springs. May be manufactured of aluminum or the like in various sizes or as a particular compartment for a refrigerator or oven. (Owner) Everett E. Cox, 601 South Vermont Ave., Los Angeles 5, Calif. Groups 32—29; 34—41; 39—81; 40. Reg. No. 9,844.

Pat. 2,441,161. GAS GENERATOR FOR COMBUSTIBLE FARM WASTES. Patented May 11, 1948. A down-draft gas-producing furnace reduces waste vegetable and wood byproducts on a farm (such as weeds, corn cobs, sawdust, etc.) to an economical gas suitable for heating, cooking, and operating farm equipment and machinery. A large con-

crete cupola in shape of a truncated cone is buried in the ground. Hinged doors on top receive material to be burned. Air enters through inlet on side. Gases at base are drawn into perforated pipes protected by shields and are carried upward through a conduit at side to a filter. Conduit has U-bend or trap to prevent fluids in filter from passing downward. Pump or other means provides constant suction through connection and filter. Filtered gases may be stored and used independently or combined with natural or other gases. (Owner) Herbert E. McCordle, Groton, S. D. Groups 28—86; 35—22. Reg. No. 9,845.

Pat. 2,418,776. METHOD AND APPARATUS FOR CENTRIFUGALLY WASHING SUGAR, CHEMICALS, ETC. Patented Apr. 8, 1947. In apparatus for centrifugal treatment of sugar and like solid materials there is a cleansing treatment for the removal of certain impurities followed by a centrifugal washing step. A washing spray is intermittently controlled by a circuit-maker and -breaker mechanism automatically regulated by the wash head for opening and closing the switch for a predetermined period of time. (Shop-rights granted to Holly Sugar Corporation of Colorado Springs, Colo.) (Owner) F. W. Kopplin, Box 591, Hardin, Mont. Group 35—51. Reg. No. 9,846.

Pat. 2,439,561. PRESSURE INDICATOR FOR PNEUMATIC TIRES. Patented Apr. 13, 1948. Tire pressure indicator for rotation with a vehicle wheel is not influenced by centrifugal forces caused by rotation of wheel. A pressure-responsive switch for actuating an annunciator on dash of car is held in open position when tire pressure is normal. A piston for actuating switch is held against an air pressure bag inside indicator by a spring. An integral stem of bag and stem of tire are, respectively, connected to the arms of a T-piece containing valve so that the number of hermetic seals is not increased by presence of indicator. When tire pressure falls below a predetermined limit, bag partially collapses permitting piston to move and close switch. Indicator is adjustable so that it will operate when relatively small decrease in tire pressure occurs, and it is easily installed on wheels. (Owner) P. A. Cressey, 225 West Myrtle St., San Antonio 1, Tex. Group 38—31. Reg. No. 9,847.

Pat. 2,391,529. TOY. Patented Dec. 25, 1945. Toy has an inclined trough for receiving a row of marbles which are automatically released and transferred one at a time into a chute below trough in a manner that is interesting and amusing. An elongated transfer member is pivotally mounted below trough, and an elongated trigger member has its lower end pivoted to this member. Upper apertured end of trigger member operates in a discharge opening in trough to deliver a marble into a pocket in upper end of transfer member, which is weighted to normally assume a position for receiving marble. Weight of marble tilts transfer member, permitting marble to drop into chute. Once operation of toy is started by depressing and releasing transfer member, its operation is automatic until last marble is transferred. (Owner) Russell T. Walker, P. O. Box 1738 Sta. A, Bremerton, Wash. Group 39—41. Reg. No. 9,848.

Pat. 2,187,655. FILM CUTTER. Patented Jan. 16, 1940. A plier-like hand device for cutting motion picture films while still in the projector or viewing machine. Two pivoted members have jaw portions and handle portions, one jaw portion having two cutting edges and teeth to engage the perforations of the film. The other jaw has cutting edges which cooperate with the cutting edges of the first jaw when actuated by movement of the handles and places the film in correct position during the cutting. A lever, U-shaped in cross section, has inwardly bent fingers at one end which fit between the teeth in one jaw portion and firmly hold the film in position during cutting. A compression spring on other end of lever provides the necessary pressure on the film. (Owner) Edward Cann, 4 Watchung Place, Summit, N. J. Groups 33—52; 35—69. Reg. No. 9,849.

Pat. 2,279,572. SWINGING DOOR. Patented Apr. 14, 1942. A swinging door having a frame in shape of an inverted L, and a sheet of flexible material forming the main portion of the door, is designed for use in factories. Frame, made of metal tubing, is pivoted or hinged at one edge to swing in one or two directions and is provided with conventional spring devices. The main portion of the door, which is clamped between strips to top and side of frame, is of rubber or rubberised fabric designed to flex so that, when a workman or truck goes through, a combined swinging and bending prevents damage to the door and keeps door from opening as wide as ordinarily happens. The flexible material is reinforced along the free edges by a strip of vulcanised rubber. (Owner) Edward Cann, 4 Watchung Place, Summit, N. J. Groups 33—83; 30—32. Reg. No. 9,850.

Pat. 2,411,543. POWER PRESS. Patented Nov. 26, 1946. A clutch control mechanism for power presses whereby the press can be readily used for either single-stroke or continuous operation. The clutch is preferably in the form of an internally expanding friction brake which is forced into its engaged position by a spring and held in its disengaged position by the toggle mechanism. When the clutch revolves during a stroke, the toggle engages the cam member and is locked in position. When it is desired to operate the press, the box-rod to which the toggle is pivoted is depressed by the foot pedal, releasing the toggle and permitting the spring to expand the friction brake. (Owner) Edward Cann, 4 Watchung Place, Summit, N. J. Group 35—66—69. Reg. No. 9,851.

Pat. 2,415,695. ATTACHING NUTS TO PLATES. Patented Feb. 11, 1947. Clinch nut assembly comprises a circular plate having a nut with hexagon-shaped edges joined to it. The assembly is drilled so that the bore which passes through the nut portion is of slightly smaller diameter. When inserted into a round opening, for example that of the sheet to which it is to be riveted, the central bore of the assembly is expanded by a punch, forcing the outer edges of the nut to bite into the edges of the sheet opening, holding the assembly securely against turning. A portion of the bore is threaded to receive a screw. (Owner) Edward Cann, 4 Watchung Place, Summit, N. J. Group 33—12—91. Reg. No. 9,852.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 17, 1948

[VOL. 613, NO. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 506,997. FARMER'S PRIDE HYBRID CORN CO., Templeton, Halbur, and Carroll, Iowa. Filed Aug. 7, 1946.

The portrait shown in the drawing is fanciful and is not that of any living individual. No claim is made to the representation of the goods shown on the drawing nor is any claim made to the word "Farmer's" shown on the drawing, apart from the mark shown.

FOR HYBRID SEED CORN.

Claims use since Feb. 5, 1944.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 516,375. PRACTICAL PRODUCTS COMPANY, Minneapolis, Minn. Filed Jan. 25, 1947.

Kleer-Flo

FOR LIQUID SOLVENTS FOR CARBON, PAINT, ANALINE DYES, VARNISH, GUMMY RESIDUES, FOR USE IN THE CLEANING OF AUTOMOTIVE PARTS AND OTHER METAL PIECES.

Claims use since Apr. 22, 1943.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 490,655. GOLD METAL HAIR PRODUCTS, Brooklyn, N. Y. Filed Oct. 29, 1945.

GOLD MEDAL

FOR BRILLIANTINE, HAIR DYES, OILS AND LIQUIDS FOR SCALP AND HAIR, SCALP CREAMS, HAIR AND SCALP TONICS, HAND CREAMS, HAND LOTIONS, BATH SALTS, BATH OILS AND BATH WATER EXTRACTS, DEODORANT CREAMS AND LOTIONS, EYE CREAMS AND LOTIONS, POMADES, TOOTH PASTE, TOOTH POWDER, BODY, FACE AND HAIR POWDERS, COLD CREAM, SKIN CREAMS, CLEANSING CREAMS, ROUGE, SHAMPOOS, COLOGNES, PERFUMES, TOILET WATERS, SKIN LOTIONS, LIPSTICK, NAIL CREAMS AND POLISH.

Claims use since Sept. 20, 1945.

Ser. No. 507,702. ALUMINUM COMPANY OF CANADA, LIMITED, Montreal, Quebec, Canada. Filed Aug. 21, 1946.

ALCAN

FOR ALUMINUM SULPHATE.

Claims use since January 1944.

Ser. No. 510,013. CORNELL PHARMACAL CO., Union City, N. J. Filed Oct. 1, 1946.

COBLEX

FOR VITAMIN B-COMPLEX EXTRACT DERIVED FROM YEAST.

Claims use since June 1, 1945.

Ser. No. 516,566. OREX LABORATORIES, INC., Toledo, Ohio. Filed Jan. 29, 1947.

Mu-Sol-Dent

Applicant disclaims the word "Dent" apart from the mark.

FOR PREPARATIONS FOR ORAL HYGIENE.

Claims use since Jan. 16, 1922.

Ser. No. 518,389. DERMIK PHARMACAL CO., INC., Brooklyn, N. Y. Filed Mar. 3, 1947.

ZETAR

FOR MEDICAL PREPARATION FOR DERMATOLOGICAL USE, FOR THE TREATMENT OF EXFOLIATIVE DERMATITIS, DISSEMINATE NEURODERMATITIS, CONTACT DERMATITIS, HYPOSTATIC DERMATITIS, DERMATOPHYTOSIS, PSORIASIS, SEBORRHEIC DERMATITIS AND ATOPIC ECZEMA.
Claims use since May 1, 1945.

Ser. No. 520,401. JEAN-PASCAL LORRIAUX & CIE., Paris, Seine, France. Filed Apr. 9, 1947.

Monastère

FOR PERFUMES.
Claims use since Jan. 30, 1946.

Ser. No. 523,445. WOOLFOLK CHEMICAL WORKS, LTD., Fort Valley, Ga. Filed June 2, 1947.

DI-CHLOR-MULSION

FOR INSECTICIDE.
Claims use since September 1938.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 520,055. REMINGTON ARMS COMPANY, INC., Bridgeport, Conn. Filed Apr. 2, 1947.

JUNIOR SPECIAL

The word "Special" is disclaimed apart from the mark shown.
FOR FIREARMS—NAMELY, SPORTING SHOTGUNS AND RIFLES, AND PARTS THEREOF.
Claims use since Feb. 24, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 486,454. EDWARD L. BLUM, doing business as The Baltimore Salvage Company, Baltimore, Md., assignor to Baltimore Salvage Co. Inc., Baltimore, Md., a corporation of Maryland. Filed July 30, 1945.

BALTIMORE'S HARDWARE FAIR

"Baltimore's" is hereby disclaimed apart from mark shown.
FOR ASPHALT COMPOSITIONS—NAMELY, PLASTIC CEMENT, FOR SEALING STRUCTURAL SURFACES.
Claims use since June 15, 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 510,477. ESTATE OF LESTER G. BLACK, doing business as Black Industries, Cleveland, Ohio. Filed Oct. 9, 1946.

"SPASAVER"

FOR HANGER SUPPORTS DESIGNED FOR SUPPORTING CLOTHES HANGERS HUNG FROM THE TOP EDGE OF AN AUTOMOBILE WINDOW.
Claims use since June 1, 1946.

Ser. No. 522,901. DIXON VALVE & COUPLING CO., Philadelphia, Pa. Filed May 23, 1947.

AIR KING

Applicant disclaims the word "Air" apart from the mark.
FOR AIR HOSE COUPLINGS AND CLAMPS.
Claims use since June 20, 1933.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 507,703. ALUMINUM COMPANY OF CANADA, LIMITED, Montreal, Quebec, Canada. Filed Aug. 21, 1946.

ALCAN

FOR ALUMINUM AND ALUMINUM ALLOY INGOT, SHEET, TUBES AND EXTRUDED FORMS REQUIRING FURTHER FINISHING, ALUMINUM AND ALUMINUM ALLOY CASTINGS REQUIRING FURTHER FINISHING.
Claims use since January 1944 on aluminum and aluminum alloy ingot, sheet, tubes and extruded forms; since April 1945 on aluminum and aluminum alloy castings.

CLASS 15

OILS AND GREASES

Ser. No. 514,508. SUN OIL COMPANY, Philadelphia, Pa. Filed Dec. 18, 1946.

SUNVIS

FOR LUBRICATING OILS.
Claims use since November 1944.

Ser. No. 515,281. SUN OIL COMPANY, Philadelphia, Pa. Filed Jan. 4, 1947.

SUN OCCIDENT

FOR LUBRICATING OIL.
Claims use since May 1916.

Ser. No. 521,772. JACK H. WEINER, doing business as U. S. Highway Supply Co., Chicago, Ill. Filed May 2, 1947.

Ever-Top

FOR PENETRATING LIQUID OIL CONCENTRATE AND LUBRICANT TO BE ADDED TO MOTOR FUEL FOR REDUCING CARBON AND INCREASING THE POWER AND EFFICIENCY OF COMBUSTION ENGINES.
Claims use since May 9, 1945.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 510,403. REICHHOLD CHEMICALS, INC., Detroit, Mich. Filed Oct. 7, 1946.

REVEILLE RED

Applicant disclaims the word "Red" apart from the mark.
FOR ORGANIC PIGMENTS USED FOR COLORING PAINTS.
Claims use since Aug. 12, 1946.

CLASS 19

VEHICLES

Ser. No. 498,902. WILLIE W. JACKSON, Houston, Tex. Filed Mar. 25, 1946.

BULTITE

FOR ATTACHMENTS FOR COMMERCIAL WAGONS, TRUCKS, AND TRAILERS, IN THE FORM OF RACKS, RAILS, AND UPRIGHT AND HORIZONTAL MEMBERS FOR SUCH VEHICLES TO RETAIN VARIOUS ARTICLES OF EQUIPMENT AND MATERIAL FOR TRANSPORTATION, INCLUDING LIGHT BULKY COMMODITIES SUCH AS HAY, COTTON, COTTON SEED, AND OTHER LIKE MATERIALS, AND FOR ENCLOSING CATTLE AND LIVESTOCK DURING TRANSPORTATION.
Claims use since Jan. 15, 1946.

Ser. No. 502,958. FIBRCAN CORPORATION, New York, N. Y. Filed May 29, 1946.

MONARCH

FOR HAND TRUCKS OF PLASTIC, FIBRE OR METAL FOR HANDLING MATERIAL AND WASTE.
Claims use since Mar. 15, 1946.

Ser. No. 507,364. BELL AIRCRAFT CORPORATION, Town of Wheatfield, N. Y. Filed Aug. 14, 1946.

BELL *Aircraft*

Applicant disclaims the words "Helicopter" and "Aircraft" except as used in conjunction with the design.
FOR HELICOPTERS AND STRUCTURAL PARTS THEREOF.
Claims use since June 10, 1946.

Ser. No. 507,365. BELL AIRCRAFT CORPORATION, Town of Wheatfield, N. Y. Filed Aug. 14, 1946.

BELL *Aircraft*

Applicant disclaims the words "Helicopter" and "Aircraft" except as used in conjunction with the design.
FOR HELICOPTERS AND STRUCTURAL PARTS THEREOF.
Claims use since June 10, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 504,205. PENN VACUUM STORES, INC., Philadelphia, Pa. Filed June 19, 1946.

SUPER VAC

FOR ELECTRIC VACUUM CLEANERS.
Claims use since July 1937.

Ser. No. 505,167. TRADIO, INC., Deal, N. J. Filed July 6, 1946.

The drawing is lined to indicate the colors red, blue and gold. The words "News," "Drama," "Sports," "Music," "Comedy" and "The Hotel Radio" are disclaimed apart from the mark, as shown.

FOR ELECTRICAL EQUIPMENT, SPECIFICALLY RADIO AND TELEVISION RECEIVING SETS.

Claims use since May 1, 1946.

Ser. No. 511,677. FINCH TELECOMMUNICATIONS, INC., Passaic, N. J. Filed Oct. 29, 1946.

FAXOGRAPH

FOR TRANSMITTERS AND RECORDERS FOR TRANSMITTING AND RECORDING FACSIMILE SIGNALS BY ELECTRIC CURRENTS ON OR IN AN APPROPRIATE RECORD MEDIUM, PARTS THEREOF AND SUPPLIES INCLUDING RECORD SHEETS, TREATED PAPER, TREATED STENCIL FORMING MATERIAL, AND STYLI.

Claims use since Oct. 29, 1946.

Ser. No. 513,557. H. L. DALIS, INC., New York, N. Y. Filed Dec. 2, 1946.

Applicant disclaims the word "Antenna."

FOR AUTOMOBILE RADIO RECEIVING ANTENNAE, TELEVISION RECEIVING ANTENNAE, FREQUENCY MODULATION RECEIVING ANTENNAE, ROOF TOP RECEIVING ANTENNAE, WINDOW TYPE RECEIVING ANTENNAE.

Claims use since May 2, 1946.

Ser. No. 515,808. UNITED ACCESSORIES CORP., New York, N. Y. Filed Jan. 15, 1947.

Protect-O-Flash

The word "Flash" is disclaimed apart from the mark as shown.

FOR ELECTRICAL WARNING DEVICE FOR MOTOR VEHICLES IN FORM OF PERIODIC LIGHT INTERRUPTOR.

Claims use since Mar. 31, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 493,667. VERA A. DAUS, doing business as Daus Duplicators, New York, N. Y. Filed Dec. 21, 1945.

COPYGRAM

FOR TOY DUPLICATORS OF THE HECTOGRAPH TYPE.

Claims use since Sept. 19, 1945.

Ser. No. 494,712. SCIENTIFIC ANGLERS, Midland, Mich., assignor to Scientific Anglers, Inc., Midland, Mich., a corporation of Michigan. Filed Jan. 12, 1946.

LO-LEADER

The word "Leader" is disclaimed apart from the mark.

FOR COMPOSITION COMPRISING A SILICONE RESIN AND A COMMINUTED ADHERENT SUCH AS A CLAY USED FOR TREATING FISHING LINE LEADERS, FISHING LINES AND ARTIFICIAL FISHING BAIT, FOR WATERPROOFING AND INCREASING THE WETTABILITY OF THE SURFACE OF THE TREATED ARTICLE FOR THE PURPOSE OF MAKING THEM SINK.

Claims use since May 1, 1945.

Ser. No. 500,349. ACADEMY AWARD PRODUCTS, INC., New York, N. Y. Filed Apr. 17, 1946.

ACADEMY AWARD

FOR MECHANICAL GAMES—NAMELY, BASE BALL, AIRPLANE, AND FOOT BALL, WHEREIN THE OPERATOR OPERATES A PLUNGER TO SET A MISSILE IN MOTION; PLAYING CARDS; BOWLING BALLS, AND BOWLING PINS, BOWLING ALLEYS, BILLIARD TABLES, GOLF BALLS AND GOLF CLUBS; AND SPRING AND ELECTRICALLY ACTUATED MECHANICAL TOYS IN THE FORM OF ANIMALS, HUMAN FIGURES, MOTOR CARS AND SCOOTERS.

Claims use since Feb. 6, 1946.

Ser. No. 502,821. OSCAR HUGO GUTHEIL, Columbus, Ohio. Filed May 27, 1946.

The representation of the four ace cards is disclaimed.

FOR PLAYING CARDS.

Claims use since Sept. 1, 1942.

Ser. No. 506,793. PETRIE-LEWIS MFG. CO., INC., New Haven, Conn. Filed June 4, 1946.

FOR MAGICIAN'S TRICK AND MAGICAL EFFECTS APPARATUS—NAMELY, EASELS, TABLES, REELS, STANDS, RACKS, TRIPODS, BOXES, TRAYS, TUBES, CARDS, CARD HOLDERS, RIBBONS, COINS, COIN CATCHERS, VANISHERS, REPRODUCERS, WANDS, HATS, BALLS, CORDS, MATCHES, MATCH LIGHTERS, MATCH BOXES, CANDLES, CANDLE TUBES, THIMBLES, RODS, FUNNELS, CUPS, SAUCERS, GLASSES, FISH RODS, BOWLS, PITCHERS, CLOCKS, ROCKETS, FIRE CRACKERS, BOTTLES, FANS, PENCILS, DISCS, DOVE PANS, RABBIT PANS, DUCK PANS, BAGS, RINGS, TARGETS, GUNS, BULLETS, CIGARETTE HOLDERS, HANDKERCHIEFS, FLAGS, ROSE BUSHES, BOOMERRANGS, AND THUMB AND FINGER TIPS.

Claims use since May 1, 1923.

Ser. No. 507,897. JOHN C. FULLER, doing business as Fuller Manufacturing Company, Columbus, Kans. Filed Aug. 23, 1946.

The applicant disclaims exclusive use of the words "Better Bait" and the representation of a fish, except in the association shown.

FOR EDIBLE FISH BAIT, CONSISTING OF A MIXTURE OF WHOLE WHEAT FLOUR, MOLASSES AND VINEGAR.

Claims use since June 1946.

Ser. No. 508,074. EUGENE A. SMEJA, doing business as The Magic Snell Tackle Company, Rochester, N. Y. Filed Aug. 26, 1946.

Magic Snell

No claim is made to the word "Snell" and the representation of the fish hooks, apart from the mark shown.

FOR FISH HOOKS.

Claims use since Mar. 15, 1946.

Ser. No. 509,106. ALEX SMIDTH, doing business as Alex Products Co., New York, N. Y. Filed Sept. 14, 1946.

No rights to registration of the word "Toy" are claimed apart from the mark.

FOR TOYS—NAMELY, PLASTIC TRAIN SETS, BABIES' RATTLES, AND HOLLOW PLASTIC ALPHABET BLOCKS.

Claims use since Feb. 1, 1946.

Ser. No. 510,849. LUDINGTON-GRISWOLD, INC., Saybrook, Conn. Filed Oct. 14, 1946.

CONN-KER-AIR

The representation of the airship is disclaimed except in association with the remainder of mark.

FOR TOY AIRCRAFT.

Claims use since Aug. 28, 1946.

Ser. No. 535,794. GODFREY L. CABOT, INC., Boston, Mass. Filed Sept. 26, 1947.

STERLING-L

FOR CARBON BLACK FOR USE IN THE MANUFACTURING OF INKS.
Claims use since Jan. 19, 1946.

Ser. No. 545,538. CHARLES E. SALMON, INC., Detroit, Mich. Filed Dec. 26, 1947.

PRESTO

FOR PRINTING INKS AND PRINTING INK VARNISHES.
Claims use since July 1946 on printing inks; and since February 1947 on printing ink varnishes.

Ser. No. 545,564. UNDERWOOD CORPORATION, New York, N. Y. Filed Dec. 26, 1947. Under section 2f of the act of 1946.

OLD DUTCH

Applicant claims ownership of registration No. 156,824.
FOR CARBON PAPER AND INKED RIBBONS.
Claims use since May 13, 1912.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 515,445. NORTHWESTERN STATES PORTLAND CEMENT COMPANY, Mason City, Iowa. Filed Dec. 11, 1947. Under section 2f of the act of 1946.

PLASTILITH NORTH WESTERN

Applicant claims ownership of registration No. 70,578.
FOR AIR-ENTRAINING PORTLAND CEMENT.
Claims use since Aug. 1, 1943.

Ser. No. 527,185. RICHARDS-WILCOX MANUFACTURING COMPANY, Aurora, Ill. Filed July 5, 1947.

FYE-RW-JARD

FOR SHEET STEEL DOORS FOR USE IN BUILDING CONSTRUCTION.
Claims use since January 1936.

Ser. No. 536,129. PEARCE METAL PRODUCTS, INCORPORATED, Youngstown, Ohio. Filed Sept. 29, 1947.

AIR-RAY

FOR METAL AWNINGS.
Claims use since June 16, 1947.

Ser. No. 536,262. MALVERN BRICK AND TILE COMPANY, Malvern, Ark. Filed Sept. 30, 1947.

ARK-ACE

FOR FIRE BRICK.
Claims use since Mar. 1, 1944.

Ser. No. 536,312. THE TECHKOTE COMPANY, Inglewood, Calif. Filed Sept. 30, 1947.

MASTEX

FOR SELF-SETTING MASTIC COATING AND SEALING COMPOUND, FOR USE AS A COATING AND SEAL FOR CRACKS AND JOINTS IN CONCRETE AND MASONRY.
Claims use since Sept. 15, 1947.

Ser. No. 538,354. THE CAMBRIDGE TILE MFG. CO., Cincinnati, Ohio. Filed Oct. 20, 1947.

CAMBRITE

FOR INDIVIDUAL SECTIONS OF TILE BEARING NUMBERS AND USED TO FORM HOUSE NUMBER ASSEMBLIES.
Claims use since Feb. 8, 1947.

Ser. No. 538,719. A. B. CHANCE COMPANY, Centralia, Mo. Filed Oct. 23, 1947. Under section 2f of the act of 1946.

CHANCE

FOR SAFETY CABLE SUSPENSION CARS COMPRISING A PULLEY SUSPENDED SEAT CARRIED BY PULLEYS FOR MOUNTING ON A CABLE WHICH EXTENDS FROM POLE TO POLE, FOR SERVICING OF MULTIPLE CONDUCTOR CABLES SUSPENDED FROM THE FIRST-MENTIONED CABLE, LINE MEN'S POLE PLATFORMS, PLATFORM RAILINGS, AND WOOD INSULATOR CONDUCTOR HOODS USED AS PLATFORMS ON LINE CONDUCTORS.
Claims use since May 10, 1937.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 529,219. DRUGE BROTHERS MANUFACTURING CO., Oakland, Calif. Filed July 14, 1947.

TRU-FLATE

FOR AIR CHUCKS; WATER FAUCETS CONTAINING A VALVE FOR FILLING VEHICLE RADIATORS; AIR HOSE REPAIR KITS COMPRISING AIR CHUCKS, HOSE CLAMPS, AND PIPE HOSE BARBS; HOSE CONNECTORS.
Claims use since May 1929.

Ser. No. 531,425. BELL & GOSSETT COMPANY, Morton Grove, Ill. Filed Aug. 15, 1947.

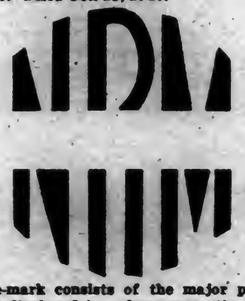
The name "Bell & Gossett Company" is disclaimed as a part of the mark.
FOR FLOW CONTROL VALVES, PRESSURE REDUCING VALVES, PRESSURE RELIEF VALVES, DUAL UNIT VALVES CONSISTING OF PRESSURE REDUCING AND PRESSURE RELIEF VALVES, WATER MIXING VALVES, AND PIPE FITTINGS FOR HOT WATER HEATING SYSTEMS.
Claims use on flow control valves since July 1, 1930; on pressure reducing valves, pressure relief valves, and dual unit valves consisting of pressure reducing and pressure relief valves since Jan. 2, 1935; on water mixing valves since Apr. 15, 1938; and on pipe fittings for hot water heating systems since Aug. 10, 1937.

Ser. No. 532,684. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Aug. 28, 1947.

CAMEL

FOR PLUMBING FIXTURES—NAMELY, WATER CLOSETS.
Claims use since Feb. 1, 1932.

Ser. No. 532,685. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Aug. 28, 1947.



DELUXE

FOR PLUMBING FIXTURES—NAMELY, WATER CLOSETS.
Claims use since Mar. 1, 1933.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 537,720. THE NILES ROLLING MILL COMPANY, Niles, Ohio. Filed Oct. 13, 1947.

The trade-mark consists of the major portion of the letters NRM displayed in a form presenting substantially a circle with a blank band extending diametrically across the letters.
FOR COPPER BEARING STEEL SHEETS AND GALVANIZED STEEL SHEETS.
Claims use since November 1936.

Ser. No. 542,388. ZIV STEEL & WIRE CO., Chicago, Ill. Filed Nov. 25, 1947.

Zivco

Applicant claims ownership of registration No. 227,785.
FOR DRILL AND TOOL STEEL.
Claims use since February 1923.

Ser. No. 543,198. THE LINCOLN ELECTRIC COMPANY, Cleveland, Ohio. Filed Dec. 3, 1947.

TUNGWELD

FOR METALLIC WELDING RODS AND WELDING WIRE.
Claims use since Oct. 23, 1947.

Ser. No. 545,089. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

Applicant claims ownership of registrations Nos. 266,862 and 285,909.
FOR ROLLED STEEL IN VARIOUS FORMS AND FINISHES, COMPRISING SHEET STEEL IN BLACK, GALVANIZED, BLUE ANNEALED, MUFFLE ANNEALED, PAINTED, AND OTHER FINISHES, AND WIRE, PLAIN, AND GALVANIZED.
Claims use since May 15, 1947.

Ser. No. 545,095. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 232,479.
FOR LEAD COVERED OR COATED STEEL OR IRON SHEETS.
Claims use since July 29, 1926.

Ser. No. 545,099. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

CONTINENTAL

Applicant claims ownership of registrations Nos. 266,862 and 285,909.
FOR ROLLED STEEL IN VARIOUS FORMS AND FINISHES, COMPRISING SHEET STEEL IN BLACK, GALVANIZED, BLUE ANNEALED, MUFFLE ANNEALED, PAINTED, AND OTHER FINISHES, AND WIRE, PLAIN, AND GALVANIZED.
Claims use since June 5, 1929.

CLASS 15

OILS AND GREASES

Ser. No. 528,904. PERKINS SOAP COMPANY, Springfield, Mass. Filed July 18, 1947.

BORNO

FOR WAX-LIKE EMULSIONS FOR LUBRICATING MOLDS, TEXTILE THREADS, AND THE LIKE.
Claims use since May 5, 1938.

Ser. No. 531,259. THE TEXAS COMPANY, New York, N. Y. Filed Aug. 13, 1947.

SPINDURA

FOR LUBRICATING OILS.
Claims use since August 1938.

Ser. No. 533,567. E. F. HOUGHTON & CO., Philadelphia, Pa. Filed Sept. 5, 1947.

HOUPOID

FOR LUBRICATING OILS AND LUBRICATING GREASES.
Claims use since July 22, 1942.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 536,929. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947. Under section 2f of the act of 1946.

MURAD

The drawing is lined for the color gold.
FOR CIGARETTES.
Claims use since 1904.

Ser. No. 536,931. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947. Under section 2f of the act of 1946.

TURKISH TROPHIES

The drawing is lined for the color gold.
FOR CIGARETTES.
Claims use since 1900.

Ser. No. 536,932. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947. Under section 2f of the act of 1946.

VAN BIBBER

FOR CIGARS.
Claims use since 1893.

Ser. No. 536,934. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

Friends

Applicant claims ownership of registration No. 370,325.
FOR SMOKING TOBACCO.
Claims use since 1898.

Ser. No. 539,742. PENN TOBACCO COMPANY, Wilkes-Barre, Pa. Filed Oct. 31, 1947.

KENTUCKY CLUB

Applicant claims ownership of registration No. 304,768.
FOR SMOKING TOBACCO.
Claims use since 1900.

CLASS 19

VEHICLES

Ser. No. 501,306. ROBERT S. BOLES, Humarock, Mass. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

HUMAROCK BOATS

No claim is made to the word "Boats" apart from the mark.
FOR POWER DRIVEN, ROW, AND SAIL BOATS.
Claims use since 1929.

Ser. No. 528,428. CALUMET MACHINE CO., Three Rivers, Mich. Filed July 12, 1947.

CONTROLATOR

FOR DEVICE WHICH FUNCTIONS AS A HYDRAULIC PRESSURE BOOSTER, HILL CONTROL, AND BRAKE LOCK FOR AUTOMOBILES.
Claims use since November 1941.

Ser. No. 528,438. THE FLOUR CITY ORNAMENTAL IRON COMPANY, Minneapolis, Minn. Filed July 12, 1947.

Aluma Craft
BOAT COMPANY

The words "Craft," "Boat," and "Company" are disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 429,596.
FOR BOATS—NAMELY, SMALL PLEASURE CRAFT INCLUDING ROW BOATS AND OARS.
Claims use since April 1946.

Ser. No. 529,844. THE WAYNE WORKS, Richmond, Ind. Filed July 28, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 266,324.
FOR AUTOMOTIVE AND RAILROAD VEHICLE BODIES.
Claims use since 1939.

Ser. No. 531,160. THE STUDEBAKER CORPORATION, South Bend, Ind. Filed Aug. 12, 1947.

Applicant claims ownership of registrations Nos. 229,607, 277,160, 277,275, 277,299, and 277,300.
FOR AUTOMOBILES.
Claims use since Sept. 30, 1937.

Ser. No. 532,316. MERCURY AIRCRAFT, INC., Hammondsport, N. Y. Filed Aug. 25, 1947.

DELIVERS MORE SAFE MILES PER DOLLAR
ALUMIBUS

The slogan "Delivers More Safe Miles Per Dollar" and the representation of the goods are disclaimed apart from the mark as shown.
FOR BUSES.
Claims use since October 1946.

Ser. No. 540,515. THE PAUL BUNYAN BAIT COMPANY, Minneapolis, Minn. Filed Nov. 8, 1947.

PAUL BUNYAN

The trade-mark is the name of a legendary character in American folk literature. Applicant claims ownership of registration No. 424,119.
FOR BOATS—NAMELY, INBOARD AND OUTBOARD MOTOR BOATS, ROW BOATS, DUCK BOATS, AND CANOES.
Claims use since May 9, 1947.

Ser. No. 541,113. E. A. LABORATORIES, INC., Brooklyn, N. Y. Filed Nov. 14, 1947.

Red Head

Applicant claims ownership of registration No. 322,613.
FOR VEHICLE HEATERS.
Claims use since August 1930.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 501,007. ALLEN E. RAU, doing business as Rau's Chicken Dinner Inns, Union, Wash., assignor to Rau Electric Manufacturing Company, Inc., Union, Wash. Filed Sept. 15, 1947. Under section 2f of the act of 1946.

Rau's

FOR ELECTRIC RANGES AND COOKERS.
Claims use since Oct. 15, 1939.

Ser. No. 511,565. MASONITE CORPORATION, Chicago, Ill., and Laurel, Miss. Filed Aug. 28, 1947.

BENELEX

FOR ELECTRICAL PANEL BOARDS, COMPOSITE PANELS FOR ELECTRICAL USES, SWITCHBOARD PANELS, RADIO PANELS.
Claims use since Aug. 13, 1946.

Ser. No. 512,918. FRED A. METLEN, Seattle, Wash. Filed Sept. 15, 1947. Under section 2f of the act of 1946.

FRED LITE

FOR REFLECTORS FOR ELECTRIC LIGHTS.
Claims use since June 15, 1941.

Ser. No. 518,111. STITT IGNITION COMPANY, Columbus, Ohio. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

STITT

FOR AUTOMOTIVE AND GAS ENGINE SPARK PLUGS AND PARTS THEREFOR.
Claims use since 1928.

Ser. No. 527,431. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947. Under section 2f of the act of 1946.

AJUSTO-SPEDE

Applicant claims ownership of registration No. 373,583.
FOR ELECTRIC MOTOR-CLUTCHES, INCLUDING MOTORS AND CONTROLS THEREFOR.
Claims use since May 10, 1939.

Ser. No. 528,129. PARR ELECTRIC CO., INC., Newark, N. J. Filed July 8, 1947. Under section 2f of the act of 1946.

Parr

Applicant claims ownership of registration No. 158,359.
FOR FRICTION TAPE AND SPLICING COMPOUND (RUBBER INSULATING TAPE).
Claims use since July 1, 1919.

Ser. No. 528,985. JASPER BLACKBURN PRODUCTS CORPORATION, St. Louis, Mo. Filed July 21, 1947. Under section 2f of the act of 1946.

BLACKBURN

FOR SOLDERLESS CONNECTORS FOR ELECTRIC WIRES AND GROUND ROD CLAMPS.
Claims use since 1934 on solderless connectors for electric wires; and since 1936 on ground rod clamps.

Ser. No. 529,059. LE JAY MANUFACTURING CO., Minneapolis, Minn. Filed July 21, 1947.

LEJAY

FOR ELECTRICAL EQUIPMENT AND SUPPLIES—NAMELY, ELECTRICAL OUTBOARD MOTORS AND WELDING GENERATORS.
Claims use since 1933.

Ser. No. 533,048. PLASTAL MANUFACTURING CO., Pasadena, Calif. Filed Sept. 2, 1947.

The words "Big Amp" are disclaimed apart from the mark.
FOR WELDING ELECTRODE HOLDERS, CABLE CONNECTORS, AND TERMINAL LUGS.
Claims use since Mar. 30, 1945.

Ser. No. 533,593. MINNESOTA MINING AND MANUFACTURING COMPANY, St. Paul, Minn. Filed Sept. 5, 1947.

SCOTCH

FOR RECORDING TAPE FOR MAGNETIZED REPRODUCTION.
Claims use since June 1947.

Ser. No. 534,665. THE PEP BOYS, MANNY, MOE & JACK, doing business as Sturdee Storage Battery Co., Philadelphia, Pa. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 271,928.
FOR STORAGE BATTERIES.
Claims use since Jan. 1, 1929.

Ser. No. 535,144. GIBSON REFRIGERATOR COMPANY, Greenville, Mich. Filed Sept. 20, 1947. Under section 2f of the act of 1946.

GIBSON

Applicant claims ownership of registrations Nos. 398,223 and 398,460.
FOR ELECTRIC COOKING STOVES.
Claims use since Jan. 1, 1939.

Ser. No. 536,910. THE LELAND ELECTRIC COMPANY, Dayton, Ohio. Filed Oct. 6, 1947. Under section 2f of the act of 1946.

Leland

FOR ELECTRICAL APPARATUS—NAMELY, MOTORS, GENERATORS, VARIABLE SPEED MOTOR CONTROLS, AND INVERTERS.
Claims use since October 1935.

Ser. No. 537,103. RUDOLPH B. THORNTON, Winchester, Mass. Filed Oct. 7, 1947.

FLASH

FOR PORTABLE FIRE ALARMS COMPRISED OF A BELL AND BELL RINGING MECHANISM OPERATED BY DRY CELLS AND SET IN OPERATION THROUGH THE ACTUATION OF A TEMPERATURE CONTROLLED ELEMENT.
Claims use since Sept. 12, 1947.

Ser. No. 539,515. HARDEN ASSOCIATES, INC., New York, N. Y. Filed Oct. 30, 1947.

DEVON

FOR RADIO RECEIVING SETS.
Claims use since Oct. 20, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 478,683. GEMLOID CORPORATION, Elmhurst, Long Island, N. Y. Filed Oct. 30, 1947.

FOR SPORTING AND RECREATIONAL ARTICLES OF SEALED PLASTIC SHEET STRUCTURE—NAMELY, UTILITY BAGS AND PILLOWS, BEACH PILLOWS, BEACH ROLLS, BEACH BALLS, SWIMMERS' WINGS, SWIM RINGS, SAFETY BELTS, BEACH ROLL AND PILLOW COMBINATION.
Claims use since August 1944.

Ser. No. 496,787. WALTER D. HEDENKAMP, doing business as B. L. Fry Products Company, St. Louis, Mo. Filed Oct. 31, 1947.

JUNIOR-PRO

FOR LIGHTWEIGHT HORSESHOE SETS—NAMELY, HORSESHOES AND STAKES, LIGHTWEIGHT HORSESHOE PAIRS, INDOOR GOLF GAMES INCLUDING GOLF CLUBS, INDOOR GOLF CUPS, AND WOODEN GOLF BALLS, TROLLING UNITS FOR FISHING, GOLF SETS INCLUDING GOLF CLUBS, GOLF BAG, GOLF TEES, AND GOLF BALLS, GOLF CUPS, BASEBALL CATCHERS' MITTS, BASEBALL FIRST BASEMAN'S MITTS, TOY JEEPS IN WHICH CHILDREN CAN RIDE, AND ELECTRIC EYE KITS INTENDED FOR USE AS TOYS.
Claims use since Nov. 5, 1945.

Ser. No. 497,528. CHICAGO ROLLER SKATE COMPANY, Chicago, Ill. Filed Oct. 25, 1947.

Velvet-Tread

FOR ROLLER SKATES WITH SHOES ATTACHED AND ROLLERS FOR ROLLER SKATES.
Claims use since Mar. 1, 1909.

Ser. No. 507,985. EDWARD W. KOEPNICK, doing business as Allstate Engineering Service, Dayton, Ohio. Filed Oct. 18, 1947.

The vertical parallel lines are used to denote red. The term "Torpedo" is disclaimed apart from the mark.
FOR TOY INCLUDING A PROJECTORY, A PROJECTILE, AND A TARGET SIMULATING A BATTLESHIP.
Claims use since Aug. 5, 1946.

Ser. No. 509,635. VERDELLE CLARK, Presque Isle, Maine. Filed Aug. 12, 1947. Under section 2f of the act of 1946.

FOR ARTIFICIAL FISHING FLIES.
Claims use since June 1941.

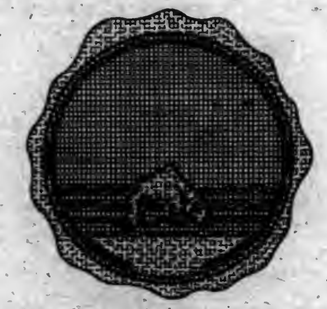
Ser. No. 516,749. WOLVERINE SUPPLY AND MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Sept. 9, 1947.

MAGIC MUSIC

The word "Music" is disclaimed except as used in connection with the word "Magic" in the trade-mark.
FOR MUSICAL TOYS.
Claims use since Dec. 21, 1945.

Ser. No. 520,507. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Aug. 15, 1947.

Lucky 13



FOR FISH LURES.
Claims use since 1922.

Ser. No. 527,070. B. F. GLADDING & CO. INC., South Otselic, N. Y. Filed July 5, 1947.

Whip-slik

FOR FISHING LINES.
Claims use since August 1936.

Ser. No. 527,082. B. F. GLADDING & CO. INC., South Otselic, N. Y. Filed July 5, 1947.

The drawing is lined to indicate the colors gold and black. No claim is made to the exclusive use of the representation of a fish apart from the mark.
FOR FISHING LINES.
Claims use since 1940.

Ser. No. 528,196. JOSEPH DAVIS PLASTICS COMPANY, Arlington, N. J. Filed July 9, 1947.

JODA
U.S.A.

The letters "U. S. A." are disclaimed apart from the mark.
FOR CHILDREN'S TOY RATTLES AND CHILDREN'S TOY COMBS AND BRUSHES.
Claims use since July 1945.

Ser. No. 528,824. TERRI LEE CO., Lincoln, Nebr. Filed July 17, 1947.

Terri Lee

The mark as shown constitutes a facsimile signature of the first two given names of Terri Lee Gradwohl Taylor; consent is given.

FOR DOLLS.

Claims use since July 1, 1946.

Ser. No. 529,120. WARREN PAPER PRODUCTS CO., Lafayette, Ind. Filed July 21, 1947. Under section 2f of the act of 1946.

BUILT-RITE

FOR TOYS—NAMELY, DOLL HOUSES AND OTHER BUILDINGS, REPRESENTATIONS OF HUMAN FIGURES, ANIMAL FIGURES, AND OF HOME, FARM, INDUSTRIAL AND MILITARY EQUIPMENT COMPRISING FURNITURE, FENCES, FIRE PLACES, TUNNELS, BRIDGES, BILLBOARDS, PACKAGES, SIGNALS, TRENCHES, TRUCKS, TENTS, AND GUNS; PICTURE PUZZLES, AND GAMES—NAMELY, CHECKERS, SHOOTING GALLERIES (TARGET AND RUBBER BAND SHOOTING GUNS), NAVAL TARGET SHOOTING (SHIPS AND RUBBER BAND SHOOTING GUNS), ARMY TARGET SHOOTING (TRENCHES, SOLDIERS, AND RUBBER BAND SHOOTING GUNS), AND PITCHING GAMES (TARGET AND HAND-THROWN PIECES).

Claims use since 1934.

Ser. No. 531,180. AMCO SPORTS DISTRIBUTORS, St. Louis, Mo. Filed Aug. 13, 1947.

FOR ATHLETIC AND SPORTING GOODS—NAMELY, ARCHERY BOWS, ARROWS AND TARGETS; TENNIS, SQUASH, AND BADMINTON RACQUETS, BALLS, SHUTTLECOCKS, AND NETS; BASEBALL AND SOFTBALL BATS, BALLS, GLOVES AND NETS; FOOTBALLS, BASKETBALLS, HANDBALLS, VOLLEY BALLS, SOCCER BALLS; PUNCHING BAGS, GOLF BAGS, AND CLUBS; HUNTING AND FISHING SUPPLIES—NAMELY, DECOYS, CALLS, FISHING RODS, REELS, LINES, TACKLE BOXES, ARTIFICIAL FLIES, AND LURES; GAME SETS FOR PLAYING CHESS, CHECKERS, BACKGAMMON, CROQUET, SHUFFLEBOARD, DARTS, AND HORSE SHOES.

Claims use since June 1945.

Ser. No. 531,727. SHAPELEIGH HARDWARE COMPANY, doing business as Diamond Manufacturing Co., St. Louis, Mo. Filed Aug. 18, 1947.

BLACK DIAMOND

FOR FISHING LINES, FISHING RODS AND FISHING REELS.

Claims use since Dec. 22, 1915.

Ser. No. 532,057. RAYBESTOS-MANHATTAN, INC., Passaic, N. J. Filed Aug. 21, 1947. Under section 2f of the act of 1946.

Manhattan MR

The mark comprises the initials "MR" and the words "Manhattan," regardless of the color or style of lettering. Applicant claims ownership of registration No. 382,172.

FOR BOWLING BALLS.

Claims use since June 12, 1939.

Ser. No. 532,635. ROESSLER CORPORATION, Philadelphia, Pa. Filed Aug. 27, 1947.

SAMBA-SWIMMER

FOR FISH LURES AND ARTIFICIAL BAIT.

Claims use since July 8, 1947.

Ser. No. 533,431. ARMOUR AND COMPANY, Chicago, Ill. Filed July 5, 1947.

VARSITY

FOR STRINGS FOR TENNIS, BADMINTON, AND SQUASH RACKETS.

Claims use since 1917.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 483,601. APPLETON WOOD PRODUCTS COMPANY, Appleton, Wis. Filed Nov. 10, 1947.

PLAS-TEX

FOR DIE BLOCKS, CUTTING BOARDS, AND CUTTING BLOCKS MADE FROM PLASTIC OR WOOD, SAID DIE BLOCKS, CUTTING BOARDS, AND CUTTING BLOCKS ALL CONSISTING OF A BOARD OR BLOCK UPON WHICH MATERIAL IS LAID DURING THE PROCESS OF TRIMMING OR CUTTING PATTERNS THEREFROM.

Claims use since May 5, 1945.

Ser. No. 513,183. LEWIS-SHEPARD PRODUCTS, INC., Watertown, Mass. Filed July 7, 1947. Under section 2f of the act of 1946.

LEWIS-SHEPARD

FOR MATERIALS-HANDLING EQUIPMENT ACTUATED HORIZONTALLY OR FOR LIFTING PURPOSES MANUALLY OR BY OR WITH THE AID OF MOUNTED POWER UNITS (INCLUDING MECHANICAL OR HYDRAULIC EQUIPMENT, GASOLINE ENGINES, ELECTRIC MOTORS, OR COMBINATION GASOLINE ENGINE-ELECTRIC GENERATOR UNITS)—NAMELY, LIFT TRUCKS, LIFTING DOLLIES, LIFTING FORK TRUCKS, LIFTING FORK AND TILT TRUCKS, LIFTING INDUSTRIAL POWER TRUCKS, LIFTERS, STACKERS, PORTABLE ELEVATORS AND DUMBWAITERS, PORTABLE CRANES, AUXILIARY CRANES, HOISTS, PILING MACHINES, AND TIERING MACHINES—TOGETHER WITH ACCESSORIES THERETO AND PARTS THEREFOR—NAMELY, CHAIN CONTROLS, TURNTABLES, CANTILEVER JACKS, WINCHES, HIGH-SPEED DRIVES, HINGES FOR HIGH-STACKING MACHINES, LADDERS FOR PERMANENT ATTACHMENT TO HIGH-STACKER MACHINES, HYDRAULIC RELEASES, SPRING BALANCE CYLINDERS, BROKEN CABLE SAFETY DEVICES, ROLLERS, CASTERS, FRAME SPLICES, CABLE CONTROL FLOOR STOPS, PLATFORM RETAINING BARS FOR STACKING MACHINES, DETACHABLE SKIDS, BARREL ROLLS, REMOVABLE ROLLERS, AND ROLLER PLATFORMS.

Claims use since 1920.

Ser. No. 515,032. THE MAJESTIC SILVER COMPANY, New Haven, Conn. Filed Oct. 13, 1947.

Majesco

FOR TABLE CUTLERY AND FLATWARE—NAMELY, KNIVES, FORKS, SPOONS, GRAVY LADLES, BUTTER SPREADERS, SUGAR SHELLS, AND SERVING SPOONS; CUTLERY—NAMELY, BUTCHER KNIVES, PARING KNIVES, SLICING KNIVES FOR SLICING MEATS AND VEGETABLES; AND KNIVES OF GENERAL UTILITY, ALL MADE OF STAINLESS STEEL OR OTHER BASE METALS.

Claims use since May 1946.

Ser. No. 527,626. CEEJAY PRODUCTS COMPANY, Los Angeles, Calif., assignor to Ceejay Products Company, Los Angeles, Calif., a partnership composed of Charles A. Munz and Rosella J. Munz. Filed July 5, 1947.

"800, Jr."

No claim is made to the term "Jr." apart from the mark.

FOR POWER MACHINE CLUTCHES.

Claims use since May 10, 1947.

Ser. No. 527,792. BURGESS-MANNING COMPANY, Libertyville, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

BURGESS

Applicant claims ownership of registration No. 305,063.

FOR MUFFLERS AND SILENCERS FOR QUIETING NOISES AT EXHAUSTS AND INTAKES OF INTERNAL COMBUSTION ENGINES, COMPRESSORS, AND THE LIKE; INTAKE AIR CLEANERS AND COMBINATION CLEANERS AND SILENCERS; AND PULSATION ABSORBERS FOR MINIMIZING PRESSURE AND VELOCITY PULSATIONS IN GASEOUS STREAMS BY SNUBBING SAID PULSATIONS.

Claims use since Sept. 9, 1929.

Ser. No. 528,365. THE NEW YORK AIR BRAKE COMPANY, New York and Watertown, N. Y. Filed July 11, 1947.

The mark consists of the letters "N" and "Y" written as a monogram followed by the letters "C" and "O" which are written as another monogram. The mark is regarded as forming the pronounceable word "NYCO" and the goods are commonly orally designated in that manner. Applicant claims ownership of registrations Nos. 86,543 and 86,727.

FOR TRACK SANDERS.

Claims use since May 29, 1947.

Ser. No. 528,685. BALTIMORE HARDWARE COMPANY, Baltimore, Md. Filed July 16, 1947.

MISTER FIX-IT

The figure shown on the composite mark is fanciful. Applicant disclaims the representation of the tools shown in the mark.

FOR SCREW-DRIVERS, HAMMER, PLIERS, AND SAW, ALL SOLD IN A CLOTH KIT AS A UNIT.

Claims use since February 1947.

Ser. No. 529,395. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn. Filed July 24, 1947.

M-M

ZEPHYR

FOR PYROPHORIC CIGAR LIGHTERS.
Claims use since Sept. 10, 1940.

Reg. No. 415,639. Registered Aug. 14, 1945. GALTER MANUFACTURING COMPANY, Chicago, Ill. Republished by Galter Products Co., Chicago, Ill., a corporation of Illinois.

WINDJAMMER

FOR PYROPHORIC CIGAR LIGHTERS.
Claims use since Sept. 10, 1940.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 169,341. Registered June 12, 1923. NATIONAL MORTAR AND SUPPLY COMPANY OF PITTSBURGH, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

BANNER

FOR LIME.
Claims use since the month of October 1907.

Reg. No. 179,554. Registered Feb. 12, 1924. MILWAUKEE CORRUGATING COMPANY, Greenfield, Wis. Republished by Inland Steel Products Company, Milwaukee, Wis., a corporation of Delaware.

"MILCOR"

FOR SHEET-METAL BUILDING PRODUCTS—TO WIT, EAVES TROUGH AND EAVES TROUGH DROPS, ENDS, AND FITTINGS; CONDUCTOR PIPE AND CONDUCTOR-PIPE ELBOWS AND FITTINGS; BUILDING CORNERS, CORNER BEADS, BASE SCREEDS, MOLDINGS AND PLASTER TERMINALS; CEILING, ROOFING, AND SIDING; AND FINIALS.
Claims use since November 1911.

Reg. No. 224,909. Registered Mar. 8, 1927. MILWAUKEE CORRUGATING COMPANY, Milwaukee, Wis. Republished by Inland Steel Products Company, Milwaukee, Wis., a corporation of Delaware.

StayRib

FOR METAL LATH.
Claims use since on or about Dec. 1, 1921.

Reg. No. 288,535. Registered Nov. 3, 1931. MEDUSA PORTLAND CEMENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

STONESET

FOR NON-STAINING WATERPROOFED MORTAR CEMENT.
Claims use since Apr. 29, 1931.

Reg. No. 328,114. Registered Sept. 17, 1935. MEDUSA PORTLAND CEMENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

FOR NON-STAINING WATER-PROOFED MORTAR CEMENT; PORTLAND CEMENT; MASONRY CEMENT; AND WATERPROOFING COMPOUNDS FOR INCORPORATION IN MORTAR AND CONCRETE.
Claims use since Aug. 1, 1893.

Reg. No. 345,608. Registered May 4, 1937. THE CAMBRIDGE-WHEATLEY CO., Cincinnati, Ohio, assignor to The Cambridge Tile Manufacturing Company, Cincinnati, Ohio, a corporation of Ohio. Republished by The Cambridge Tile Manufacturing Co., Cincinnati, Ohio, a corporation of Ohio.

The words "Bright With Color" are disclaimed.
FOR CERAMIC, CLAY, WALL TILE, GLAZED AND UNGLAZED.
Claims use since Mar. 1, 1936.

Reg. No. 345,630. Registered May 4, 1937. NATIONAL MORTAR AND SUPPLY COMPANY OF PITTSBURGH, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

ROYAL

FOR LIME.
Claims use since May 7, 1931.

Reg. No. 349,073. Registered Aug. 17, 1937. THE CAMBRIDGE TILE MANUFACTURING CO., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

CAMBRIDGE

FOR CERAMIC, CLAY WALL TILE, GLAZED AND UNGLAZED.
Claims use since 1885.

Reg. No. 352,797. Registered Dec. 14, 1937. CLARENCE R. REX, Toledo, Ohio. Republished by registrant.

WEATHERITE

FOR SPECIALLY PREPARED, TREATED AND COMPOUNDED MORTAR, STUCCO, ARTIFICIAL STONE, CONCRETE PRODUCTS, AND THE LIKE.
Claims use since on or about Dec. 3, 1936.

Reg. No. 357,756. Registered June 14, 1938. MEDUSA PORTLAND CEMENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

The words "High Early Strength" and "Cleveland, Ohio" are disclaimed.
FOR PORTLAND CEMENT.
Claims use since Apr. 21, 1936.

Reg. No. 401,462. Registered May 18, 1943. A. B. CHANCE COMPANY, Centralia, Mo., a corporation of Missouri. Republished by registrant.

TIPS

FOR LINEMEN'S PLATFORMS, PLATFORM RAILINGS, AND LIVE LINE GUARDS COMPRISING RECTANGULAR WOODEN TROUGHS WHICH COVER AND ARE SUPPORTED BY THE LINE AT A CROSS ARM TO PROTECT THE LINEMEN FROM THE LINE AND PERMIT THEM TO SIT OR STAND ON THE CROSS SUPPORT BY THE LINE.
Claims use since Jan. 1, 1926.

Reg. No. 409,231. Registered Sept. 26, 1944. DARLINGTON VENEER COMPANY, INC., Darlington, S. C., a corporation of South Carolina. Republished by registrant.

PERMAWOOD

FOR PLYWOOD.
Claims use since May 15, 1943.

Reg. No. 415,417. Registered Aug. 7, 1945. PHC HOUSING CORPORATION, New York, N. Y., a corporation of Ohio. Republished by registrant, present location Columbus, Ohio.

FOR PREFABRICATED BUILDINGS AND STRUCTURAL PARTS THEREOF.
Claims use since Sept. 28, 1934.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 205,244. Registered Nov. 3, 1925. THE GRISWOLD MANUFACTURING COMPANY, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.
The drawing is lined for the colors red and blue. The name "Griswold" is disclaimed.

FOR ALUMINUM AND IRON COOKING UTENSILS—NAMELY, PERCOLATORS, GRIDDLES, SKILLETS; KETTLES—NAMELY, TEA, MASLIN, ROASTING, BASTING, FLAT-BOTTOM STOVE, LOW STOVE, BOILING, REGULAR STOVE, ECCENTRIC STOVE, BAKE; ROASTERS, WAFFLE-IRONS, CASSEROLES, PITCHERS; BOILERS—NAMELY, DOUBLE, BERLIN, HAM; POTS—NAMELY, COFFEE, TEA, BOILING, REGULAR STOVE, FLAT-BOTTOM STOVE, ROASTING, ECCENTRIC STOVE, LOW STOVE, BAKE; BOWLS, BASTERS; PANS—NAMELY, OYSTER, OMELET, FRY, SAUCE, BAKE, GEM, MUFFIN, BREAD, BREADSTICK, WAFFLE, IRON FRY, APPLECAKE, DANISH CAKE, PLETT; PATTY IRONS.
Claims use since Dec. 11, 1924.

Reg. No. 206,139. Registered Nov. 24, 1925. ELCO TOOL AND SCREW CORPORATION, Rockford, Ill., a corporation of Illinois. Republished by registrant.

ELCO

FOR WOOD SCREWS, WASHER HEAD SCREWS, MACHINE SCREWS, HEADLESS SCREWS, SPECIAL SCREWS, ROLLED THREAD PARTS, RIVETS, UPSET SHOULDERED PARTS, WIRE PINS, COLD HEADED PARTS, AND THREADED WIRES.
Claims use since Dec. 1, 1922.

Reg. No. 215,525. Registered July 20, 1926. ADVANCE PATTERN & FOUNDRY COMPANY, Chicago, Ill. Republished by Advance Aluminum Castings Corp., Chicago, Ill., a corporation of Illinois.

ADVANCE
CAST
ALUMINUM
PRODUCTS

The words "Cast Aluminum Products" are disclaimed.
FOR CAST-ALUMINUM COOKING UTENSILS.
Claims use since January 1921.

Reg. No. 228,103. Registered May 24, 1927. THE CAPEWELL HORSE NAIL COMPANY, Hartford, Conn. Republished by The Capewell Manufacturing Company, Hartford, Conn., a corporation of Connecticut.

FOR HORSE NAILS.
Claims use since Jan. 26, 1927.

Reg. No. 261,770. Registered Sept. 24, 1929. NATIONAL MUELLERMIST COMPANY, Detroit, Mich. Republished by Mueller Brass Co., Port Huron, Mich., a corporation of Michigan.

MUELLERMIST

FOR LAWN SPRINKLER SYSTEMS.
Claims use since on or about Mar. 1, 1929.

Reg. No. 287,259. Registered Sept. 15, 1931. THE V. D. ANDERSON COMPANY, Cleveland, Ohio. Republished by The V. D. Anderson Company, (1945), Cleveland, Ohio, a corporation of Ohio.

Silvertop

FOR STEAM TRAPS.
Claims use since Apr. 15, 1931.

Reg. No. 302,888. Registered May 2, 1933. UTILITY PRODUCTS, INC., Rockford, Ill. Republished by Advance Aluminum Castings Corp., Chicago, Ill., a corporation of Illinois.

MASTER
HEAVY
CAST

The words "Heavy Cast" are disclaimed.
FOR COOKING UTENSILS OF BASE METAL—NAMELY, KETTLES, TEA KETTLES, TURKEY ROASTERS, DUTCH OVENS, CASSEROLES, COOKING BOILERS, OMELET PANS, ROASTERS, SKILLETS, SAUCE PANS, GRIDDLES, REVERSIBLE GRIDDLES, BREAKFAST GRILLS, PANCAKE GRIDDLES, FRYERS, AND TRIPLICATE KETTLE SETS.
Claims use since Aug. 17, 1931.

Reg. No. 319,114. Registered Nov. 13, 1934. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

MINITMAID

FOR PRESSURE COOKERS.
Claims use since Mar. 17, 1934.

Reg. No. 326,870. Registered Aug. 6, 1935. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR COOKING UTENSILS COMPOSED OF ALUMINUM ALLOY—TO WIT, TRIPLICATE SETS, WATER KETTLES, WATER KETTLE INSERTS, COFFEE POTS, FRY PANS AND COVERS THEREFOR, DOUBLE FRY PANS, CASSEROLES WITH BASE, DUTCH OVENS, PRESERVING KETTLES, SAUCE PANS, ROASTERS, GRIDDLES, AND SUGAR AND CREAMER SETS.
Claims use since June 21, 1933.

Reg. No. 399,883. Registered Feb. 2, 1943. THE V. D. ANDERSON COMPANY, Cleveland, Ohio. Republished by The V. D. Anderson Company, (1945), Cleveland, Ohio, a corporation of Ohio.

SUPER-SILVERTOP

FOR STEAM TRAPS.
Claims use since Feb. 20, 1935.

Reg. No. 401,576. Registered May 25, 1943. A. B. CHANCE COMPANY, Centralia, Mo., a corporation of Missouri. Republished by registrant.

TIPS

FOR GROUNDING CLAMPS, GROUNDING RODS, GROUNDING CLUSTER SUPPORTS, TERMINAL LUGS, GROUND ROD CLAMPS, GROUNDING CABLES, SPLICES AND FERRULES, BUS BAR CLAMPS, JUMPER CLAMPS, AND TAPPER HANGERS.
Claims use since Jan. 1, 1926.

Reg. No. 401,922. Registered June 15, 1943. A. B. CHANCE COMPANY, Centralia, Mo., a corporation of Missouri. Republished by registrant.

THIMBLEYE

FOR ANCHOR RODS, BOLTS, NUTS, STRAIGHT FIXTURES COMPRISING METAL FITTINGS HAVING A GUY ROD EYE, ANGLE FIXTURES COMPRISING METAL FIXTURES HAVING A GUY ROD EYE AT AN ANGLE, AND GUY FIXTURES COMPRISING FIXTURES HAVING A GUY ROD EYE WHICH MAY BE USED FOR RECEIVING A GUY ROD.
Claims use since Sept. 15, 1921.

Reg. No. 402,120. Registered June 29, 1943. THE V. D. ANDERSON COMPANY, Cleveland, Ohio. Republished by The V. D. Anderson Company, (1945), Cleveland, Ohio, a corporation of Ohio.

THE V.D. ANDERSON CO.

FOR STEAM TRAPS.
Claims use since on or about Dec. 29, 1893.

Reg. No. 423,576. Registered Sept. 3, 1946. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Art Cast

The word "Cast" is disclaimed.
FOR CAST ALUMINUM COOK-WARE—NAMELY, KETTLES, TEAKETTLES, PRESERVING KETTLES, COFFEE POTS, ROASTERS, TURKEY ROASTERS, FRENCH ROASTERS, DUTCH OVENS, CASSEROLES, SAUCE PANS, BOILERS, DOUBLE BOILERS, TRIPLICATE KETTLE SETS, OMELET PANS, SKILLETS, FRY PANS, DOUBLE FRY PANS, FRENCH FRYERS, GRIDDLES, BREAKFAST GRILLS, TEAPOTS, AND STEAK PLATTERS.
Claims use since Dec. 31, 1931.

Reg. No. 423,577. Registered Sept. 3, 1946. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

GRANDEUR

FOR CAST ALUMINUM COOK-WARE—NAMELY, KETTLES, TEAKETTLES, PRESERVING KETTLES, COFFEE POTS, ROASTERS, TURKEY ROASTERS, FRENCH ROASTERS, DUTCH OVENS, CASSEROLES, SAUCE PANS, BOILERS, DOUBLE BOILERS, TRIPLICATE KETTLE SETS, OMELET PANS, SKILLETS, FRY PANS, DOUBLE FRY PANS, FRENCH FRYERS, GRIDDLES, BREAKFAST GRILLS, TEAPOTS, AND STEAK PLATTERS.
Claims use since Nov. 8, 1932.

Reg. No. 423,578. Registered Sept. 3, 1946. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR CAST ALUMINUM COOK-WARE—NAMELY, KETTLES, TEAKETTLES, PRESERVING KETTLES, COFFEE POTS, ROASTERS, TURKEY ROASTERS, FRENCH ROASTERS, DUTCH OVENS, CASSEROLES, SAUCE PANS, BOILERS, DOUBLE BOILERS, TRIPLICATE KETTLE SETS, OMELET PANS, SKILLETS, FRY PANS, DOUBLE FRY PANS, FRENCH FRYERS, GRIDDLES, BREAKFAST GRILLS, TEAPOTS, AND STEAK PLATTERS.
Claims use since Dec. 31, 1931.

Reg. No. 425,281. Registered Nov. 12, 1946. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

GOLD BOND

FOR CAST ALUMINUM COOK-WARE—NAMELY, KETTLES, TEAKETTLES, PRESERVING KETTLES, COFFEE POTS, ROASTERS, TURKEY ROASTERS, FRENCH ROASTERS, DUTCH OVENS, CASSEROLES, SAUCE PANS, BOILERS, DOUBLE BOILERS, TRIPLICATE KETTLE SETS, OMELET PANS, SKILLETS, FRY PANS, DOUBLE FRY PANS, FRENCH FRYERS, GRIDDLES, BREAKFAST GRILLS, TEAPOTS, AND STEAK PLATTERS.
Claims use since Mar. 25, 1932.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 80,202. Registered Nov. 15, 1910. J. H. WILLIAMS & CO., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

FOR METAL FORGINGS.
Claims use since 1898.

Reg. No. 104,813. Registered June 15, 1915. J. H. WILLIAMS & Co., New York, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

FOR STEELS AND HIGH-SPEED STEELS.
Claims use since the year 1883.

Reg. No. 149,740. Registered Dec. 20, 1921. THE SUPERIOR SHEET STEEL COMPANY, Louisville, Ohio. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.

FOR ROLLED STEEL IN VARIOUS FORMS AND FINISHES, COMPRISING SHEET STEEL IN BLACK, GALVANIZED, BLUE ANNEALED, PAINTED, AND OTHER FINISHES.
Claims use since Feb. 15, 1921.

Reg. No. 151,644. Registered Feb. 7, 1922. J. H. WILLIAMS & Co., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

WILLIAMS

FOR DROP FORGINGS, CASTINGS, STAMPINGS, STEELS, AND HIGH-SPEED STEELS.
Claims use since 1883.

Reg. No. 180,872. Registered Mar. 11, 1924. LUMEN BEARING COMPANY, Buffalo, N. Y., a corporation of New York. Republished by registrant.

LOTUS

FOR BEARING METAL.
Claims use since about 1903.

Reg. No. 312,781. Registered May 8, 1934. SHARON STEEL HOOP COMPANY, Sharon, Pa. Republished by Sharon Steel Corporation, Sharon, Pa., a corporation of Pennsylvania.

GALVANITE

FOR STRIP AND SHEET STEEL.
Claims use since Mar. 15, 1933.

Reg. No. 331,756. Registered Jan. 2, 1936. J. H. WILLIAMS & Co., Buffalo, N. Y., a corporation of New York. Republished by registrant.

FOR METAL FORGINGS MADE OF IRON, STEEL, COPPER, TIN, LEAD, NICKEL, ALUMINUM, AND ALL FORGEABLE INDUSTRIAL ALLOYS OF THE SAME.
Claims use since 1884.

Reg. No. 356,869. Registered May 17, 1938. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

ADVALOY

FOR ROUGH OR UNFINISHED CASTINGS OF ALUMINUM OR ITS ALLOYS.
Claims use since Apr. 16, 1931.

Reg. No. 364,004. Registered Jan. 17, 1939. THE SUPERIOR SHEET STEEL COMPANY, Canton, Ohio. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.

CHECKER COAT

The word "Coat" is disclaimed.
FOR GALVANIZED SHEETS.
Claims use since Apr. 23, 1938.

CLASS 15

OILS AND GREASES

Reg. No. 154,987. Registered May 16, 1922. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KEYSTONE

FOR LUBRICANTS CONSISTING OF OILS AND GREASES.
Claims use since 1885.

Reg. No. 419,314. Registered Feb. 12, 1946. EITEL-McCULLOUGH, INC., San Bruno, Calif., a corporation of California. Republished by registrant.

Eimac

FOR VACUUM PUMP OIL USED AS A PUMPING FLUID IN VACUUM PUMPS OF THE OIL DIFFUSION TYPE.
Claims use since September 1943.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 53,948. Registered June 19, 1906. BOSTON VARNISH COMPANY, Everett, Mass. Republished by Boston Varnish Company, Everett, Mass., a corporation of Massachusetts.

Dryol

FOR VARNISH, JAPAN, DRIERS, AND LIQUID FILLERS.
Claims use since 1902.

Reg. No. 60,123. Registered Jan. 29, 1907. BOSTON VARNISH COMPANY, Everett, Mass. Republished by Boston Varnish Company, Everett, Mass., a corporation of Massachusetts.

FOR VARNISH, JAPAN, DRIERS, AND LIQUID FILLERS.
Claims use since August 1905.

Reg. No. 154,364. Registered Apr. 11, 1922. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

Phelan's SPREDLITE

FOR WASHABLE OIL PAINT.
Claims use since on or about Sept. 1, 1921.

Reg. No. 183,493. Registered Apr. 29, 1924. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

Ellmo

FOR PAINT AND VARNISH REMOVER.
Claims use since Jan. 1, 1921.

Reg. No. 187,879. Registered Aug. 12, 1924. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

Duxpar

FOR VARNISH.
Claims use since Feb. 29, 1924.

Reg. No. 204,137. Registered Oct. 6, 1925. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

TEXIZE

FOR SIZE, FILLER, SEALER AND EXTENDER.
Claims use since Jan. 3, 1925.

Reg. No. 216,018. Registered Aug. 3, 1926. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

ARC-LITE

FOR READY-MIXED PAINT AND PAINT ENAMEL.
Claims use since Feb. 10, 1925.

Reg. No. 216,019. Registered Aug. 3, 1926. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

TUDOR

FOR PAINT ENAMELS AND VARNISHES.
Claims use since Nov. 1, 1924.

Reg. No. 229,566. Registered June 28, 1927. THE MORGAN COMPANY, Peoria, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois.

MORALAC

FOR LACQUERS.
Claims use since July 1926.

Reg. No. 229,700. Registered July 5, 1927. THE MORGAN COMPANY, Peoria, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois.

Surfspar

FOR VARNISHES.
Claims use since May 1, 1926.

Reg. No. 265,423. Registered Dec. 24, 1929. B. K. ELLIOTT COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

LUXOR

FOR ARTISTS' PAINTS, ARTISTS' COLORS, AND ARTISTS' PIGMENTS.
Claims use since on or about Nov. 1, 1928.

Reg. No. 299,371. Registered Nov. 29, 1932. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

KWIXET

FOR VARNISHES, PAINT ENAMELS, STAINS AND READY-MIXED PAINTS.
Claims use since June 15, 1932.

Reg. No. 329,061. Registered Oct. 15, 1935. BECK, KOLLER & CO., INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Ferndale Station, Detroit, Mich., a corporation of Delaware.

BECKOPOL

FOR SYNTHETIC RESIN, FOR USE IN PAINTS, VARNISHES, ENAMELS, AND THE LIKE.
Claims use since Dec. 13, 1934.

Reg. No. 399,217. Registered Dec. 22, 1942. CLOVER LEAF PAINT & VARNISH CORPORATION, New York and Long Island City, N. Y., a corporation of New York. Republished by registrant.

Clover Leaf

FOR VARNISHES, JAPANS, READY-MIXED PAINTS, PAINT ENAMELS, BRONZING LIQUIDS, STAINS, LIQUID AND PASTE DRYERS FOR PAINT AND VARNISH, LIQUID AND PASTE FILLERS FOR WOOD, COLORS IN OIL, LACQUERS, PREPARED SHELLAC, SHELLAC SUBSTITUTES.
Claims use since Feb. 7, 1891.

Reg. No. 413,563. Registered May 1, 1945. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Pheluxe

FOR TRIM COLORS—NAMELY, PAINT FOR HOUSE TRIMMING, SUCH AS FOR WINDOW SASH, BLINDS, SHUTTERS, LATTICE WORK AND TRELLISES; AND WALL FINISH—NAMELY, PAINT, LACQUER, ENAMEL WHICH IS USED AS A FINAL COAT.
Claims use since on or about Mar. 1, 1939.

Reg. No. 431,090. Registered July 8, 1947. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

kybrun

FOR READY MIXED PAINTS.
Claims use since January 1936.

Reg. No. 431,091. Registered July 8, 1947. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

kyqrön

FOR READY MIXED PAINTS.
Claims use since January 1936.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 79,303. Registered Aug. 23, 1910. JUSTIN SEUBERT, INC., Syracuse, N. Y. Republished by Scranton Tobacco Company, Inc., Scranton, Pa., a corporation of Pennsylvania.

JUSTIN SEUBERT'S PICK WICK CLUB.

FOR CIGARS.
Claims use since the year 1873.

Reg. No. 425,799. Registered Dec. 3, 1946. PENINSULAR CIGAR CO., Tampa, Fla. Republished by Tampa Cigar Company, Inc., Tampa, Fla., a corporation of Florida.

EL PLANO

FOR CIGARS.
Claims use since Nov. 4, 1899.

CLASS 19

VEHICLES

Reg. No. 180,945. Registered Mar. 11, 1924. HYDRAULIC BRAKE COMPANY, Los Angeles, Calif., and Detroit, Mich., a corporation of California. Republished by registrant, present location Detroit, Mich.

LOCKHEED

FOR VEHICLE BRAKES.
Claims use since Jan. 2, 1923.

Reg. No. 202,629. Registered Sept. 1, 1925. INTERNATIONAL MOTOR COMPANY, New York, N. Y. Republished by Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware.

Mack

PERFORMANCE COUNTS

FOR MOTOR TRUCKS.
Claims use since on or about Sept. 21, 1921.

Reg. No. 205,100. Registered Nov. 3, 1925. INTERNATIONAL MOTOR COMPANY, New York, N. Y. Republished by Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware.

PERFORMANCE COUNTS

FOR MOTOR TRUCKS.
Claims use since on or about Sept. 21, 1921.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 220,338. Registered Nov. 9, 1926. THE DEFIANCE SPARK PLUG COMPANY, Bryan, Ohio. Republished by Defiance Spark Plug Corporation, Toledo, Ohio, a corporation of Ohio.

DEFIANCE

FOR SPARK PLUGS AND PARTS THEREOF.
Claims use since January 1924.

Reg. No. 265,832. Registered Jan. 7, 1930. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

BA

FOR RECTIFYING, REGULATING AND SMOOTHING TUBES.
Claims use since Feb. 25, 1927.

Reg. No. 265,856. Registered Jan. 7, 1930. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

BH

FOR RECTIFYING, REGULATING AND SMOOTHING TUBES.
Claims use since May 24, 1926.

Reg. No. 266,330. Registered Jan. 14, 1930. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

RAYTHEON

FOR VACUUM TUBES, VALVES, AND TELEVISION LAMPS.
Claims use since Oct. 6, 1928.

Reg. No. 294,309. Registered May 24, 1932. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

POWACALL

FOR ELECTRICAL GOODS AND APPARATUS CONSISTING OF ELECTRIC TRANSFORMERS SUCH AS BELL-RINGING OR SIMILAR LOW POWER-OUTPUT TRANSFORMERS.
Claims use since on or about Dec. 10, 1931.

Reg. No. 294,310. Registered May 24, 1932. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

RINGCALL

FOR ELECTRICAL GOODS AND APPARATUS, CONSISTING OF ELECTRICALLY OPERATED BELLS SUCH AS SIGNALING BELLS.
Claims use since on or about Dec. 10, 1931.

Reg. No. 294,312. Registered May 24, 1932. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

TUCALL

FOR ELECTRICAL GOODS AND APPARATUS, CONSISTING OF ELECTRICALLY OPERATED BELLS AND BUZZERS.
Claims use since on or about Dec. 10, 1931.

Reg. No. 295,888. Registered July 19, 1932. SQUARE D COMPANY, Detroit, Mich. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

RECTIFILTER

The word "Filter" is disclaimed.
FOR ELECTRICAL RECTIFYING AND FILTERING DEVICES AND CONDENSIVE ELEMENTS.
Claims use since on or about Sept. 21, 1931.

Reg. No. 340,440. Registered Nov. 10, 1936. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

LOKATOR

FOR ELECTRICAL GOODS AND APPARATUS, COMPRISING ELECTRICALLY OPERATED SIGNALING BELLS, ELECTRICALLY OPERATED AUDIBLE SIGNALING DEVICES SUCH AS HORNS, ELECTRIC TRANSFORMERS, ELECTRICAL CODE-IMPULSE TRANSMITTERS, ELECTRICAL SELECTOR SWITCHING MECHANISM, ELECTRICALLY OPERATED VISUAL SIGNALLING DEVICES, SUCH AS LIGHT BULBS OR LAMPS, ALARM SIGNALS, ELECTRICAL RELAYS, AND MOUNTINGS AND BOXES OR CASINGS FOR THE FOREGOING.
Claims use since on or about July 6, 1936.

Reg. No. 344,385. Registered Mar. 23, 1937. EAGLE SIGNAL CORPORATION, Moline, Ill., a corporation of Massachusetts. Republished by registrant.

MICROFLEX

FOR TIMING MECHANISMS FOR ELECTRIC CIRCUITS.
Claims use since Apr. 5, 1935.

Reg. No. 367,404. Registered May 16, 1939. RAYTHEON MANUFACTURING COMPANY, Newton, Mass., a corporation of Delaware. Republished by registrant.

RECTICHARGER

FOR ELECTRIC CURRENT RECTIFIERS, ELECTRIC BATTERY CHARGERS AND RECTIFIER BATTERY CHARGERS.
Claims use since about October 1937.

Reg. No. 369,432. Registered July 25, 1939. RAYTHEON MANUFACTURING COMPANY, Newton, Mass., a corporation of Delaware. Republished by registrant.

R

FOR DEVICES FOR CONTROLLING OR MODIFYING ELECTRICAL CURRENTS, INCLUDING ALTERNATING CURRENT RECTIFYING SYSTEMS, AMPLIFIERS, AUTOMATIC SELF-REGULATING BATTERY CHARGERS, CHOKES, INDUCTION HEATING CURRENT SOURCES, TRANSFORMERS, VIBRATORY FEEDER CONTROLLERS, AND VOLTAGE REGULATORS.
Claims use since about November 1934.

Reg. No. 375,118. Registered Feb. 6, 1940. EITEL-MCCULLOUGH, INC., San Bruno, Calif., a corporation of California. Republished by registrant.

Eimac

FOR VACUUM TUBES.
Claims use since Sept. 12, 1934.

Reg. No. 380,835. Registered Sept. 3, 1940. JACK GALTER, Chicago, Ill. Republished by registrant.

STEAM-MAID

The word "Steam" is disclaimed.
FOR GARMENT OR OTHER MATERIAL PRESSING STEAM ELECTRIC HAND IRONS.
Claims use since Aug. 12, 1937.

Reg. No. 385,293. Registered Feb. 25, 1941. JACK GALTER, Chicago, Ill. Republished by registrant.

The word "Steam" is disclaimed.
FOR GARMENT OR OTHER MATERIAL PRESSING STEAM ELECTRIC HAND IRONS.
Claims use since Aug. 12, 1937.

Reg. No. 395,169. Registered May 12, 1942. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

RX

FOR ELECTRICAL SPACE DISCHARGE TUBES.
Claims use since December 1937.

Reg. No. 399,821. Registered Feb. 2, 1943. NEW JERSEY WOOD FINISHING COMPANY, Woodbridge, N. J., a corporation of New Jersey. Republished by registrant.

The words "The Peak of Quality" are disclaimed.
FOR ELECTRICAL INSULATION MATERIAL FOR USE IN SLOT INSULATION, ARMATURES, STATORS, TRANSFORMERS, AND SIMILAR ELECTRICAL APPARATUS.
Claims use since March 1940.

Reg. No. 420,697. Registered Apr. 30, 1946. EITEL-MCCULLOUGH, INC., San Bruno, Calif., a corporation of California. Republished by registrant.

Eimac

FOR VACUUM CONDENSERS WHEREIN ELECTRODES ARE MOUNTED WITHIN AN EVACUATED ENVELOPE FOR USE AS AN ELECTRICAL CAPACITOR.
Claims use since March 1938.

Reg. No. 429,305. Registered Apr. 29, 1947. RAYTHEON MANUFACTURING COMPANY, Newton, Mass., a corporation of Delaware. Republished by registrant.

RAYTHEON

FOR ELECTRIC LAMPS.
Claims use since June 1, 1937.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 299,915. Registered Dec. 27, 1932. WILLIAMS GOLD REFINING COMPANY, INC., Buffalo, N. Y., a corporation of New York. Republished by registrant.

Nipigon Coaster

FOR ARTIFICIAL FISHING BAITS—NAMELY, WOBBLERS AND SPINNERS.
Claims use since about July 15, 1932.

Reg. No. 368,354. Registered June 13, 1939. A. M. HOLTER HARDWARE CO., Helena, Mont., a corporation of Montana. Republished by registrant.

STREAM-MASTER

FOR FISHING TACKLE, PARTICULARLY TROUT FLIES.
Claims use since September 1938.

Reg. No. 375,131. Registered Feb. 6, 1940. JACK GALTER, Chicago, Ill. Republished by registrant.

FALCON

FOR TOY AND MODEL AIRPLANES AND PARTS THEREOF.
Claims use since Sept. 12, 1938.

Reg. No. 394,239. Registered Mar. 24, 1942. PAUL A. JONES, Jonesville, Mich. Republished by registrant.

Susy Goose

FOR TOY CARPET SWEEPERS, TOY HOUSECLEANING SETS AND THEIR CONTENTS CONSISTING OF FLOOR MOPS, CORN BROOMS, CARPET SWEEPERS, DUST PANS, DUSTERS; DOLL HOUSES, AND TEA DISH WASHING SETS AND DISHES.
Claims use since May 1936.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 88,987. Registered Oct. 29, 1912. J. H. WILLIAMS & CO., New York, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

VULCAN.

FOR C-CLAMPS, STRAP-CLAMPS, LATHE-DOGS, CRANK-HANDLES, BALANCE-HANDLES, MACHINE-HANDLES, WIRE-ROPE SOCKETS, TOOL-POSTS, TOOL-POST RINGS, TOOL-POST WEDGES, LATHE-TOOLS, PLANER-TOOLS, BORING-TOOLS, LATHE-TOOL HOLDERS, PLANER-TOOL HOLDERS, BORING-TOOL HOLDERS, GRINDING-TOOLS, CUTTING-TOOLS, GRINDING-TOOL HOLDERS, CUTTING-TOOL HOLDERS, THREADING-TOOLS, PIPE-TOOLS, CHAIN PIPE-WRENCHES, PIPE-WRENCHES, WRENCHES, CHAIN PIPE-VISES, PIPE-VISES, VISES, MACHINISTS' CLAMPS, CLAMP LATHE-DOGS.
Claims use since the year 1897.

Reg. No. 95,381. Registered Feb. 10, 1914. J. H. WILLIAMS & CO., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location, Buffalo, N. Y.

AGRIPPA

FOR C-CLAMPS, STRAP-CLAMPS, LATHE-DOGS, CRANK-HANDLES, BALANCE-HANDLES, MACHINE-HANDLES, WIRE-ROPE SOCKETS, TOOL-POSTS, TOOL-POST RINGS, TOOL-POST WEDGES, LATHE-TOOLS, PLANER-TOOLS, BORING-TOOLS, LATHE-TOOL HOLDERS, PLANER-TOOL HOLDERS, BORING-TOOL HOLDERS, GRINDING-TOOLS, CUTTING-TOOLS, GRINDING-TOOL HOLDERS, CUTTING-TOOL HOLDERS, THREADING-TOOLS, PIPE-TOOLS, CHAIN PIPE-WRENCHES, PIPE-WRENCHES, WRENCHES, CHAIN PIPE-VISES, PIPE-VISES, VISES, MACHINISTS' CLAMPS, CLAMP LATHE-DOGS.
Claims use since 1905.

Reg. No. 96,259. Registered Apr. 14, 1914. DURIRON CASTINGS COMPANY, New York, N. Y. Republished by The Duriron Company, Inc., Dayton, Ohio, a corporation of New York.

DURIRON

FOR MACHINERY AND PARTS OF MACHINERY FOR MANUFACTURING AND CONCENTRATING SULFURIC, NITRIC, AND OTHER ACIDS, CONDENSERS FOR ACIDS AND PARTS THEREOF, MACHINERY FOR DECHLORINATING AND PARTS THEREOF, DENITRATING-TOWERS, MACHINERY FOR MAKING GUN-COTTON AND PARTS THEREOF, CONVEYERS FOR GUN-COTTON MACHINERY AND PARTS THEREOF, DEHYDRATING APPARATUS AND PARTS THEREOF, STRAINERS, STIRRERS, STIRRER-SHOES, ACID-AGITATORS AND PARTS THEREOF, KESSLER STILLS, STRAINER-POTS, HELICOID CONVEYERS, SCRAPERS FOR SULFATE-FURNACES, EJECTORS, JET-BLOWERS, AND CENTRIFUGAL PUMPS AND PARTS THEREOF.
Claims use since 1912.

Reg. No. 104,212. Registered Apr. 27, 1915. J. H. WILLIAMS & CO., New York, N. Y., a corporation of New York. Republished by registrant, present location, Buffalo, N. Y.

W

FOR C-CLAMPS, STRAP-CLAMPS, LATHE-DOGS, CRANK-HANDLES, BALANCE-HANDLES, MACHINE-HANDLES, WIRE-ROPE SOCKETS, TOOL-POSTS, TOOL-POST RINGS, TOOL-POST WEDGES, LATHE-TOOLS, PLANER-TOOLS, BORING-TOOLS, LATHE-TOOL HOLDERS, PLANER-TOOL HOLDERS, BORING-TOOL HOLDERS, GRINDING-TOOLS, CUTTING-TOOLS, GRINDING-TOOL HOLDERS, CUTTING-TOOL HOLDERS, THREADING-TOOLS, PIPE-TOOLS, CHAIN PIPE-WRENCHES, PIPE-WRENCHES, WRENCHES, CHAIN PIPE-VISES, PIPE-VISES, VISES, MACHINISTS' CLAMPS, CLAMP LATHE-DOGS.
Claims use since the year 1884.

Reg. No. 126,195. Registered July 29, 1919. HENRY K. PORTER, Brookline and Everett, Mass. Republished by H. K. Porter, Inc., Somerville, Mass., a corporation of Massachusetts.

HKP

FOR BOLT AND RIVET CLIPPERS.
Claims use since Nov. 1, 1917.

Reg. No. 138,885. Registered Jan. 11, 1921. UNIVERSAL WINDING COMPANY, Cranston, R. I., and Boston, Mass., a corporation of Massachusetts. Republished by registrant, present location Cranston, R. I.

LEESONA

FOR WINDING-MACHINES FOR THREAD, YARN, CORD, TWINE, ROPE AND WIRE, COUNTER-SHAFTS, AND PARTS THEREOF.
Claims use since Oct. 8, 1915.

Reg. No. 152,551. Registered Feb. 28, 1922. J. H. WILLIAMS & CO., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

SUPERJUSTABLE

FOR WRENCHES, TOOL HOLDERS, LATHE DOGS, CLAMPS.
Claims use since May 13, 1921.

Reg. No. 153,825. Registered Mar. 28, 1922. HENRY K. PORTER, Everett, Mass. Republished by H. K. Porter, Inc., Somerville, Mass., a corporation of Massachusetts.

"NEW EASY."

FOR BOLT CLIPPERS.
Claims use since November 1893.

Reg. No. 200,446. Registered June 30, 1925. PATRICK J. CUMMINGS, doing business as The Jewelry and Cutlery Novelty Company, North Attleboro, Mass. Republished by The Jewelry and Cutlery Novelty Company, North Attleboro, Mass., a partnership.

FOR POCKET KNIVES.
Claims use since Dec. 31, 1924.

Reg. No. 209,075. Registered Feb. 16, 1926. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUPERRENCH

FOR WRENCHES.
Claims use since Oct. 10, 1925.

Reg. No. 210,530. Registered Mar. 16, 1926. SCHUTTE AND KOERTING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR CERTAIN ENGINEERING APPLIANCES CONSISTING OF INJECTORS, CONDENSERS, CHEMICAL EQUIPMENT, EVAPORATORS, DISTILLERS, OIL COOLERS, FEED-WATER HEATERS, ACID PUMPS, AIR-JET LIFTS, VERTICAL OR HORIZONTAL LEAD PUMPS, AUTOMATIC BLOW CASES.
Claims use since May 1, 1921.

Reg. No. 242,308. Registered May 22, 1928. KENSINGTON STEEL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

KENSINITE

FOR PARTS FOR TRENCH-EXCAVATING MACHINES, CONCAVES FOR GYRATORY CRUSHERS, JAW PLATES FOR JAW CRUSHERS, CONVEYING CHAINS, ELEVATOR BUCKETS, PULVERIZER HAMMERS, GEARS, PINIONS, SPROCKETS, ROLLERS, STEAM-SHOVEL PARTS, DIPPER TEETH, TRACTION DEVICES FOR STEAM SHOVELS, LINKS FOR THE TRACKWAYS FOR SELF-LAYING-TRACK TRACTORS.
Claims use since Jan. 5, 1927.

Reg. No. 243,153. Registered June 12, 1928. THE LIQUID CARBONIC CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

"The Super Kleen"

The word "Kleen" forms a part of the registration sought only in association with the other features of the mark shown in the drawing.
FOR BOTTLE-WASHING MACHINERY.
Claims use since May 1922.

Reg. No. 246,233. Registered Sept. 4, 1928. H. K. PORTER, INC., Everett, Mass., a corporation of Massachusetts. Republished by registrant, present location Somerville, Mass.

PORTER'S

FOR BOLT CLIPPERS, ROD CUTTERS, WIRE CUTTERS, AND RIVET CUTTERS.
Claims use since about 1881.

Reg. No. 267,316. Registered Feb. 18, 1930. THE LIMITORQUE CORPORATION, New York, N. Y. Republished by Philadelphia Gear Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

LIMITORQUE

FOR AUTOMATIC VALVE CLOSING AND OPENING MACHINES.
Claims use since Oct. 15, 1928.

Reg. No. 270,480. Registered May 6, 1930. H. K. PORTER, INC., Everett, Mass., a corporation of Massachusetts. Republished by registrant, present location Somerville, Mass.

HKP

FOR PORTABLE TWO-HAND CUTTING-OFF METAL WORKING TOOLS, AND PARTS THEREOF.
Claims use since Nov. 1, 1917.

Reg. No. 277,308. Registered Nov. 11, 1930. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

BANTAM

FOR WRENCHES, WRENCH SETS, WRENCH SOCKETS, AND TOOL HANDLES.
Claims use since June 10, 1930.

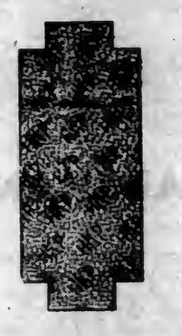
Reg. No. 283,105. Registered May 19, 1931. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUPERSOCKET

The word "Socket" is disclaimed.
FOR WRENCHES, WRENCH SETS, WRENCH SOCKETS, TOOL HANDLES, AND SCREW DRIVERS.
Claims use since Dec. 13, 1930.

Reg. No. 283,799. Registered June 9, 1931. THE HEDMAN MANUFACTURING COMPANY, Chicago, Ill. Republished by The Hedman Company, Chicago, Ill., a corporation of Illinois.

Sign-o-Meter



FOR SIGNATURE-WRITING MACHINES.
Claims use since Jan. 5, 1931.

Reg. No. 284,763. Registered July 7, 1931. GUIBERT STEEL COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

"TOGGLE BUG"

FOR MACHINES FOR DRILLING, COUNTER-SINKING, REAMING, GRINDING, POLISHING, METAL I-BEAMS, H-BEAMS, GIRDER BEAMS, CHANNELS, ANGLES, T's, Z's, PLATES, COLUMNS, TRUSSES, AND THE LIKE.
Claims use since July 21, 1930.

Reg. No. 286,003. Registered Aug. 11, 1931. H. K. PORTER, INC., Everett, Mass., a corporation of Massachusetts. Republished by registrant, present location Somerville, Mass.

The drawing is lined for the color orange. The representation of the carton is disclaimed. The color orange is claimed as a feature of the mark.
FOR PORTABLE TWO-HAND CUTTING-OFF METAL-WORKING TOOLS AND PARTS THEREOF.
Claims use since Feb. 8, 1931.

Reg. No. 303,210. Registered May 16, 1933. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUPERRATCHET

The word "Ratchet" is disclaimed.
FOR WRENCHES, WRENCH SETS, WRENCH SOCKETS, AND TOOL HANDLES.
Claims use since Sept. 19, 1932.

Reg. No. 310,125. Registered Feb. 13, 1934. H. K. PORTER, INC., Everett, Mass., a corporation of Massachusetts. Republished by registrant, present location Somerville, Mass.

FORESTER

FOR WOOD CUTTING TOOL FOR BRUSH CUTTING, PRUNING, TRIMMING AND ANY GENERAL IMPROVEMENT CUTTING.
Claims use since Aug. 18, 1933.

Reg. No. 321,641. Registered Feb. 5, 1935. BARCO MANUFACTURING CO., Chicago, Ill. Republished by Francis N. Bard, Barrington, Ill.

BARCO

FOR POWER OPERATED HAMMERS, TAMPERS, RIVETERS, BREAKERS, DRILLS AND THE LIKE, AND PARTS THEREOF.
Claims use since Apr. 19, 1934.

Reg. No. 323,755. Registered Apr. 30, 1935. THE V. D. ANDERSON COMPANY, Cleveland, Ohio. Republished by The V. D. Anderson Company (1945), Cleveland, Ohio, a corporation of Ohio.

DUO

FOR PRESSES FOR REMOVING OILS AND LIQUIDS.
Claims use since on or about Aug. 20, 1934.

Reg. No. 325,973. Registered July 9, 1935. FOSTER L. TALGE, doing business as Rival Manufacturing Company, Kansas City, Mo. Republished by Rival Manufacturing Company, Kansas City, Mo., a corporation of Missouri.

Rival

FOR ALUMINUM CULINARY UTENSILS—NAMELY, JUICE EXTRACTORS, ICE CRUSHERS, STEAK ROLLERS, VEGETABLE PRESSES, BUTTER CHURNS, CAN OPENERS, RAISIN CUTTERS.
Claims use since August 1932.

Reg. No. 331,212. Registered Dec. 31, 1935. PUMP ENGINEERING SERVICE CORPORATION, Cleveland, Ohio. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.

PESCO

FOR FUEL, VACUUM AND OIL PUMPS.
Claims use since on or about June 15, 1934.

Reg. No. 338,449. Registered Sept. 8, 1936. ADDRESSOGRAPH COMPANY, Cleveland and Euclid, Ohio, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

SERPENTINE

FOR PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE IN ADDRESSING AND SIMILAR MACHINES.
Claims use since on or about July 1932.

Reg. No. 344,556. Registered Mar. 30, 1937. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUPER

CHAIN

The word "Chain" is disclaimed.
FOR CHAINS FOR TONGS AND PIPE VISES.
Claims use since Sept. 3, 1936.

Reg. No. 344,774. Registered Apr. 6, 1937. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUPERJAW

The word "Jaw" is disclaimed.
FOR JAWS FOR TONGS AND PIPE VISES.
Claims use since Sept. 3, 1936.

Reg. No. 344,775. Registered Apr. 6, 1937. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUPERTONG

The word "Tong" is disclaimed.
FOR TONGS AND PIPE VISES.
Claims use since Sept. 3, 1936.

Reg. No. 345,920. Registered May 11, 1937. AMERICAN SAW & MANUFACTURING COMPANY, Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

Mo-Speed

The word "Speed" is disclaimed.
FOR HACK SAW BLADES.
Claims use since about Nov. 15, 1936.

Reg. No. 346,876. Registered June 8, 1937. FOSTER L. TALGE, doing business as Rival Manufacturing Company, Kansas City, Mo. Republished by Rival Manufacturing Company, Kansas City, Mo., a corporation of Missouri.

JUICE-O-MAT

FOR FRUIT JUICE EXTRACTORS.
Claims use since Nov. 18, 1936.

Reg. No. 349,385. Registered Aug. 24, 1937. H. K. PORTER, INC., Everett, Mass., a corporation of Massachusetts. Republished by registrant, present location Somerville, Mass.

HKP

FOR PORTABLE TWO-HAND CUTTING-OFF TOOLS, AND SINGLE-HAND CUTTING-OFF METAL WORKING TOOLS AND PARTS THEREOF.
Claims use since Nov. 1, 1917.

Reg. No. 353,110. Registered Dec. 28, 1937. THE CINCINNATI BALL CRANK CO., Cincinnati, Ohio. Republished by Balcrank, Inc., Cincinnati, Ohio, a corporation of Ohio.

BALCRANK

FOR MACHINE HANDLES FOR MACHINE TOOLS, SUCH AS PLANERS, SHAPERS, LATHES, MILLING MACHINES, DRILL PRESSES, AND SPECIAL MACHINERY; SPARK AND THROTTLE JOINTS; GREASING PUMPS, GREASE GUNS; CHUCKS AND FITTINGS FOR USE ON LUBRICATING GUNS, HOSE, AND OTHER LUBRICATING EQUIPMENT AND ON AIR HOSE; GREASE HOSE CONTROL HANDLES, BOOSTER ATTACHMENTS FOR GREASE AND OIL LINES, GREASE NOZZLES, GREASE CUPS, HOSE REELS, AND SHAKER BARS.
Claims use since Apr. 6, 1920.

Reg. No. 358,240. Registered July 5, 1938. THE ARO EQUIPMENT CORPORATION, Bryan, Ohio, a corporation of Ohio. Republished by registrant.

ARO

FOR AUTOMOTIVE AND INDUSTRIAL LUBRICATING EQUIPMENT, SUCH AS CABINET TYPE LUBRICATORS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Apr. 5, 1937.

Reg. No. 367,872. Registered May 30, 1939. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

CAPEWELL

FOR PLANES AND HAMMERS.
Claims use since Oct. 28, 1937.

Reg. No. 370,523. Registered Aug. 29, 1939. MACK MANUFACTURING CORPORATION, Long Island City, N. Y., a corporation of Delaware. Republished by registrant.

THERMODYNE

FOR MOTOR VEHICLE INTERNAL COMBUSTION ENGINES.
Claims use since Dec. 6, 1938.

Reg. No. 375,311. Registered Feb. 13, 1940. JACK GALTER, Chicago, Ill. Republished by registrant.

SKY CHIEF

FOR INTERNAL COMBUSTION MOTORS.
Claims use since May 7, 1938.

Reg. No. 380,963. Registered Sept. 10, 1940. UNITED ENGINEERING AND FOUNDRY COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

VANX

FOR CAST ROLLING MILL ROLLS.
Claims use since Jan. 19, 1940.

Reg. No. 384,248. Registered Jan. 7, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

TECHNITE

FOR HACK SAW BLADES.
Claims use since Sept. 3, 1940.

Reg. No. 384,249. Registered Jan. 7, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

TUNGHARD

FOR HACK SAW BLADES.
Claims use since Sept. 3, 1940.

Reg. No. 388,778. Registered July 8, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

FLEX-TUNG

FOR HACK SAW BLADES.
Claims use since Jan. 31, 1941.

Reg. No. 392,328. Registered Dec. 23, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

CAPEWELL

FOR HACK SAW BLADES.
Claims use since Sept. 3, 1940.

Reg. No. 394,202. Registered Mar. 24, 1942. THE CHAMPION PECAN MACHINE COMPANY, San Antonio, Tex., a corporation of Texas. Republished by registrant.

CHAMPION CRACKS 'EM PERFECT

The words "Cracks Em Perfect" are disclaimed.
FOR NUT CRACKING AND PROCESSING MACHINE, AND PARTS THEREOF.
Claims use since June 5, 1941.

Reg. No. 397,111. Registered Aug. 18, 1942. AMERICAN SAW & MANUFACTURING COMPANY, Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

Dimaster

FOR BAND SAW BLADES.
Claims use since Jan. 10, 1942.

Reg. No. 402,359. Registered July 13, 1943. AMERICAN SAW & MANUFACTURING COMPANY, Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

Hackmaster

FOR HACK SAW BLADES.
Claims use since Feb. 15, 1943.

Reg. No. 419,107. Registered Feb. 5, 1946. EITEL-MCCULLOUGH, INC., San Bruno, Calif., a corporation of California. Republished by registrant.

Eimac

FOR VACUUM PUMPS.
Claims use since June 1943.

Reg. No. 419,596. Registered Feb. 26, 1946. HYDRAULIC ENGINEERING CO. INC., Holyoke, Mass., a corporation of Massachusetts. Republished by registrant.

HYDROMASTER

FOR MANUALLY OPERABLE HYDRAULIC OPERATIONAL CONTROL VALVES, FLUID PRESSURE CYLINDERS, FLUID PRESSURE RAMS AND FLUID PRESSURE ACCUMULATORS FOR HYDRAULIC OPERATIONAL USES.
Claims use since Aug. 1, 1941.

Reg. No. 422,475. Registered July 23, 1946. THE STANDARD TOOL COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

STANDARD TOOL CO.

FOR TWIST DRILLS, CHUCKS, REAMERS, TAPS, DIES AND MILLING CUTTERS.
Claims use since May 1, 1883.

Reg. No. 432,267. Registered Aug. 26, 1947. LAVALLEE & IDE, INC., Chicopee, Mass., a corporation of New York. Republished by registrant.

L&I

FOR METAL CUTTING TOOLS—NAMELY, REAMERS, END MILLS, COUNTERBORES, COUNTERSINKS, MILLING CUTTERS AND DRILLS.
Claims use since February 1943.

Reg. No. 432,286. Registered Aug. 26, 1947. COLUMBUS IRON WORKS COMPANY, Columbus, Ga., a corporation of Georgia. Republished by registrant.

SOUTHERN STREAK

The drawing is lined for the color red.
FOR PLOW AND CULTIVATOR PARTS—NAMELY, SHOVELS, SWEEPS, BULL TONGUES, WINGS OR MOLDBOARDS, HEEL SCRAPES OR HEEL SWEEPS, BLADES, SCOOTERS, POINTS AND SHAPES.
Claims use since Apr. 19, 1941.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 375,757. Registered Feb. 27, 1940. EASY WASHING MACHINE CORPORATION, Syracuse, N. Y., a corporation of Delaware. Republished by registrant.

Spirator Spindrier

The word "Spindrier" is disclaimed.
FOR LAUNDRY WASHING MACHINES.
Claims use since Sept. 6, 1939.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 110,434. Registered May 23, 1916. J. SAND & SONS, Detroit, Mich. Republished by Sand's Level & Tool Co., Detroit, Mich., a corporation of Michigan.

SANDS

FOR PLUMB RULES AND LEVELS.
Claims use since Jan. 1, 1895.

Reg. No. 153,886. Registered Mar. 28, 1922. UNION TOOL COMPANY, Orange, Mass., a corporation of Massachusetts. Republished by registrant.

UNION

FOR MACHINISTS' SMALL TOOLS—NAMELY, CENTER GAUGES, THICKNESS GAUGES, THREAD GAUGES, RADIUS GAUGES, BEVEL GAUGES, DEPTH GAUGES, HEIGHT GAUGES, SURFACE GAUGES, WIRE GAUGES, STEEL MEASURING RULES, KEY SEAT RULES, STRAIGHTEDGES, MACHINISTS' AND WOODWORKERS' SQUARE, BEVEL PROTRACTORS, CALIPER RULES AND CALIPER SQUARES, VERNIER CALIPERS, CALIPERS, TEST INDICATORS, LEVELS, TRAMMEL POINTS, DIVIDERS, AND SPEED INDICATORS.
Claims use since 1906.

Reg. No. 288,193. Registered Oct. 20, 1931. B. K. ELLIOTT COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

LIN-O

FOR SENSITIZED PRINTING PAPER.
Claims use since May 12, 1931.

Reg No. 316,947. Registered Sept. 11, 1934. AGFA ANSCO CORPORATION, Binghamton, N. Y. Republished by General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware.

FINOPAN

FOR SENSITIZED PHOTOGRAPHIC FILM AND PAPER.
Claims use since Aug. 11, 1934.

Reg. No. 341,384. Registered Dec. 8, 1936. BAILEY METER COMPANY, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

STANDATROL

FOR REGULATING AND CONTROL APPARATUS FOR AUTOMATICALLY CONTROLLING AN OPERATION RESPONSIVELY TO THE FLUCTUATIONS OF ONE OR MORE VARIABLE CONDITIONS.
Claims use since on or about May 27, 1936.

Reg. No. 348,964. Registered Aug. 17, 1937. BAILEY METER COMPANY, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

PILOTROL

FOR ASSEMBLED COMBINATION OF AN AIR PILOT VALVE WITH SENSITIVITY AND STANDARDIZATION ADJUSTMENTS FOR USE IN METERING AND CONTROLLING DEVICES.
Claims use since on or about Feb. 3, 1937.

Reg. No. 368,916. Registered July 4, 1939. CONTINENTAL OPTICAL COMPANY, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

CHROMAT

FOR OPHTHALMIC BLANKS AND LENSES TINTED TO REDUCE GLARE.
Claims use since Jan. 10, 1939.

Reg. No. 369,943. Registered Aug. 8, 1939. CONTINENTAL OPTICAL COMPANY, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

KROMOTONE

FOR OPHTHALMIC BLANKS AND LENSES TINTED TO REDUCE GLARE.
Claims use since Jan. 25, 1939.

Reg. No. 374,127. Registered Jan. 2, 1940. MATCH KING, INC., Chicago, Ill. Republished by Galter Products Co., Chicago, Ill., a corporation of Illinois.

MONARCH

FOR CAMERAS, PHOTOGRAPHIC LENSES, AND SENSITIZED PHOTOGRAPHIC FILMS.

FOR CHOP SUEY SAUCE, CANNED BEAN SPROUTS, CANNED CHOW MEIN NOODLES, CANNED CHOP SUEY VEGETABLES, AND BEAD MOLASSES.
Claims use since June 7, 1937.

Reg. No. 356,964. Registered May 17, 1938. LAKELAND HIGHLANDS COOPERATIVE ASSOCIATION, Highland City, Fla., a corporation of Florida. Republished by registrant.

FOR FRESH CITRUS FRUITS.
Claims use since Feb. 28, 1929.

Reg. No. 358,066. Registered June 28, 1938. RICHARD D. MITCHELL, doing business as Mitchell Syrup & Preserving Co., Detroit, Mich. Republished by Mitchell Syrup and Preserve Co., Detroit, Mich., a corporation of Michigan.

The words "Brand" and "Supreme Quality" are disclaimed. The drawing is lined to indicate the colors blue, green, yellow or gold, orange, and red or pink.
FOR PRESERVED FRUITS, PRESERVED BERRIES, AND PRESERVED TOMATOES.
Claims use since Dec. 1, 1935.

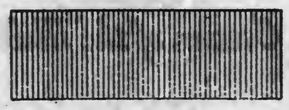
Reg. No. 363,775. Registered Jan. 10, 1939. JACOB FORST PACKING CO., INC., Kingston, N. Y. Republished by Forst Packing Company, Inc., Kingston, N. Y., a corporation of New York.

The word "Brand" is disclaimed.
FOR FOODS AND PARTICULARLY BACON, BOLOGNA, FRANKFURTERS, BOILED HAM, SMOKED HAM, AND MEAT LOAVES CONSISTING OF A MIXTURE OF BEEF AND PORK.
Claims use since Jan. 1, 1937.

Reg. No. 368,467. Registered June 20, 1939. THE CAREY SALT COMPANY, Hutchinson, Kans., a corporation of Kansas. Republished by registrant.

The lining on the ends of the carton or package indicates the color red. The representation of a container is disclaimed.
FOR SALT.
Claims use since Jan. 17, 1939.

Reg. No. 369,079. Registered July 11, 1939. DEMET'S, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.



FOR CANDY.
Claims use since Nov. 25, 1938.

Reg. No. 369,738. Registered Aug. 1, 1939. THE FUJI TRADING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

COOK'S MAGIC

FOR MOLASSES.
Claims use since Dec. 1, 1911.

Reg. No. 374,366. Registered Jan. 9, 1940. THE CAREY SALT COMPANY, Hutchinson, Kans., a corporation of Kansas. Republished by registrant.

The drawing is lined for the color red.
FOR SALT.
Claims use since July 25, 1923.

Reg. No. 375,032. Registered Feb. 6, 1940. SUNI-CITRUS PRODUCTS COMPANY, Haines City, Fla., a corporation of Florida. Republished by registrant.

Sweet Suni-Citrus Pulp

The words "Sweet" and "Citrus Pulpe" are disclaimed.
FOR DRIED CITRUS PULP FOR USE AS A CATTLE FOOD.
Claims use since May 25, 1938.

Reg. No. 378,279. Registered June 4, 1940. MELLO-JOY COFFEE CO., Lafayette, La., a firm. Republished by registrant.

MELLO JOY

The word "Mello" is disclaimed.
FOR COFFEE.
Claims use since Sept. 18, 1936.

Reg. No. 382,865. Registered Nov. 12, 1940. FRUIT GROWERS SERVICE CO., Fresno, Calif., a corporation of California. Republished by registrant.

KNICKERBOCKER

FOR FRESH GRAPES, FRESH DECIDUOUS FRUITS.
Claims use since 1915.

Reg. No. 386,422. Registered Apr. 8, 1941. NORTHERN ILLINOIS CEREAL COMPANY, Lockport, Ill., a corporation of Illinois. Republished by registrant.

Cream of the Mill

FOR ROLLED OATS.
Claims use since Aug. 3, 1934.

Reg. No. 389,620. Registered Aug. 12, 1941. SOUTH COAST FISHERIES, INC., Beverly Hills, Terminal Island, Calif., a corporation of California. Republished by registrant, present location Terminal Island, Calif.

The drawing is lined for the color red.
FOR CANNED CAT FOOD.
Claims use since Jan. 13, 1941.

Reg. No. 392,516. Registered Dec. 30, 1941. SOUTH CAROLINA PEACH GROWERS ASSOCIATION, Spartanburg, S. C., a corporation of South Carolina. Republished by registrant.

Pie Gold

The word "Pie" is disclaimed.
FOR CANNED PEACHES.
Claims use since July 1940.

Reg. No. 395,231. Registered May 19, 1942. LITCHFIELD PRODUCE COMPANY, Litchfield, Minn., a corporation of Minnesota. Republished by registrant.

FLPECO

FOR EGGS, LIVE AND DRESSED POULTRY, TURKEYS, DUCKS, GEESE AND BUTTER.
Claims use since June 1, 1923.

Reg. No. 397,216. Registered Aug. 25, 1942. LYONS-MAGNUS, INCORPORATED, San Francisco, Calif., a corporation of Delaware. Republished by registrant.

CITROLO

FOR CANDIED GRAPEFRUIT PEEL.
Claims use since July 1, 1941.

Reg. No. 397,660. Registered Sept. 15, 1942. REX MCCARTNEY, Hanford, Calif. Republished by registrant.

The words "Brand," "Muscats," and the name "R. McCartney" are disclaimed.
FOR FRESH GRAPES.
Claims use since Oct. 15, 1938.

Reg. No. 400,397. Registered Mar. 9, 1943. ADA MILLING COMPANY, Ada, Okla., a corporation of Oklahoma. Republished by registrant.

Eat the flour; If not satisfied,
Wear the sack, Your money Back.

All the words shown on the drawing are disclaimed.
FOR WHEAT FLOUR.
Claims use since May 1, 1941.

Reg. No. 402,196. Registered July 6, 1943. ADA MILLING COMPANY, Ada, Okla., a corporation of Oklahoma. Republished by registrant.

WHITE FACE

FOR STOCK AND CATTLE FEED.
Claims use since Dec. 7, 1942.

Reg. No. 402,985. Registered Aug. 24, 1943. FAIR PLAY CARAMELS, INC., Johnson City, N. Y., a corporation of New York. Republished by registrant.

KITS

FOR CANDY.
Claims use since Mar. 14, 1938.

Reg. No. 403,284. Registered Sept. 14, 1943. FAIR PLAY CARAMELS, INC., Johnson City, N. Y., a corporation of New York. Republished by registrant.

B-B BATS

FOR CANDY.
Claims use since June 7, 1926.

Reg. No. 403,698. Registered Oct. 12, 1943. ADA MILLING COMPANY, Ada, Okla., a corporation of Oklahoma. Republished by registrant.

FOR POULTRY AND LIVESTOCK FEEDS.
Claims use since Feb. 22, 1943.

Reg. No. 407,410. Registered June 6, 1944. RALPH E. MYERS, doing business as Ralph E. Myers Co., Salinas, Calif. Republished by Salinas Valley Ice Company, Ltd., Salinas, Calif., a corporation of California.

7x

FOR FRESH VEGETABLES.
Claims use since Jan. 25, 1943.

Reg. No. 407,782. Registered June 27, 1944. GENERAL MILLS, INC., Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

FOR FEED FOR DOGS, FEED FOR CATTLE, FEED FOR SWINE, FEED FOR TURKEYS, AND FEED FOR POULTRY.
Claims use since Sept. 4, 1942.

Reg. No. 409,014. Registered Sept. 12, 1944. MEAT INDUSTRY SUPPLIERS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The word "Products" is disclaimed.
FOR SPICES, AND ALL THE OTHER ITEMS NAMED IN THE ORIGINAL REGISTRATION.
Claims use since Nov. 6, 1941.

Reg. No. 416,352. Registered Sept. 4, 1945. LEONARD H. BALLIF, doing business as California Ficgo Company, Los Angeles, Calif. Republished by registrant.

Ficgo

FOR PREPARATION FOR MAKING A FOOD BEVERAGE TO BE USED AS A COFFEE SUBSTITUTE.
Claims use since on or about July 1, 1929.

Reg. No. 417,535. Registered Oct. 30, 1945. HOVDEN FOOD PRODUCTS CORPORATION, Monterey, Calif., a corporation of California. Republished by registrant.

PORTOLA

FOR CANNED FISH AND CANNED SQUID.
Claims use since 1920.

Reg. No. 420,577. Registered Apr. 23, 1946. DE MET'S, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

Turtles

The lining in the drawing is for shading only.
FOR CANDY.
Claims use since Feb. 7, 1945.

Reg. No. 420,578. Registered Apr. 23, 1946. DE MET'S, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

The lining in the drawing is for shading only.
FOR CANDY.
Claims use since Feb. 7, 1945.

Reg. No. 426,907. Registered Jan. 21, 1947. LAND O'SUN DAIRIES, INC., Miami Beach, Fla., a corporation of Florida. Republished by registrant.

LAND O'SUN

FOR FRESH MILK AND ICE CREAM.
Claims use since Aug. 12, 1935.

Reg. No. 431,168. Registered July 15, 1947. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

STABILIDE

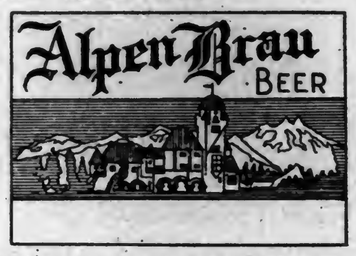
FOR STABILIZED ASSIMILABLE IODIDE-CONTAINING SUBSTANCES—NAMELY, POTASSIUM IODIDE WITH UP TO ABOUT TEN PER CENT CALCIUM STEARATE ADDED, FOR USE AS INGREDIENTS OF FEEDS FOR CATTLE, SHEEP, SWINE, DOGS, FOXES, CHICKENS AND TURKEYS.
Claims use since May 16, 1941.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 251,838. Registered Jan. 15, 1929. M. K. GOETZ BREWING COMPANY, Saint Joseph, Mo., a corporation of Missouri. Republished by registrant.

COUNTRY TAVERN



FOR NONALCOHOLIC, MALT CEREAL BEVERAGES.
Claims use since May 28, 1928.

Reg. No. 307,538. Registered Oct. 31, 1933. THE WEST END BREWING CO., Utica, N. Y., a corporation of New York. Republished by registrant.

THE FAMOUS UTICA BEER

FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since 1890.

Reg. No. 319,451. Registered Nov. 27, 1934. COLUMBIA BREWING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

The lining in the drawing is for shading only. The words "Brau" and "Beer" are disclaimed.
FOR BEER.
Claims use since June 6, 1934.

Reg. No. 320,606. Registered Jan. 1, 1935. UNITED STATES BREWING CO. OF CHICAGO, Chicago, Ill., now by change of name The Elston Company, assignor to United States Brewing Co., Wilmington, Del. Republished by United States Brewing Co., Chicago, Ill., a corporation of Delaware.

Rheingold

FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since Jan. 1, 1890.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 210,625. Registered Mar. 16, 1926. FIBROC INSULATION COMPANY, Valparaiso, Ind. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

Fibroc

FOR COMPOSITE MATERIAL CONSISTING OF FIBROUS MATERIAL AND A CONDENSATION PRODUCT BINDER.
Claims use since Jan. 21, 1921.

Reg. No. 283,104. Registered May 19, 1931. ADDRESSOGRAPH COMPANY, Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

ELECTROCOTE

FOR PRINTING PLATES.
Claims use since on or about Dec. 9, 1930.

Reg. No. 284,826. Registered July 7, 1931. ROCK OF AGES CORPORATION, Burlington, Vt., a corporation of Vermont. Republished by registrant, present location Barre, Vt.

FOR GRANITE MONUMENTS AND MEMORIALS.
Claims use since May 22, 1924.

Reg. No. 357,850. Registered June 14, 1938. ROCK OF AGES CORPORATION, Barre, Vt., a corporation of Vermont. Republished by registrant.

CRYSTALART

FOR GRANITE MONUMENTS AND MEMORIALS.
Claims use since Feb. 11, 1938.

Reg. No. 399,970. Registered Feb. 9, 1943. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

DUROclear

The word "Clear" is disclaimed.
FOR PLANOGRAPHIC PRINTING PLATES.
Claims use since May 11, 1942.

Reg. No. 417,497. Registered Oct. 30, 1945. BEACON STEEL PRODUCTS CO., Westminster, Md. Republished by Beacon Steel Products Co., Inc., Westminster, Md., a corporation of Maryland.

BEACON

All wording is disclaimed except the word "Beacon."

FOR METAL BROODERS, PORTABLE METAL CHICK FOUNTAINS, METAL POULTRY FEEDERS AND WATERERS, METAL GRIT BOXES, METAL NESTS AND METAL ADJUSTABLE ROOF SADDLES.

Claims use since on or about Jan. 1, 1943.

Reg. No. 427,934. Registered Mar. 4, 1947. ALBERT C. FISCHER, Chicago, Ill. Republished by registrant.

SERVICISED

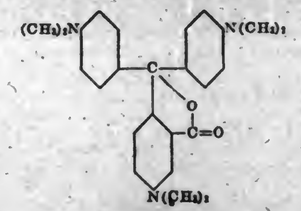
FOR BIRD HOUSES; RUBBER KNEELING PADS FOR PROTECTION OF THE KNEES WHEN KNEELING; AND TREE PROTECTORS IN THE NATURE OF COVERINGS OR JACKETS MADE OF WATERPROOFED PAPER, FABRIC, AND THE LIKE FOR TREES, PLANTS, TWIGS OR BUDS.

Claims use since Feb. 28, 1935.

REISSUES

AUGUST 17, 1948

23,024



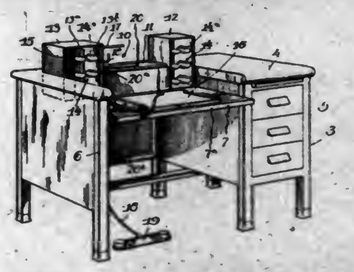
3,3-BIS(4-DIMETHYLAMINOPHENYL)-6-DIMETHYLAMINOPHTHALIDE

Clyde S. Adams, Yellow Springs, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

No Drawing. Original No. 2,417,897, dated March 25, 1947, Serial No. 599,967, June 16, 1945. Application for reissue November 22, 1947, Serial No. 787,610

1 Claim. (Cl. 260—344.6)

The compound 3,3-bis(4-dimethyl-aminophenyl)-6-dimethylaminophthalide having the structure



23,025

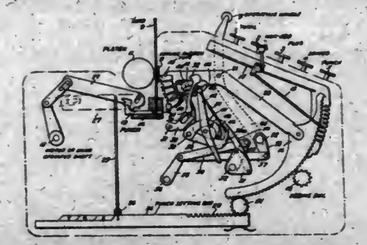
TYPEWRITER DESK FOR USE WITH DICTATING MACHINE TRANSCRIBING DEVICES

John S. Burdick, North Muskegon, Mich., and Carl S. Fairbank, Madison, N. J., assignors to The Shaw-Walker Company, Muskegon, Mich., a corporation of Michigan

Original No. 2,220,475, dated November 5, 1940, Serial No. 260,946, March 10, 1939. Application for reissue May 6, 1948, Serial No. 25,424

1 Claim. (Cl. 45—90)

In combination with a typewriter desk having a typewriter platform, a unit for supporting a transcribing device on said desk in close association to said platform, said unit having a hollow base, cords including a power line cord, a foot control cord, and an ear piece cord adapted for connection to said transcribing device, said foot control cord descending through said hollow base and down below said platform, said ear piece cord descending through said hollow base and then transversely below said platform in close association therewith and extending beyond said platform, the inlet end of said power line cord being housed in said hollow base, and said hollow base and platform being provided with suitable openings for threading said several cords in the manner described whereby said cords are held from interference with the movement of the operator.



23,026

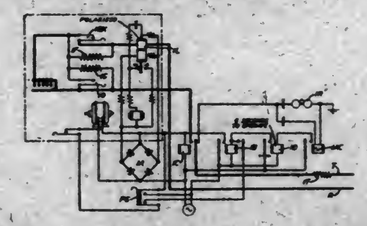
APPARATUS FOR PRINTING AND NOTCHING

Roger Connor, Athens, Ohio, assignor to The McBee Company, Athens, Ohio, a corporation of Ohio

Original No. 2,293,713, dated August 25, 1942, Serial No. 314,676, January 19, 1940. Application for reissue April 10, 1944, Serial No. 530,381

8 Claims. (Cl. 101—19)

1. In a machine of the character described, a differentially movable toothed segment, means to determine the extent of movement of said segment, type selected by said segment for printing, a platen cooperable with the selected type, a stationary card guide and die for locating a card in printing position, punches adjacent said guide for notching an edge of the card, means for operating said punches individually or in selected combinations, a toothed element differentially positionable in accordance with the position of said differentially movable toothed segment, a pinion intermediate the toothed segment and said element in mesh with the teeth of both, and means controlled by said element for controlling the operative connection between said punches and said punch operating means.



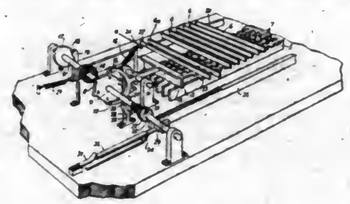
23,027

SATELLITE TELEGRAPH EXCHANGE SYSTEM

Karl E. Fitch, Summit, N. J., and Wayne V. K. Large, Locust Valley, and Charles W. Lucek, Port Chester, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Original No. 2,390,656, dated December 11, 1945, Serial No. 173,958, November 11, 1937. Application for reissue April 5, 1946, Serial No. 659,710

243 Claims. (Cl. 178—2)



1. A telegraph switching system comprising a switching office, a plurality of lines terminating thereat each provided at a remote point with a teletypewriter set, a plurality of trunks extending

therefrom to a central exchange office, a circuit controlling connection in a predetermined order of the first idle one of said trunks to a calling line, and permutation code controlled instrumentalities controlling the connection of one of said lines to a calling trunk in a back and forth intercommunicative relation.

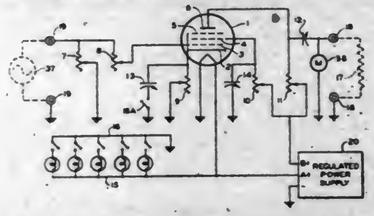
23,028
PRINTING TELEGRAPH SYSTEM
John B. Moore, Brooklyn, N. Y., and Richard E. Mathes, Westfield, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Original No. 2,183,147, dated December 12, 1939, Serial No. 78,348, May 7, 1936. Renewed April 19, 1939. Reissue No. 22,394, dated November 23, 1943, Serial No. 456,514, August 28, 1942. This application for reissue December 9, 1947, Serial No. 790,600
17 Claims. (Cl. 178—23)

1. In a printing telegraph system, means responsive to character representing signals all of which signals are of equal length and possess a fixed ratio other than one-to-one between the number of marking and spacing units thereof, means to de-code said signals, and actuating

mechanism responsive to the operation of said de-coding means to print a designated character only when a signal is received the marking and spacing units of which are in conformity with said fixed ratio.

PATENTS

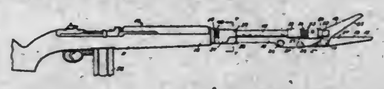
GRANTED AUGUST 17, 1948



2,446,991
MELAMINE-FORMALDEHYDE RESINS PLASTICIZED WITH ALKALI LACTATE
James Ranald Alexander, Donald Burton, and Frederick Hausmann, Bolton, England, assignors to William Walker & Sons, Limited, Bolton, England, a British company
No Drawing. Application July 8, 1947, Serial No. 759,718
7 Claims. (Cl. 260—32.2)

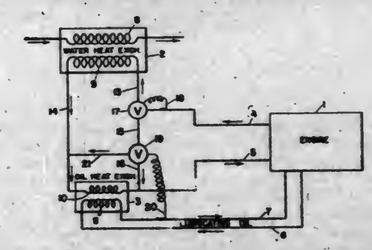
1. A composition of matter having a major proportion of melamine formaldehyde resin and a minor proportion of an alkali lactate.

2,446,992
PROCESS FOR THE PRODUCTION OF PURE WHITE DISCHARGING EFFECTS ON CELLULOSIC MATERIALS
Charles Babey, Basel, Switzerland, and Frederic Leathley Goodall, Burley-in-Wharfedale, England, assignors to J. R. Geigy A.-G., Basel, Switzerland
No Drawing. Application September 27, 1946, Serial No. 699,632. In Switzerland September 26, 1945
Section 1, Public Law 690, August 8, 1946
7 Claims. (Cl. 8—69)



1. A process for the production of pure white discharging effects on cellulosic materials dyed with dischargeable dyestuffs and treated with copper-containing agents which comprises applying to the materials a discharge composition containing a thickening agent as well as a sulfoxylate formaldehyde compound and treating the discharged areas of the materials with an agent yielding cyano ions.

2,446,993
DEVICE FOR FACILITATING CIRCUIT DESIGN
Joseph Alter, Long Branch, N. J.
Application December 19, 1944, Serial No. 568,920
1 Claim. (Cl. 179—171)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A device for determining circuit parameters, under predetermined signal conditions, of electronic circuits comprising an electron tube, a plurality of terminals adapted to be connected to the electrodes of said tube, means for supplying operating potentials to said electrodes, a plurality of components in circuit with said means and said electrodes, each of said components having calibrated adjusting means to vary the magnitude thereof, signal generator means for impressing a signal upon the input electrodes of said tube, load means in the output circuit of said tube for extracting a signal output, and means in said output circuit for indicating signal output conditions as said components are varied in magnitude whereby the magnitude of each component is determinable at any signal output condition.

2,446,994
EXPLOSIVE-OPERATED SHEARS
George A. Barker, Rochester, N. Y.
Application March 1, 1944, Serial No. 524,564
5 Claims. (Cl. 42—90)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A shears device, in combination with a gun having a barrel provided with a muzzle, comprising a base blade having a rearwardly extended shank, means to attach the shank to said gun muzzle with said blade offset from and extended longitudinally of the barrel, a working blade pivoted on the base blade on an axis close to the end of the base blade transverse to the barrel and spaced from a longitudinal geometrical projection of the barrel and positioned to swing in a plane alined with the bore of the barrel, means responsive to gas discharge from the barel to operate the working blade full stroke in one direction, a longitudinal bar spring mounted on the shank having a forward end adjacent the pivot of the blade, said working blade having a lug thereon arranged to engage the outer side of the spring, said spring being under tension to bear on said lug and hold the working blade yieldingly in open position.

2,446,995
ENGINE COOLING SYSTEM AND APPARATUS
Thomas J. Bay, United States Navy
Application October 31, 1945, Serial No. 625,928
4 Claims. (Cl. 123—178)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A system for controlling the temperature of the cooling water and of the lubricating oil for an internal combustion engine wherein a first

heat exchanger cools the water flowing from the engine and a second heat exchanger controls the temperature of the lubricating oil; characterized by the fact that there is combined with said first heat exchanger means controlled by the water temperature for by-passing a portion of the heated water from the engine around said first heat exchanger for alternative delivery to said second heat exchanger or directly to the engine, and means controlled by the temperature of the lubricating oil for determining the portions of said by-passed heated water which are to be delivered to the second heat exchanger and directly to the engine.

2,446,996

METAL OBJECTS COATED WITH LEAD ALLOYS

George M. Bouton, Madison, George S. Phipps, Chatham, and Earle E. Schumacher, Maplewood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

No Drawing. Application June 6, 1942, Serial No. 446,138

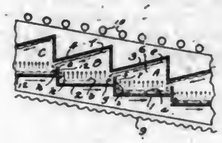
2 Claims. (Cl. 117—131)

1. A metal object having on its surface a relatively thin adherent coating of an alloy consisting of the following ingredients in about the following proportions:

	Per cent
Antimony	1.25
Cadmium	.25
Bismuth	.25
Copper	.06
Arsenic	.01
Lead	Remainder

together with incidental impurities.

2,446,997



MOLECULAR DISTILLATION PROCESS AND APPARATUS FOR THE SEPARATION OF ISOTOPES, ETC.

Aubrey Keith Brewer, Richland Center, Wis., and Samuel Leo Madorsky, Chicago, Ill., assignors, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission

Application March 11, 1943, Serial No. 478,844

13 Claims. (Cl. 202—52)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. Process for rectifying a liquid mixture by unidirectional distillation which comprises heating a first part of the liquid, condensing the vapor therefrom on a surface higher than the level of said first part, flowing the condensate by gravity from said surface to another part of the liquid and replacing the liquid evaporated from the first part by liquid comprising at least a portion of said condensate flowing by gravity from said second part whereby a difference in abundance of the components in the two parts is established.

2,446,998

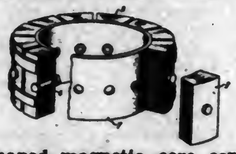
PROCESS OF CATALYTICALLY TREATING HYDROCARBONS WITH HYDROGEN FLUORIDE AND BORON TRIFLUORIDE IN THE PRESENCE OF HYDROGEN

Robert E. Burk, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application November 20, 1943, Serial No. 511,106

4 Claims. (Cl. 260—683.5)

1. A process of catalytically treating hydrocarbons which comprises subjecting a hydrocarbon fraction containing a normal paraffin and an olefin, in the presence of hydrogen in an amount to provide a partial pressure of hydrogen from 50 to 2000 pounds per square inch, to the action of 5 to 300 volume percent (based on the hydrocarbons) of a liquid catalyst comprising as its essential catalytic ingredients liquid hydrogen fluoride in which is dissolved not over 50 mol percent of boron trifluoride (based on the total fluorides) to provide a partial pressure of boron trifluoride of 5 to 550 pounds per square inch, continuing the reaction at a temperature of −35 to 250° F. under a total pressure to maintain the hydrogen fluoride liquid at the temperature employed, whereby at least a part of said olefin is converted into saturated hydrocarbons along with the modification of the normal paraffin, and the amount of hydrocarbons accumulating in the liquid catalyst is minimized.



2,446,999

MAGNETIC CORE

Guglielmo Camilli, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

Application November 7, 1945, Serial No. 627,226

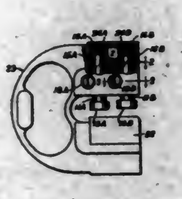
1 Claim. (Cl. 175—356)

A ring shaped magnetic core comprising, a hollow cylinder of insulating material having a plurality of holes through the wall thereof, a plurality of radially laminated flatwise curved segmentally shaped members, clamping rods extending radially through each of said members and terminating in an enlarged raised head on the inner and outer surfaces of each member, said members being located on the outer surface of said cylinder with the raised head on the inner surface of each member fitted into one of the holes in the wall of said cylinder, a pair of non-magnetic clamping bands surrounding said core on opposite sides of the raised heads on the outer surface of said segmentally shaped members, said members being separated by uniform gaps of substantial length, and solid non-magnetic inserts in said gaps.

2,447,000

PLAY-MINIMIZING MEANS FOR ADJUSTABLE GAUGING MEMBERS

William J. Darmody, Philadelphia, Pa.



Application June 7, 1946, Serial No. 675,127

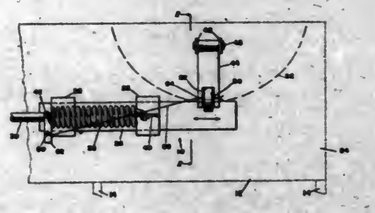
4 Claims. (Cl. 33—163)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an adjustable gaging device comprising an arm having a bore opening therethrough, the

combination of a stem member movably fitted into said bore opening with one end thereof protruding from the arm and presenting a flat gaging surface perpendicular to the axis of said bore and with the opposite stem end terminating within the bore and having a portion of that end's cross section slanted with respect to the stem axis, locking means intermediate said two stem ends adjustably anchoring the stem in said bore and restraining same in each anchored position against axial movement with respect to the bore, a plug fitted into the end of said bore farthest away from the stem's gaging surface and having a portion of one of its ends slanted with respect to the plug's axis so as to mate with the slanted portion of said stem member's non-gaging surface end in a way to convert axial pressure by the plug against that stem end into a sidewise force which positively urges the slanted stem end against the bore wall and thereby prevents the stem from cocking in said bore so that the stem's gaging face is held perpendicular to the bore axis as aforesaid, and an adjusting screw threadably fitted into said bore behind said plug for the purpose of applying said axial pressure through the plug to the stem's said slanted end.

2,447,001



SAFETY LATCH

Clayton A. Erickson, United States Navy

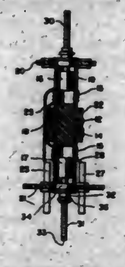
Application June 16, 1945, Serial No. 599,946

2 Claims. (Cl. 89—1)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with latching means consisting of a hook and a bar adapted by interengagement to anchor one part to another, a retainer holding the hook in engagement with the bar, a cotter pin inserted through an aperture in said hook for preventing disengagement of the retainer from the hook, and means attaching the cotter pin to the bar, whereby movement of the bar to disengage it from the hook will simultaneously withdraw the cotter pin from the hook.

2,447,002



PERMEABILITY TUNED INTERMEDIATE FREQUENCY TRANSFORMER

William R. Faust and Howard O. Lorensen, Washington, D. C.

Application April 28, 1945, Serial No. 590,869

5 Claims. (Cl. 171—119)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. A permeability tuned transformer comprising a coil-form of electrical insulating material, a group of four coil sections spaced axially along said form, a pair of inductance varying means one for each end coil of the group, each end coil being relatively closely coupled to its inductance varying means and relatively very loosely coupled to both middle coils of the group and the end coil and said middle coils being relatively closely coupled to each other, whereby the induction varying means has relatively very slight but substantially equal influence on both said middle coils.

2,447,003

PRODUCTION OF CARBON BISULFIDE

Bernard Wm. Gamson, Chicago, Ill., assignor to Great Lakes Carbon Corporation, Morton Grove, Ill., a corporation of Delaware

No Drawing. Application July 24, 1944, Serial No. 546,427

7 Claims. (Cl. 23—206)

6. A process for manufacturing carbon disulfide which comprises initially preparing a substantially uniform mixture of a hydrocarbonaceous substance with elemental sulfur in proportions of at least 60% the stoichiometric equivalent of said hydrogen in said substance, calcining the mixture at a temperature of 1200°–1800° F., thereby eliminating the major portion of the hydrogen as hydrogen sulfide, and then contacting additional sulfur vapors with the solid, infusible carbon-sulfur-hydrogen substance thus formed, at a temperature in the range of about 1100°–1800° F. until at least about 95% of the carbon content thereof is converted to carbon disulfide.

2,447,004

SULFO COMPOSITIONS AND THEIR METHOD OF MANUFACTURE

Bernard W. Gamson, Chicago, Ill., assignor to Great Lakes Carbon Corp., Morton Grove, Ill., a corporation of Delaware

No Drawing. Application February 23, 1946, Serial No. 649,730

11 Claims. (Cl. 260—139)

1. As a new composition of matter, a hard, dense, amorphous, infusible, insoluble substance composed of from about 47 to about 70% by weight of carbon, from about 1.8 to 4.0% by weight of hydrogen and from about 25–50% by weight of sulfur in chemical combination, said

substance being obtained by heating a uniform mixture of a heavy heat liquifiable hydrocarbon and elemental sulfur at least 60% of the stoichiometric equivalent of the hydrogen content of said hydrocarbon, to a temperature in the range of 450–625° F.

2,447,005

METHOD AND APPARATUS FOR PRODUCING SULFO COMPOSITIONS

Bernard W. Gamson, Chicago, Ill., assignor to Great Lakes Carbon Corp., Morton Grove, Ill., a corporation of Delaware

Application February 23, 1946, Serial No. 649,731
11 Claims. (Cl. 260—139)

1. The method of producing sulfo-compositions which comprises intimately admixing at a temperature of from about 300° F. to about 400° F., hydrocarbon material having a hydrogen content of from about 4% to about 12% and sulfur in substantially stoichiometrical proportion to said hydrogen content, and spraying said reaction mixture while in liquid condition onto previously formed solid particles of sulfo-composition contained in a separate reaction zone heated to a temperature of from about 450° F. to about 625° F., to react said liquid and to accumulate the resulting solid, infusible sulfohydrocarbon reaction product thereof on said particles and to evolve gaseous products therefrom comprising hydrogen sulfide.

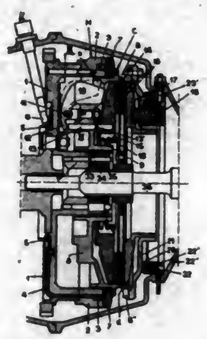
2,447,006

PRODUCTION OF SULFO COMPOSITIONS

Bernard W. Gamson, Chicago, Ill., assignor to Great Lakes Carbon Corp., Morton Grove, Ill., a corporation of Delaware

Application February 23, 1946, Serial No. 649,732
10 Claims. (Cl. 260—139)

1. In a method for producing compositions of the class described, which comprises intimately admixing at a temperature of from about 300° F. and to about 450° F., hydrocarbon material having a hydrogen content of from about 4% to about 12% with sulfur in the proportion of from about 60% to about 110% of the stoichiometric hydrogen content of said hydrocarbon material to form a fluid reaction mixture, heating the resulting mixture at a temperature of from about 450° F. to about 625° F. to form a solid, and calcining said solid to a temperature of from about 1100° F. to about 1800° F., the steps which comprise oxidizing the hydrogen sulfide content of the gases evolved in said process, condensing free sulfur therefrom, and returning the sulfur to the initial reaction step of the process.



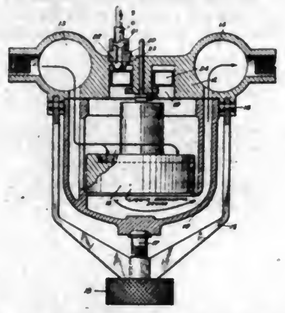
2,447,007

CLUTCH DEVICE

Michel Gravina and Marcel Hawadier, Paris, France; vested in the Attorney General of the United States

Application August 20, 1941, Serial No. 407,662
In France April 26, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires April 26, 1960
14 Claims. (Cl. 192—105)

1. In a power transmitting mechanism, the combination of a driving member, an electromagnetic clutch including a pair of traction elements, a centrifugal clutch, and a driven member, arranged in series in the order named, and a rotary member supporting one of said electromagnetic clutch elements, said centrifugal clutch including a friction disk secured to said driven shaft and a pair of cooperating disks secured to said rotary member on opposite sides of said first disk, said electro-magnetic and centrifugal



clutches adapted to successively and jointly transmit the entire torsional stress from the driving to the driven member.

2,447,008

UNITARY VAPOR ELIMINATOR AND FUEL METER FOR USE IN FUEL FEED SYSTEMS OF AIRCRAFT

Léon Gouy, Geneva, Switzerland; vested in the Attorney General of the United States

Application October 22, 1942, Serial No. 462,981
In France October 23, 1941
5 Claims. (Cl. 158—36.3)

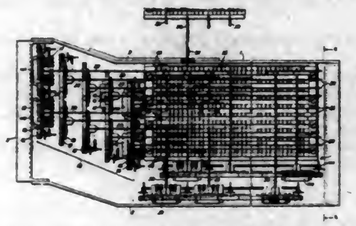
1. In a fuel supply system for an aeroplane engine or the like, said system being of the type involving a feed line leading from a supply to the carbureter of the engine with a pump connected between the supply and the carbureter; a fuel metering and devaporizing device connected in the feed line between the supply and said pump; said device comprising a casing containing metering means in the lower part thereof and a head closing the top of the casing, fuel entrance and exit means on said device, means for directing the fuel flow from the fuel entrance means to that portion of the casing above the metering means, through the metering means and thence out of the casing by way of said exit means, whereby the fuel from the fuel supply line can enter the casing to be metered therein and pass again into the fuel feed line toward the carbureter, said head being formed with a relatively large diameter vapor collecting chamber substantially directly above said metering means and open at its lower end to the upper part of the interior of said casing whereby air and vapor can accumulate while the fuel in the casing is at a low level, a relatively large diameter float positioned in said vapor chamber and arranged to rise and fall freely with the rise and fall of the fuel level in said casing and chamber, a vapor withdrawing conduit leading from said chamber to a suction element on said engine, and a normally open free valve arranged to be operated to close said conduit by a rise of said float above a predetermined level.

2,447,009

METHOD OF REFINING POLYMERIZED ROSIN

Burt L. Hampton, Jacksonville, Fla., assignor, by mesne assignments, to The Glidden Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application February 23, 1946, Serial No. 649,774
5 Claims. (Cl. 260—97)



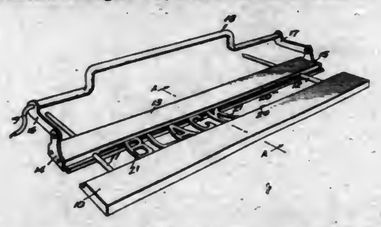
1. The process for refining polymerized rosin which comprises the steps of: heating said rosin to a temperature between about 150° C. and 220° C.; mixing iodoform with said heated rosin in amounts of from about .03% to 1% by weight of the latter; bringing the temperature of the mixture to between about 175° C. and 340° C. and maintaining said temperature therewithin for a period of time related inversely to temperature in the range of from 2 to 4 hours at 175° C. to about 1 to 10 minutes at 340° C. to effect improvements in grade without substantial decarboxylation.

2,447,010

CROSSBAR SWITCH

Henry C. Harrison, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application August 28, 1946, Serial No. 693,594
4 Claims. (Cl. 179—27.54)

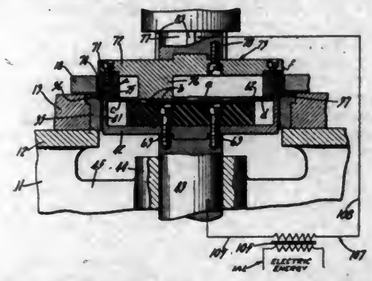


1. In a cross bar switch for establishing connections, coordinately arranged cross bars in which each hold bar comprises a stiff strip, located vertically and a flexible attachment thereto having a projection at each cross-point while each select bar comprises a stiff strip located horizontally and having a projection at each cross-point, vertical contact strips running parallel to the hold bars and each having an angular projection at each cross-point serving as contact points, and arranged in sets, each set associated with a particular hold bar, sets of contact wires in pairs each pair serving as a single contact point for a corresponding projection on a contact strip, horizontally located insulation strips, one of said insulation strips being provided for each horizontal row of cross-points, said vertical contact strips being supported in transverse slots in said insulation strips, while the hold bars are slidably movable in transverse slots in said insulation strips, insulation strips each running parallel with and located behind and in the same horizontal plane with a corresponding first-mentioned insulation strip and in each of which is molded a corresponding horizontal row of said contact wires, an operating finger for each set of contact wires at each cross-point molded in the corresponding last-mentioned insulation strips, an insulation card at each cross-point in which the corresponding sets of contact wires and finger are threaded, each said set of contact wires and finger being tensioned to cause said finger to rest against a corresponding first-mentioned insulation strip so that said contact wires maintain a fixed contact gap between them and the associated projections on the associated vertical contact strips, an armature yieldably connected to one end of each select bar, select magnets for attracting corresponding armatures to shift the associated select bars longitudinally, said select magnets being located in staggered relation so that the select bars may be separated only as required for the free movement of the cards transversely between two adjacent horizontal insulation strips, an armature yieldably connected to one end of each hold bar, hold magnets for attracting corresponding hold bars to shift them longitudinally, said hold magnets being located in staggered relation so that the hold bars may be located as close together as is merely required by the cards which are wide enough only to accommodate the associated sets of contact wires and rods mounted thereon plus a reasonable space between the cards for easy operation and a housing for mounting said insulation strips, magnets and bars, said select bars being arranged to have their projections engage associated flexible projections on all hold bars to a position where when a hold bar is shifted the flexed projection thereon will engage the associated finger and cause said finger to shift the associated card and contact wires to engage associated extensions on the associated contact strips to establish connections at the corresponding cross-point.

2,447,011

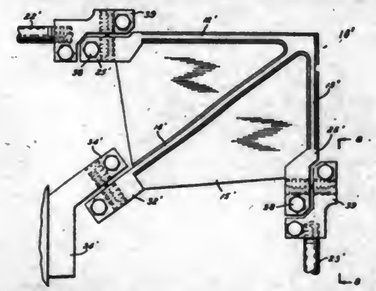
METHOD AND DEVICE FOR MOUNTING LETTERS TO A SUPPORT

Douglass E. Hayes, Arlington, Va.



Application October 19, 1945, Serial No. 623,428
10 Claims. (Cl. 40—140)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. A method for applying separate symbols, letters and the like which are coated on one side with adhesive to a backing member, the steps comprising, composing a line of symbols, maintaining the ends of each symbol under compression, applying heat and pressure to said line of symbols along the longitudinal axis of said line of symbols whereby said symbols are tacked to said backing surface along said longitudinal axis,

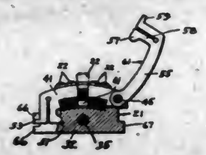


removing the heat and pressure from said longitudinal axis, and applying heat and pressure to the entire area of said symbols whereby they adhere tightly to said backing.

2,447,012
WELDING OF KEYS TO CAN ENDS
John G. Hayes, San Mateo, Calif., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application February 21, 1945, Serial No. 579,021
5 Claims. (Cl. 219—4)

1. In an apparatus for attaching an opening key having a welding projection thereon to a can end having a protective surface coating on a portion only of one side thereof, the combination of an electrode for engaging the uncoated portion of the partially coated can end surface, a second electrode for pressing an opening key against the opposite surface of the can end to force the key welding projection into close metal to metal contact with the can end, spaced electrically insulated means on opposite sides of the can end respectively disposed oppositely to said electrodes for clamping the can end therebetween during a welding operation, and electrical means for passing a welding current between said electrodes through the key and can end to fuse them together in a permanent welded bond.

2,447,013
MOTION TRANSMITTING DEVICE
Herbert M. Heuver, Dayton, Ohio, and Edward A. Rutan, Elmira, N. Y.
Application October 1, 1945, Serial No. 619,730
10 Claims. (Cl. 74—519)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



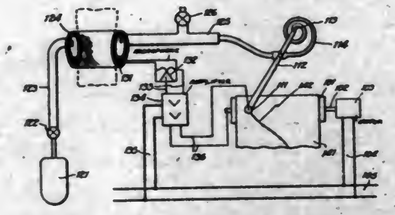
1. A motion transmitting device comprising a fixed support, a bell crank member supported thereby, and a plurality of flexure pivots connected with the bell crank member, said device being adapted to transmit movement applied by means positioned at one part of the member as a proportionate movement to means positioned at another part of said member, the flexure pivots including each a pair of spaced attaching shoulders containing thereon a pair of converging neck portions merging into a narrow flexure neck therebetween, one shoulder being adjustably attached to said member and the other shoulder similarly attached to the means connected thereto, whereby the relative mechanical effect of the bell crank can be readily modified without removing any of the parts of the whole device.

2,447,014
MANUFACTURE OF ESSENCE CONTAINING PACKAGES FOR BREWING BEVERAGES
Hans O. Irmscher, Roslyn, N. Y., assignor to National Urn Bag Co., Inc., a corporation of New York
Application November 25, 1940, Serial No. 367,051
2 Claims. (Cl. 93—3)

1. In a method of making a package of the character described, the steps of severing a flattened tubular structure formed with a single longitudinally extending edge fold seam to provide a section unit with an open end, placing contiguous edge portions of said open end to extend across a thermosetting coated side of a web while in flattened position, folding and simultaneously securing said web with the coated side in face to face relation around said open side to form a closure and pressure heating said folded web against the outer surfaces of said edge portions to seal said closure.

2,447,015
TYPE LOCKING MEANS FOR MARKING MECHANISM
Samuel S. Jacobs, San Mateo, and Howard B. Peterson, San Francisco, Calif., assignors to American Can Company, New York, N. Y., a corporation of New Jersey
Application May 17, 1945, Serial No. 594,326
7 Claims. (Cl. 101—29)

1. In a marking mechanism for a machine for marking container parts, the combination of a type holder insertable into a marking head, said type holder having a walled recess for receiving a plurality of rows of separate type marking elements each provided with aligned locking ledges, a plurality of spaced locking levers pivotally mounted in a wall of said holder recess and respectively and individually hingeable into and out of embracing engagement with the aligned ledges of said rows of type elements for confining the same in said holder against displacement therefrom when the lever is in a closed position and for permitting access to the type elements for easy removal thereof from said holder when the lever is in an open position, and a spring catch on the outer end of each of said locking levers yieldably engageable with a notch on said holder for individually locking the levers in closed position over the ledges of said marking elements.



2,447,016
CATALYTIC REFORMING OF HYDROCARBONS
Kenneth K. Kearby, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application March 2, 1948, Serial No. 12,681
16 Claims. (Cl. 260—673.5)

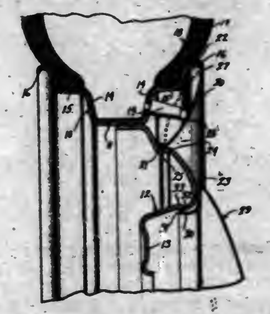
1. A method of treating hydrocarbons which comprises contacting said hydrocarbons at elevated temperatures with a catalyst composition consisting of at least 70% of zinc aluminate spinel supporting at least one metal oxide selected from the group consisting of molybdenum oxide and chromium oxide.

2,447,017
CATALYSTS FOR HYDROCARBON CONVERSIONS
Kenneth K. Kearby, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 24, 1947, Serial No. 782,029
6 Claims. (Cl. 252—210)

1. A catalyst composition consisting of at least 70% of zinc aluminate spinel supporting at least one metal oxide selected from the group consisting of molybdenum oxide and chromium oxide.

2,447,018
THREE-MAGNITUDE RECORDER
George Keinath, Larchmont, N. Y.
Application April 18, 1945, Serial No. 588,951
8 Claims. (Cl. 128—2.05)

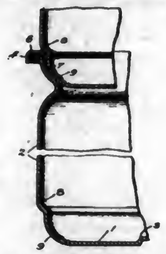
1. Apparatus for recording three correlated magnitudes on an electroresponsive recording chart, comprising a rotatable surface electrode for accommodating the chart, a stylus electrode reciprocable relative to said surface electrode, drive means connected with said surface electrode for rotating it in accordance with one of said magnitudes, drive means connected with said stylus electrode for moving it in accordance with another one of said magnitudes, an electric circuit connected to said electrodes and having continuous-energy supply means for continuously applying a mark-producing voltage across the chart, and control means associated with said circuit for varying said voltage in accordance with said third magnitude so as to impose a corresponding thickness variation on the recorded marks.



2,447,019
PREPARATION OF DIAMINOCRESOL
John Krueger and Robert Lenhart Hayes, Chicago, Ill., assignors to The Edwal Laboratories, Inc., Chicago, Ill., a corporation of Illinois
No Drawing. Application December 8, 1943, Serial No. 513,462
7 Claims. (Cl. 260—575)

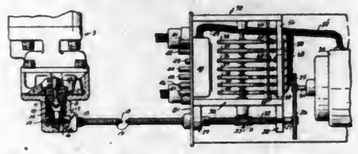
1. In a method of preparing diaminocresol base, the steps which comprise hydrolyzing a symmetrical triaminotoluene hydrochloride in an aqueous-hydrochloric acid medium until only one of the amino groups of the triaminotoluene is converted to a hydroxy group, cooling, adding hydrochloric acid, admixing the resulting precipitate with a solution of an alkali metal carbonate, filtering, extracting the diaminocresol base from the precipitate with an organic solvent, and recovering the diamino cresol base from said organic solvent.

2,447,020
PREPARATION OF DIAMINOPHENOL
John Krueger and Robert Lenhart Hayes, Chicago, Ill., assignors to The Edwal Laboratories, Inc., Chicago, Ill., a corporation of Illinois
No Drawing. Application December 8, 1943, Serial No. 513,463
11 Claims. (Cl. 260—575)



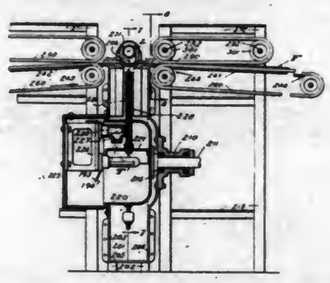
1. In a method of preparing diaminophenol base, the steps which comprise hydrolyzing a hydrochloride of symmetrical triaminobenzene with an aqueous-hydrochloric acid solution until only one of the amino groups of the triaminobenzene is converted to a hydroxy group, cooling, adding hydrochloric acid thereto and filtering off the resulting precipitate, admixing said precipitate with a solution of an alkali metal carbonate, filtering off the resulting precipitate and extracting the diaminophenol therefrom with an organic solvent.

2,447,021
TRIM RING FOR VEHICLE WHEELS
George Albert Lyon, Allenhurst, N. J.
Application February 25, 1943, Serial No. 476,999
2 Claims. (Cl. 301—37)



1. As an article of manufacture, a wheel cover member for disposition over an outer side of a wheel and over the tire rim of a wheel to which it is attached, said cover member having a cross-sectional configuration of such curvature and magnitude so as to constitute in effect a continuation of the side wall of a tire on a wheel to which it is attached and being provided with openings at substantially the radially outer part thereof for affording emission of foreign matter from the rear side thereof under the influence of centrifugal force developed during rotation of the wheel to which it is attached.

2,447,022
STACKING RECEPTACLE
Howard Hinds McCarl, Washington, D. C.
Application July 19, 1945, Serial No. 606,016
1 Claim. (Cl. 220—97)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



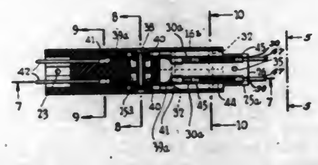
An open-topped receptacle comprising a bottom wall and vertical side walls, a continuously-extending inwardly directed bead below the top edge of the side wall forming between said bead and the top edge an inwardly facing concave portion, a continuously extending outwardly facing convex portion integrally connecting the side wall to the bottom wall and inset slightly from the side wall, to lie beneath the concave portion, said convex portion having a cross-sectional radius of curvature slightly less than the cross-sectional radius of curvature of said concave portion, whereby when several receptacles are stacked, one above the other, the concave portion of the lower receptacle will contact and support the convex portion of the upper receptacle substantially along a line of contact and the receptacles will be nested without wedging.

2,447,023
SELECTIVE CONTROL MECHANISM FOR GOVERNOR-CONTROLLED AIRCRAFT PROPELLERS
Howard M. McCoy, Patterson Field, Ohio
Application February 3, 1944, Serial No. 520,924
2 Claims. (Cl. 264—3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A selective speed control mechanism for governor-controlled engine-driven aircraft propellers comprising, a propeller governor having a speed regulating means actuated by rotatable engine-driven governor weights and a speeder spring under compression, means for adjusting the compression of said speeder spring including a slidable piston-like element in abutment with said spring, means including reduction gearing for adjusting the position of said piston-like element in response to rotation of a drive shaft extending from said propeller governor to a remote control point, an electric motor, driving means connecting the remote end of said drive shaft to the shaft of said motor, a plurality of push button switches corresponding to the number of desired speed adjustments of said control mechanism, a movable contact for each of said push button switches and connected in series therewith, a pair of spaced contacts for each of the movable contacts and arranged on opposite sides of the respective movable contacts, a plurality of disk cams mounted on a common camshaft and each adapted to operate one of said movable contacts, driving means connecting said camshaft to the shaft of said motor, a plurality of energizing circuits for said motor and each including one of said push button switches, one of said movable contacts and a corresponding pair of said fixed contacts, the connections between said pairs of fixed contacts and said motor being such that closing the motor circuit through one contact of each pair causes motor rotation in one direction and closing the motor circuit through the other contact of each pair causes motor rotation in the opposite direction, and said cams being individually contoured to cause operation of said motor in such a direction and for such length of time as to produce definite and individual adjustments of the compression of said speeder spring in response to operation of each of said push button switches.

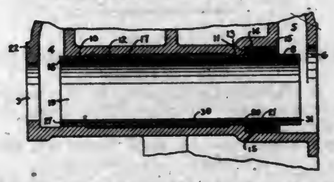
2,447,024
APPARATUS FOR PHOTOELECTRIC MEASUREMENT OF AREAS
Arthur G. B. Metcalf, Milton, Mass., assignor to North American Research Corporation, Cambridge, Mass., a corporation of Massachusetts
Original application October 31, 1939, Serial No. 302,185. Divided and this application January 19, 1944, Serial No. 518,841
6 Claims. (Cl. 88—14)

1. Apparatus of the type described comprising a cylindrical scanner housing, a circumferential window in said housing, scanning means rotating about the axis of, and arranged to traverse said window, and adjacent to said housing a conveyor table including conveyor belts adapted to convey the article to be scanned past said window and forming a conveyor surface having next to said housing substantially the curvature of the window.



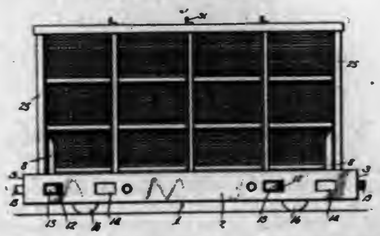
2,447,025
CABLE SEPARATOR AND YOKE
Bruce K. Newman, United States Army, St. Louis, Mo.
Application May 25, 1945, Serial No. 595,865
3 Claims. (Cl. 24—115)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A combined spacer and holder for a plurality of groups of conductors comprising a strip of band material bent to form a multiplicity of loops broad at outer parts each loop having sides convergent into close relation at their bases, all said loops being symmetrically and radially arranged with their bases close to a common center, a strap fixed with the material of the loops so that it may be bent into encircling relation around the



outer parts of the loops, and means to secure the strap in close encircling relation to the loops for retention of conductor elements in the spaces between said loops.

2,447,026
CONNECTOR UNIT FOR ELECTRIC CONDUITS
Joseph F. O'Brien, Lebanon, and Earl S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application August 16, 1944, Serial No. 550,866
1 Claim. (Cl. 173—334.1)

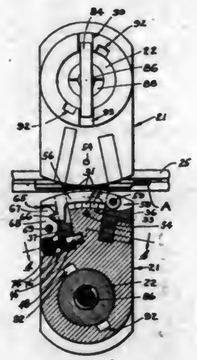


An electrical pivotally jointed device comprising in combination a sleeve member provided on its interior faces with longitudinally extending ribs and therewith parallelly extending grooves; a member dimensioned to be received within said sleeve member and provided with longitudinally extending grooves arranged and dimensioned to receive said longitudinally extending ribs of said sleeve member and provide groove space respectively aligned with said grooves of said sleeve member, said second member having a circular end portion exteriorly disposed when said second member is inserted within said sleeve member, said circular end portion having at its opposite lateral faces circular recesses and a perforation extending centrally with respect to said circular recesses; a pair of complementary hollow members provided respectively at one end with circular end portions corresponding to said circular end portion of said second member, and centrally disposed circular bosses dimensioned to be received within said circular recesses respectively; a pair of insert members of corresponding outer dimensions and contour arranged to be respectively received within said pair of complementary hollow members and provided with longitudinally extending grooves; a pair of electrical conductors respectively disposed in said mutually aligned grooves of said sleeve member and said second member; a pair of electrical conductors respectively disposed in said grooves of said insert members, each of said electrical conductors being provided with a flat circular terminal arranged to be respectively received in pairs within said circular recesses of said second member; and pivotal means extending through said central perforation and pivotally interconnecting said pair of hollow members with said second member and affording pressure engagement between said flat circular terminals of said pairs of electrical conductors respectively, whereby pivotal movement at the thus formed joint of said device and good electrical contact between the electrical conductors of the respective pairs of electrical conductors are afforded.

2,447,027
CYLINDER LINER
William E. Pielop, Jr., Houston, Tex.
Application January 13, 1944, Serial No. 518,066
10 Claims. (Cl. 309—3)

4. A liner assembly for slush pumps comprising a hollow cylindrical liner body, a retainer flange rib projecting from the periphery thereof, a recess cut into the inner periphery of said liner, a plurality of packing rings fitted into said recess, and an insert of a hard wear resistant material forced into said liner and a cement like compound on the periphery of said insert.

2,447,028
FREIGHT HANDLING DEVICE
William M. Riddick, Houston, Tex., assignor of one-tenth to Willard B. McGranahan, Los Angeles, Calif.
Application July 23, 1945, Serial No. 606,603
8 Claims. (Cl. 280—50)

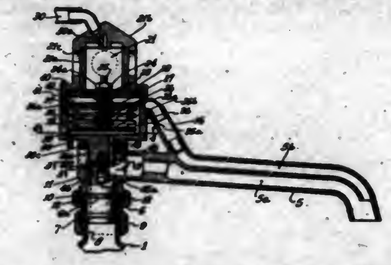


3. A demountable freight container comprising a wheeled base, side and end frame members having leg portions adapted to register in openings within the base, said leg portions having notches therein and cross pins in certain of the openings engaged by the notches of the legs, and a top frame member mounted on the upper portion of the side and end frames.

2,447,029
PROCESS OF PREPARING CATALYSTS FOR BENZINE SYNTHESIS
Otto Roelen and Walter Feisst, Oberhausen-Holten, Germany, vested in the Attorney General of the United States
No Drawing. Original application March 23, 1937, Serial No. 132,595. Divided and this application November 1, 1941, Serial No. 417,496. In Germany April 1, 1936
3 Claims. (Cl. 252—238)

1. In the regeneration for reuse of catalytic masses spent in the synthesis of benzine from

carbon monoxide and hydrogen and comprising iron group catalysts precipitated on a carrier substance, the improvement which comprises using magnesium carbonates as the carrier substance, the improvement which comlyst with water and carbon dioxide to dissolve out the magnesium carbonates, separating the solution of magnesium carbonates from the residue, treating this solution for the removal of part of the carbon dioxide by heating it to the boiling point, whereby the magnesium is precipitated in the form of basic carbonate, and combining the precipitated carbonate with freshly precipitated iron group catalysts.

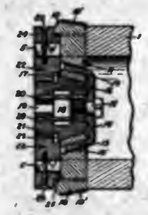


2,447,030
TYPE LOCKING MEANS FOR MARKING MECHANISM
Sven H. Rosenlof, Newark, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application June 25, 1945, Serial No. 601,450
6 Claims. (Cl. 101—29)

6. In a marking mechanism for a machine for marking container parts, the combination of a marking head having a recess for receiving a type marking element provided with a locking ledge extending across the element and inwardly spaced from its marking face, a locking lever pivotally mounted at one end on said head and outwardly swingable from a closed locking position inside of said marking element face in embracing engagement with said element ledge and released position out of engagement with said ledge and outside of said marking face for easy removal of the marking element from said head, and a latch member pivotally mounted within the confines of said head and engageable with the free end of said locking lever when it is inside of the marking face of said marking element for holding the lever against accidental opening.

2,447,031
LIQUID DOSING APPARATUS
Harry A. Rush, Glendale, Calif.
Application December 8, 1944, Serial No. 567,173
12 Claims. (Cl. 210—31)

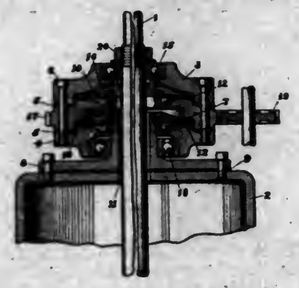
1. In a chemical dosing apparatus, swingable spout means forming a passage for passing water under pressure, means for feeding chemical to said water, pressure responsive valve means for controlling said chemical feed, and means for causing the pressure of said water to operate said



valve means in accordance with the position of said swingable spout means.

2,447,032
CONTACT MAKER AND BREAKER
Oscar A. Shann, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 25, 1944, Serial No. 551,189
5 Claims. (Cl. 200—122)

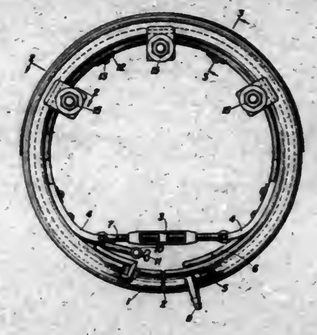
2. A flat plate of resistance material having an opening substantially in the center thereof, flexible convex plates of metal secured with their peripheries to the outer peripheries of flat surfaces of said resistance plate, one of said metal plates on each side of said resistance plate to form a sealed chamber between said metal plates with all except the outer peripheral surface of said resistance plate inside said chamber, an expansible fluid filling said chamber, said resistance plate adapted to have an electric current passed therethrough to heat said resistance plate, said heated resistance plate, by reason of being all except its outer peripheral surface inside said chamber, adapted to transfer substantially all of its heat to said fluid to expand said metal plates.



2,447,033
DUMMY PROJECTILE
Michael Shapiro, Franklin Square, N. Y.
Application April 27, 1945, Serial No. 590,574
8 Claims. (Cl. 102—92.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A projectile for use in loading practice drill, comprising a body provided at its rear end with a plurality of equally spaced longitudinal recesses, a rotating band formed of a plurality of arcuate

sections each provided with a stem seated in one of said recesses, an outer ring-nut threaded on the rear end of the body and providing rearward support for said rotating band, an inner ring threaded into the rear end of said body, an operating lock threaded into said inner-ring-nut and rotatable with relation to said nut, said lock having an inner end in the form of a truncated cone whose periphery is in operative engagement with the ends of the stems of the rotating band sections whereby when the lock is rotated in one direction the said sections will be moved positively outward simultaneously, and when rotated in the opposite direction, said sections will be released and permitted to move simultaneously inward, and non-rotatable means carried by said lock to engage said arcuate sections to prevent independent movement of the respective sections.



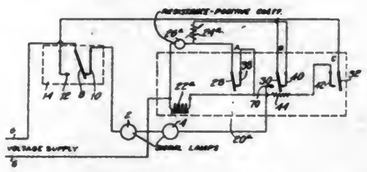
2,447,034
CENTRIFUGAL FLUID SEAL
Milton C. Shaw and Ormal W. Hart, Cleveland, Ohio
Application January 8, 1945, Serial No. 571,892
1 Claim. (Cl. 286—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a sealing means between a wall having differential pressures on its opposite sides and a rotatable shaft passing through said wall, a sleeve projecting from said wall and fitting loosely around said shaft, an annular disc fixed to the end of said sleeve, another annular disc fixed to said shaft and spaced from said first disc, means forming an annular chamber around each of said discs with small clearance about their peripheral portions and with pockets for retaining a quantity of sealing fluid when not in motion, means and said sleeve and between said chamber means and said shaft, means for rotating said chamber means to throw said sealing fluid into said small clearance so as to form a positive seal against said differential pressure independently of the rotation of said shaft.

2,447,035
TIRE REPAIR APPARATUS
Elwood F. Shell, San Francisco, Calif.
Application December 10, 1945, Serial No. 634,136
6 Claims. (Cl. 18—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

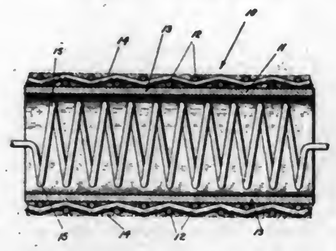
5. In an apparatus of the character described, an annular support comprising a pair of semi-circular members having outer surfaces shaped to fit against a tire bead, adjustable connecting means mounted between opposing interior surfaces of said pair of members and arranged to expand said support by forcing said members away from one another, and heating means mounted on the surface of at least one of said pair of members; a lock ring shaped to fit against

a portion of said tire bead which is not contacted by said pair of members; and clamp means for engaging said support and said ring and maintaining them in position against said tire bead.



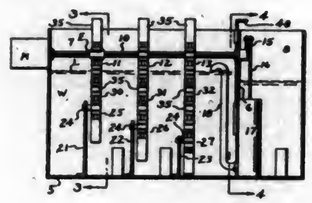
2,447,036
GRENADE
Frank Short, East Berlin, Conn.
Original application March 1, 1943, Serial No. 477,583. Divided and this application December 2, 1946, Serial No. 713,446
5 Claims. (Cl. 102—50)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. The combination of a grenade and a stabilizing device, said grenade having a body portion and a rearwardly extending centrally positioned tubular member, a V-shaped expansible latch member anchored in said tubular member and having curved projections extending laterally and transversely over the rear end of said tubular member sidewalls, a hollow truncated cone member having a configuration similar to that of said grenade to provide for the former to telescope the latter, an annular member secured to said cone member and having an aperture with its axis coincident with the central axis of said cone member, said tubular member and said annular member aperture being so constructed and



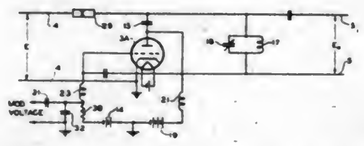
arranged to provide for said tubular member to be slidably received within said aperture whereby said hollow truncated cone can be mounted upon said tubular member either in a first position to telescope said grenade body or in a second position to trail said grenade body for stabilizing the same during flight of same.

2,447,037
SIGNAL SYSTEM
Philip Sitzer, Irvington, N. J., assignor to Tung-Sol Lamp Works, Inc., Newark, N. J., a corporation of Delaware
Application February 3, 1944, Serial No. 520,859
8 Claims. (Cl. 171—97)



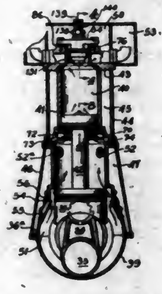
2. The combination with a source of electrical energy and a switch arm alternated between fixed contacts of a circuit comprising a pair of electrical devices, circuit connections for connecting one of said devices across said source when said switch arm engages one of said contacts, circuit connections for connecting the other of said devices across said source when said switch arm engages the other of said contacts and means associated with said last mentioned connections for providing a period of delay between the engagement of said switch arm with said other contact and the energization of said other device, said last mentioned means including a solenoid connected to said other contact, a switch controlled by said solenoid so as to close when full current is supplied to the solenoid, said last mentioned switch being in circuit with said second device, and means connected with said solenoid for delaying the application of full current thereto.

2,447,038
CATHODE STRUCTURE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application October 31, 1945, Serial No. 625,731
5 Claims. (Cl. 250—27.5)



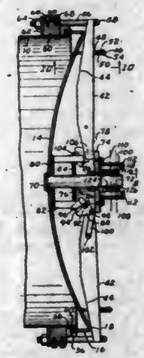
1. A cathode structure comprising: a metallic core; a metallic gauze bound to said core by a fused metallic powder; and an electron-emissive coating deposited over said gauze.

2,447,039
EGG BOILER
Dwight W. Stabler, Venice, Calif.
Application January 3, 1944, Serial No. 516,887
2 Claims. (Cl. 99—404)



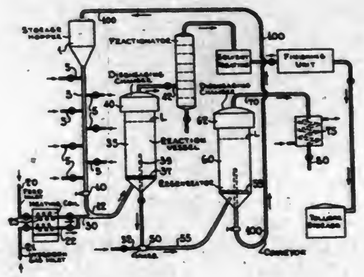
1. An egg boiler comprising, in combination, a tank presenting a cooking chamber adapted to contain heated liquid and a liquid reservoir open to atmosphere, a pair of belt-rotating members one mounted to rotate about a horizontal axis in the cooking chamber below the level of liquid therein and the other mounted to rotate about a horizontal axis in said chamber directly above the other belt-rotating member and above the liquid level in said chamber, a continuous conveyor belt carried by said members, means for rotating one of said members, an egg-retaining member on the belt, means for heating the liquid in the cooking chamber, and liquid level maintaining means communicating between the reservoir and cooking chamber, the last-named means comprising a pump operatively connected to said means for rotating one of the belt rotating members.

2,447,040
MODULATION SYSTEM
Edwin K. Stodola, Neptune, N. J.
Original application November 17, 1942, Serial No. 465,921. Divided and this application March 5, 1946, Serial No. 652,210
6 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A network for providing a variable-phase output from a source of alternating-current input voltage in response to a control factor variable over a predetermined range comprising: a reactance adapted to be coupled to said source in series with the space-current path of an electron tube, an output circuit coupled solely across said path, and means adapted to be controlled solely by said control factor to vary the resistance of said path, the resistance of said path over said range of variation of said control factor being a non-linear function of said variation, the magnitude of said reactance being so related to said non-linear function that the phase angle between the voltage across said output circuit and the voltage across said network is a substantially linear function of said control factor variation.

2,447,041
TWO-CYCLE ENGINE, COMBINED PUMP AND MOTOR CYLINDER
Carl B. Sues, Los Angeles, Calif.
Application December 18, 1944, Serial No. 568,619
22 Claims. (Cl. 123—66)

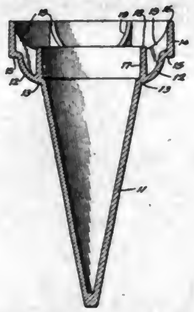


5. An internal combustion engine comprising a working cylinder having a base and a head, a piston in said cylinder having a rod member reciprocable through said base, a pre-compression cylinder having a piston on said rod member, a crank case connected to said pre-compression cylinder and forming a pre-compression chamber therewith, a super-charging receiver external to said working cylinder, valve means between said cylinders and said super-charging chamber, a crank shaft extending through said crank case, a connecting rod connected to said crank shaft and pre-compression piston, an air inlet to said working cylinder through said crank case and pistons, an exhaust valve and a fuel inlet in said working cylinder head, and a valve in said fuel inlet adapted to be actuated by said first piston.

2,447,042
CLOSURE MECHANISM
Orville O. Velie, Bellingham, Wash.; Orrie W. Norton, executor of said Orville O. Velie, deceased, assignor to United Engineering Company, Bellingham, Wash., a partnership
Application February 27, 1945, Serial No. 579,932
8 Claims. (Cl. 220—55)

8. In locking mechanism for vessel closures, a rod centrally fixed to the closure, a plurality of radially movable locking levers, and means for bodily moving said levers radially to and from locking position, comprising individual actuating means mounted on the closure and operatively connected to the respective levers, a plate axially movable on said rod, an operating lever having a pin fixed to one end thereof rotatably mounted in a transverse opening in said rod, spaced members fixed to one side of said plate, means eccentrically carried by each end of said pin coacting with said members and the plate to move the latter axially of the rod in opposite directions, and means connected to the opposite side of said plate in axially spaced relation therefrom for simultaneously operating said individual actuating means for the locking levers.

2,447,043
HYDROFORMING PROCESS
Albert B. Welty, Jr., Mountainside, and Clinton H. Holder, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application August 24, 1944, Serial No. 551,038
2 Claims. (Cl. 196—53)

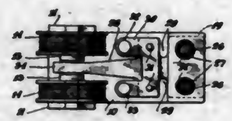


1. A hydroforming process which comprises establishing a fluidized mass of powdered hydroforming catalyst carried on a support, said catalyst including a metallic oxide normally tending to be reduced by hydrogen under the conditions of reaction, said metallic oxide being selected from the class consisting of molybdenum, chromium and tungsten oxides and said metallic oxide being chemically combined mole for mole with calcium oxide, continuously feeding powdered catalyst and gasiform hydrocarbons into a reaction zone containing said fluidized mass, permitting the hydrocarbons and catalyst to contact each other in the reaction zone in the presence of added hydrogen for a sufficient period to effect the desired reaction, withdrawing reaction products, purifying and recovering the same, separately withdrawing a fluidized stream of spent catalyst in substantially unreduced condition but containing carbonaceous deposits, conveying the spent catalyst to a separate regeneration zone, establishing within said regeneration zone a fluidized mass of catalyst, intermixed with an oxidizing regeneration gas in amount not substantially in excess of that required to burn off carbonaceous deposits, permitting the regeneration gas to contact the catalyst at a sufficiently elevated temperature to cause burning of the carbonaceous deposits, separating the catalyst from the gases and recycling a fluidized stream of regenerated catalyst while still hot to the reaction zone.

2,447,044
DIPHENYLAMINE MANUFACTURE
Alfred B. Wester, Lawton A. Burrows, and Winford B. Johnson, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 26, 1944, Serial No. 532,882
3 Claims. (Cl. 260—576)

1. The process of producing diphenylamine which comprises heating aniline at an elevated temperature and under superatmospheric pressure in the presence of ferric chloride in an amount between 0.3 and 8.0% by weight of the aniline used.

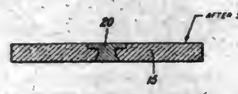
2,447,045
ICE-CREAM CONE
Walter E. Amberg, Beverly Shores, Ind., assignor to Arthur S. Bowes, Chicago, Ill.
Application December 22, 1947, Serial No. 793,107
7 Claims. (Cl. 99—89)



1. An ice cream cone adapted to be stacked in telescoped relation with similar cones comprising a conical body surmounted by a flared bowl formed of two concentric substantially vertical flanges connected at their lower edges by an exterior rounded shoulder portion and by a plurality of radial ribs extending between the flanges, the inner flange being of such height that the upper edge thereof will bear against the lower edge of the outer flange of an adjacent cone telescoped into the cone.

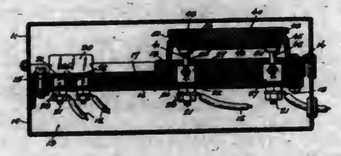
2,447,046
DRIVER CONTACT VIBRATOR
Robert J. Aust, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 26, 1944, Serial No. 537,464
7 Claims. (Cl. 172—126)

1. A vibratory electromagnetic interrupter comprising in combination a main vibratory reed clamped at the lower end thereof, a ferromagnetic weight at the other end of said reed, an electromagnetic system adapted when energized to deflect said weight and said reed, an auxiliary reed having one of its ends secured to said main reed and extending along the same at a substantial distance from the center line thereof, a vibratory driver contact at the other end of said auxiliary reed, a fixed driver contact adapted to cooperate with said vibratory driver contact to control said electromagnetic system and thereby to maintain said reeds in vibration, said main reed having a continuous and imperforate surface in its upper portion to avoid concentration of stresses in the regions subjected to strong flexing, and means on said main reed engageable with said auxiliary reed during the travel of the main reed in driver contact-breaking direction whereby both reeds shall move as a unit during their travel in such direction and the auxiliary reed shall lag behind the main reed during the travel thereof in driver contact-closing direction.



2,447,047
VIBRATOR
Robert J. Aust, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application June 10, 1944, Serial No. 539,651
2 Claims. (Cl. 172—126)

1. A vibratory electromagnetic interrupter comprising a ferromagnetic frame, a stack at one end of said frame, an elongated vibratile reed mounted in said stack having a tapered armature portion at the free end thereof, pole pieces disposed at the respective sides of said armature portion defining an unobstructed path for vibration of said reed, ferromagnetic means interconnecting said pole pieces to establish a closed magnetic circuit including said pole pieces and said reed, a pair of driver coils mounted, respectively, on said pole pieces, the axes of said coils being perpendicular to the longitudinal axis of said reed, and means including a set of contacts actuated by said reed for periodically energizing said driver coils thereby to effect vibratory movement of said reed, said armature portion, during each vibration of the reed, moving freely along the unobstructed path between said pole pieces, the direction of movement of said reed being perpendicular to the magnetic flux lines between said pole pieces.



2,447,048
ARRESTER ELEMENT
Harry J. Baker, Speedway, Ind., assignor to Union Carbide and Carbon Corporation, a corporation of New York
Application January 15, 1944, Serial No. 518,350
2 Claims. (Cl. 48—192)

1. A backfire arresting and filter element comprising a disc of porous heat conductive sintered metal having tortuous interconnected pores of a small size capable of extinguishing a backfire flame, a non-porous metallic button-like member embedded in and supported by the porous sintered disc with the exposed face of the button-like member extending over a substantial part of only the central portion of a downstream face of said disc near and not sunk below the adjacent face of said porous disc to receive the impact of and spread any backfire flame arrested in the pores of said sintered metal disc, a shank portion for the button-like member connected thereto for holding the same in place on the disc

face, said shank portion extending well into the body of said disc and provided with an anchorage portion of shape in the plane of the disc which is enlarged with respect to that of the shank portion and adapted for cooperation with the porous metal to retain the button-like member and shank portion from coming out of the porous disc.

2,447,049
ELECTRIC FUSE BOX
Romain Bauwens, Burton, Wash.
Application August 7, 1944, Serial No. 548,443
7 Claims. (Cl. 200—114)

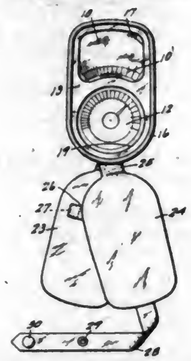
1. In an electric fuse-box, and in combination with an open-top shell or casing: a fuse-block having a plan configuration closely conforming to that of the casing and hinged to the latter for bodily swinging movement into and from a normal housed position, said casing when the block is housed therein providing a compartment for wire leads closed at the top by the block and described about the sides and the bottom by side and bottom walls of the casing, said compartment and the underside of the block being exposed for servicing by the act of swinging said block from its said housed position, said block comprising complementary close-fitting plates of insulating material detachably secured one in overlying relation to the other and having the meeting faces cavitated to provide separated internal cells arranged in sets of two, said plates having openings bored from the outer faces thereof to the respective cells; binding posts having conductive U-clips anchored to the head ends of the same and received through said lower-plate openings to locate the U-clips within the cells and project the lower ends below the block; binding nuts for said projecting ends of the posts; electrically-conductive prongs for respective said U-clips arranged to be inserted through the upper-plate openings into socketing engagement with the clips; fuse bodies fixedly supporting a pair of said prongs and holding the latter to a fixed spacing corresponding to that of the upper-plate openings for a given set of clips; and links, fusible under a given current overload, encased by respective fuse bodies and applied as a spanning connection between the two prongs.

2,447,050
ORGANIC HYDROXY COMPOUND AND DERIVATIVES THEREOF
Joseph E. Bludworth and Donald P. Easter, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application September 21, 1944, Serial No. 555,204
3 Claims. (Cl. 260—611)

3. Process for the production of the methyl ether of 1-cyclohexyl-butanol-3, which comprises methylating 1-cyclohexyl-butanol-3 with dimethyl sulfate.

2,447,051
PROCESS FOR REMOVING ACIDIC SULFUR COMPOUNDS FROM HYDROCARBON DISTILLATES
Donald C. Bond, Northbrook, and Nelson B. Russell, Winnetka, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application February 16, 1944, Serial No. 522,618
8 Claims. (Cl. 23—184)

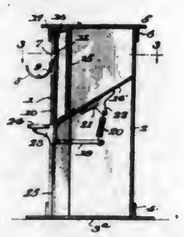
5. The method of regenerating aqueous caustic alkali solution which has been used to extract mercaptans from petroleum distillates, comprising contacting said solution, containing an amount between about 0.1 and 2% by weight sufficient to function as an oxidation accelerator of a hydroxy aromatic compound selected from the group consisting of 3,4 dihydroxy diphenyl and 2,5 dihydroxy diphenyl, with air until a sufficient amount of the sulfur compounds have been converted to disulfides to make the alkali solution effective for further use in extracting mercaptans.



2,447,052
PAINT REMOVER
Donald C. Bond, Northbrook, and George G. Bernard, Evanston, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application June 25, 1945, Serial No. 601,538
1 Claim. (Cl. 252—160)

A paint removing composition consisting essentially of a solution containing at least 5 per cent by weight of an alkali selected from the group consisting of sodium and potassium hydroxide in water, a solubility promoter for hydrocarbon solvents from the group consisting of acidic petroleum oxidation products and a mixture of naphthenic acids and cresols, sufficient hydrocarbon paint solvent to substantially saturate said solution and bentonite in quantity sufficient to give said composition the consistency of a gel capable of adhering to a vertical surface when said composition is brushed or sprayed onto said surface.

2,447,053
PHOTOMETER CARRYING CASE
James L. Bouley, Oakland, Calif.
Application April 5, 1946, Serial No. 659,954
2 Claims. (Cl. 150—52)



2. A carrying case for a photometer comprising; a pocket having a front wall, a rear wall, and a peripheral side wall, and a passage formed through said side wall for insertion and removal of the photometer, and means for securing said passage in closed position, and protruding cushioned edges formed about all edges of the case; a first opening formed in the back wall and registrable to expose the light-intercepting passage of the photometer; a second opening formed in the front wall to expose the dial of the photom-

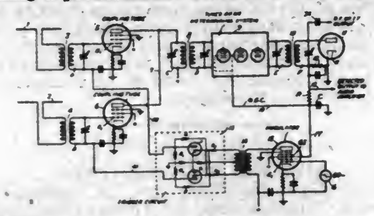
eter, and a third opening in the front wall for providing unrestricted access to the calculating apparatus of the photometer; a flap for each, the front and back wall and each having one edge hingedly connected to the case with both flaps fitting closely within the confines of said pro-

truding cushioned edges to protect the case from ingress of dust through said first, second, and third openings; a strap having one end connected to one of said flaps, and cooperative securing means on said strap and the other flap for simultaneously securing or releasing both flaps at will.

2,447,054
DISPENSING CABINET
Cecil C. Coates, Prescott, Ariz.
Application March 24, 1947, Serial No. 736,761
3 Claims. (Cl. 312—79)

1. A dispensing cabinet for toothpicks and the like including a front wall, a rear wall and side walls suitably secured together, said front wall having a horizontal slot through which articles are dispensed, a dispensing slide movable up and down in contact with the inner face of the front wall and extending from one side wall to the other, a hopper in said cabinet including a downwardly inclined bottom wall extending from the rear wall to the dispensing slide, and side walls spaced inwardly from the side walls of the cabinet and extending from the rear wall of the cabinet to the said slide and serving to guide said slide in its up and down movements, said hopper having a front wall extending from one side wall of the hopper to the other and spaced inwardly from the slide, said front wall of the hopper terminating a short distance above the bottom wall, said dispensing slide having a horizontal slot adjacent the upper end thereof, said slot being dimensioned so as to receive one article at a time and having a length at least equal to the distance between the side walls of the hopper whereby said side walls will align the articles lengthwise for entrance into the slot, and means to facilitate movement of said dispensing slide for dispensing one article at a time.

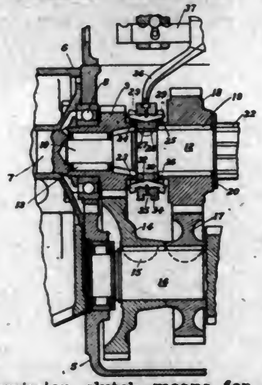
2,447,055
PRODUCTION OF EXPANDED PLASTIC MATERIALS
Alfred Cooper, Croydon, England, assignor to Expanded Rubber Company Limited, Croydon, England
No Drawing. Application October 10, 1944, Serial No. 558,076. In Great Britain October 7, 1943
1 Claim. (Cl. 260—83)



The process of making expanded bodies having closed cells of a thermoplastic polymer selected from the class consisting of polystyrene, polymethyl methacrylate and copolymers of these two, which comprises heating the monomers to 60–70° C. for a period sufficient to just obtain partial polymerization to a plastic dough of rubbery consistency which can be sheeted out on a rubber mill, manipulating the plastic dough which is obtained to obtain it in sheet form, subjecting the sheet to gas under pressure approximating 5000 pounds per square inch at from room temperature to 100° C. to obtain gas impregnation, and thereafter locating the gas impregnated sheet in a mold and heating it to expand the contained gas and complete the polymerization of the polymer to a strength to retain its cellular structure.

2,447,056
MANUFACTURE OF EXPANDED THERMOPLASTIC MATERIALS
Alfred Cooper, Croydon, England, assignor to Expanded Rubber Company Limited, Croydon, England
No Drawing. Application October 10, 1944, Serial No. 558,077. In Great Britain October 5, 1943
1 Claim. (Cl. 260—88)

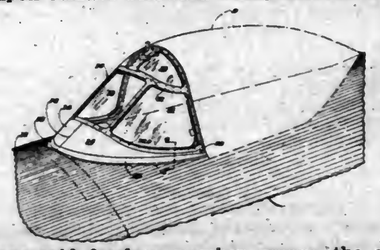
The process of making expanded bodies having closed cells of polymerized polyvinyl chloride monomers, which comprises mixing to a pasty consistency a dispersion of the powdered polymer and a plasticizer, the plasticizer constituting 40–80% of the weight of the polymer, then heating the paste under atmospheric pressure to a temperature of 125–150° F. to set the paste to an initial gel, cooling the gel to room temperature, then impregnating the gel with gas under a pressure of 500–5000 pounds per square inch for a period of about 4 hours, then allowing the sheet to expand freely at room temperature, then heating to about 130° F. for two hours to strengthen the gel, to thereby retain the expanding gas and also produce gas expansion, and thereafter heating to 230° F. to obtain the final expanded material.



2,447,057
DIVERSITY RECEIVING SYSTEM
Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application May 6, 1943, Serial No. 485,821
14 Claims. (Cl. 250—20)

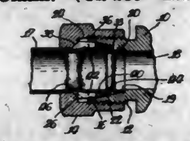
13. A receiving system comprising radio frequency receiving apparatus including a detector and having a pair of input circuits each having an electron discharge device therein, means including a source of low audio frequency alternating current for rendering said devices alternately conductive, and means responsive to the detected output voltage from said receiving apparatus exceeding a predetermined value for removing the

control of said source over said devices from said first means.



2,447,058
MULTIPLE CLUTCH MECHANISM
Donald S. Dence, Berrien Springs, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application July 5, 1944, Serial No. 543,512
9 Claims. (Cl. 192—48)

1. Transmission clutch means for selectively clutching axially spaced gears to a shaft upon which said gears are journalled, comprising a hub member keyed to said shaft intermediate said gears, a collar axially shiftable on said hub member, axial slots in the periphery of said hub member, rocker members in said slots having end clutching portions, corresponding clutching portions on the adjacent ends of said gears, means coacting between said collar and rocker members whereby upon axial shifting of said collar said rocker members are simultaneously rocked radially to a position interengaging said clutching portions between one of said gears and said rocker members, said slots on said hub member extending axially into the radial plane of said clutching portions to provide circumferential support for the engaging ends of said rocker members.



2,447,059
WINDSHIELD MOUNTING DEVICE
Bruce G. Eaton, Jr., Buffalo, N. Y., and Raymond E. Moses, Jr., Tunkhannock, Pa., assignors to Curtiss-Wright Corporation, a corporation of Delaware
Application July 25, 1945, Serial No. 606,994
9 Claims. (Cl. 244—121)

6. In aircraft windshield construction, a forwardly converging rearwardly open fuselage member having a forwardly and outwardly opening groove, said groove having rearwardly terminating laterally spaced ends, a readily removable windshield having a similarly shaped and dimensioned forwardly converging rearwardly open portion, and a rearwardly and inwardly directed tongue carried by said windshield adapted upon relative rearward bodily movement to

engage said fuselage member groove, the said tongue and groove being shaped and dimensioned to slidably and interfittingly engage each other and define a common coinciding plane along which the said relative engagement and disengagement movements are restricted, thereby preventing relative lateral and vertical movements therebetween.

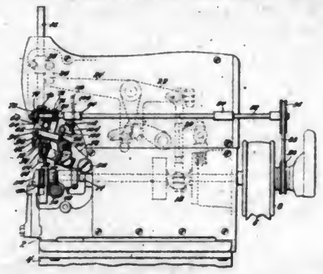
2,447,060
HIGH-PRESSURE COUPLING
George E. Franck, Riverside, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 15, 1944, Serial No. 545,093
1 Claim. (Cl. 285—122)

In a compression coupling for tubing having a first member having a threaded portion and a passage therethrough including a substantially cylindrical enlargement forming a recess adapted to receive and a shoulder adapted to be abutted by an end of the tubing and a conical portion flaring gently outwardly from the recess to the end of said member and a second member adapted for threaded engagement with said first member and having a recess therein facing said first member and a sloping distorting shoulder at the bottom of said last named recess having a relatively sharp inclination, a sleeve initially having a bore of uniform diameter capable of sliding freely over the tubing, said sleeve having a cylindrical leading portion with a beveled end face, a mid portion having an outer, gently sloping, conical surface and a rear portion having a sharply sloping conical surface, said sleeve having a plurality of longitudinal slits opening through the rear portion and extending inwardly to a position short of said leading portion.

2,447,061
PIEZOELECTRIC SYSTEM
Constance W. Franklin, Belmont, Mass., assignor to Cambridge Thermionic Corporation, Cambridge, Mass., a corporation of Massachusetts
Application July 18, 1945, Serial No. 605,665
11 Claims. (Cl. 171—327)

1. In an oscillator device of the type described a pulsating element cut from piezo electric material with sections having curved boundaries in

fixed geometric relation to the characteristic axes of said material, the frequency controlling dimension of the element varying through said sections with varying relation of said boundaries to said



axes according to the mathematical function which defines the condition that said element furnishes in an oscillating electric field a pulse frequency which is substantially uniform throughout the element.

2,447,062

MACHINE FOR LASTING SHOES

James P. Fredericksen, Braintree, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application February 10, 1947, Serial No. 727,587
12 Claims. (Cl. 12—6)

1. A machine for lasting shoes having a clamping roll, and a member between which and the clamping roll the marginal portions of a shoe upper and sole are gripped, in combination with means acting in advance of the roll to impart a preliminary tension to the upper.

2,447,063

PROCESS FOR DRYING EGG SUBSTANCE AND RESULTING PRODUCT

Charles N. Frey, Scarsdale, and Glennard E. Miller, Bronx, N. Y., assignors to Standard Brands Incorporated, New York, N. Y., a corporation of Delaware

No Drawing. Original application August 30, 1939, Serial No. 292,606. Divided and this application August 11, 1944, Serial No. 549,116
9 Claims. (Cl. 99—210)

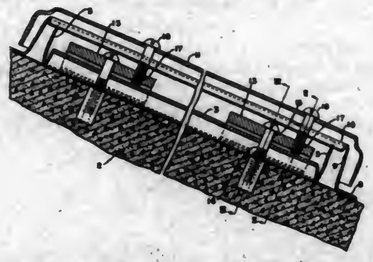
8. A process for drying egg substance which comprises incorporating a propylene ester of a higher fatty acid belonging to the group consisting of lauric, palmitic, stearic and oleic acids with egg substance, and then drying.

2,447,064

PREPARATION OF ALUMINUM SALTS

Arthur Ira Gebhart, Union City, and John Ross, Ramsey, N. J., assignors to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware

No Drawing. Original application August 14, 1943, Serial No. 498,736. Divided and this application September 7, 1946, Serial No. 695,554
15 Claims. (Cl. 260—414)



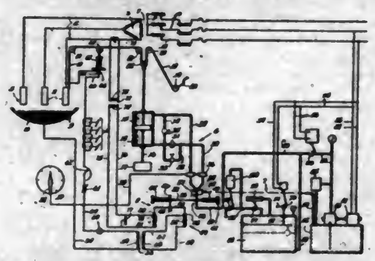
1. A process for preparing water-insoluble aluminum salts of organic carboxylic acids which comprises contacting an aqueous solution of a water-soluble salt of aluminum with an aqueous solution of a salt of an organic carboxylic acid which reacts with said aluminum salt to give a substantially water-insoluble salt, and maintaining the ionic constituents of said water-insoluble salt in the contacting solutions in substantially stoichiometric proportions.

2,447,065

ROOFING CONSTRUCTION

John H. Goodwin, Pittsburgh, Pa., assignor to Overly Manufacturing Company, Greensburg, Pa., a corporation of Pennsylvania

Application March 3, 1947, Serial No. 731,926
5 Claims. (Cl. 108—21)



1. In a roof construction, a batten extending down the slope of the roof, said batten being of generally U-shaped form with a longitudinally extending ridge at the base of the U, roofing sheets having flanges extending up the sides of the batten and overhanging the top edges thereof, a cap strip over the batten embracing the flanges of the roofing sheets, a securing block on the ridge of the batten having a fastener passing therethrough and through the ridge in the bottom of the batten for anchoring the batten in place, and a bolt passing through the cap strip and screwed into said block.

2,447,066

ELECTRIC ARC FURNACE CONTROL SYSTEM

Daniel T. Gundersen and Paul Glass, Chicago, Ill., assignors to Askania Regulator Company, Chicago, Ill., a corporation of Illinois

Application December 2, 1943, Serial No. 512,520
15 Claims. (Cl. 314—61)

1. In a control system for an electric arc furnace having an electrode to be moved toward or from the melt, a reversible hydraulic motor operatively associated with the electrode to move the same, means for governing the operation of said motor including a jet-type regulator having yieldable means biasing said regulator to cause said motor to withdraw the electrode from the melt, and means for governing said regulator to maintain a predetermined power input into the arc comprising means responsive to the voltage across the arc acting in opposition to said yieldable means, means responsive to the current flowing in the arc acting in aid of said yieldable means, and means in circuit with one of said responsive means adjustable to vary the response thereof.

2,447,067

VALVE ASSEMBLY FOR PRESSURE REGULATORS AND THE LIKE

James K. Hamilton, Plainfield, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York

Application June 1, 1944, Serial No. 538,233
4 Claims. (Cl. 50—23)

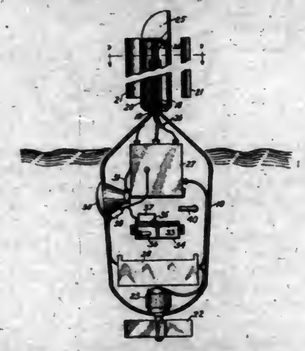
1. A valve assembly for pressure regulators and the like comprising a body, a separately formed ported seat member held in the body and provided with a valve seat, a valve element cooperating with said seat and having a stem extending through the port in the seat member, the valve element also having a head provided with a recess, a spherical ball engaging in said recess, a chamber in said body in which the ball has a close fit and is guided rectilineally in the direction of movement of the valve element, said ball serving to center and guide the head end of the valve element, a spring in said chamber acting on said ball and tending to seat the valve element, said seat member being capable of lateral movement in the body before being clamped in place so that it will center itself when assembled on the valve element, and a threaded member in the body adapted to clamp the seat member rigidly in place after it is thus centered, said member engaging the valve stem to guide the same along a small portion only of the length of the stem near its end.

2,447,068

METHOD OF MAKING MULTIFOCAL OPHTHALMIC LENS BLANKS

James H. Hammon, deceased, late of Vincennes, Ind., by Alberta M. Hammon, executrix, Vincennes, Ind.

Original application December 18, 1942, Serial No. 469,418. Divided and this application June 5, 1946, Serial No. 674,586
6 Claims. (Cl. 49—82.1)



2. The method of forming a multifocal ophthalmic lens blank which comprises forming a button-receiving surface on the major blank, forming a composite button by first forming a fused laminated unit consisting of layers of glass of different indices of refraction fused together along a surface of predetermined curvature, forming a second laminated unit consisting of layers of glass of different indices of refraction fused together along a surface of predetermined curvature, said laminated units consisting of layers of glass of corresponding indices of refraction, associating a section of the first-named unit in edge contact with a section of the second-named unit in such a manner that layers of glass of a corresponding index of refraction are in contact with each other, disposing said associated sections in a carrier portion of glass of the said index of refraction as the major blank to form the composite button, forming a finished surface on the composite button, and then disposing said surface in contact with the button-receiving surface of the major blank and fusing the assembled unit.

2,447,069

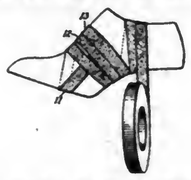
SIGNALING BUOY

Philo Holcomb, Jr., Great Neck, N. Y.

Application February 5, 1940, Serial No. 317,263
11 Claims. (Cl. 177—386)

1. A signaling buoy comprising a hollow watertight casing, means including a radio transmitter to radiate signals corresponding to sounds impinging on said buoy from aircraft or watercraft, a ballast chamber in said casing, motor means to fill said ballast chamber and thereby at least partially submerge said buoy, and means to operate said motor means to empty said ballast chamber in response to propeller sounds and the like in the vicinity.

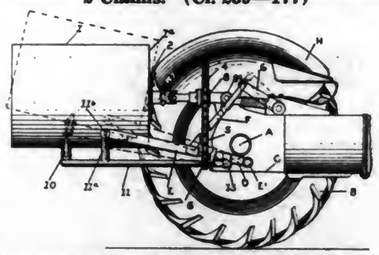
2,447,070



METHOD OF MAKING LAST SHELLS

Lester B. Hooper, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application November 1, 1946, Serial No. 707,201
5 Claims. (Cl. 33—6)

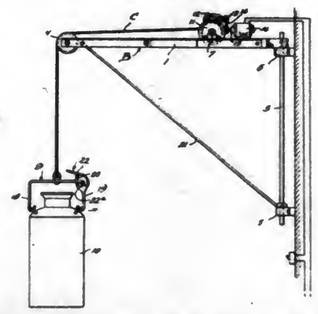


2. The improved method of making a last-shell which consists in wrapping a last model initially in girthwise convolutions of tape having a sticky side and a non-sticky side by applying said convolutions successively and sticky side out and conforming them progressively to the model, thereafter covering bare portions of the model with individual strips of such tape also applied sticky side out and partially overlapping tape previously applied, and thereafter superposing

additional strips of such tape on those engaging the model until portions of the shell on the height-

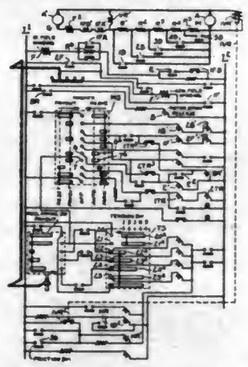
wise surfaces of the model include at least two layers of tape bonded one to another by adhesive without being bonded to the model.

2,447,071
CONCRETE MIXER
Harry Wayne Huffman, Toledo, Ill.
Application June 28, 1945, Serial No. 602,065
2 Claims. (Cl. 259—177)



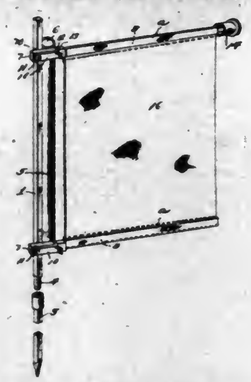
1. A concrete mixing attachment for a tractor having operator controlled Ferguson links at its rear end swingable on a horizontal axis and having a power take-off shaft adjacent said links, comprising a frame carried by said links for swinging movement therewith; an axially disposed rotatable drum open at its outer end and closed at its inner end supported upon said frame; a second shaft disposed parallel with the power take-off shaft and driven thereby; and a flexible element in the second shaft adjacent the closed end of the drum to permit the drum to swing upwardly or downwardly with the links while maintaining a fixed parallel relation between the remaining portions of said shafts.

2,447,072
CONVEYER SYSTEM
Frank E. Jones, West Lafayette, Ohio, assignor to The Jones Metal Products Company, West Lafayette, Ohio, a corporation of Ohio
Application October 30, 1945, Serial No. 625,641
1 Claim. (Cl. 311—32)



A transferring and working support comprising a series of rollers mounted in a circular course on a floor, a rotatable device comprising an annular track riding on said rollers, a flat annular table above the track for material to be treated, a series of spaced uprights between the track and annular table for supporting the table, allowing access to the space on the interior of the table, and means for rotating the table, the top of said table being at such elevation with reference to the floor on the exterior and interior thereof that operators standing on the floor may readily place goods on the table or remove them therefrom.

2,447,073
GRAPPLE FOR LIFTING MILK CANS
Robert Arno Kreutzer, Menomonee Falls, Wis.
Application August 28, 1945, Serial No. 613,121
2 Claims. (Cl. 294—104)



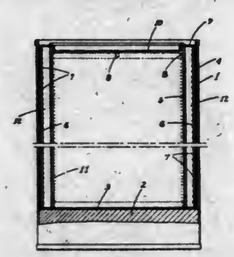
1. A grapple or the like comprising two pivotally joined members provided with hooks at their lower extremities, a fork on one of said members having a branch adapted to engage the other of said members to limit the approach of said hooks, a second branch of said fork extending above the pivot point of said members and operable to separate said hooks.

2,447,074
CONTROLLER FOR TOWING WINCHES AND OTHER MACHINES
Elvind U. Lassen, Whitefish Bay, Wis., and Almon A. Johnson, Forest Hills, N. Y.; said Lassen assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application August 28, 1946, Serial No. 693,496
5 Claims. (Cl. 318—6)

5. For towing winch control, the combination with a motor to be operatively connected to the winch, means to energize said motor for torque opposing payout operation of the winch and tending to effect reclaiming operation of the winch, and means to effect a reclaiming cycle of control for said motor following a payout cycle, the last mentioned means comprising a friction switch operatively related to said motor and responsive to a slight motion of said motor in reclaiming direction thereby to effect a reclaiming cycle and also comprising a relay having contacts in parallel with said friction switch and a control winding connected across the armature of said motor.

2,447,075
SIGNAL AND DANGER FLAG
Alvin R. Madsen, Rupert, Idaho, assignor of one-half to Raymond E. Messler, Boise, Idaho
Application June 26, 1947, Serial No. 757,168
1 Claim. (Cl. 116—173)

A signal flag storage and display support comprising a vertical stake adapted to be driven into the ground, a chambered tubular member to one side of said stake in parallel relation thereto and rigidly attached thereto, one side of the stake being in the plane of one side of the tubular member, horizontally disposed sleeves connecting the stake and chambered member adjacent their upper and lower ends, flag stretching arms detachably held in said sleeves in a horizontal position and to which arms the upper and lower ends of a signal flag are secured, one of said arms having a closure cap for the upper end of the chambered member, said flag being adapted to be rolled onto one of the arms so that the other arm will assume a position close thereto and a compactness of a size whereby the arms and flag may be received within the chambered member, and the cap close the upper end of the chambered member, said means for detachably holding the stretching arms in the sleeves comprising latches pivoted to the outer faces of the sleeves and swingable in a vertical plane, said latches having arms in the plane of the sleeves and cooperating with notches in the stretching arms through notches in the upper sides of the sleeves.



2,447,076
REUSABLE TAMPERPROOF SEALED CLOSURE
Charles D. Magnesen, Chicago, Ill.
Application October 1, 1945, Serial No. 619,490
5 Claims. (Cl. 215—45)

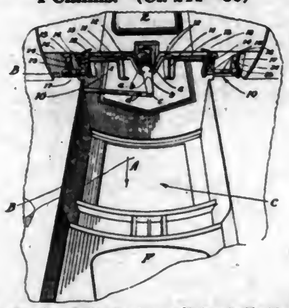
1. The combination with an open-ended container having a mouth with a ridge about the same, a reusable snap-on closure formed of two parts and having an inner cover member with depending flanges adapted to grip below the ridge on the mouth of the container and an outer ring member having a downwardly depending skirt adapted to press portions of said inner cover member into engagement below the ridge on the mouth

of the container, pivots on the top of said inner cover member, a plurality of lug members mounted upon said pivots, each of said lug members having a portion overlying portions of said outer ring member and a seal member connecting all of said lugs so that no one of them can be rotated without breaking the seal member.

2,447,077
CANNED FOOD HEATING DEVICE
Virgil E. C. Martin and Donald E. Martin, Hayward, Calif.
Application October 7, 1946, Serial No. 701,708
4 Claims. (Cl. 126—263)

1. A canned food heating device comprising a retaining can, a layer of chemical in the bottom of the retaining can, the chemical being of a type which creates heat upon hydration, a separator disc in the retaining can on top of said layer of chemical, and a food can guiding and locating assembly in the retaining can above the separator disc; said assembly including a lining sleeve in the retaining can, a food can guiding and locating sleeve disposed co-axially with and in inwardly spaced relation to the lining sleeve, and spacers between said sleeves, the separator disc, sleeves, and spacers being of water absorbent material and said spacers forming water passages between the top portion of the retaining can and the separator disc, the latter being of water absorbent material.

2,447,078
EAR MUFF
Robert E. Maxant, Riverside, Ill., assignor to Maxant Button & Supply Co., Chicago, Ill., a corporation of Illinois
Application February 1, 1947, Serial No. 725,926
4 Claims. (Cl. 2—209)



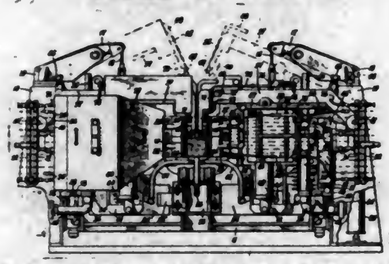
1. An ear muff comprising a flanged annular frame, a covering for the frame and completely overlapping the flange thereof and adapted to be worn adjacent the ear, a solid frame received in the annular frame with the covering clamped

between the solid frame and the flange and adapted to be exposed when worn, and a band

fastener extending through a slit in the covering and carried by one of said frames.

2,447,079
FOLDING RUDDER PEDALS
William P. McKinnie, Kenmore, N. Y., and Will H. Trammell, Columbus, Ohio, assignors to Curtiss-Wright Corporation, a corporation of Delaware
Application June 12, 1943, Serial No. 490,692
4 Claims. (Cl. 244—86)

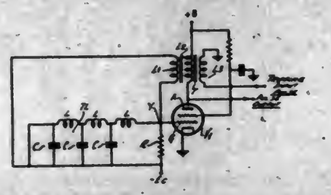
2. In a dual-control aircraft installation, a forwardly disposed pilot position, a rearwardly disposed auxiliary pilot position, a camera position intermediately disposed between said tandem pilot positions, a transverse wall defining the rearward margin of said camera position, a pair of rudder pedal units laterally disposed on opposite sides of the longitudinal plane of symmetry of the aircraft adjacent the forwardly disposed face of said transverse wall, mounting means for said pedal units including a horizontally disposed torque tube for each said pedal unit journalled upon said wall face extending transversely to the said plane of symmetry and rotatable in response to forward pedal movements, a lever extending from each said torque tube adapted to provide an interconnection with the rudder operating cable system of the aircraft, a pedal crank extending radially from each said torque tube, a hinge joint in each said pedal crank arranged with its pivotal axis disposed in a longitudinal horizontal direction above said torque tube and adapted to permit inward and downward folding movement of each said pedal crank in a transverse plane normal to said plane of symmetry to provide access to said camera position from said auxiliary pilot position and means to lock said hinge joints against folding movements in the operative positions of said pedal cranks.



2,447,080
MUSICAL INSTRUMENT SUPPORT
Walter H. Meier, Englewood, N. J.
Application November 7, 1947, Serial No. 784,692
3 Claims. (Cl. 84—280)

1. A support for a violoncello or the like, comprising a rod pointed at one end, a sleeve having one end closed, the pointed end being extended into, and engaging the closed end of, the sleeve, means adapted to prevent disengagement of the

sleeve from the rod, and to permit free swiveling movement of the rod within the sleeve, and a resilient floor-engaging tip tightly fitted over the sleeve.

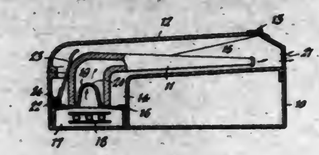


2,447,081
APPARATUS FOR CONDITIONING METAL BODIES
Alfred J. Miller, Garwood, and Ivan P. Thompson, Elizabeth, N. J., assignors to The Linde Air Products Company, a corporation of Ohio
Application November 13, 1943, Serial No. 510,160
8 Claims. (Cl. 266—23)

1. Apparatus for conditioning at least one longitudinal side of each of successive metal bodies such as steel billets, such side of each having different widths, said apparatus comprising means for supporting and longitudinally propelling said bodies with the side to be conditioned vertical; a surface conditioning head having a substantially vertical row of gas outlet orifices arranged to apply a composite surface conditioning gas stream against and completely across the vertical side of each body, the length of said row being sufficient to condition the widest of said sides; means for supporting and maintaining said head in operating relation to said vertical body sides during movement of said bodies with the lower side of said head substantially flush with the lower edge of said vertical body sides; a selector valve device having a movable control element; gas supply passages connecting at least the upper outlet orifices in said head with said selector valve, said control element being arranged when moved to progressively interrupt the supply of gas through said passages starting with the passage that supplies the upper orifice of said head for varying the width of said surface conditioning gas stream; a shoe adapted to contact with the upper surface of said bodies and movable up and down according to the vertical thickness thereof; blowpipe means carried by said shoe to direct a surface conditioning gas stream against said bodies adjacent the upper edge of said side; and

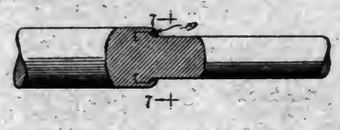
mechanism constructed and arranged to transmit movement of said shoe to said control element for interrupting the supply of gas to sufficient of the upper orifices of said head to adjust the width of said conditioning gas stream according to the vertical width of the particular body side being conditioned.

2,447,082
GENERATOR CIRCUIT
William A. Miller, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 29, 1944, Serial No. 542,706
11 Claims. (Cl. 250—36)



1. A pulse generator comprising an electron discharge device having an anode, a cathode and a grid, a transformer having separate coils in circuit with said anode and grid to produce regenerative coupling therebetween, means for biasing said device below cut-off, and a transmission line of predetermined electrical length short-circuited at one end and connected at its other end to said grid, and an input circuit for supplying to said device over a path independent of said line a pulse of such polarity and magnitude as to overcome the bias applied to said device to thereby cause a voltage wave of positive polarity to travel down the length of said line from the grid connected end and be reflected as a wave with negative polarity from the short circuited end.

2,447,083
COVERING SHIELD MOUNT FOR SAFETY HELMETS
William C. Moeller, Kansas City, Mo., assignor to A. F. Parmalee, doing business as United States Safety Service Co., Kansas City, Mo.
Application May 7, 1945, Serial No. 592,332
1 Claim. (Cl. 2—8)

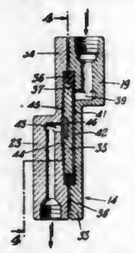


In a face covering shield and helmet assembly, means for mounting the shield on a substantially rigid helmet comprising a relatively stiff, elongated arm, said arm having the shield pivotally connected thereto at one end of the arm and being provided with a pair of spaced apart, elongated slots intermediate the ends thereof, each of said slots and the said pivotal connection between the arm and the shield being on a substantial median longitudinal line through the arm, the major axes respectively of said slots in the arm being on said longitudinal line; and a pair of fasteners forming connection between the arm and said helmet, said fasteners each having a part rigidly secured to the helmet and a part irremovably mounted in a respective one of said slots in the arm, said part of each fastener on the helmet being separable from the corresponding part thereof on the arm whereby the said arm and shield carried thereby are rendered removable from the helmet, said parts of the fasteners on the arm being slidable toward and from each other within their respective slots whereby the same may be aligned with the parts on the helmet when the arm is attached thereto.

2,447,084
SMOKING PIPE HOLDER AND DRIER
William H. Moore, Buffalo, N. Y.
Application December 22, 1945, Serial No. 636,643
4 Claims. (Cl. 34—104)

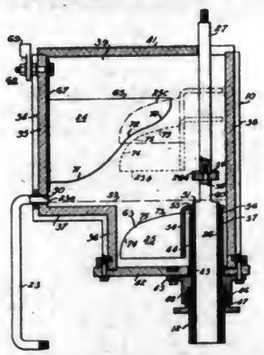
1. A device of the character described, comprising a body including spaced L-shaped walls defining vertical and horizontal sections forming a compartment for receiving a smoking pipe, said vertical section having a heating chamber therein and perforated teats rising therefrom between the walls of such section, and a heating means disposed in said chamber.

2,447,085
WELDED JOINT
William H. Odlum, Wilmette, Ill., assignor to Duro Metal Products Co., Chicago, Ill., a corporation of Illinois
Application May 11, 1944, Serial No. 535,014
3 Claims. (Cl. 287—20.2)



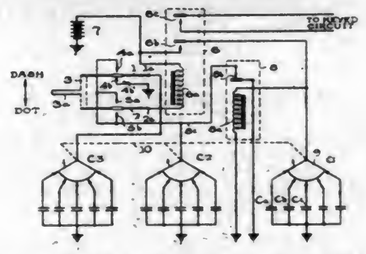
1. The method of endwise joining two solid bar members having different end sizes which comprises the steps of hollow milling the end of the member having the larger end size to provide a central protuberance and a surrounding wall spaced from the protuberance and extending outwardly beyond the protuberance to define a channel and an adjoining opening of larger size than the end of the smaller member, moving the end of the smaller member into said opening to abutment with the protuberance without contacting said wall while causing welding current to pass between the protuberance and smaller member during the application of force urging the smaller member against the protuberance

thereby to cause the welding flash to fill said channel, confining welding flash to the inner portion of said opening away from the ends of said outwardly extending wall, and then concealing said flash by forming the end portion of said extending wall inwardly to the surface of the smaller member.



3. A pair of bar members having cylindrical portions of different diameters integrally joined in coaxial end-wise relationship, an annular wall integral with the larger diameter end portion projecting therefrom in spaced-from and sleeving relationship to the smaller diameter portion and an annulus of welding flash occupying the space between said wall and said smaller diameter portion, said wall turning inwardly to the cylindrical surface of the smaller diameter portion and concealing the welding flash in said space.

2,447,086
BACKFIRE ARRESTER AND FLASH BACK PREVENTER
Malven L. Olson and Elwood A. Berger, Indianapolis, Ind., assignors to Union Carbide and Carbon Corporation, a corporation of New York
Application January 15, 1944, Serial No. 518,422
6 Claims. (Cl. 48—192)

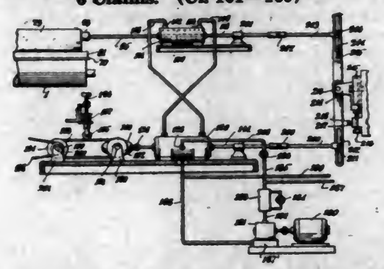


1. In a backfire arrester comprising a porous metal disc having multitudinous tortuous interconnected pores formed between sintered particles, a casing enclosing said disc, gas tight packing between the casing and the perimeter of the disc, a gas supply passage leading to a space within the casing adjacent the upstream face of said disc, at least the major portion of the upstream face of said disc being exposed to receive incoming gas for passage through the pores of the disc, an outlet passage from the casing opposite the downstream face of said disc, the casing providing a shallow space adjacent the downstream face of the disc whereby the major portion of the disc downstream porous face is adapted to contact any backfire flame but said space is too shallow to support continued burning of flashback after backfire, and the combination therewith of the improvement for enhancing the ability of said disc to withstand backfire which improvement comprises a metal member which is non-porous to a backfire flame, embedded in the porous disc, supported thereby, and located opposite the outlet passage from the caing in a central portion of the porous metal disc to receive the impact of any backfire flame and spread the same over the downstream face of the porous disc whereby any backfire flame may be quenched as it is divided into numerous parts to enter and be bent within the tortuous pores of said disc, said metal member having a surface substantially flush with the downstream face of the porous disc exposed to a backfire flame and being at least about as large as the area of cross section of the outlet passage opposite thereto.

2,447,087
LIQUID RHEOSTAT
John K. Ostrander, Philadelphia, Pa.
Application June 27, 1946, Serial No. 679,621
12 Claims. (Cl. 201—57)

1. A liquid rheostat, comprising: a receptacle for containing liquid; a plurality of electrode means in said receptacle; means for varying the total area of said electrode means immersed in said liquid to vary the resistance to flow of electric current from one of said electrode means to the other; and one of said electrode means being so constructed and arranged that it is always entirely below the level of said liquid.

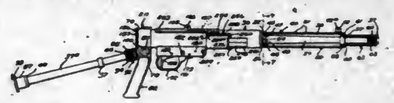
2,447,088
KEYING SYSTEM
Donald Parson, Jr., Framingham, Mass.
Application June 5, 1946, Serial No. 674,452
8 Claims. (Cl. 178—82)



1. In a keying system, the combination of a transmitting relay having two sets of normally open contacts, a spacing relay having a set of normally closed contacts, a transmitting key having two transmitting positions, circuit connections controlled by said key in both transmitting positions for completing an energizing circuit for said transmitting relay through the normally closed contacts of said spacing relay, an energizing circuit for said spacing relay controlled by one set of contacts of said transmitting relay, a condenser shunted across the windings of said spacing relay to delay the release thereof, a second condenser connected across the contacts of said spacing relay to prolong the energization of said transmitting relay after opening of the contacts of said spacing relay, and a circuit controlled by said transmitting key in one transmitting position for connecting a third condenser in parallel with said second condenser.

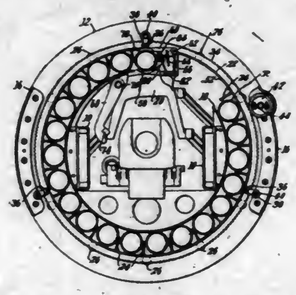
2,447,089
LOW ALLOY HIGH TENSILE STRENGTH, HIGH IMPACT STRENGTH STEEL
Peter Payson, New York, N. Y., assignor to Crucible Steel Company of America, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 13, 1946, Serial No. 662,092
4 Claims. (Cl. 75—123)

1. A low alloy steel characterized in having an Izod notched impact resistance of at least 25 foot pounds and a tensile strength of at least 200,000 pounds per square inch, when heat treated by cooling sufficiently rapidly from an austenitizing temperature to avoid high temperature transformations, and thereafter tempering at temperatures on the order of 450° F., said steel containing: about 0.15 to 0.4% carbon; about 1 to 2.5% manganese; about 0.8 to 3% silicon; about 1 to 5% nickel; about 0.25 to 1% molybdenum; and the balance substantially all iron.



2,447,090
ROTARY INTAGLIO PRINTING PRESS
Willard M. Pollock, Glen Ellyn, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application January 14, 1944, Serial No. 518,217
6 Claims. (Cl. 101—169)

1. A rotary intaglio inking mechanism including in combination a guide, a doctor blade carrier mounted for reciprocation thereon, and fluid pressure means for reciprocating said doctor blade carrier including a pilot valve having an innner plunger and a barrel surrounding same and mounted for relative sliding movement therewith, ports in said barrel communicating with exit ports through the body of said pilot valve, means for conducting fluid under pressure to the interior of said pilot valve, means to move said barrel and plunger to periodically permit flow of said fluid under pressure through first one and then the other of said exit ports, a piston within a cylinder, ports on either side of said piston, means to connect said exit ports with said cylinder ports, whereby said piston is reciprocated under flow of pressure from said pilot valve, a driving rod from said piston to said blade carrier, and a connection between the other side of the piston and the barrel of said pilot valve whereby movements of said barrel relative to said plunger may be effected.



2,447,091
INTERCHANGEABLE GUN BARREL AND STOCK
Arthur J. Pope, Madison, Conn.
Application September 18, 1943, Serial No. 502,921
2 Claims. (Cl. 42—76)

2. A firearm comprising a receiver and a pair of tubular elements constructed and arranged for interchangeable gun barrel and butt stock use, the front end of said receiver having a bore opening formed therein, means for selectively and detachably securing the rear end of either of said tubular elements in said bore opening, the rear end of said receiver having formed thereon a socket, means for selectively and detachably

securing a front end of either of said tubular elements in said receiver socket, whereby when the firearm is assembled either of said tubular elements is selectively secured in said bore opening of the receiver to function as a gun barrel and the other is secured in the receiver socket to function as a butt stock.

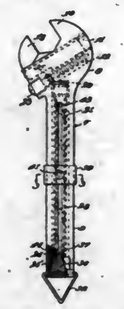
2,447,092
GUN AMMUNITION MAGAZINE
Eugene J. Ray, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 29, 1944, Serial No. 542,707
1 Claim. (Cl. 89—34)

An annular rounds magazine comprising an inner circular cage having an opening in its upper portion for movement of rounds inwardly thereof, an outer cage concentric with said inner cage and comprising a pair of spaced rings, antifriction bearings supporting said rings in spaced relation to each other and in concentric relation to said inner cage, inwardly extending rounds-engaging members carried by said rings, an external ring gear on the periphery of each of said rings, a drive shaft, means supporting said drive shaft adjacent to the peripheries of said rings with its axis parallel to the axis of said rings, and pinions secured to said drive shaft in driving engagement with the gears carried by said rings.

2,447,093
WIRE TIGHTENER
Charles C. Schley, George West, Tex.
Application September 17, 1945, Serial No. 616,807
5 Claims. (Cl. 140—149)

1. A wire tightener including an elongated handle constituting a lever, there being a smooth-walled opening in said handle adjacent to one end, a short fulcrum block carried by and extending from one face of the handle adjacent the opening, the opening being interposed between the fulcrum block and said end of the handle, a stem having a hook at one end and an eye at its

other end, said hook and eye being rotatable, and said hook constituting means for engaging the



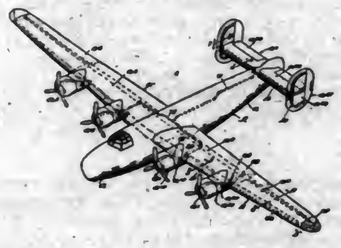
wire to be twisted, said eye constituting means for receiving a lever for rotating the same.

2,447,094

HELICAL SPRING ACTUATED SLIDING SIDE JAW WRENCH

Royal H. Schlote, Milwaukee, Wis., assignor to G. F. Schlote & Company, Inc., Milwaukee, Wis., a corporation of Wisconsin

Application January 10, 1947, Serial No. 721,306
6 Claims. (Cl. 81—165)



6. In a wrench of the character described, a wrench head provided with a fixed jaw and having a recessed portion, a movable jaw having a shank portion slidably disposed in the recessed portion of the wrench head, worm means journalled in the recessed portion of the head for cooperating with a portion of the shank of the movable jaw for moving said movable jaw relatively to the head when said worm means is revolved, an elongated tubular handle projecting from a part of the wrench head and provided with a longitudinally disposed slot, a helical spring journalled in said tubular handle, pinion means connecting the helical spring to said worm means, a collar slidably disposed on the handle and having a pin extending through the slot thereof and engaging the slot formed by the spaced convolutions of the helical spring, said collar being slidable on the handle for rotating the helical spring to actuate the movable jaw, said pin being normally clamped between the convolutions of the spring by the resiliency thereof for retaining the parts in adjusted positions, and a dust guard tube journalled in the tubular handle and rotatably disposed around the helical spring, said tube having a helical slot extending substantially from end to end thereof and in which the pin is slidably disposed.

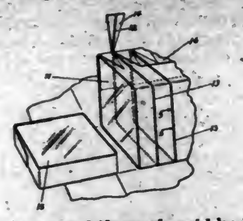
2,447,095

AIRPLANE ANTI-ICING SYSTEM

Howard F. Schmidt, San Diego, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware

Application December 30, 1944, Serial No. 570,547
1 Claim. (Cl. 244—134)

In combination with an airplane having a section of the wing thereof embodying front and rear spaced apart longitudinally extending spars and a covering skin around the spars, and provided with an aileron with the leading edge thereof positioned directly behind, and extending lengthwise of, the rear spar, an anti-icing system for the airplane comprising an elongated inner skin part extending lengthwise within, and shaped substantially conformably to, the leading edge of said section of the wing and spaced from said leading edge so as to form therebetween a comparatively thin compartment of arcuate cross section and with the upper and lower side portions opening within said leading edge, means arranged in associated relation with the skin part and forming therewith an interiorly disposed plenum chamber, means for delivering a fluid heating medium into the plenum chamber, means in the form of a longitudinal series of holes in the central portion of the inner skin part for supplying the heating medium from the plenum chamber into the compartment for transverse circulation in opposite directions therethrough, and means for delivering said heating medium to the leading edge of the aileron after flow thereof through said compartment consisting of a longitudinal series of transverse holes in the central portion of the front spar and a longitudinal series of transverse holes in the central portion of the rear spar.



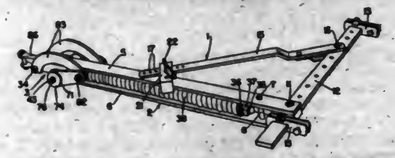
2,447,096

PARTITIONING MEANS FOR PARTIBLE BODIES

Cale J. Schneider, Toledo, Ohio

Application March 2, 1943, Serial No. 477,713
14 Claims. (Cl. 31—22)

1. An article of manufacture having a partible body and a partitioning means therefor; said partitioning means including a strand; a foldable sheet means adapted for wrapping about the partible body for supporting the strand in linear extension across the foldable sheet means and coinciding with a predetermined plane of proposed partition of the body; means for detachably securing the strand to said sheet means along substantially the entire length of the strand in said predetermined relation; and means connected to the strand adapted to be grasped to facilitate moving the strand from securement to



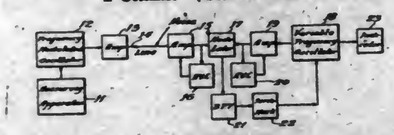
said sheet means and through said body to thereby partition the body in said plane.

2,447,097

OVERLOAD YIELDING HITCH DEVICE

Walter H. Silver, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corperation of Illinois

Application May 11, 1945, Serial No. 593,205
9 Claims. (Cl. 280—33.16)



1. A hitch device comprising a pair of relatively slidable draft members normally disposed in telescoped relation, means for connecting one of said members to an implement to be propelled, means for connecting the other of said members to a propelling means, a relatively long cushioning spring means extending substantially from one end of one of said normally telescoped members to the opposite end of the other of said members, and an overload release device connected between one end of one of said members and the adjacent portion of the other member and serving to restrain relative movement therebetween until the draft transmitted becomes excessive.

2,447,098

SIGNALING SYSTEM

Daniel Silverman, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

Application June 28, 1943, Serial No. 492,491
1 Claim. (Cl. 250—36)

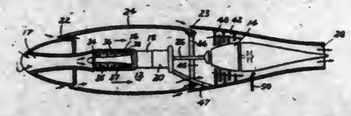
In a system for demodulating frequency-modulated signals received in the presence of a very large noise background, the frequency of said signals being varied slowly in accordance with slowly changing transmitted intelligence, the combination comprising: receiving means for said frequency-modulated signals together with said noise, an oscillator containing at least one adjustable reactance and adapted to generate alternating potentials over approximately the same frequency range as the received signals, a modulator connected to said receiving means and to said oscillator, a first sharply tuned band-pass filter connected across the output of said modulator, said filter being tuned to frequency not greater than 100 cycles per second, means for maintaining the output of said filter at an approximately constant average amplitude, a second sharply tuned band-pass filter directly connected to the output of said amplitude-maintaining means and tuned to a frequency differing from but within the pass band of said first filter, and a servo-mechanism controlled only by the amplitude of the output of said second filter and adapted to vary the value of said adjustable reactance as the average amplitude of said second filter output varies from a fixed predetermined value, whereby said second filter output is maintained approximately constant and the frequency of said oscillator is maintained at a constant frequency difference from that of said signals.

2,447,099

2-PHENYLINDENE DERIVATIVES AND PROCESS FOR THE MANUFACTURE OF SAME

Ulrich Volckmar Solmssen, Essex Fells, N. J., assignor to Hoffmann-La Roche, Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application August 23, 1944, Serial No. 550,869
15 Claims. (Cl. 260—488)



1. 2-(p-acetoxyphenyl)-3-ethyl-6-methoxyindene.

2,447,100

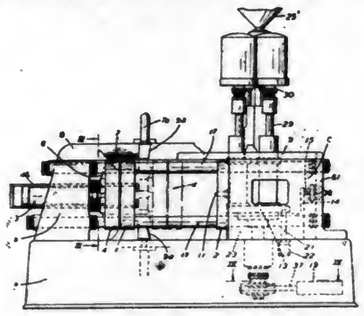
PROPULSION AND BOUNDARY LAYER CONTROL FOR AIRCRAFT

Edward A. Stalker, Bay City, Mich.

Application June 17, 1946, Serial No. 677,265
7 Claims. (Cl. 244—15)

1. In combination in an aircraft, a surface exposed to the relative wind and having a slot therein for the induction of boundary layer air, a gas turbine prime mover having a compressor and a turbine, said prime mover compressor having an inlet for the intake of air subject to the ram pressure of the relative wind providing for operation of said turbine with greater thermal efficiency upon increased ram pressure, means to heat said air to form a hot motive fluid for operating said turbine, said turbine having a power take-off shaft for driving said prime mover compressor, a propulsive compressor operably connected to said shaft to be rotated thereby, said propulsive compressor having an air inlet in communication with said slot to induct the boundary layer air therethrough into said propulsive compressor, and means to discharge said inducted boundary layer air rearward as a propulsive jet to propel the aircraft with increased efficiency.

2,447,101



DIE CASTING MACHINE

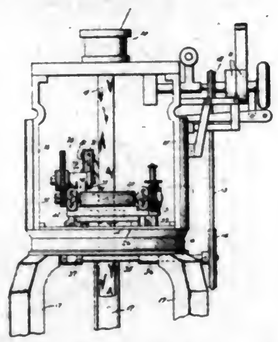
Hubert Arthur Stock, Peterborough, England

Application December 30, 1944, Serial No. 570,668
In Great Britain February 15, 1944
9 Claims. (Cl. 18—30)

1. Die casting machine for pressure moulding, comprising in combination a rotatable support and a plurality of injection cylinders mounted thereon, transfer passages formed to communicate with said injection cylinders, a plurality of

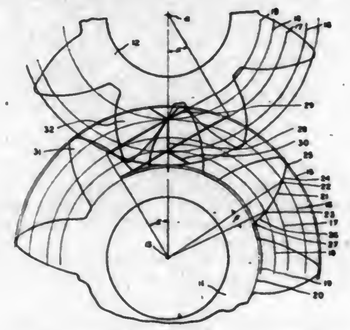
injection plungers associated with said cylinders, a common filling hopper and an outlet passage therefrom, measuring slides, having cavities of predetermined capacities, movable from positions communicating with said outlet passage

to positions communicating with said transfer passages, by action of said injection plungers when performing a filling stroke, and means associated with said injection plungers for thus moving said measuring slides.



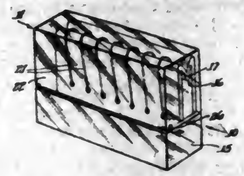
2,447,102
SANDING DISK
Alfred G. Strand, Longmont, Colo.
Application December 3, 1946, Serial No. 713,611
2 Claims. (Cl. 51—197)

1. A sanding disc comprising: a circular, metallic face plate having a shaft-receiving bore at its axis; a circular resilient cushion on the front face of said plate; a circular sheet of sanding medium on the front face of said cushion; an even number of independently rotatable, U-shaped clips extending through receiving openings around the periphery of said disc comprising inwardly extending clamping legs on said clips extending over the edge portion of the abrasive surface of the sheet; and an inwardly extending handle portion on each of said clips extending over the rear face of said face plate for independently rotating each of said legs to and from said sheet.



2,447,103
KNITTING MACHINE
Theodore A. Susen, Chicago, Ill., assignor to Phoenix Dye Works, Chicago, Ill., a corporation of Illinois
Application March 15, 1945, Serial No. 582,926
14 Claims. (Cl. 164—42)

14. A severing means for a continuous knitting machine or the like having a vertically floating take-up device including a pair of rolls to grip the product between them and place the product forming mechanism under proper tension by the weight of the device on the product as it is formed, comprising shear blades adapted to be mounted on said device closely adjacent the said rolls and

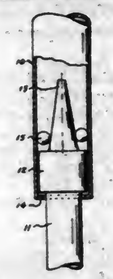


vertically movable therewith, and an electromagnetic device connecting with said blades for operating same to sever the product as it issues from the rolls, said magnetic device being so operated to sever the product as desired irrespective of the vertical position of the take-up device on the product.

2,447,104
VARIABLE LEVERAGE GEARING
Nikola Trbojevich, Detroit, Mich.
Application August 30, 1944, Serial No. 551,851
15 Claims. (Cl. 74—462)

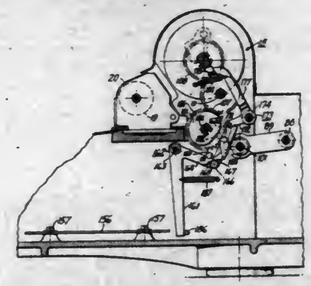
1. A pair of meshing variable velocity gears each having a plurality of equispaced teeth disposed in a circle and conjugate tooth curves formed on both sides of the said teeth, in which the said curves are constructed from three different curved segments tangentially merging one into another to form three concentric zones in each gear, the zones in one gear mating with the corresponding zones in the other gear in a timed relation, consecutively and independently of each other, in which the ratio of transmission in the inner and outer zones are two preselected constants, and the ratio in the middle zone is variable and is obtained by means of a shifting contact of the mating curves substantially in the line of centers throughout the said zone.

2,447,105
CONTAINER FOR FISHHOOKS
Louis W. Vogel, Chicago, Ill.
Application September 4, 1943, Serial No. 501,252
8 Claims. (Cl. 43—32)



1. A container for fish hooks or the like comprising a main body portion having a rear wall, a bottom end wall and a front wall and side walls extending upwardly from the bottom wall only a part of the distance, a fish hook supporting member carried by the rear wall and extending parallel therewith and spaced forwardly therefrom, the upper edge of the supporting member being substantially at the level of the top of the of the rear wall, and a closure pivotally mounted on said main body portion comprising a main portion forming the balance of the front wall of the container, side flanges and a top flange projecting laterally of said main portion to complete the side walls and form the top end wall respectively of the container when the closure is in closed position, and a pad of resilient material on the inner side of said top flange for yieldably engaging and holding fish hooks on said supporting member in position.

2,447,106
ADJUSTABLE SHIRT SLEEVE AND CUFF ASSEMBLY
Alfred J. Wegener, Jr., Kansas City, Mo.
Application June 17, 1946, Serial No. 677,165
2 Claims. (Cl. 2—124)



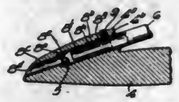
1. An adjustable shirt sleeve and cuff assembly comprising a sleeve portion; a cuff; and cooperating interconnecting elements on the sleeve and the cuff for securing the same together with a predetermined amount of the length of the cuff overlapping the end of the said sleeve, said cuff being formed of superimposed layers of material, the interconnecting elements of the cuff being button holes formed therein, the interconnecting elements of the sleeve being buttons adapted to engage the button holes respectively, said button holes being disposed in the innermost layer of material whereby the buttons are confined between the layers of material forming the cuff, said layers of material being stitched together throughout the length of their respective marginal edges.

2,447,107
EXTENSION FOR TRIPODS
Joseph Wirgin, Mount Vernon, N. Y.
Application January 26, 1945, Serial No. 574,678
3 Claims. (Cl. 248—191)

1. The combination of a pair of tubular standards comprised of two tubular members one telescoping within the other, the inner telescoping member formed with a cone shaped head, a plurality of spheres mounted between the cone shaped head of the one tubular member and the inner wall of the other tubular member providing means to lock the one tubular member with relation to the other tubular member in an upright position and to release said plurality of spheres when in an inverted position by further extension of said standards and gravity, thus permitting complete retelescoping of said tubular standards.

2,447,108
KEYBOARD CLEARING MECHANISM
Harold T. Avery, Oakland, Calif., assignor to Marchant Calculating Machine Company, a corporation of California
Application June 12, 1945, Serial No. 599,087
2 Claims. (Cl. 235—79)

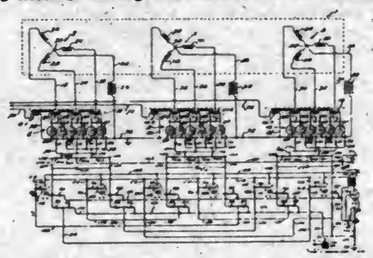
1. In a calculating machine having a keyboard comprising settable numeral keys, means for locking said keys in set position, an accumulator register, a rotary actuator therefor, driving mechanism for rotating said actuator in either of two opposite directions, a counter register and clearing mechanism therefor; the combination of, means operable by said driving mechanism to release the keys from the locking means, said releasing means being adapted to be selectively enabled or disabled, with means operable to disable said key releasing means, a train between said driving mechanism and said disabling means including an element normally in operating position to be actuated by said driving mechanism upon operation of the latter in one direction only to cause the train to operate said disabling means, a latch having a latching position in which it



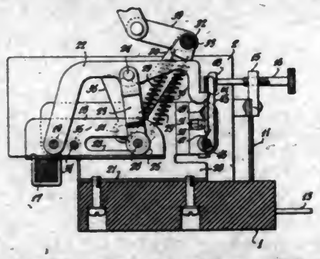
holds said element out of operating position and an unlatching position in which it enables the element to move to said operating position, and means driven by the counter clearing mechanism upon operation thereof to move the latch to said unlatching position.

2,447,109
TORQUE MEASURING WRENCH
Henry Robert Billeter, Highland Park, Ill., assignor to Ammco Tools, Inc., a corporation of Illinois
Continuation of application Serial No. 507,827, October 27, 1943. This application November 7, 1945, Serial No. 627,192
12 Claims. (Cl. 73—139)

1. A torque measuring wrench having a flexible spring bar, a work-engaging head rigidly joining one end of said flexible spring bar, an operating handle rigidly joining the opposite end of said flexible spring bar, and indicating means comprising two members movable relatively to each other during a torque-measuring operation, one moving with the normal axis of the spring bar at the intersection of said axis with a transverse line, the other moving with the intersection of the handle axis with said line, said line being the locus of a series of points, each of which points is the vertex of a pencil of lines formed by the handle axis as the resultant of operating force applied to the handle normal thereto is shifted along the handle axis while maintaining a constant given torque applied to the work, each such pencil of lines being obtained when a different constant torque is applied to the work.



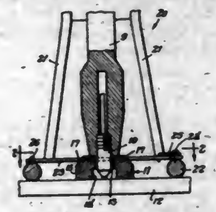
2,447,110
SOLDERING IRON
Frank C. Bitzenburger, Los Angeles, Calif.
Application May 15, 1944, Serial No. 535,629
4 Claims. (Cl. 113—109)



1. In a soldering iron, a soldering element having a substantially longitudinal tubular passage therein, said passage extending to near the soldering end of the element and provided intermediate the forward and rear portions of the passage with an enlargement, the forward end of said rear portion extending forwardly of the rear end of the enlargement forming an undercut recess backwardly from said forward end of the rear portion of the passage, said enlargement being so constructed and arranged with respect to said passage as to retard outward flow of melted solder and prevent backward flow.

2,447,111
ELECTRICAL CONTROL SYSTEM
Omer E. Bowlus, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application July 10, 1946, Serial No. 682,485
21 Claims. (Cl. 172—281)

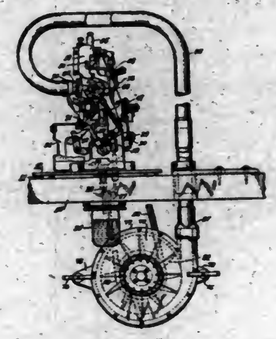
9. In a system for transferring electrical energy from a multiphase input circuit to a multiphase load circuit, a plurality of groups of electric valve means of the same number as the phases in said load circuit, a transformer means for each group of valve means, each transformer means comprising a single core having an output coil and a plurality of center tapped input coils with end connections and of a number equal to the number of phases of said source, circuit means connecting a different phase of said source to each of said center taps of one of said transforming means, circuit means correspondingly connecting each of the other of said transformer means to said source, each said group of valve means comprising a pair of valve means, each said pair of valve means having a common cathode connection and a common grid connection and a plurality of anodes, means connecting corresponding end connections of said input coils of the corresponding one of said transformer means to the anodes of one of said pair of valve means of the corresponding group of valve means, circuit means connecting the other corresponding end connections of the input coils of the corresponding one of said transformer means to the anodes of the other pair of said valve means of the corresponding group of valve means, and means for sequentially biasing the respective common grid connections of each group of valve means, and circuit means connecting the output coils of each translating means to form a multiphase load circuit.



2,447,112
SWITCH CONSTRUCTION
Chester W. Brown, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application May 20, 1943, Serial No. 487,743
15 Claims. (Cl. 200—116)

6. A circuit breaker comprising switch means, pivotally mounted switch operating means for opening and closing said switch means, a pivotally mounted carrier, said carrier and said switch operating means being pivotally movable about the same axis, an actuator pivoted on said carrier for operating said switch operating means, movable main operating means, over center spring means operatively connecting said main operating means and said actuator for moving said actuator back and forth to operate said switch operating means, condition responsive means normally holding said carrier against motion and releasing said carrier for motion upon the occurrence of a predetermined condition, said carrier being biased for outward motion and when released allowing said switch operating means to move to switch open position.

2,447,113
HOLDING MECHANISM FOR WELDING STUD FERRULES
Albert M. Candy, La Grange, Ill., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware
Application May 5, 1947, Serial No. 746,073
8 Claims. (Cl. 219—4)

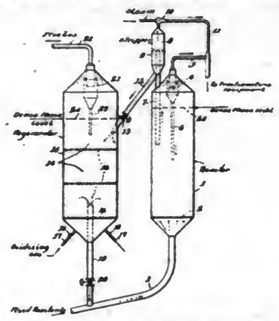


1. For combination with a stud welding gun having a chuck for holding a stud within a welding stud ferrule, a frame through which the chuck is movable for supporting the gun and engaging the work surface, an arm rockably mounted at one end on one side of said frame and extending transversely of the longitudinal axis of the stud for engagement with the ferrule, the other end of said arm extending to the other side of said frame, stop means on said frame cooperating with said other end of said arm to limit its movement relative to said frame, and spring means biasing said arm toward the ferrule for holding the same in operative position with respect to the stud.

2,447,114
INSULATOR CAP
Charles S. Card, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York
Application January 12, 1946, Serial No. 640,730
1 Claim. (Cl. 174—188)

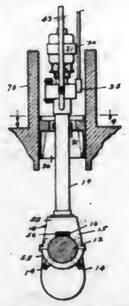
An insulator cap comprising a bell shaped cap body having a depending apron portion and a dome-shaped top portion formed with a central aperture and a unitary coupling piece formed with a base portion resting on the dome-shaped top portion of the cap body and covering and substantially overlying the edges of the aperture and having a solid coupling lug projecting inwardly from the base portion through and substantially filling the aperture, said lug being upset inside the cap body so as to overlap the edges of the aperture and engage the inner surface of the dome-shaped top portion.

2,447,115
SEWING MACHINE
Norman V. Christensen, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application May 20, 1946, Serial No. 671,068
7 Claims. (Cl. 112—256)



1. In a sewing machine having a work support and a needle and driving means therefor within a generally enclosed housing which extends partly above and partly below the work support, a cooling system comprising air input and outlet means comprising openings in said housing, said air input means being in the upper part of said housing, an air blower, a conduit connecting said blower to said input means for forcing air into the interior of said housing, means for filtering said air prior to its entry into said housing, and an air-conducting tube branching off from said conduit exterior of said housing and leading to the zone of operation of said needle.

2,447,116
VACUUM STRIPPING OF MOVING CATALYST IN HYDROCARBON CONVERSION PROCESS
Robert B. Collins, Downers Grove, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application July 30, 1945, Serial No. 607,890
2 Claims. (Cl. 196—52)



1. In a hydrocarbon conversion process wherein a hydrocarbon charge is passed upwardly at conversion conditions through a reaction zone containing a body of finely divided solid catalyst to form a lower dense fluidized catalyst phase and an upper light phase, and wherein the resultant contaminated catalyst is supplied to a regeneration zone wherein an oxidizing gas is passed upwardly through said contaminated catalyst to form a lower dense fluidized catalyst phase and an upper light phase, the improvement which comprises passing contaminated catalyst upwardly by suction from the dense phase in said reaction zone to an enlarged stripping zone, maintaining a vacuum in said stripping zone and therein vacuum stripping occluded volatile hydrocarbons from said contaminated catalyst, and

passing the resultant stripped catalyst downwardly by gravity flow from said stripping zone

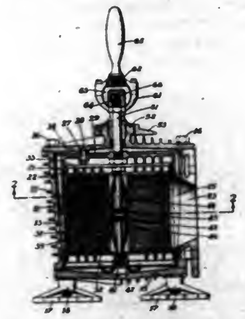
directly into the dense phase in said regeneration zone.

2,447,117
PORTABLE CRANK JOURNAL GRINDER
Walter F. Emory, Arbutus, Md.
Application February 12, 1946, Serial No. 647,029
5 Claims. (Cl. 51—241)

1. A grinding unit for cylindrical surfaces comprising, a shield adapted to encompass said surfaces, means for adjustably attaching the shield to said surfaces, a quill casing connected with the shield and extending therefrom in a predetermined directional manner, a saddle mounted on the casing, a quill housing within the quill casing and spaced therefrom to provide an evacuating duct therebetween, a quill shaft longitudinally disposed within said housing and having its operating head located adjacent the surfaces and adapted to hold a grinding wheel for processing same, mechanism mounted on the casing and coupled to said quill shaft for actuating same, and mechanism for creating a travel of the head over the surface to be ground and means for drawing the contaminated air from within said duct.

2,447,118
ROTOR BLADE
Michael E. Gluhareff, Stratford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 24, 1945, Serial No. 574,318
2 Claims. (Cl. 170—159)

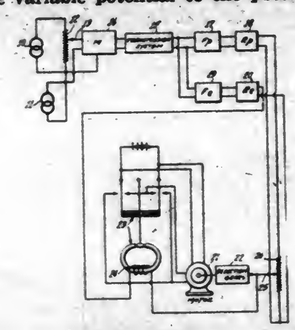
1. In a rotary wing aircraft, a rotor hub, a universal link having a generally horizontal flapping pivot connecting it with said hub, a shaft constituting a blade root having a generally vertical pivotal connection with said link, a blade shaft adapted to be aligned with said root and carrying a rotor blade, a blade folding and locking connection between said blade and root shafts having resiliently connected mating parts, each of said mating parts comprising two sets of duplicate ears carried by said blade and root shafts respectively and disposed on opposite sides of the axis of said blade shaft, each set of ears on said blade



shaft comprising a plurality of spaced ears adapted to intermesh with a plurality of similarly spaced ears on said root shaft, said intermeshing ears of each set being provided with registering holes, resilient bushings in said holes, hinge pins extending through said bushings, said pins and bushings completely filling said holes, and means for holding said pins and bushings in assembled relation in said ears.

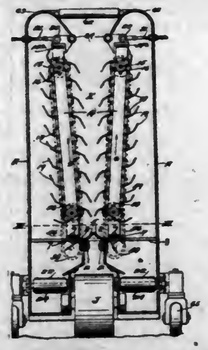
2,447,119
DEVICE FOR SEPARATING LIQUID OR FOREIGN MATTER IN SUSPENSION FROM FLUID UNDER PRESSURE
Harold J. Goodyer, Chicago, Ill.
Application June 30, 1944, Serial No. 542,969
4 Claims. (Cl. 183—77)

1. A device adapted to remove foreign matter in suspension from fluid under pressure and comprising a casing having a fluid inlet at the bottom thereof and a fluid outlet at its top, an upstanding open ended tubular element disposed in the lower portion of the casing and having the lower end thereof in communication with the inlet, a deflector in the casing mounted to rotate about a vertical axis and embodying a horizontal substantially imperforate plate disposed above and in centered relation with the upper end of the element and an annular series of spaced apart angularly disposed blades depending from the marginal portion of the plate and arranged so that they surround the upper end of the element, and an annular horizontally disposed downwardly flared inner baffle mounted fixedly in the casing and positioned so that it directly surrounds the deflector, and an annular horizontally disposed downwardly tapered outer baffle mounted fixedly in the casing and arranged so that it surrounds the inner baffle and its lower end is disposed above, and in spaced relation with, the lower end of the inner baffle and forms therewith an annular passage for permitting upflow of fluid in the casing to the outlet.



2,447,120
FLAME ARRESTER
Richard C. Hall, Alhambra, Calif., assignor to Petroleum Essentials, Incorporated, Glendora, Calif., a corporation of California
Application November 10, 1943, Serial No. 509,813
10 Claims. (Cl. 48—192)

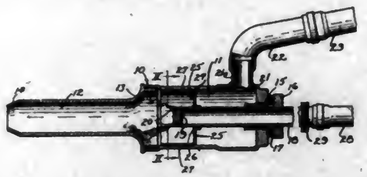
1. In a flame arrester, the combination of: a casing having a valve chamber therein which is concentric about an axis, said casing having side casing openings through which gas can pass through said chamber in a direction substantially at right angles to said axis, and a bottom casing opening; a valve body fitting in said valve chamber and rotatable about said axis and having an arrester chamber formed therein which has an inner wall concentric about said axis, said body having side valve openings that register with the side casing openings when the valve body is in open position, said side openings in said casing being closed, or blocked, by the walls of said valve body when said valve body is in its closed position, said valve body having a bottom valve body opening; an arrester shell adapted to fill and turn freely in said valve body and having side openings coinciding with the side openings in said valve body, said arrester shell being of such size that it may be readily withdrawn through said bottom casing opening, and having a disc chamber concentric about a disc axis formed therein; a series of discs so mounted in said disc chamber that there is a narrow slot or opening between adjacent discs, each disc being concentric about said disc axis; a bottom cover closing said bottom casing opening; and means outside said casing by which the valve body can be rotated.



2,447,121
PROPORTIONAL REMOTE CONTROL
Harold E. Haynes, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application December 10, 1943, Serial No. 513,794
4 Claims. (Cl. 318—28)

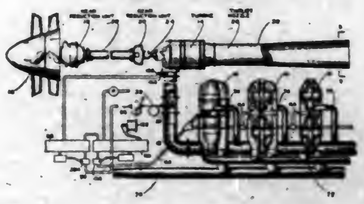
1. A telemetric system including two sources of alternating current of constant amplitudes and of different frequencies, means for selecting a portion of the potential of one source, means for mixing the output of one source and the output of selecting means, a transmission system for transmitting said mixed outputs, means for separating and rectifying the alternating currents corresponding to said frequencies at the output of the transmission system, means for applying current from the constant amplitude source across a potentiometer, contact means for applying the variable potential to the potentiometer,

and means for moving the contact means in accordance with the current flow therein.



2,447,122
HOP PICKING MACHINE
Emil C. Horst, Jr., San Francisco, Calif., assignor to E. Clemens Horst Company, San Francisco, Calif., a corporation of New Jersey
Application September 6, 1943, Serial No. 501,446
9 Claims. (Cl. 56—130)

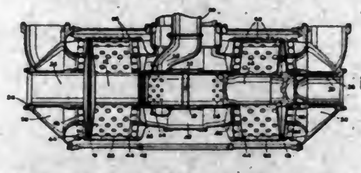
1. A machine for removing hops directly from vines in a field, comprising a frame having a pair of spaced guide rails extending a substantial length of the frame, said guide rails adapted to straddle a row of hop vines and said guide rails being flared outwardly at their forward ends to engage and guide hop vines between the rails, a picker frame disposed one adjacent each guide rail, an endless vertically disposed picker belt carried by each picker frame, means for adjusting said picker belts and frames to assume a horizontal angle with relation to the guide rails, other means for adjusting the picker belts to assume a vertical angle with relation to hop vines entering between the guide rails, means for imparting continuous upward movement to the picker belts to comb the vines in an upward direction to remove the hops, means for advancing the machine longitudinally of the row of hop vines while the picking belts are in operation, a roller carried by the machine and in contact with the ground, said roller aligning with the space formed between the guide rails and overriding the vines so as to pull them downwardly between the picking belts when the machine is advancing, a rubber flap extending longitudinally of each guide rail, said



rubber flaps extending over the guide rails and being sufficiently yielding to permit a hop vine to pass between them, said flaps forming a cover over the space formed between the guide rails to prevent hops from dropping through and an endless continuously moving conveyor belt below each hop picking belt to gather and remove the picked hops.

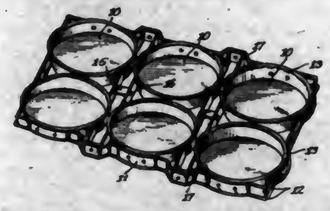
2,447,123
THERAPEUTIC DEVICE
Harry Sloper Jones, Chicago, Ill.
Application August 9, 1944, Serial No. 548,697
5 Claims. (Cl. 261—116)

1. A nozzle comprising a casing having a rear chamber portion and a reduced forward discharge portion having a restricted outlet opening, an air inlet in said chamber portion, an apertured baffle in said chamber portion forwardly of said air inlet, a water conduit extending into said chamber and through said baffle, and a plug fixed in and closing the forward end of said water conduit and having a plurality of divergent passages therethrough extending in the direction of the juncture of said chamber portion and reduced portion.



2,447,124
FUEL CONTROL FOR POWER PLANTS
Andrew Kalitinsky, Eagleville, and Donald E. Meitzler, Manchester, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 15, 1944, Serial No. 531,304
9 Claims. (Cl. 60—13)

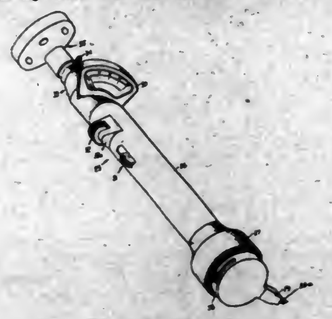
1. A fuel control for a power plant including at least one gas generator, a burner for adding heat to the gas, and a hot gas motor driven by the gas, in combination w ith means for adjusting the supply of total fuel to the power plant, a control lever for said fuel adjusting means, and means independent of the control lever for reducing the quantity of fuel supplied in response to a decrease in atmospheric pressure whereby the control lever will have the same position for the same power at all altitudes.



6. A power plant including a number of free-piston units generating gas under pressure, a burner for adding heat to the generated gas, and a device driven by the gas, in combination with a pump, means for adjusting the total supply of fuel from the pump to the power plant, a control lever for said adjusting means, and means for directing a part of said total supply to the burner over a predetermined part of the power range.

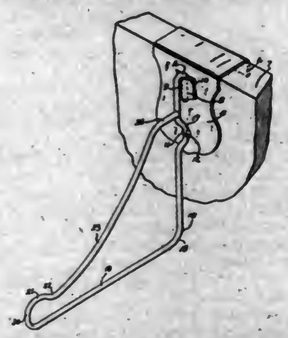
2,447,125
COMPRESSOR PISTON RING
Andrew Kalitinsky, Eagleville, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 30, 1945, Serial No. 575,339
14 Claims. (Cl. 309—4)

5. A compressor cylinder having a number of ports in its outer wall, and a piston in said cylinder, in combination with a single piston ring on the periphery of the piston, the ring being substantially as wide as the thickness of the piston, and having integral ribs on its outer periphery closely adjacent to the side surfaces of the ring.



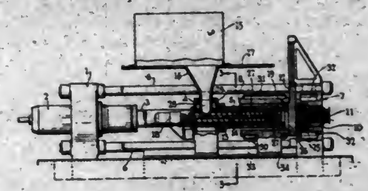
2,447,126
BAKING PAN ASSEMBLY
Jack Kollman, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application October 12, 1946, Serial No. 703,025
3 Claims. (Cl. 220—23.8)

1. In a baking pan set comprising a plurality of spaced baking pans of circular periphery arranged in rows, means secured to the outer wall of each of said pans including a strap of such longitudinal dimension as to completely surround said pan set and having arcuately formed portions conforming to and bearing against the outer wall portions of each of said pans, said strap having a portion intermediate its arcuately formed portions offset outwardly from a plane common to the outer surface of the arcuate portions thereof extending laterally in opposite direction therefrom, a bracer extending from the pans of one row to the pans in the next adjacent row and fixed to the walls of each of said pans, said bracer having its ends rigidly secured to the inner side of said outwardly offset portions of said strap.



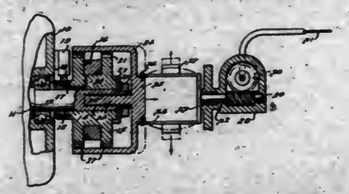
2,447,127
ELECTRIC TREATMENT APPLIANCE
Fred Landauer, Rockville Centre, N. Y.
Application January 19, 1944, Serial No. 518,797
9 Claims. (Cl. 128—405)

1. An electric treatment appliance comprising a metallic handle adapted to conduct electric current, an applicator housing of electrically insulating material carried by said handle, an electrode, said applicator housing having a recess, said electrode being normally shielded within said recess of said applicator housing, spring means operatively connected to said electrode within said applicator housing and permitting displacement of said electrode within said recess under action of said spring means, respective means for conducting electric current to said metallic handle and to said electrode, and switch means carried by said handle and connected to said



electric current conducting means, said switch means being adapted to cause continuous current flow in one position and intermittent current flow in another position, whereby upon contact of said metallic handle by a person and upon abutment of said applicator housing against a body part of said person said electric current conducting means may direct through said switch means electric current to flow respectively, continuously or intermittently between said electrode and said person in contact with said handle.

2,447,128
HANGER BRACKET
Ulysses S. Logan, Shorewood, Wis.
Application January 29, 1945, Serial No. 575,055
3 Claims. (Cl. 248—290)

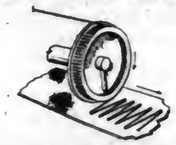


1. In a device of the character described, a mounting plate having a hook portion engageable over a door and provided in a central upper area with an integral portion formed outwardly of said plate to constitute an eye, said plate having below said eye integral convex boss portions in mutually spaced relationship thrust outwardly from the plane of said plate and having sheared edge surfaces in mutually spaced relation to constitute means for laterally confining a bracket member having a hook engaged in said eye.

2,447,129
EXTRUSION PRESS
Hugo Lorant, New York, N. Y.
Application September 11, 1945, Serial No. 615,559
16 Claims. (Cl. 18—12)

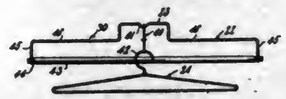
1. In an extrusion press, a material container, a removable closure member for closing one end of said container, an extrusion piston having a feed passageway therein insertable into said container from the end of said container opposite to said closure member and movable outwardly therein away from said closure member against a predetermined force as material is fed into said container between said piston and said closure member through said passageway so as to compress said material, an extrusion die arranged to be engaged against the end of said container in place of said closure member after the container has been filled, and means including said extrusion piston for thereafter extruding said compressed material through said die.

2,447,130
ACCESSORY DRIVE
Victor E. Matulaitis, Rochester, N. Y., and Franklin W. Edwards, Detroit, and Henry R. Voorhees, Grosse Pointe Farms, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application September 23, 1944, Serial No. 555,480
4 Claims. (Cl. 172—284)



1. An electromagnetic coupling comprising, an input member; a shaft mounting said input member and having a hollow bore; a dished output member surrounding said input member and having a stub shaft adapted to be received in said bore; an axially rigid driven shaft; radially flexible members connecting said output member and said driven shaft.

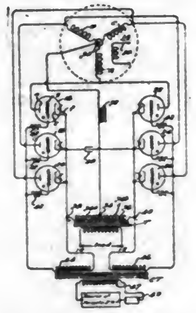
2,447,131
YARN FEED AND DISTRIBUTOR WHEEL
Henry J. McDermott, Collingdale, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application November 19, 1946, Serial No. 710,859
11 Claims. (Cl. 28—71.5)



1. An apparatus for depositing a strand comprising rotatable means for feeding the strand having an apertured strand-carrying periphery, a nozzle disposed inward of the periphery for directing a jet of fluid through the periphery,

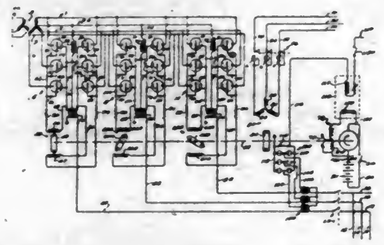
means for rotating the feeding means, means whereby a fluid may be supplied to the nozzle,

and means for oscillating the nozzle about an axis within the periphery of the feeding means.



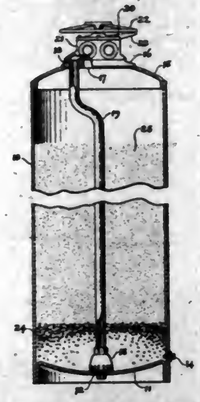
2,447,132
HANGER DEVICE FOR GARMENTS
Siegfried Meyer, New York, N. Y.
Original application February 7, 1941, Serial No. 377,884. Divided and this application November 22, 1944, Serial No. 564,624
1 Claim. (Cl. 223—85)

In a garment supporting device, a U-shaped bail member comprising substantially horizontally directed arms aligned to each other and terminating in downwardly extending parallel legs, a U-shaped hand grip fixed to and positioned intermediate said arms, said hand grip being positioned above said arms and being provided with a centrally arranged and downwardly directed notch, a loop element for supporting garment shoulder hanger means freely and swingably engaging said notch and depending from said hand grip, a substantially rigid rod member extending parallel to said arms and positioned between said legs of said bail member for engagement therewith, and interfitting formations at the extremities of said rod member and of said legs, respectively, for removably connecting said rod member with said legs, said rod member being adapted to support between said legs of said U-shaped bail member the lower portion of a garment when said garment is supported by said garment shoulder hanger and depends therefrom.



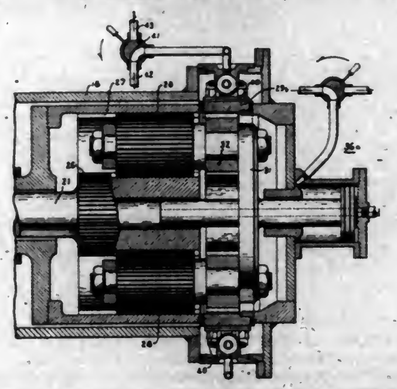
2,447,133
FREQUENCY CONVERSION SYSTEM
Paul T. Nims, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application November 30, 1944, Serial No. 565,955
32 Claims. (Cl. 172—281)

11. In a system for transferring alternating current energy between associated input and output circuits, a source constituting said input circuit and having a plurality of phases, electric valve means defining a plurality of discharge paths the anodes whereof are connected to corresponding terminals of corresponding ones of said phases. additional electric valve means defining a plurality of discharge paths the anodes whereof are connected to corresponding ones of said phases, a translating means comprising a winding having its respective terminals connected to the cathodes of the respective valve means and having an intermediate terminal connected to another terminal of each of said phases, control means for successively rendering said valve means conductive in alternate relation, and means coupling the output circuit to the translating means so that successive current impulses passed by the valve rectifying means cause current flow in respectively opposite directions in



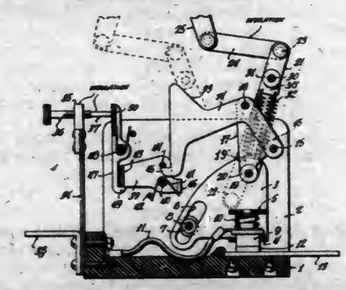
the output circuit, said control means including a source of periodic alternating voltages of opposed phase relation each corresponding to a corresponding one of said valve means.

2,447,134
ELECTRICAL CONTROL SYSTEM
Paul T. Nims, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application July 13, 1946, Serial No. 683,294
19 Claims. (Cl. 172—281)



18. In an electrical control system for transferring electrical energy from a polyphase electrical input system to a polyphase electrical output system, a plurality of pairs of electrical valve means, each of said pairs being connected to a different phase of said output system, each of said valve means having anode means connected to certain phases of said input system and a common grid connection and common cathode connection, circuit means connecting the common cathode connections of said pairs of valve means to a phase of said output system, a voltage inducing mechanism for each of the pairs of common grid connections for each of said pairs of valve means, said inducing mechanism being operable to generate a substantially rectangular voltage wave shape, a common means for rotating said mechanisms, means controlling the speed of rotation of said common rotating means whereby each of said common grid connections is rendered at a potential relative to that of the associated common cathode connection for placing each valve means in condition to conduct once each cycle of the output system.

2,447,135
STRAINER
Eric Pick, East Rockaway, N. Y., and Joseph J. Carlson, Madison, N. J., assignors to The Permutit Company, New York, N. Y., a corporation of Delaware
Application June 20, 1946, Serial No. 678,078
5 Claims. (Cl. 210—24)

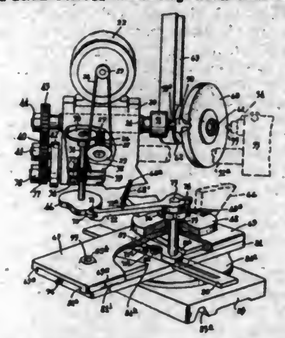


1. A strainer for liquid treating apparatus including a tank and a liquid carrying pipe inside said tank, comprising a hollow tubular member made of resilient soft rubber, said pipe extending into one end of said tubular member, screw means embedded in said tubular member for fastening the other end of said tubular member to said tank, a rigid cup-shaped member fitted over said tubular member, liquid straining means on said cup-shaped member, and transverse passage means in said tubular member interconnecting the inside of said tubular member and the inside of said cup-shaped member.

2,447,136
LOCOMOTIVE REVERSING GEARING APPARATUS
Thomas J. Putz, Upper Darby, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 28, 1946, Serial No. 680,178
9 Claims. (Cl. 74—298)

6. In a power developing and transmitting unit, a housing, reduction gearing in the housing and rotatably supported by the latter, said reduction gearing including a driving quill pinion, a prime mover supported by the housing adjacent to one end of the quill pinion, a gear casing supported by the housing adjacent to the other end of the quill pinion, a quill shaft driven by the prime mover and extending through the quill pinion, and forward and reverse gearing in the gear casing for connecting the quill shaft and the quill pinion; said forward and reverse gearing including a sun gear connected to the quill shaft, an orbit gear connected to the quill pinion, an anchor gear aligned with the orbit gear and carried by the gear casing, planet pinions meshing with the sun and orbit gears, a carrier for the planet pinions, a ring connected to the carrier for rotation with the latter and provided with teeth which are meshable with the teeth of the orbit gear or with the teeth of the anchor gear, means for moving the ring to forward driving position in which said teeth thereof mesh with the orbit gear teeth and to reverse driving position in which such teeth mesh with the teeth of the anchor gear, and means for restraining rotation of the anchor gear relative to the casing.

2,447,137
SWITCH CONSTRUCTION
Glenn R. Runke, Racine, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application May 21, 1943, Serial No. 487,883
18 Claims. (Cl. 200—116)



1. A switch construction comprising a floating, pivotally mounted follower operatively connected to a movable contact, a co-operating contact adapted to be engaged and disengaged by said movable contact, a link having one end pivoted to said follower and having the other end pivoted at a point spaced from said follower, and main operating means for rocking said link, said link and said floating follower having a toggle action only when said contacts are in engagement.

2,447,138
FORM RELIEF GRINDER
Paul A. Saari and Herbert A. Rugg, Minneapolis, Minn.
Application September 1, 1944, Serial No. 552,240
12 Claims. (Cl. 51—95)

1. A device for grinding a form relief cutter on a grinding wheel having in combination, a rotatable member carrying said cutter and rotatable therewith, means for rotating said member, a rotatable cam, gearing connecting said means and cam whereby said cam is rotated in synchronism with said rotatable member, a slide carrying said member, an oscillating member actuated by said cam, a member moved by said

oscillating member and engaging said slide to reciprocate the latter longitudinally once for each tooth on said cutter whereby said cutter is moved

against said wheel to grind each tooth thereon and is moved away from said wheel between said teeth.

2,447,139

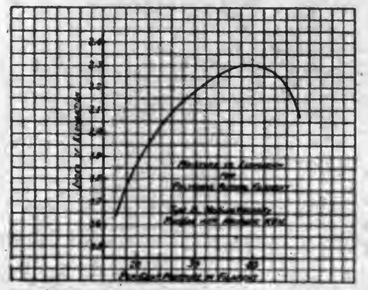
PRODUCTION OF HALOCYCLOALKANES

Louis Schmerling, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

No Drawing. Application August 30, 1943, Serial No. 500,557

16 Claims. (Cl. 260—648)

16. A process for producing a halonaphthenic compound which comprises reacting a naphthenic hydrocarbon and an alkyl halide containing at least 3 carbon atoms per molecule and whose halogen is selected from the group consisting of chlorine and bromine at a temperature of from about —40° to about +10° C. in the presence of a catalytic solution formed by adding to a liquid nitrohydrocarbon a metal halide of the Friedel-Crafts type.



2,447,140

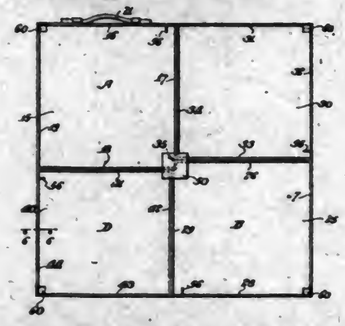
METHOD OF TREATING POLYVINYL ALCOHOL FILAMENTS AND TREATED FILAMENT

Elbert M. Shelton and Walter Leland Thompson, Pittsburgh, Pa., assignors to Johnson & Johnson, a corporation of New Jersey

Application April 10, 1943, Serial No. 482,552

11 Claims. (Cl. 18—47.5)

6. The process of treating a polyvinyl alcohol filament to improve its tensile strength which includes conditioning the filament to a moisture content permitting substantially maximum orientation by stretching, stretching the filament just short of the breaking point, reconditioning the filament while in stretched condition to a moisture content in the range of 6% to 12%, and heating it for at least four hours within the temperature range 140° to 180° C., without permitting any substantial variation either in its degree of stretch or in its moisture content.



2,447,141

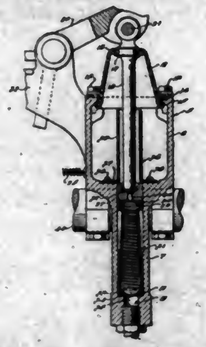
TABLE

Marion C. Shillady, Norristown, Pa.

Application May 3, 1944, Serial No. 533,898

7 Claims. (Cl. 311—90)

6. A table top consisting of a plurality of box sections of similar shape and capable of nesting one within another, each of said box sections having a flat table surface portion of different area, means for locking said box sections in assembled relationship with said surface portions coplanar and with edge portions of different box sections in engagement, one of said box sections having a cut out portion of the table surface at one corner to permit of the assembling and nesting of at least one of the other box sections therewith.



2,447,142

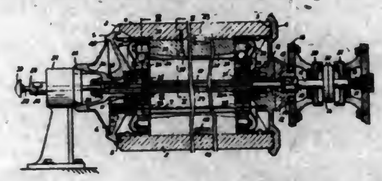
MASTER CYLINDER

Robert F. Smith and Bruce E. Clark, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Application December 29, 1944, Serial No. 570,298

2 Claims. (Cl. 60—54.6)

2. A hydraulic brake system including a fluid reservoir having a wall and a cylinder open at one end thereof to the reservoir through said wall, a filter surrounding said cylinder open end secured to said bottom wall and projecting outwardly from the latter, a piston reciprocal in said cylinder to place fluid therein under pressure and to relieve such pressure, a portion of said filter overlying said cylinder open end and constituting a stop to limit pressure relieving movement of the piston.



2,447,143

THREAD ADVANCING REEL

Richard W. Stanley, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application October 26, 1944, Serial No. 560,441

6 Claims. (Cl. 28—71.5)

1. Reel mechanism comprising a set of spaced longitudinally extending bars, means for rotatably mounting said set of bars about an axis, a second set of spaced, longitudinally extending bars interdigitating with the bars of the first set, means comprising individual ball and socket connections spaced apart axially of the reel and longitudinally of each bar for supporting each bar of the second set rotatably about an axis offset with respect to the axis of rotation of the first set, and spaced stiff elements, each being adjacent an annular group of ball and socket connections and having inwardly facing bearing surface areas resting against projections secured to the bars for retaining them.

2,447,144

OIL PURIFIER

Marion V. Thornton, Spokane, Wash.

Application July 6, 1946, Serial No. 681,722

7 Claims. (Cl. 210—150.5)

1. A filter comprising a casing, a removable cover for the upper end of said casing, a partition dividing the casing into a filter chamber and heating chamber, filtering material in the filter chamber, a perforated plate closing the upper end of the filter chamber and releasably secured upon the partition with a portion overhanging the heating chamber and formed with an upstanding marginal flange and with openings spaced from each other longitudinally of the flange, there being an oil inlet at the bottom of the filter chamber adapted for connection with an oil pipe extending from an engine, a heater pipe extending diagonally in the heater chamber between upper and lower sleeves projecting from the casing, a removable plug closing the outer end of the upper sleeve, said heater pipe passing through the lower sleeve and adapted for connection with the exhaust pipe of an engine, a discharge pipe for exhaust gases leading from the upper sleeve, a pipe connected with the bottom of the heater chamber for returning clean oil from the heater chamber to an engine, a tubular screen in said heater pipe, a trough in the heater chamber over said heater pipe V-shaped in cross section and gradually increasing in depth toward one end and following the incline of the heater pipe, a side wall of the trough being formed with a flange disposed under the projecting portion of said plate whereby oil flowing through openings in the plate will enter the trough, walls of the trough being formed with channels disposed under the openings in the plate and having portions crossing the bottom of the trough and formed with outlet openings through which oil flows onto the heater pipe, removable closures for the openings in the plate, the side walls of the trough being formed with openings through which vapors rising from the heater pipe may flow upwardly into the portion of the casing above the chambers, said cover being formed with an outlet for vapors, and a float valve for closing the vapor outlet and preventing escape of oil through the vapor outlet.

2,447,145

TAPE DISPENSER

Paul Van Cleef and Frank Chonacki, Chicago, Ill., assignors, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a corporation of New York

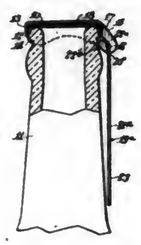
Application June 20, 1946, Serial No. 677,998

5 Claims. (Cl. 164—84.5)

1. A device adapted to dispense strips from material with a coating of permanently tacky pressure sensitive adhesive on one face thereof, and embodying means for holding a supply of the material, a stationary cutting element provided with a cutting edge at its front and disposed in front of the holding means, a pair of freely rotatable rollers disposed in the rear of the cutting edge of said cutting element, said rollers being spaced one in advance of the other, one of said rollers operating to guide the material under said cutting element with the non-tacky surface of the material adjacent the cutting element, the other of said rollers serving to support the free end of the material in position to be grasped by the operator, the material contacting surface of said other roller being disposed below the material contacting surface of the guiding roller.

2,447,146

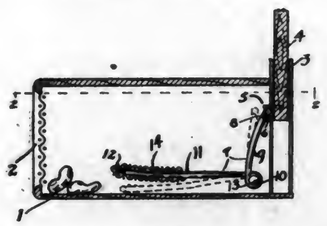
BOTTLE CAP



Frank Vogel, Philadelphia, Pa., assignor to Philip A. Udall Distributing Co., Inc., a corporation of New York

Application June 29, 1945, Serial No. 602,266

9 Claims. (Cl. 215—38)

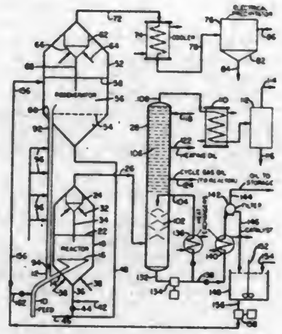


5. A bottle cap including a body proportioned to close the top of a bottle having a lip, a flange extending partly around and integral with the body and having an undersiung forward portion for engaging beneath a portion of said lip, a gasket on the inside of said body, a tongue integral with the body and depending from said

body, said tongue and flange holding the gasket in position, and a lever pivotally connected to the rear of the body and adapted to operate in

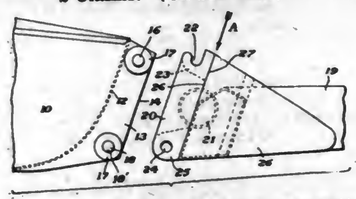
conjunction with the bottle lip to move the forward underslung portion into engagement with and under said lip thereby to compress the gasket and hold the cap to the bottle.

2,447,147
ANIMAL TRAP
Gilbert S. Warner, Palma Sola, Fla., assignor to William Hegener, Sarasota, Fla.
Application January 1, 1945, Serial No. 570,849
5 Claims. (Cl. 43—61)



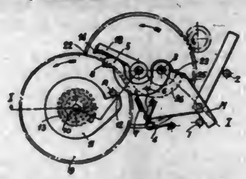
1. A box trap for capturing animals alive, comprising a box open at the front, a gravity door mounted vertically to slidably close the same, and a single unitary operating mechanism formed of a wire frame pivoted near the front of the box in each of the side walls thereof, having a yoke-shaped portion extending upwardly from either side of the box, and open centrally to permit the animal to pass through said yoke-shaped portion, and a rear portion composed of side bars integral with the yoke-shaped portion and with each other, and each projecting rearwardly at opposite sides of the box toward the rear wall of the trap, being spaced apart to leave the floor of the box empty and uncovered between said side bars for the passage of the animal upon the floor, and meeting at the rear ends, and a platform fixed upon and between the side bars, the said yoke portion of the frame having side members extending upwardly and forwardly from the side bars and formed with a crossbar between the side members integral therewith, the said frame being pivoted at each side in axially aligned pivots behind the door and near the floor of the trap, whereby animal pressure on the said platform will depress the same and pull back the crossbar of the yoke, the said crossbar being adapted to be brought under the lower edge of the door to be held thereby, to be released by either a light or a heavy touch upon the platform according to the setting of said crossbar under said door.

2,447,148
PROCESS FOR PRODUCING DERIVATIVES OF PYRAZINE
John Weijlard, Westfield, and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application September 18, 1943, Serial No. 502,966
2 Claims. (Cl. 260—250)



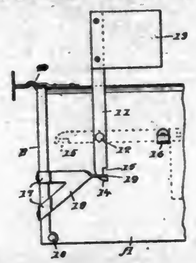
1. The process that comprises heating one molar equivalent of lumazine and 1 to 3 molar equivalents of an alkali metal hydroxide in aqueous solution under pressure at a temperature of 150–170° C. for 2 to 8 hours thereby forming the corresponding alkali metal salt of 2-amino-3-carboxyl pyrazine, and adjusting the pH of the reaction mixture to about 2–3 to form 2-amino-3-carboxyl pyrazine.

2,447,149
CATALYTIC CONVERSION OF HYDROCARBONS
Lloyd D. Wier, East Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 21, 1944, Serial No. 527,408
9 Claims. (Cl. 196—52)



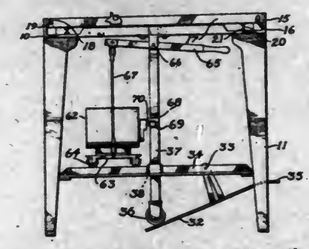
1. In a process of converting hydrocarbons catalytically in a catalytic unit comprising a reaction zone and a regeneration zone wherein hydrocarbons are contacted with finely divided catalyst in a reaction zone and then most of the dry contaminated catalyst particles are separated from vaporous reaction products in a dry separation step and the separated particles are passed to said regeneration zone and the vaporous reaction products still contain entrained catalyst and low boiling and high boiling hydrocarbons, the steps of condensing only high boiling hydrocarbons from the vaporous reaction products in a scrubbing zone to scrub out catalyst particles and form a slurry, cooling a part of said slurry and recirculating the same to the scrubbing zone, separating catalyst particles contained in the remaining and uncooled part of the slurry from high boiling hydrocarbons, discarding the thereby separated high boiling hydrocarbons from the catalytic unit so as to avoid their further contact with catalyst particles and reaction products and returning the separated catalyst particles to the catalytic unit for reuse in the process, and fractionating the vapors remaining after condensation of the high boiling hydrocarbons to separate cycle oil from gasoline constituents.

2,447,150
MATERIAL HANDLING APPARATUS
Thomas K. Andersen, Staten Island, N. Y.
Application April 4, 1946, Serial No. 659,516
2 Claims. (Cl. 214—145)



1. Quick detachable means for connecting a bucket to its carrying arms, comprising a pair of vertically extending members at the back end of the bucket defining a channel and a vertically extending lifting section at the back end of each bucket arm to enter said channel, said pair of members near their upper and lower edges respectively having sets of aligned holes therethrough and said lifting section near its upper edge being formed as a hook and near its lower edge having a hole therethrough, a fixed pin in the set of aligned holes near the upper edge of said pair of members to be engaged by the hook portion of said lifting section, and a removable pin to be placed through the set of aligned holes at the lower edge of said pair of members and through the hole in the lower edge of said lifting section when said three holes are registered with one another.

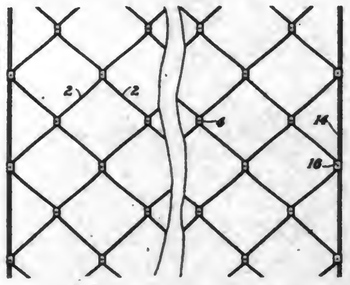
2,447,151
TEMPORIZING OR DELAY DEVICE
Enzo Ascoli, Sainte-Croix, Switzerland, assignor to Paillard S. A. (Paillard A. G., Paillard Limited), Sainte-Croix, Switzerland
Application June 17, 1946, Serial No. 677,245
In Switzerland March 21, 1946
6 Claims. (Cl. 185—40)



1. A delay device comprising a rocking operating member, a pair of spaced fixed stops, said stops serving to determine the extreme positions of said rocking member, a spring associated with said rocking member, said spring serving to move and hold said rocking member in its end positions, an actuating member cooperating with said rocking member, an adjusting member associated with said actuating member, a return spring associated with said adjusting member, a shaft, means for driving said shaft, a feed pawl on said shaft, a ratchet wheel connected to said adjusting member by said return spring, and a retaining pawl on said shaft, said feed pawl and said retaining pawl cooperating with said ratchet wheel, said feed pawl being subjected to a friction torque in such a manner as to cooperate with said ratchet wheel carrying said actuating member, said ratchet wheel being retained against the action of said return spring by said retaining pawl which is subjected to a friction torque tending to hold said retaining pawl in engagement with the teeth of said ratchet wheel.

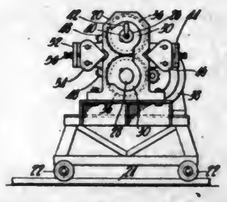
2,447,152
FLAG FOR MAILBOXES
Henry C. Baker, Muskegon, Mich.
Application January 7, 1944, Serial No. 517,400
3 Claims. (Cl. 232—35)

3. A flag signal device for rural mail boxes having a front end opening and hinged door normally closing the opening, said flag signal comprising a staff pivotally mounted intermediate its ends to one side of said box and at a distance inwardly from the front end thereof, a flag carried at the upper end of said staff, said staff being normally disposed in vertical position to display said flag above the top side of said box, the lower end of said staff being curved at its forward edge, a bracket secured to the door and extending rearwardly therefrom alongside said side of said box and recessed at its rearward end to receive the curved lower end of said staff when the staff is in vertical position, the rear edge of the recess engaging the rear side of said staff to lower the flag when the door is opened, the curved end of the staff allowing the staff to rotate about said pivot and out of said recess when the door is opened.



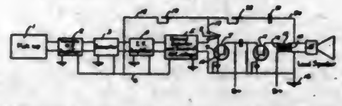
2,447,153
MACHINE FOR MANUFACTURING CEMENT TILE
Ethel P. Barber, Phoenix, Ariz.
Application November 13, 1945, Serial No. 628,057
2 Claims. (Cl. 25—43)

1. In a machine of the class described, a bed plate with a centrally arranged opening, side and end rails surrounding said opening, said side rails having their upper edges parallel to act as a guide, stop attached to said bed plate and positioned within said opening to support a pallet, said pallet and rails acting as a mold for concrete, a trowel adapted to slide on said side rails to form the upper surface to concrete positioned in said mold, and means for lifting said pallet from said opening, a frame supporting said bed plate and said means for lifting said pallet, a motor mounted upon said frame by hinge means, a cam upon said motor shaft, a cam rider attached to said means for lifting said pallet, lever means for raising said motor to bring



said cam and said rider into contact whereby rotation of said motor will move said lifting means up and down and impart a jarring action to said pallet.

2,447,154
METHOD OF MAKING TORPEDO NETS
Alan E. Brickman, New Haven, Conn., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application March 6, 1945, Serial No. 581,310
5 Claims. (Cl. 245—7)

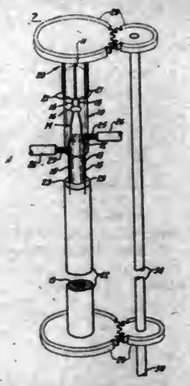


1. The method of making a zigzag weave net which comprises placing a plurality of stranded wire structures of a length substantially equal to the width of the unspread net side by side in substantially parallel relationship, progressively passing double barreled sleeves over adjacent stranded structures from the center outwardly to each end thereof, spacing the sleeves at the desired position along the stranded structures to obtain the desired openings in the finished net, thereafter applying sufficient pressure to the sleeves to secure them to the stranded structures, and spreading the net by putting a permanent bend in structures in the plane of the net at the point where they leave the sleeves.

2,447,155
METHOD AND APPARATUS FOR SWAGING AND BENDING
Alan E. Brickman, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application January 17, 1946, Serial No. 641,664
7 Claims. (Cl. 140—1)

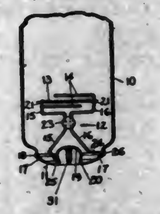
1. Apparatus for fastening a sleeve assembled on two stranded wire structures to the wire structures and spreading the wire structures at the point that they leave the sleeve which comprises a pair of parallel shafts, a swaging roll mounted on each shaft, said rolls having parallel grooves therein which together form an aperture slightly smaller than the outside contour of the sleeve, a spreader cam in line with the grooves and adjacent thereto, one of said wire structures passing on each side of the cam, means for rotating the rolls to swage the sleeve to the wire structure and force the wire structures against the spreader cam to bend them sufficiently to give them a permanent set at approximately the point that they leave the sleeve.

2,447,156
RADIO CONTROL SYSTEM
Louis B. Brittain, Los Angeles, Calif.
Application February 23, 1942, Serial No. 431,909
8 Claims. (Cl. 250—20)



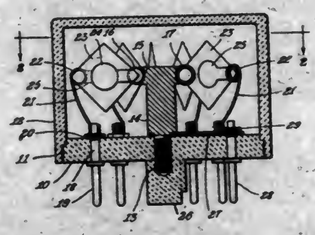
3. In combination with a radio receiver of the type having at least a pair of electronic emission tubes adapted to cooperate with a sound reproducer, each of said tubes having a control electrode: means responsive to the reception of a carrier wave by said receiver for creating a potential difference, and circuit forming means adapted to be connected to the control electrode of one of said tubes, and when so connected serving to apply said potential difference to said electrode, as well as to form a regenerative circuit including said tube, said potential difference, when it exists, being of such direction and magnitude as to cause a reduction in the supply of signalling current to the sound reproducer, said regenerative circuit having constants such that said circuit is effective to energize said sound reproducer only when said potential difference is substantially non-existent.

2,447,157
SPARK PLUG SHIELD
George G. Burrell and Leo Burrell, Cedar Rapids, Iowa; said Leo Burrell assignor to Kittie P. Burrell, Cedar Rapids, Iowa
Application March 8, 1946, Serial No. 652,887
10 Claims. (Cl. 174—77)



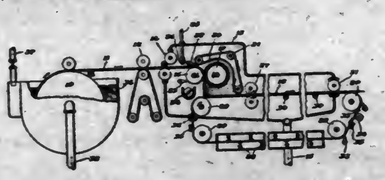
1. In a moisture shield for a spark plug having a porcelain insulator and a terminal at the top thereof, an upper insulating shield having an opening through the top thereof for receiving an ignition cable, means including a stylus for expanding and sealing a cable within the said opening, a lower insulating shield member threadedly engaged to the said upper shield and a sealing gasket engaged by and adapted to be forced by the lower shield member into contact with the porcelain insulator whereby a moisture sealed chamber is provided above the said sealing gasket and within the upper and lower insulating shields.

2,447,158
SEALING-IN METHOD FOR LAMPS AND SIMILAR DEVICES
Paul O. Cartun, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application August 31, 1943, Serial No. 500,675
3 Claims. (Cl. 49—78)



1. The method of making a seal of the class described which comprises assembling the end of a glass exhaust tube within an outer tubular glass member with lead-in wires extending longitudinally therebetween, rotating the assembly about its axis, directing a heating flame substantially tangentially of the outer member and maintaining the flame in its original position to cause the said outer member to soften and contract away from the flame to a predetermined extent and become fused to the exhaust tube whereby to seal portions of the lead-in wires in the resulting joint without closing up the exhaust tube.

2,447,159
LAMP TERMINAL STRUCTURE AND METHOD OF MANUFACTURE
Paul O. Cartun, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application June 19, 1944, Serial No. 540,969
2 Claims. (Cl. 176—126)



1. An end unit for an enevolpe of the character described comprising a metal end disc, for sealing to the envelope end, having a lateral marginal flange with a notch in said flange, and a filament mounting structure carried by said disc comprising current conductors having separated filament clamps remote from the disc and also having portions nearer the disc more closely spaced, with an insulative stem bead sealed to and mechanically but insulatively interconnecting said portions of said conductors, one of said conductors being attached and electrically connected to said disc, and the other conductor extending outward past the edge of the disc opposite said notch, in position to be insulatively embedded in and extend out through an insulative seal by which said disc may be attached to an envelope end.

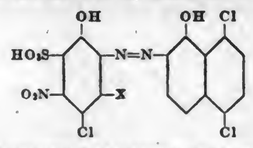
2,447,160
PIEZOELECTRIC APPARATUS
Norman L. Chalfin, New York, N. Y., assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y., a corporation of Delaware
Application October 22, 1945, Serial No. 623,618
7 Claims. (Cl. 171—327)

1. Piezo-electric crystal apparatus comprising an insulating base, a central support, a plurality of connector supports and a plurality of piezo-electric crystal elements with spaced apart portions acting as surface electrodes, said central support and said connector supports being mounted on said base so that the said elements will be held at spaced electrode corners in radial relation around the said central support.

2,447,161
APPARATUS FOR THE MANUFACTURE OF PAPER AND OTHER FELTED FIBROUS PRODUCTS
James T. Coghill, Rochester, N. Y., assignor to Consolidated Machine Tool Corporation, Rochester, N. Y., a corporation of Delaware
Application June 28, 1943, Serial No. 492,612
4 Claims. (Cl. 92—38)

1. Apparatus for manufacturing a web of felted fibrous material from an aqueous pulp furnish, comprising dewatering means for partially dewatering said furnish, a conveyor for carrying said dewatered furnish away from the dewatering means, a continuously revolving fibre-projector arranged adjacent to the discharge end of said conveyor for withdrawing moist fibres from said dewatered furnish and projecting them, an imperforate conveyor upon which said projected fibres impinge and are formed into a continuous web, press rolls for physically compacting said web against said last-named conveyor, and means for heating said imperforate conveyor to evaporate from said web while it is on said heated conveyor most of the liquid contained therein.

2,447,162
DOLLY BLOCK WITH SERRATED WORK-ENGAGING FACES
Harry E. Conrad, Pomona, Calif.
Application April 2, 1946, Serial No. 659,082
1 Claim. (Cl. 81—15)

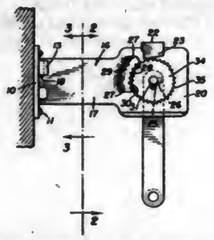


A metal-working tool including a dolly block proportioned to be manually gripped and held against a part of a metal body to be straightened, and a removable hard steel covering for said block, the covering enveloping the work-engaging faces and edges of said block and having an outer work-engaging surface formed at either side of its center line with a plurality of ridges each of which is longitudinally curved and has its ends disposed toward said center line, each ridge being formed with a continuous unbroken biting edge pitched away from said center line.

2,447,163
O:O'-DIHYDROXY AZO DYESTUFFS AND A PROCESS OF MAKING SAME
Achille Conzetti, Basel, Switzerland, assignor to the firm J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application March 8, 1945, Serial No. 581,716. In Switzerland February 21, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 21, 1964
8 Claims. (Cl. 260—199)

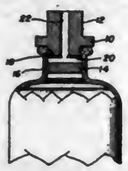
1. Process for the manufacture of an o:o'-dihydroxy azo dyestuff which comprises coupling diazotised 4-chloro-2-aminophenol-6-sulfonic acid in an alkaline medium with a 1-carboalkoxyamino-7-naphthol.

2,447,164
CHROMABLE MONOAZO DYES
Achille Conzetti, Basel, Switzerland, assignor to J. R. Geigy A.-G., Basel, Switzerland
No Drawing. Application April 5, 1946, Serial No. 659,887. In Switzerland April 17, 1945
3 Claims. (Cl. 260—197)



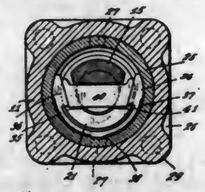
1. A chromable azo dyestuff of the formula

wherein X represents a member selected from the group consisting of H and Cl.



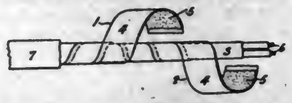
2,447,165
CAN OPENER
Thomas W. Costello, Everett, Wash.
Application February 5, 1947, Serial No. 726,668
1 Claim. (Cl. 30—8)

A can opener comprising a holder, a stationary cutter carried by the upper edge of the holder, said holder having a vertical slot in axial alignment with the vertical axis of the cutter and also having a horizontal slot opening into the upper end of the vertical slot, an axle shaft rotatable in the slots, a traction wheel carried by the axle shaft, an annular series of peripheral teeth on the wheel adapted to engage a cam and rotate it against the cutter, and a stationary rack carried by the holder and adapted when the axle shaft is in the vertical slot to engage the teeth on the



wheel and advance the traction wheel toward the cutter as the axle shaft is rotated in one direction.

2,447,166
REVERSIBLE STOPPER
Irven William Daffer, Mount Pleasant, Tex.
Application December 9, 1946, Serial No. 714,929
1 Claim. (Cl. 215—73)



A reversible stopper having a transverse channel therethrough and a substantially longitudinal channel extending from one end of the stopper to said transverse channel, the ends of the stopper being selectively insertable in a neck of the container, said transverse channel being unequally spaced from the ends of the stopper, an annular flange midway of the length of the stopper, said transverse channel being in a portion of the stopper on that side of the flange remote from said one end, and said transverse channel being adapted to be closed at both ends thereof when said portion is operatively inserted in the neck of a container.

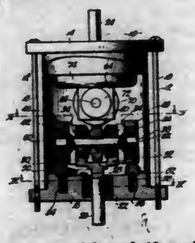
2,447,167
REVERSE BRAKE
Francis H. Davis, Ovid C. Emerson, and Percy A. Newman, La Fayette, Ind., assignors to Ross Gear & Tool Company, La Fayette, Ind., a corporation of Indiana
Application June 11, 1945, Serial No. 598,750
3 Claims. (Cl. 192—8)

1. In combination, a stationary member having a circular bore, rotatable driving and driven members coaxial with said bore, said driving and driven members being provided with axially overlapping extensions arranged in opposed relationship within said bore, an arcuate brake member disposed in said bore, an actuator disposed between the ends of said brake member, said actuator being located between said extensions and providing a lost-motion connection between them, said actuator having end faces converging toward each other away from the extension on said driven member, said brake member being provided interiorly with faces complementary to and respectively engaged by the end faces of said actuator and also with shoulders engageable by one of said extensions to limit the extent to which such extension can rotate relatively to the brake member.

2,447,168
HIGH-FREQUENCY ELECTRIC CONDUCTORS AND CABLES
John Norman Dean, Westerham, Esmond Wassell Smith, Beechcroft, Chislehurst, and Reginald Sear, London, England, assignors to Telegraph Construction & Maintenance Company, Limited, Greenwich, London, England
Application September 16, 1943, Serial No. 502,678
In Great Britain May 12, 1942
5 Claims. (Cl. 174—105)

1. A high frequency signalling cable having two balanced conductors together surrounded by a dielectric and comprising a tape including a layer of non-conductive flexible material and a thin layer of metal wound upon the dielectric with overlapping turns with the thin layer of metal facing toward the inside of the cable and being in intimate contact with said dielectric, and a flexible conductive reinforcing layer immediately covering said tape.

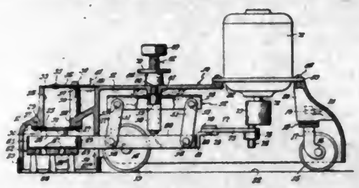
2,447,169
SURGICAL INSTRUMENT AND TECHNIQUE
Eugenio de Sousa, Rio de Janeiro, Brazil
Application January 16, 1945, Serial No. 573,020
2 Claims. (Cl. 128—303.14)



2. An instrument for use in excision of prostate gland enlargements about the neck of the urethra passage where the latter enters the bladder, comprising a shank for insertion through and rotation in the urethra and having its outer walls of an electric insulating material, a cutting attachment designed to form an extension of said shank, said cutting attachment being insertible into the bladder other than through said urethra passage, cooperating means on said shank and the end of said attachment for detachably securing said shank and attachment together, said attachment including an electrode extending angularly from adjacent the connected end of the attachment to a point forwardly and outwardly thereof to describe a substantially conical figure upon rotation of the shank in the urethra with the circumference of the base exceeding that of the urethra in its most distendible condition, means on said attachment formed of dielectrical material supporting said electrode fixedly in said position and including a portion coaxial with said shank and a transversely extending portion permanently disposed in angular relationship with said first mentioned portion, said second mentioned portion being greater in length than the permissible maximum distention of said urethra, means connected with said electrode for establishing contact with a source of electrical current, and protective means on the attachment positioned radially outward beyond the most outward point of the electrode for holding adjacent portions of the bladder spaced from said electrode.

2,447,170
PROCESS OF FREEZING LIQUID AND APPARATUS THEREFOR
Russell Paul Dunmire, Orange, Ohio
Application August 24, 1943, Serial No. 499,799
13 Claims. (Cl. 62—172)

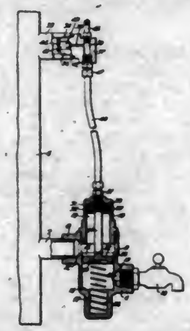
1. The herein disclosed process employing a receptacle consisting of a device for making an ice cake or block comprising a container and a closure therefor, which consists in filling the container with the liquid to be frozen to a level within a range fixed by the pressure which must be imposed on a body of air trapped in said container to overcome the bond between the container and an ice cake or block therein and positioning the closure on the open end of said container, then inverting the recepacle, whereby a sealed space filled with air is provided between the bottom of the container and the body of liquid and atmospheric pressure seals the closure in position, and finally freezing the liquid into solid form, thereby expelling air contained in the liquid into said space and compressing all of the air in said space to said bond breaking pressure.



2,447,171
MOUNTING ASSEMBLY
Carl Vincent Erickson, Kansas City, Kans., assignor to Speer & Koenig, Kansas City, Mo., a copartnership composed of Joseph G. Speer and Herbert G. Koenig
Application November 4, 1946, Serial No. 707,730
7 Claims. (Cl. 74—63)

7. A mounting assembly of the character described comprising a rotatable drive shaft; a driven shaft mounted for rotation in spaced relation to and in substantial axial alignment with the drive shaft; a roller for each shaft respectively, disposed between the proximal ends of the shafts and each being rotatable on an axis perpendicular to and revolvable on an axis in substantial alignment with the axes of rotation of the shafts; structure joining the drive shaft and

its roller and responsive to rotation of the drive shaft in either direction for revolving the drive shaft roller in like directions respectively; means for yieldably holding the rollers in mutual, peripheral, frictional contact whereby revolving motion of the drive shaft roller in either direction imparts revolving motion to the driven shaft roller in corresponding directions; means responsive to the revolving motion of the drive shaft roller for rotating the same, said last mentioned means having structure for limiting the rotation of the drive shaft roller to one direction whereby the driven shaft roller is caused to seek at a progressively increasing rate of revolution either of two positions where the planes of the axes of rotation of the rollers are in alignment and where the drive roller rotates the driven roller; and structure for transmitting said progressively increased rate of revolution into proportionate progressively increased rate of rotation in the driven shaft.

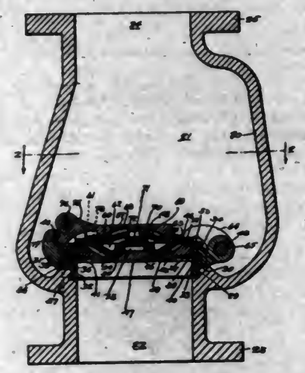


2,447,172
FLOOR WAXING AND POLISHING MEANS
James Gordon, Chicago, Ill.
Application December 30, 1944, Serial No. 570,535
18 Claims. (Cl. 91—39)

18. In a portable floor polishing machine, the combination with a housing frame, of a rear wheel for the frame adjacent the longitudinal center line thereof, a pair of wheels carried by the frame forwardly of said rear wheel and spaced laterally outwardly of said rear wheel, a polishing brush carried by the frame forwardly of said pair of wheels, the polishing brush extending laterally beyond said pair of wheels at each side of the device, wax supply means carried by the frame in delivery relation to said brush and substantially laterally coextensive with said brush, said wax supply means including wax containing means arranged for direct delivery of wax from said wax containing means to said brush at a multiplicity of relatively closely spaced places throughout the lateral extent of the brush, and a handle secured to the frame intermedially of the extreme laterally extending portions of the brush, whereby both said brush and said wax supply means extend laterally of said wheels and said handle securing means at each side of the device, said wheels, brush and wax supply means being all housed within said frame.

2,447,173
AIR CHARGER
Leonard E. Gordon, Oakland, Calif.
Application December 21, 1945, Serial No. 636,397
11 Claims. (Cl. 222—484)

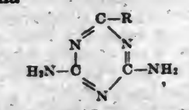
10. In combination with a water supply tank having an outlet adjacent the bottom thereof and an inlet adjacent the top thereof, an air charger comprising a housing having therein a water cylinder, provided with a continuing well bordered by an abutment forming the lower end of the cylinder, and an axially aligned air chamber, said housing being connected with said outlet and said water cylinder being in flow relationship with said outlet, a service line having a passage entering said water cylinder above the said abutment thereof, a valve housing connected in said tank inlet and provided with a vertical passage extending therethrough and a horizontal passage intersecting said vertical passage and entering said tank, a first check valve in said horizontal passage for confining flow of fluid in the passage unidirectionally into the tank, a second check valve in the vertical passage for confining flow of fluid unidirectionally from the atmosphere into said vertical passage, an air line connecting said vertical passage and said air chamber, interconnected water and air pistons respectively in and movably axially of said water cylinder and air chamber, said pistons being movable in accordance with water flow through the water cylinder from the tank outlet to said service line passage, said movement being limited by engagement of the water piston with said abutment bordering the well and said air piston drawing air through said vertical passage check valve and said air line into said air chamber, means connected with said water piston and operative upon cessation of water flow for moving said piston to force the air in the air chamber through the air line, the



horizontal passage and the check valve associated therewith into said tank, said water piston having therein ports through which water may flow from the tank into said service line as said water piston approaches said abutment, a valve normally closing said ports, and means engageable with said valve during movement of the water piston for opening said valve.

11. In combination with a water supply tank having an outlet adjacent the bottom thereof and an inlet adjacent the top thereof, an air charger comprising a housing having therein a water cylinder, provided with a continuing well bordered by an abutment forming the lower end of the cylinder, and an axially aligned air chamber, said housing being connected with said outlet and said water cylinder being in flow relationship with said outlet, a service line having a passage entering said water cylinder above the said abutment thereof, a valve housing connected in said tank inlet and provided with a vertical passage extending therethrough and a horizontal passage intersecting said vertical passage end entering said tank, a first check valve in said horizontal passage for confining flow of fluid in the passage unidirectionally into the tank, a second check valve in the vertical passage for confining flow of fluid unidirectionally from the atmosphere into said vertical passage, an air line connecting said vertical passage and said air chamber, interconnected water and air pistons

respectively in and movable axially of said water cylinder and air chamber, said pistons being movable in accordance with water flow through the water cylinder from the tank outlet to said service line passage, said movement being limited by engagement of the water piston with said abutment bordering the well and said air piston drawing air through said vertical passage check valve and said air line into said air chamber, means connected with said water piston and operative upon cessation of water flow for moving said piston to force the air in the air chamber through the air line, the horizontal passage and the check valve associated therewith into said tank, said water piston having therein ports through which water may flow from the tank into said service line as said water piston approaches said abutment, and said piston further having therein an annular groove provided with screw threads and encircling said ports, a cage threadedly engaged in said annular groove, a disk valve in said cage and normally overlying and closing said ports, and a rod carried by said housing and extending through said water piston for engaging and raising the disk valve from its position overlying the ports as said water piston approaches said abutment.



2,447,174
DRY PIPE VALVE
William B. Griffith, Stone Harbor, N. J.
Application August 27, 1946, Serial No. 693,297
9 Claims. (Cl. 169—20)

1. In a dry pipe valve for a fire protection system, a valve body having a seat receiving recess, a water valve seat engaging in the recess having, supported thereon, a latching lug and a water valve pivot bearing, a water valve clapper making pivotal connection with the water valve pivot bearing and making sealing connection with the water valve seat and having, mounted thereon, an air valve pivot bearing and an air valve seat, an air valve clapper making pivotal connection with the air valve pivot bearing and sealing connection with the air valve seat, and having a latch in closed position making latching engagement with the latching lug, the air valve clapper forming with the water valve clapper in closed position a closed space and means for connecting the closed space to the atmosphere, whereby the water valve seat, water valve clapper and air valve clapper form a unitary structure all mounted ultimately on the water valve seat.

2,447,175
GUANAMINE COMPOUNDS
Adolf Grün, deceased, late of Basel, Switzerland, by Franz Grün, administrator, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application February 9, 1948, Serial No. 7,291. In Switzerland April 25, 1939
4 Claims. (Cl. 260—249.5)

1. A 2-substituted guanamine having the following formula

in which R is an aliphatic radical having at least nine carbon atoms.

2,447,176
GUANAMINE COMPOUNDS
Adolf Grün, deceased, late of Basel, Switzerland, by Franz Grün, administrator, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application February 9, 1948, Serial No. 7,292. In Switzerland April 25, 1939
2 Claims. (Cl. 260—249.5)

1. Guanamines having the following formula:

R—G

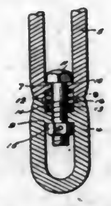
in which R is a carboxy polymethylene radical and G is a guanamine radical having a free valence on the carbon atom of the triazine ring which does not have an amino group attached to it, the bond between R and G being a carbon to carbon bond.

2,447,177
GUANAMINE COMPOUNDS
Adolf Grün, deceased, late of Basel, Switzerland, by Franz Grün, administrator, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application February 9, 1948, Serial No. 7,293. In Switzerland April 25, 1939
1 Claim. (Cl. 260—249.5)

Guanamines having the following formula

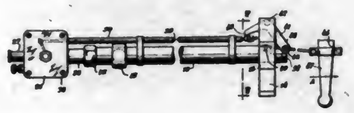
G—RCOOH

in which R is an olefinic aliphatic radical, G is a guanamine radical, G being linked to R at the 2 carbon atom of the triazine ring by a carbon to carbon bond.



2,447,178
SCRUB PAIL WITH PIVOTALLY ATTACHED FLOATING STRAINER
Andrew H. Hatchette, Cleveland, Ohio
Application October 26, 1945, Serial No. 624,863
4 Claims. (Cl. 15—264)

3. A scrub pail having compartments in the sides thereof open to the interior of the pail, water buoyant members pivotally connected with

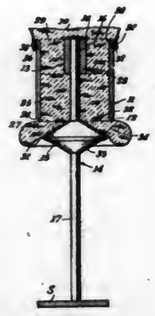


the pail at the upper ends of the pivoted members, said pivoted members adapted to float into the pail when water poured from the pail enters the compartments, and hook fingers secured to the pivoted members, lying in the path of flow of water passing from the pail, said fingers obstructing the passage of articles from the pail with the water, as the water is being poured from the pail.

2,447,179
SWIVEL CONNECTOR
Berkely Marvin Holloway, Filbert, W. Va.
Application September 12, 1944, Serial No. 553,778
2 Claims. (Cl. 287—91)

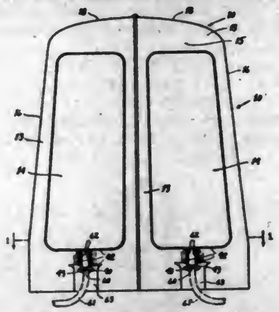
1. A swivel connector comprising a pair of looped link members, the adjacent ends of said link members being thickened and having flattened abuting surfaces with coaxial bores, a bolt in said bores swivelly connecting said members, the opposed thickened portions of the link members being provided with counterbores in said flattened surfaces, and a coiled compression spring disposed in said counterbores impinging against the bottom of each in the link members.

2,447,180
STOCK FEEDING MECHANISM FOR LATHES
John George Horrigan, London, England, assignor of one-half to Bertie Alfred Pettitt, Stanmore, England
Application October 2, 1944, Serial No. 556,826
In Great Britain October 21, 1943
2 Claims. (Cl. 29—59)



1. Stock feeding mechanism for lathes, of the type that include a hollow headstock spindle and a collet, said mechanism comprising a stock tube, means supporting said stock tube for angular movement from a working position in axial registry with the hollow headstock spindle to a loading position out of registry with the hollow headstock spindle, a piston-like member disposed within said tube, said tube being open at its end adjacent the headstock spindle, conduit means for connecting a source of fluid under pressure to the other end of the said tube, a normally closed valve in said conduit means, control means for opening said valve to control the supply of fluid to said tubular member, a part of said control means being pivoted to the machine and another part of said control means being mounted on said stock tube for movement therewith, a first interlocking element on the part of the control means that is mounted on the stock tube, a second interlocking element on the part of the control means that is pivoted to the machine, said second interlocking element lying in the path of movement of said first interlocking element as the latter moves into working position, said elements mutually interlocking in the working position to render the valve operating means operable and automatically disconnecting in the loading position whereby the valve is closed in that position, a control member for opening and closing the collet of the machine, means connecting said control member to that part of the control means which is mounted on the machine.

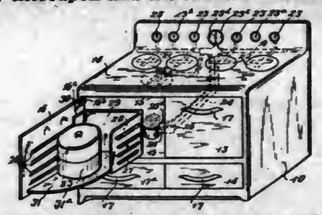
2,447,181
SILICA-MAGNESIA CATALYST AND PREPARATION THEREOF
Darrel J. Butterbaugh, Abington, and Le Roy U. Spence, Elkins Park, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Original application August 30, 1944, Serial No. 551,996, now Patent No. 2,423,681, dated July 8, 1947. Divided and this application May 31, 1946, Serial No. 673,485
4 Claims. (Cl. 252—204)



1. A catalyst suitable for converting ethanol to butadiene which consists essentially of a mixture of silica and magnesium oxide, said mixture containing from 20% to 90% silica and having been (*a*) digested at a temperature of at least 50° C. in an aqueous solution of a strongly alkaline material from the group consisting of quaternary ammonium bases, the hydroxides of the alkali metals and the silicates of the alkali metals, (*b*) freed of water-soluble materials, (c) brought to a pH of 8 to 9, and (*d*) dried.

2,447,182
DOUGHNUT MAKER
Emerson J. Hutchinson, Los Angeles, Calif.
Application May 22, 1945, Serial No. 595,162
3 Claims. (Cl. 107—14)

1. A device of the character described comprising a cylindrically tubular body, an open ended tubular guide axially disposed in the upper portion of said body, ribs connecting the body and the guide, a valve axially movable to engage the lower end of said body to close the same, said valve comprising a disc and an axial stem extending upwardly from the disc through the body and the tubular guide and extending downwardly from the disc forming a fixed stop, means on the stem retaining the stem in the tubular guide, and a flexible container detachably mounted on the said body at the upper end thereof.



2,447,183
STERILIZING APPARATUS
Frank L. Irish, De Witt, and Samuel Feldman, Syracuse, N. Y.
Application September 11, 1946, Serial No. 696,166
5 Claims. (Cl. 21—83)

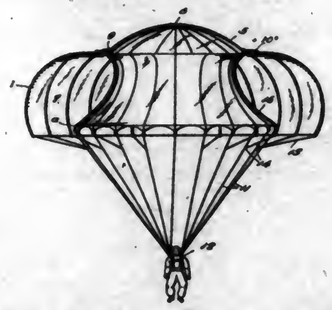
4. In an apparatus for accommodating at least one instrument having an attached electric cord or the like, the combination of a vertically disposed cabinet forming a substantially sealed storage and sterilizing chamber; said cabinct comprising a casing and a base; means for securing said casing removably to said base; suction cup means for anchoring said base to a substantially horizontal supporting surface; a container in said chamber for holding a sterilizing agent for generating sterilizing fumes; a panel mounted on said casing for rotation medially of its sides and adapted to close an opening in said casing; means cooperating with said panel to limit its rotation to substantially 180°; sealing means around the inside edge of the panel opening; adjustable holding means on one side of said panel for releasably holding said instrument; said panel being characterized by the provision of a lower pivot pin having a cord receiving channel along its length; said pin being rigidly fixed to the lower portion of the panel for rotation therewith; the lower portion of said pin being journaled in the lower portion of said casing; said pin in combination with said panel being so constructed that when said panel is rotated to its "out" position, said instrument may be positioned in said instrument holding means and its upper cord portion may be releasably inserted in said channel, and that when said panel is rotated to its "in" position, said instrument and its upper cord portion will be carried from outside to inside of said cabinet, while permitting the cord received in said channel to extend from inside to outside of said cabinet; and said pin being so constructed as substantially to prevent the escape of air from said chamber when said panel is in either position of closure.

2,447,184
BROILER COMPARTMENT
William R. Jones, Cleveland, Ohio
Application July 25, 1944, Serial No. 546,457
1 Claim. (Cl. 126—41)

In a range having heating elements in the top thereof and a broiler compartment beneath one or more of the said heating elements and having a heating element in the upper portion thereof, a door for the said compartment, means pivotally supporting a vertical edge portion of said door, a wall secured to the inner side of the said door adjacent to the pivoted edge thereof and extending at substantially right angles from said door and a wall secured to the edge of the first mentioned wall which is remote from said door, the second mentioned wall extending substantially parallel with the door and being shorter than the said door, the said walls providing with the said door a U-shaped space, the said door and the wall parallel therewith being provided with means adapted to removably support a broiler thereupon and the said door and the wall

parallel therewith being provided also with means adjacent to the lower ends thereof for removably supporting a shelf thereon, and a shelf removably supported upon said last mentioned means, the shelf being provided with an opening therethrough, and a secondary heating element within said compartment and above which the opening of said shelf is adapted to be positioned when the door is in its closed position.

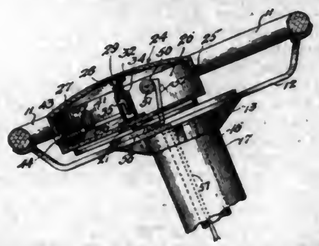
2,447,185
DETACHABLE FLUID LINE MANIFOLD
Charles J. Keim, Oil City, Pa., assignor to Oil Well Supply Company, a corporation of New Jersey
Application May 17, 1946, Serial No. 670,654
3 Claims. (Cl. 285—23)



1. An oilfield drawworks layout including at least one prime mover unit requiring pipe lines and connections for transmittal of motive fluid, and a driller's control station unit where continuations of said pipe lines are required, the improvement which comprises respective fixed, spaced face plates at the prime mover unit and at the control station unit where the pipe lines terminate, and a unitary detachable manifold consisting of one flange adapted to be detachably secured to the face plate of the prime mover unit, another flange adapted to be detachably secured to the face plate of the control station unit and a plurality of ducts secured to and terminating at said flanges, each of the pipe connections in the fixed plate of the prime mover unit having a corresponding pipe connection in the fixed plate of said control station unit adapted to be connected by one of said ducts, said flanges and fixed plates having registering means positioning the manifold to connect the individual ducts with their respective pipe connections upon assembly.

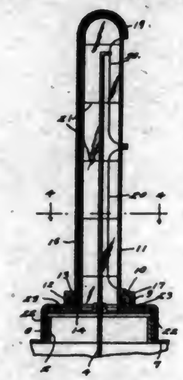
2,447,186
PRODUCING LOWER ALKYL ESTERS
Robert Gardner King, Norwalk, and Robert Joshua King, New Canaan, Conn., assignors to The Photo Technical Corporation, Norwalk, Conn., a corporation of Connecticut
No Drawing. Application January 1, 1945, Serial No. 571,016
8 Claims. (Cl. 260—410.9)

1. The process of producing lower alkyl esters of higher fatty acids which comprises reacting a



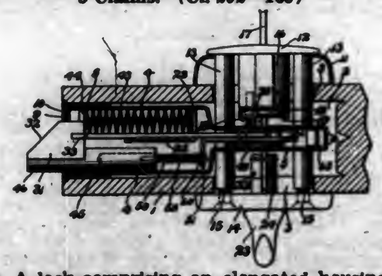
material of the class consisting of higher fatty acid glycerides and higher fatty acids with a lower alcohol in the presence of a mineral acid, an acid-compatible emulsifying agent and water.

2,447,187
PARACHUTE
Clarence A. Kunkler, Columbus, Ohio
Application February 11, 1944, Serial No. 522,001
1 Claim. (Cl. 244—142)



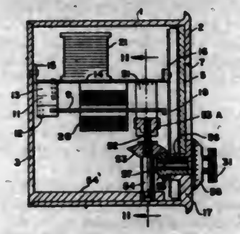
In a parachute construction, a canopy comprising a dome-like top, and an annular flap-like lower portion depending from said top, an annular flexible wall member circumscribing said canopy with an upper circumferential edge joined to the canopy at the juncture line of said top and lower portion and forming together with said lower portion a circumferential pocket around the canopy below said top and open at its bottom, a harness, guy lines connecting the bottom edge of said lower portion to the harness, and guy lines connecting the bottom edge of the wall member to the first mentioned guy lines, air vents in said wall member at said circumferential upper edge, and an annular flap extending around said circumferential edge for closing said vents and reinforcing the joint between said canopy and wall member.

2,447,188
RECEPTACLE FOR VEHICLES
William L. Langley, Locust Grove, Okla.
Application June 8, 1945, Serial No. 598,232
6 Claims. (Cl. 206—19.5)



4. A receptacle adapted to be mounted within the rim of the steering wheel of a vehicle, comprised of a cylindrical body portion, and two semi-circular cover members, and means to raise each of said cover members above the opposite member in said manner that it may be rotated in a horizontal plane to overlie the opposite cover member, and open half of the receptacle, said means comprising posts secured to the underside of each of said cover members, sleeves in said body surrounding said posts, spring means in said sleeves biasing said posts upwardly, said sleeves having slots therein, and pins secured to said posts extending outwardly through said slots, and latch means releasably engaging said pins, said latch means extending exteriorly of said body at points adjacent the driver of said vehicle.

2,447,189
FUEL GAUGE
Myron H. Lerche, Mobile, Ala.
Application April 16, 1945, Serial No. 588,594
1 Claim. (Cl. 73—305)

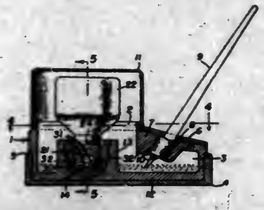


In a fuel gauge, a pair of inverted telescoping cup members, one located upon the other, the upper cup member provided with an upstanding hollow and externally threaded neck, said neck being open at its top, an inwardly directed annular flange at the open top of the neck, a gauge tube disposed through the open top of the neck and having a flanged lower end seated in the hollow neck below the annular flange, said lower cup being secured to the upper cup to provide a portion preventing downward displacement of the lower end of the tube and a protective housing for the tube having a gauge tube viewing opening and internal threads at its lower end to engage the threads of the neck.

2,447,190
DOOR LOCK
Albert F. Lickteig, Grand Rapids, Mich., assignor to National Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application October 8, 1945, Serial No. 621,121
5 Claims. (Cl. 292—169)

1. A lock comprising an elongated housing, a vertical plate fastened within the housing between its ends, a latch bolt comprising, a bolt head and a plate secured to and extending from the rear end thereof into the housing, said plate lying against one side of said vertical plate, spring means for normally projecting the bolt in an outward direction, said housing having an opening to pass the bolt head, manually operable means for retracting the bolt against said spring means, and a locking member movably mounted on said vertical plate adapted to be brought into locking engagement with said bolt plate to hold the bolt retracted when moved to its innermost position, and to hold the bolt at its outermost position against retraction from outer end pressure against the bolt head, as specified.

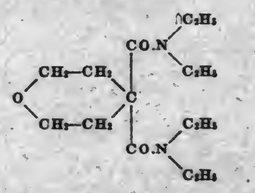
2,447,191
VIBRATING REED FREQUENCY METER
Frederick J. Lingel, Bluffton, Ohio, assignor to The Triplett Electrical Instrument Co., Bluffton, Ohio, a corporation of Ohio
Application November 19, 1945, Serial No. 629,607
10 Claims. (Cl. 172—245)



1. A frequency measuring instrument comprising an actuating coil, a reed responsive to the magnetic effect of the coil, and means for changing the stiffness of the reed, said means including a permanent magnet in magnetic association with said reed and said magnet being continuously adjustable in position with respect to the position of the reed.

2,447,192
STOCKING TURNER
Clyde Ludington, Billings, Mont.
Application March 20, 1947, Serial No. 736,013
3 Claims. (Cl. 223—39)

1. A device for turning stockings including a backboard, means securing said back-board in a vertical position to a supporting structure, one end of a fixed arm secured to one end of said back-board, a spherical knob carried by the free end of said fixed arm, one end of a second arm pivotally mounted at the other end of said back-board, a second spherical knob carried by the free end of the second arm, said knobs adapted to furnish a smooth surface contacting the toe of a stocking, and a stop carried by the back-board adapted to limit the swinging movement of the free end of the second arm toward and away from the free end of the fixed arm.



2,447,193
FOUNTAIN INKWELL
George Arthur MacDonald, Los Angeles, Calif.
Application February 7, 1947, Serial No. 727,230
4 Claims. (Cl. 120—59)

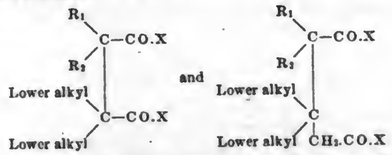
4. The combination with an ink bottle having a threaded neck and an open top ink well in which said bottle is adapted to be inverted, of an internally threaded closure cap on said neck provided with a side ink discharge port therein adjacent the top of said cap adapted to be closed when said cap is screwed tight on said neck and opened when said neck is unscrewed partway out of said cap, and an annular sleeve like ink bottle holder upstanding from the bottom of said well and in which said cap is removably fitted, said holder having a bottom side discharge port therein registering with the discharge port in said cap, and coacting devices on said cap and holder, respectively, for securing said cap in said holder against turning when said neck is unscrewed comprising interlocking tongues and grooves at the sides of said cap and holder, and interlocking tongues and grooves at the top of said cap and the bottom of said well.

2,447,194
TETRAHYDROPYRANE-4:4-DICARBOXYLIC ACID BIS-DIETHYLAMIDE
Henry Martin and Hans Gysin, Basel, Hans Zaeslin, Riehen, near Basel, and Alfred Margot, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application October 15, 1943, Serial No. 506,418. In Switzerland December 18, 1942
1 Claim. (Cl. 260—333)

The tetrahydropyrane-4:4-dicarboxylic acid bis-diethylamide of the formula

being a white crystalline solid of the melting point 47–48° C. and having analeptic activity.

2,447,195



DIAMIDES OF ALKANE DICARBOXYLIC ACIDS

Henry Martin and Hans Gysin, Basel, Hans Zaeslin, Riehen, near Basel, and Alfred Margot, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm

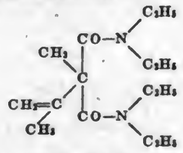
No Drawing. Original application October 15, 1943, Serial No. 506,418. Divided and this application March 6, 1945, Serial No. 581,345. In Switzerland December 18, 1942

4 Claims. (Cl. 260—561)

1. A member selected from the group consisting of the alkane dicarboxylic acid diamides of the formulae

wherein X represents the radical of a secondary dialkylamine containing at least 3 carbon atoms, and R_1 and R_2 each represents a member selected from the group consisting of hydrogen and lower alkyl.

2,447,196



DIAMIDES OF METHANE-1:1-DICARBOXYLIC ACIDS

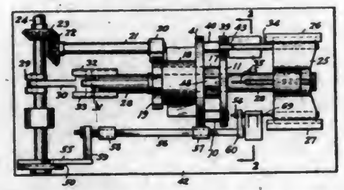
Henry Martin and Hans Gysin, Basel, Hans Zaeslin, Riehen, near Basel, and Alfred Margot, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm

No Drawing. Original application October 15, 1943, Serial No. 506,418. Divided and this application February 28, 1947, Serial No. 731,720. In Switzerland December 18, 1942

4 Claims. (Cl. 260—557)

1. The bis-diethyl amide of methyl-isopropenyl malonic acid of the formula

being a white crystallised solid of the melting point 48°–49° C.



2,447,197

BATTERY CORE MACHINE AND METHOD

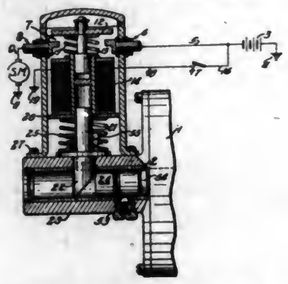
Benjamin May, New York, N. Y., assignor to May Machine Company, New York, N. Y., a copartnership

Application June 18, 1945, Serial No. 600,045

9 Claims. (Cl. 18—5)

1. In a machine of the character described, a drive shaft, a tool holder, means on the shaft to reciprocate the tool holder, means on the tool holder and reciprocating therewith for compressing and piercing a bobbin of powdered material, means on the tool holder and reciprocating therewith for inserting a rod into the pierced bobbin, and reciprocating means mounted independently of the rod-inserting means and of the tool holder and operative positively during the final part of and at greater speed than the movement of the rod-inserting means to further compress the bobbin by a blow delivered to the bobbin just prior to the moment when the rod reaches its final position in the bobbin, said independently mounted reciprocating means comprising a cam on the shaft, a cam follower engaging the cam, a guiding and centering member for the rod constituting a hammer, and a hammer-supporting connection secured at one end to the hammer and at the other end secured to the cam follower.

5. The method of producing a homogeneous bobbin of powdered material with a rod projecting centrally therefrom and held firmly by the bobbin comprising inserting the rod into a pierced compressed bobbin and during the movement of the rod into the bobbin and before said movement is completed further compressing the bobbin around the rod by a single momentary blow delivered at relatively high speed.



2,447,198

STARTER FOR INTERNAL-COMBUSTION ENGINES

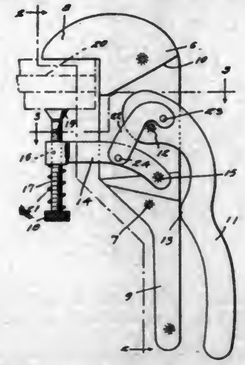
Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application May 3, 1945, Serial No. 591,655

5 Claims. (Cl. 290—38)

1. In a starting system for internal combustion engines a motor having a longitudinally shiftable armature shaft, a plunger adapted to engage and move said shaft away from its normal running position, a pinion on the shaft having an overrunning clutch connection therewith, and movable with the shaft into and out of mesh with a gear of an engine to be started, and means under the control of the operator for withdrawing said plunger to thereby allow the armature of the motor to freely move to its normal running position.

2,447,199



TOGGLE LINK OPERATED HAND CLAMP

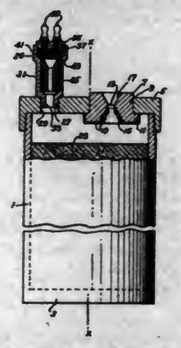
Edward F. Miller, Chicago, Ill.

Application January 26, 1945, Serial No. 574,717

1 Claim. (Cl. 144—297)

A clamp of the class described comprising a pair of elongated plates, means for securing the plates in facing contact with each other, one end of the plates being shaped to form a stationary laterally projecting jaw and the other end of the plates being formed to constitute a handle, said plates having complemental recesses in the opposed faces thereof, an arm pivoted at one end in said recesses, an adjustable jaw at the other end of said arm and adapted for movement into and out of clamping relation with the stationary jaw, a second handle pivoted at one end in said

recesses, and an L-shaped link pivotally connecting the arm to said second-named handle, the pivot of said second-handle being located in the recesses at a point intermediate the pivots of said link when said second-handle is in a closed position whereby the line joining the pivots of said link will move across the axis of the pivot point of the second-handle when the latter is swung toward the first mentioned handle to lock the arm in an operative position.



2,447,200

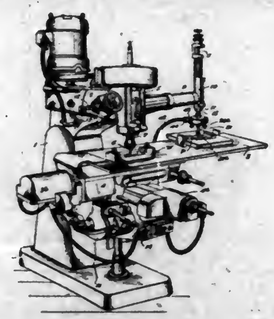
EXHAUST NOZZLE FOR ROCKET MOTORS

Fred S. Miller, Pasadena, Calif., assignor to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware

Application September 3, 1943, Serial No. 501,154

2 Claims. (Cl. 60—35.6)

1. In combination with a rocket motor having a combustion chamber, a propellant charge within the chamber adapted to burn over an extended period of time, a metallic nozzle in the wall of said motor and having a passage extending therethrough, the passage wall having a restricted throat therein and a smooth portion within the chamber converging toward said throat, and an asphalt coating on the wall of said portion.



2,447,201

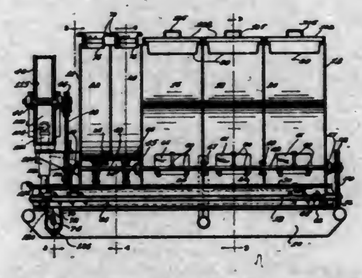
TRACER AND TRACER CONTROLLED OPERATION OF MACHINE TOOLS AND OTHER CUTTING MACHINES

Theodore Miller, Racine, Wis., assignor to George Gorton Machine Co., Racine, Wis., a corporation of Wisconsin

Application December 13, 1943, Serial No. 514,125

15 Claims. (Cl. 90—13.5)

1. Tracer mechanism provided with separate switches for control of separate electromagnetic clutch energizing electric circuits; said mechanism including a switch selecting and operating tracer finger; said mechanism providing a fulcrum about which said finger can be forcibly tilted in any lateral switch selecting direction; said mechanism providing resilient means positioned at said fulcrum and constantly acting in all directions radially of said tracer finger to yieldingly maintain said finger in its null central vertical position and to return the same thereto; said finger provided with a radially extending crosshead adapted to supply operational force to said switches along lines substantially parallel to the longitudinal axis of said finger.

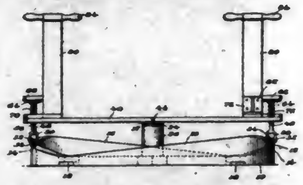


2,447,202

MUD MIXER

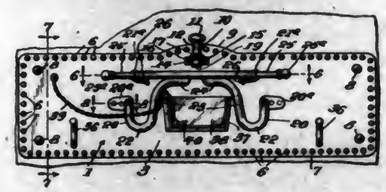
James Richard Nowery, Shreveport, La.

Application September 14, 1945, Serial No. 616,239



11 Claims. (Cl. 259—26)

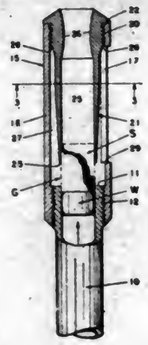
1. A machine for automatically mixing chemicals and admixes with drilling muds comprising a mud motor connected to a source of supply of mud under pressure, a valve or choke nipple for controlling the speed of rotation of said motor, a plurality of dry and wet chemical and admix containers, discharge control means from said containers, a mixing chamber for said chemicals and admixes positioned adjacent said discharge control means, conveying means mounted in said



chamber adapted to carry said chemicals and admixes emptying therein to the discharge end of said chamber, the rate of flow of the chemicals being controlled by the speed of the mud motor.

2,447,203
OCCUPANT PROPELLED ROUNDABOUT
Floyd F. O'Toole, L'Anse, Mich.
Application June 4, 1946, Serial No. 674,164
3 Claims. (Cl. 272—33)

1. A device of the character described, comprising a circular track, elevated portions at diametrically opposed positions on the upper surface of said track, the declines of said track being longer than the inclines thereof, an arm rotatably mounted at the center of said track, a fixed foot rest and a movable foot rest on said arm at its opposite ends, a spring pressed roller secured to said movable foot rest for engagement with the upper surface of said track, upon depression of said movable foot rest.



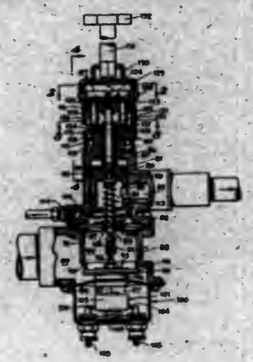
2,447,204
GARMENT HANGER
Anthony Piotrowski, Chicago, Ill.
Application November 27, 1944, Serial No. 565,393
3 Claims. (Cl. 211—87)

1. In a wall costumer, the combination with a base, of curved supports on the base the free ends of which are proximate each other and spaced from the base, a garment hanger on the free ends of the supports and comprising a curved tubular body, springs in the body, telescoping extensions in the ends of the tubular body, means preventing ejection of the extensions by the springs, and co-acting latch means on the body ends and the extensions for securing the extensions with relation to the body.

2,447,205
SHOTGUN MUZZLE DEVICE
Edward Baden Powell, San Diego, Calif.
Application May 15, 1945, Serial No. 593,881
8 Claims. (Cl. 42—79)

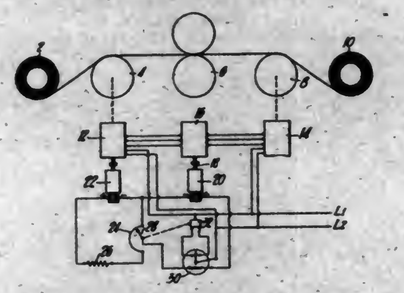
1. A muzzle device for firearms of the shot gun type discharging a scatter shot charge, which includes a substantially tubular cage, means for mounting the rear end of said cage on and surrounding the muzzle of a gun barrel to which the device is designed to be attached, a shot pattern control tube supported and extending longitudinally within said cage and adapted to terminate in spaced relation from the muzzle end of the gun to form a gap the length of which is not more than the total axial length of a shot charge and following wad normally designed for the gun, said cage and tube being constructed and arranged to

provide a passage extending longitudinally between them and in open communication with said gap, and outlet means in the wall of said cage leading exteriorly from said passage to the atmosphere.



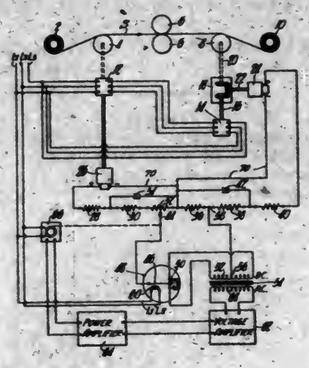
2,447,206
PIPE SHIPPING PACKAGE AND METHOD OF FORMING THE SAME
Edmund G. Price, Mount Lebanon, Pa., assignor to National Tube Company, a corporation of New Jersey
Application September 25, 1945, Serial No. 618,477
3 Claims. (Cl. 206—65)

2. A pipe shipping package comprising at least two telescoped pipes, a plurality of elongated bearing members disposed between the end portion of the outer pipe and the inner pipe, said bearing members having an outwardly extending shoulder engaging the end of the outer pipe, said bearing members being welded to said inner pipe.



2,447,207
FLUID CONTROL VALVE
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Original application November 6, 1940, Serial No. 364,524, now Patent No. 2,346,704, dated April 18, 1944. Divided and this application April 11, 1944, Serial No. 530,532.
6 Claims. (Cl. 137—144)

1. In a valve structure, in combination: an elongated body; a plug seated in one end portion of said body and rotatable on the general axis of the body to normally control flow through said structure; a safety valve closure reciprocable generally along the axis of said plug in the opposite end portion of the body and effective, when seated, to obstruct flow through the structure; means for temporarily maintaining said safety closure in open position; an elongated member sealingly reciprocable in an axial opening through said plug, one end of the member extending exteriorly of the body at said one end thereof and there being provided with a head, the other end of the member being operatively engageable with the safety closure; a cap rotatably mounted on said one end of the body and having a connection for rotating said plug, said connection permitting

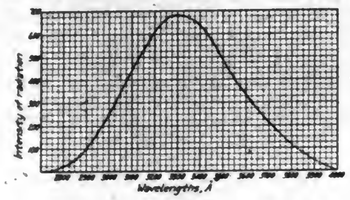


limited rotation of the cap with respect to the plug; and cam means cooperating with said head and said cap whereby, when the cap is rotated while the plug is in flow-obstructing condition, said member is operated to effect movement of the safety closure to said open position.

2,447,208
EXTENSOMETER FOR INDICATING PERCENT ELONGATION
George H. Rendel, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application May 17, 1945, Serial No. 594,240
9 Claims. (Cl. 177—311)

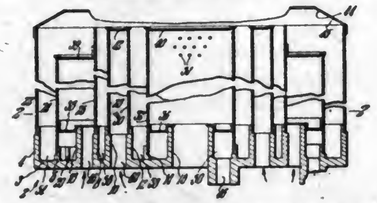
1. An extensometer for determining the elongation of an elongated article passing through a reducing machine comprising means connected to be driven at a speed proportional to entering article speed, means connected to be driven at a speed proportional to exit article speed, a differential receiver connected to both of said means for obtaining the difference in their speeds, a tachometer generator driven by said differential receiver, a tachometer generator driven at a speed proportional to entering article speed, and means for comparing the voltage outputs of the generators to indicate the amount of elongation of the article.

2,447,209
EXTENSOMETER FOR INDICATING AMOUNT OF ELONGATION OF STRIP MATERIAL
George H. Rendel and Thomas F. Reed, Mount Lebanon, Pa., assignors of one-half to Carnegie-Illinois Steel Corporation, a corporation of New Jersey, and one-half to United States Steel Corporation of Delaware, a corporation of Delaware
Application June 28, 1946, Serial No. 679,955
4 Claims. (Cl. 177—311)



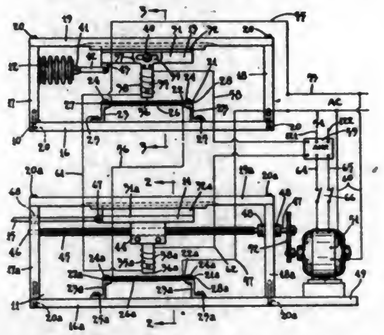
1. An extensometer for determining the elongation of strip passing through a reducing machine comprising means connected to be driven at a speed proportional to entering strip speed, means connected to be driven at a speed proportional to exit strip speed, a differential device connected to both of said means for obtaining the difference in their speeds, a tachometer generator driven by said differential device, a tachometer generator driven at a speed proportional to entering strip speed, a two-legged bridge having a resistance in one leg and a slide wire in the other leg, said slide wire being connected in series with the second named generator, a movable contact arm for said slide wire, said resistance being connected in series with the first named generator, and means responsive to the difference between the voltage drop across said resistance and the voltage drop across said slide wire for moving said contact arm to balance said voltages, the position of said contact arm when the said voltages are balanced indicating the amount of elongation of the strip.

2,447,210
ERYTHEMAL PHOSPHOR
Willard A. Roberts, deceased, late of Euclid, Ohio, by Edna W. Roberts, executrix, Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application May 28, 1943, Serial No. 488,885
9 Claims. (Cl. 176—122)



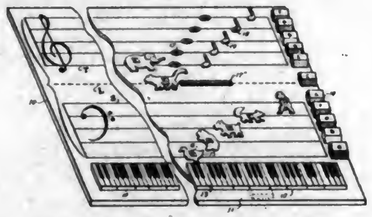
1. A sunlamp comprising a low-pressure mercury vapor discharge device, whose radiation is rich in 2537 Å. ultraviolet, and which includes a sealed envelope of glass which is impermeable to radiations of wave length shorter than about 2800 Å. but which transmits ultraviolet radiations of longer wave length in combination with unfused and unsintered fluorescent calcium orthophosphate activated by thallium and excited by the 2537 Å. ultraviolet to the emission of ultra-

violet in erythemal wave lengths of about 2800 to 3200 Å. at an efficiency substantially in excess of



that of a high pressure mercury vapor discharge, but essentially free of visible luminescence.

2,447,211
DUAL COMBUSTION SYSTEM FOR COMBUSTION TUBE BURNERS
Edward Rousseau, Jewett City, Conn.
Application December 23, 1946, Serial No. 717,973
2 Claims. (Cl. 158—87)



1. A burner for liquid fuel comprising in combination, inner and outer burner systems, said inner system including a lower wall, a central hollow hub extending upwardly from said wall, first and second and third and fourth sleeve supporting ribs extending upwardly from said wall in outwardly sequentially spaced concentric relation, said first and second ribs forming a first flame channel and said third and fourth ribs forming a second flame channel, perforated sleeves extending upwardly from said ribs at the sides of said flame channels, said wall provided with a primary fuel inlet between said hub and said first rib, and second and third ribs spaced apart to form an upwardly extending air passageway, hollow connections between said second and third ribs and provided with openings therethrough whereby fuel may flow from said fuel inlet through said hollow connections to said second flame channel, said outer system including a lower wall and inner and intermediate and outer ribs extending upwardly from said wall and spaced apart and concentrically arranged outside of said inner system, said inner rib being spaced from and supportingly connected to said fourth rib providing an upwardly extending air passageway therebetween, said outer rib and said intermediate rib forming a third flame channel, perforated sleeves extending upwardly from said outer and intermediate ribs, said wall being provided with a secondary fuel inlet between said intermediate and inner ribs, dams extending upwardly between said intermediate and inner ribs having spaced outer ends providing an opening at a side of said wall opposite said secondary inlet and having inner ends connected to said intermediate rib on opposite sides of said secondary inlet, said intermediate rib having spaced openings adjacent the inner ends of said dams whereby fuel may flow from said secondary inlet around said dams and through the openings in said intermediate ribs into said third flame channel.

2,447,212
VARIABLE INDUCTANCE PICKUP DEVICE
John F. Schoeppel, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 13, 1944, Serial No. 563,206
10 Claims. (Cl. 171—119(777))

1. An electric control device comprising an elongated noncontinuous core member, a distributed input winding extending along said core member and adapted upon energization to produce a sufficiently high flux density in said core member to cause stray flux to emanate laterally from said core member varying in degree from the ends of said core member to a locality intermediate its ends, a second core member extending transversely of said first core member and having a portion movable along said distributed winding, and an output winding mounted on said second core member and energized by the stray flux passing through said second core member.

2,447,213
MUSICAL EDUCATIONAL APPLIANCE
Eula F. Sledge, Dallas, Tex.
Application September 15, 1945, Serial No. 616,509
4 Claims. (Cl. 84—470)

1. In a musical educational appliance, the combination with a chart having printed thereon music staffs, of movable animal-shaped pieces adapted to be placed on the staffs having designations identifying them with particular lines of the staffs, said pieces being freely movable when placed on the staffs, and freely movable blocks adapted to be placed at the ends of each of the staff lines and having a configuration distinguishing them from the pieces, said blocks each having the same designation as the piece placed on its correlated staff line, whereby each block is correlated with an individual piece to visually teach the musical staffs.

2,447,214
OPTICALLY ACTIVE SALTS OF THE LYSERGIC AND ISOLYSERGIC ACID DERIVATIVES AND A PROCESS FOR THEIR PREPARATION AND ISOLATION
Arthur Stoll and Albert Hofmann, Basel, Switzerland, assignors to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm
No Drawing. Application August 23, 1943, Serial No. 499,714. In Switzerland September 16, 1942
16 Claims. (Cl. 260—236)

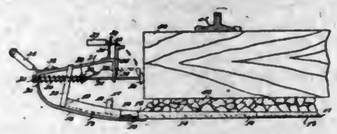
1. A process for the separation of a mixture of basic compounds containing the lysergic acid radical, comprising the steps of treating a solution of the said mixture with a solution of a mononuclear, aroylated tartaric acid of the general formula

HOOC—CHOX—CHOX—COOH

wherein X stands for a mononuclear aroyl radical, and separating the pure salts thus obtained by fractional crystallization.

8. As new products of manufacture the optically active salts of basic compounds containing the lysergic acid radical with mononuclear-aroylated tartaric acids of the general formula

HOOC—CHOX—CHOX—COOH

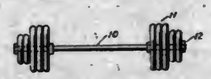


wherein X stands for a mononuclear aroyl radical, these salts being well crystallized compounds, yielding on treatment with alkalis the free bases of the lysergic acid derivatives.

2,447,215
SHIELD
Gertrude Stovall, Los Angeles, Calif.
Application August 11, 1945, Serial No. 610,299
11 Claims. (Cl. 2—174)

1. A device of the class described comprising: a split annular ring; means on said ring for closing said ring in substantially frustro-conical shape; ear cups on said ring; and an integral projecting element on said ring extending between the ear cups for attaching said ring to the head.

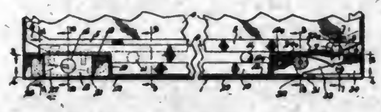
2,447,216
TRACK TOOL
John L. Tidwell, Homedale, Idaho
Application August 13, 1947, Serial No. 768,388
4 Claims. (Cl. 104—13)



3. A device of the character described comprising an elongated pan, a framework associated with the pan, a thrust handle carried by the framework, a guide handle carried by the framework, a ram carried by said framework and adapted to engage a railroad tie when the pan is placed thereunder said ram comprising a horizontal shaft reciprocally mounted in said framework, a head for said shaft, a spring adapted to urge said shaft in a direction toward the open end of said pan, a detent adapted to engage said head whereby to render the spring inoperative, and a latch to hold said detent out of engagement with said head.

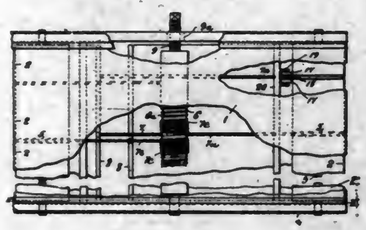
2,447,217
WELL CEMENTING METHOD
William J. Travers, Jr., Los Angeles, Calif., assignor to Richfield Oil Corporation, Los Angeles, Calif., a corporation of Delaware
Application October 14, 1946, Serial No. 703,224
1 Claim. (Cl. 166—22)

A method of cementing oil wells having a perforated liner therein for excluding gas from the formation of the upper portion of the liner from the lower portion of the liner, which method comprises filling the well with fluid, lowering spaced packers in the well to a point along the perforated liner where the cementing operation is to be performed, forcing water from the space between the packers through the perforations of the liner to clean such perforations, progressively raising the spaced packers while continuing the cleaning operation to cover the zones to be cemented, lowering the spaced packers to the bottom of the zone and forcing cement from the space between the packers through the perforations to deposit cement in the space back of the perforations cleaned by said operation, removing the spaced packers and allowing the cement to harden, cleaning out the interior of the well while leaving a short bridge of cement in the well at the bottom of the zone treated, setting a sleeve on said bridge and cementing the same in place, and cleaning out the well and inserting a production tubing having a packer thereon into the well and setting the packer on said sleeve.



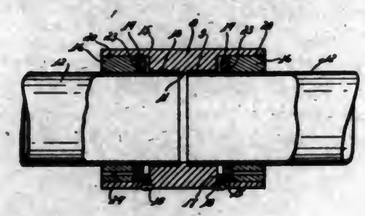
2,447,218
BAR BELL
Stanley Trzesniewski, Milwaukee, Wis.
Application March 9, 1945, Serial No. 581,880
1 Claim. (Cl. 272—84)

A device of the character described comprising a plurality of weights, a bar, said bar arranged for supporting said weights, in combination with a removable covering of pliable material having a contour corresponding with the outer surfaces of



said weights at their points of contact with one another, and a bushing of pliable material inserted into the bore of said weights at their point of contact with said bar.

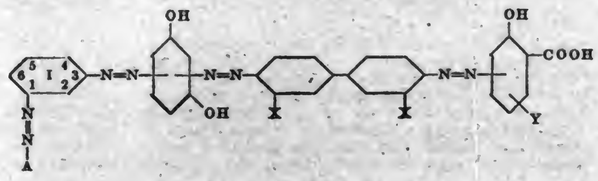
2,447,219
SLIDING DOOR LOCK
Anthony Vanderveld, Grand Rapids, Mich., assignor to Grand Rapids Store Equipment Company, Grand Rapids, Mich., a corporation of Michigan
Application April 30, 1947, Serial No. 744,923
8 Claims. (Cl. 70—82)



1. In a structure as described, a door carrying frame, vertical doors mounted for sliding movement therein, one within the other, said frame having a lower frame member and mountings for the lower edges of the doors upon which the doors are slidably movable, a key operated lock at one end of said lower frame member, over which one of said doors comes when it is in closed position, a movable locking member included in said lock movable into and out of locking connection with said door when it is in closed position, a second movable locking member located at the opposite end of said lower frame member, movable into and out of locking connection with the other door when it is in closed position, and means connecting said locking members for simultaneously locking both doors when they are in closed position.

2,447,220
MOVING FLOOR FOR VEHICLES
Stanley Wood Walker, Workington, England, assignor of one-half to Allan Maclachlan, Wolverhampton, England
Application October 13, 1945, Serial No. 622,230
In Great Britain October 31, 1944
1 Claim. (Cl. 214—83.36)

A moving floor for a vehicle or like conveyance comprising a flexible band forming the surface of the floor of said vehicle, a roller support unit at each end of said floor surface and around which the ends of said flexible band pass, an operating drum, a tension device comprising a flexible rope formed in two parts, the inner ends of which are anchored to said operating drum and coiled thereon in opposite directions towards one another and after leaving the drum pass around one roller support unit back to an end of the floor band trained over the other roller support unit, and means for moving the operating drum axially whilst the drum is rotating to maintain the location at which the rope leaves the operating drum in alignment with the place of engagement of the rope with the respective roller support unit.

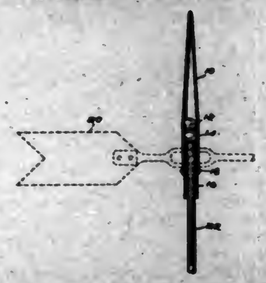


2,447,221
PIPE COUPLING AND FASTENING DEVICE
Alfred Warring, Detroit, Mich., assignor, by mesne assignments, of one-third to said Warring, one-third to Norman A. Grams, and one-third to William Noponen.
Application January 7, 1946, Serial No. 639,527
7 Claims. (Cl. 285—193)

1. A pipe coupling of the class described adapted for securing adjacent ends of pipes in fixed relation to each other comprising a retainer having a bore formed therein for the reception of a pipe end, said retainer having an enlarged bore communicating with said first mentioned bore; a locking ring positioned in said enlarged bore and having a sufficiently large opening for the passage of a pipe end therethrough; a retaining ring mounted in said enlarged bore in fixed position, said locking ring being free for axial movement within predetermined limits, said retaining ring having an inclined face directed toward said locking ring and having an opening sufficiently large for the passage of a pipe end therethrough, the engagement of said locking ring with said inclined face tilting said locking ring axially of said retainer into clamping relation with a pipe inserted therethrough.

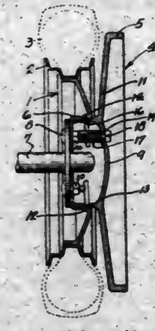
2,447,222
METALLIZABLE POLYAZO DYESTUFFS AND A PROCESS FOR THEIR PREPARATION
Walter Wehrli and Charles Petitjean, Basel, Switzerland, assignors to Sandoz Limited, Fribourg, Switzerland, a Swiss firm
No Drawing. Application June 29, 1944, Serial No. 542,810. In Switzerland July 2, 1943
5 Claims. (Cl. 260—144)

1. A metallizable polyazo dyestuff of the formula



wherein X represents a member selected from the group consisting of hydrogen and methyl, Y represents a member selected from the group consisting of hydrogen and methyl, A represents a radical which is free from diazotizable amino groups and contains no carbon atoms capable of coupling, the radical A being selected from the group consisting of radicals of the benzene, naphthalene and pyrazolone series, the benzene nucleus I containing one hydroxy group in ortho-position to the azo group which is at the 3-position, the other free positions of the benzene nucleus I severally carrying a substituent selected from the class consisting of hydrogen, alkyl, nitro, halogen and sulfo.

2,447,223
RAIL TURNING DEVICE
Gustaf Westerholm, Hobart, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application October 25, 1945, Serial No. 624,402
11 Claims. (Cl. 214—1)

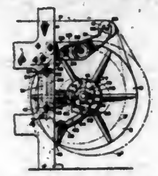


2. A device for turning and moving rails or the like comprising spaced apart supports for supporting the rails transversely of their direction of movement, a movable carriage mounted adjacent said supports, the top of said carriage being below the top of said supports, means on said carriage for engaging the rails and pushing them off the front end of the support to turn them from one side to another, said carriage moving the turned rails from in front of the support prior to the turning of the next succeeding rail, a second group of spaced apart supports for supporting the rails transversely of their direction of travel, said second supports being spaced longitudinally from said first supports in the direction of travel, the top of said carriage being below the top of the second supports, and an incline extending upwardly from the plane of the top of the carriage to the top of the second supports at the entry side thereof.

2,447,224
WEATHER VANE
Walt Akerman, Dover, N. H.
Application November 15, 1944, Serial No. 563,609
2 Claims. (Cl. 73—188)

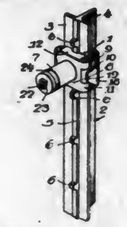
2. A weather vane head comprising a tubular spindle tapering upwardly to a closed end and having an external vane-carrying flange at its lower open end, the body of the spindle being completely closed except at its lower end below said external flange, an abutment ball wedged securely into the tapered portion of said spindle, a second ball freely movable below said abutment ball, and an internal sleeve confining the lower ball within said spindle in a location above the level of its said external flange.

2,447,225
EMERGENCY WHEEL
Donald Edward Bennett, Larkspur, Calif.
Application August 6, 1945, Serial No. 609,118
1 Claim. (Cl. 301—38)



The combination with a tire wheel having a pneumatic tire mounted on its rim and having a hollow wheel hub; of an auxiliary wheel comprising a hub cap fitting over the hollow hub of said wheel, an annular flange, an auxiliary wheel body connecting said flange to said hub cap and spacing said flange outwardly from the side of the tire and radially inwardly from the periphery of said tire, said hub cap being hollow, threaded connecting means between said hub cap and said hub for securing said hub cap and hub together upon a predetermined degree of turning of said hub cap in said hub, said hub cap having a hole therethrough, and means extending through said hole and connected to said hub to prevent the rotation of said hub cap relatively to said hub.

2,447,226
SIGN FOR ELECTRIC DOORBELL SWITCHES
Donald Edward Bennett, Larkspur, Calif.
Application August 6, 1945, Serial No. 609,119
3 Claims. (Cl. 177—329)



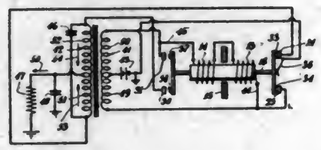
1. A warning device for doorbell switch device, comprising a bracket adapted to be clamped between said doorbell and switch device and the surface on which said doorbell switch device is mounted, and an adjustable shield on said bracket for covering and uncovering the doorbell switch device in respective adjusted positions and exposing to view different warnings in said respective positions.

2,447,227
SUPPORT FOR WARP BEAMS IN LOOMS
Carl P. Bergstrom, Millbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application April 10, 1946, Serial No. 661,119
7 Claims. (Cl. 139—97)

1. In a loom capable of operating with warp beams of different diameters and having a whip roll over which warp from the warp beam extends, a support for a warp beam, means constituting a pivotal connection for the support fixed with respect to the loom, a plunger slidably mounted with respect to the loom and normally engaging the support and cooperating with the pivotal connection to prevent angular movement of the support relatively to the loom, a downwardly and rearwardly inclined shelf on said support, a bearing for a warp beam on said shelf, and means for attaching said bearing to the shelf at any one of a plurality of different points along the length thereof at different distances from the whip roll to accommodate warp beams of different diameters, said support upon removal of the plunger from engagement therewith being movable about said pivotal connection in a direction to move said bearing away from the axis of the warp beam to facilitate removal of the latter from the loom when the bearing is attached to said shelf at any of said different points.

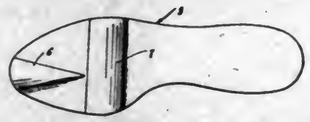
2,447,228
BRACKET CONSTRUCTION
Elmer S. Boston, Earlville, Ill.
Application July 12, 1946, Serial No. 683,207
8 Claims. (Cl. 248—221)

1. A bracket comprising a central plate and side plates hingedly mounted thereon, said plates being so constructed and arranged as to encompass a post or other upright and when assembled about the post are securely anchored thereon with one side plate folded over the other for the greater portion of its length and in overlapping contact therewith.



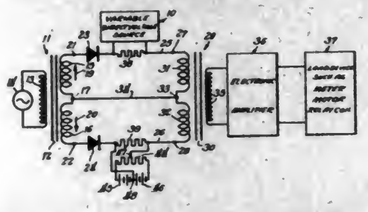
2,447,229
SHOTGUN FOREARM
George T. Bradley, Miami, Fla.
Application July 11, 1947, Serial No. 760,298
1 Claim. (Cl. 42—71)

A gun forearm comprising an elongated, hollow body having an opening in its upper side to receive the lower portion of a gun barrel, a bore therethrough to receive a gun recoil and magazine mechanism and a magazine-plug-receiving recess longitudinally disposed in the lower portion



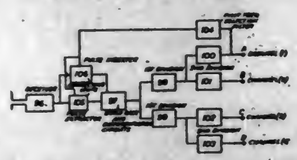
thereof and spaced from said bore, said recess having one open end, and closure means for the open end of said recess detachably secured to said body.

2,447,230
VIBRATOR
Harold J. Brown, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application June 11, 1946, Serial No. 675,870
5 Claims. (Cl. 171—97)



1. In a vibrator system; a transformer having a center tapped primary winding; a battery having one terminal connected to said center tap; and a vibrator including a paramagnetic core, an armature mounted for reciprocatory movement with respect to said core and connected to the other terminal of said battery, magnetic means for polarizing said armature, interrupter contacts connected to the respective ends of said primary winding and adapted to be alternately closed during reciprocatory motion of said armature to thereby alternately energize the respective sections of said primary winding, and a driver coil connected across said primary winding, the direction of current flow through said driver coil being cyclically reversed by the alternate closure of said contacts to effect reciprocatory movement of said polarized armature.

2,447,231
ORTHOPEDIC INSOLE
Edward K. Bruckner, New York, N. Y.
Application September 11, 1946, Serial No. 696,209
2 Claims. (Cl. 36—71)

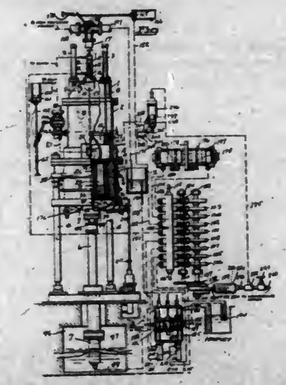


1. An insole comprising a base sheet of sponge rubber, a top sheet of thin leather, and a wedge between the sheets extending longitudinally of the insole from the front end thereof and forming a rearwardly tapered ridge disposed in position for engaging between the big toe and an adjoining toe of a person's foot and spreading said toes, the said ridge being of appreciably less diameter than the toes and having side edges merging into the upper surface of the top sheet.

2,447,232
CIRCUIT FOR OBTAINING PULSATING CURRENT OUTPUT AS A FUNCTION OF DIRECT-CURRENT INPUT
Edward Cartotto, Chicago, Ill., assignor to Illinois Testing Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application May 2, 1947, Serial No. 745,415
7 Claims. (Cl. 171—97)

3. In combination, a transformer having a primary winding for connection to an alternating current source and two balanced secondary windings interconnected at a common connection to have equal and opposite voltages induced therein, a rectifier connected to each secondary winding to permit current to flow therein only in opposite directions, a pair of output terminals, impedance means having a mid-tap connected between said output terminals, circuit means interconnecting said common connection and said mid-tap, circuit means interconnecting each secondary winding and one output terminal, and means for introducing a direct voltage into one of the last mentioned circuit means whereby a pulsating voltage appears between said output terminals whose magnitude is a function of the magnitude of said direct voltage.

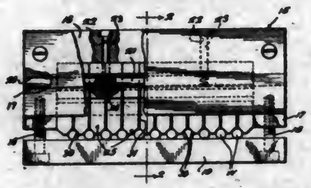
2,447,233
PULSE TIME MODULATION MULTIPLEX RECEIVER
Prafulla Kumar Chatterjea and Leslie Wilfred Houghton, London, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application March 15, 1944, Serial No. 526,566
In Great Britain April 7, 1943
10 Claims. (Cl. 179—15)



1. In a multichannel electrical signalling system utilizing the transmission of electrical pulses, each channel comprising a train of time-phase modulated pulses, time-phased with respect to the pulses of other channels, means for directing the pulse trains of the channels to respective receiving apparatus including progressive selection means for deriving from the received total pulse train of all the channels a particular channel pulse train comprising a first stage including build back circuit means for deriving from consecutive pairs of received pulses further pulses of durations equal to the time intervals between the received pulses of the respective pairs, means for differentiating said further pulses, means for eliminating pulses of one sign from the pulses resulting from the differentiation means, and further stages including build back circuit means for obtaining in like manner from consecutive pairs of the selected differentiated pulse train of the preceding stage further pulse trains which comprise pulses of a single channel only, and means in each receiving apparatus for deriving as an amplitude modulated wave from the time-phase modulation of the train of pulses receive the intelligence carried thereby.

2,447,234
RECOVERY OF NICOTINIC ACID FROM DILUTE SOLUTIONS
Russell Tattershall Dean, Stamford, Conn., and Victor L. King and Napoleon Arthur Laury, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 31, 1942, Serial No. 437,016
4 Claims. (Cl. 260—295.5)

1. In a batch process of manufacturing nicotinic acid comprising the steps of oxidizing nicotine to nicotinic acid nitrate with nitric acid, dissolving nicotinic acid nitrate in an alkaline solution as an alkali-metal nicotinate, acidifying the solution to precipitate nicotinic acid and purifying the nicotinic acid by crystallization in the course of which steps large volumes of filtrates containing concentrations of less than 1% of nicotinic acid are produced; the improvement which comprises the steps of collecting the filtrates, adding thereto a sufficient quantity of a soluble zinc salt to precipitate substantially all the nicotinic acid as zinc nicotinate, collecting the precipitated nicotinate, treating the zinc nicotinate with a solution of a salt of an alkali metal and a weak acid whereby a solution of an alkali-metal nicotinate and an insoluble zinc compound are produced, removing the insoluble zinc compound and adding the solution of the alkali-metal nicotinate to the alkali-metal nicotinate of the next batch.

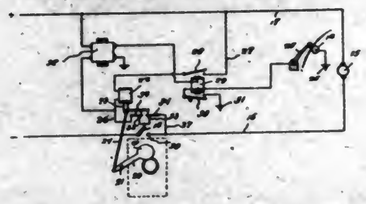


2,447,235
MACHINE FOR MAKING CONTAINERS FROM PULPY FIBROUS MATERIAL
Harvey R. Denton, Oakland, Calif., assignor to Moist-R-Proof Container Co., San Francisco, Calif., a corporation of California
Application February 20, 1945, Serial No. 578,902
13 Claims. (Cl. 92—60)

5. Apparatus for molding containers from pulpy fibrous material comprising, a vertically reciprocable hydraulic ram and a horizontal perforated

platform on its upper end, a vertically reciprocable hydraulically actuated piston coaxial with said ram and spaced above said platform, a plurality of adjacent pairs of perforated side walls between said piston and said platform forming the side walls of a plurality of mold forms for a plurality of containers, expansible water-impervious cores carried by said piston positioned for extending into each of said forms, means for tightly locking said piston, platform and side walls together, means for admitting said pulpy material into said mold forms when the latter are so locked together, means for admitting liquid under pressure into said cores after said pulpy material is admitted into said forms for expanding said cores and for compacting said fibers against said platform and side walls to form the sides and bottoms of containers, and means for releasing said platform and mold forms from said piston and from each other after said fibers have been so compacted for removal of the containers formed by the compacted fibers.

2,447,236
WORK HOLDING FIXTURE
Aldege L. Dery, Pine Meadow, Conn.
Application June 12, 1945, Serial No. 599,077
4 Claims. (Cl. 90—60)

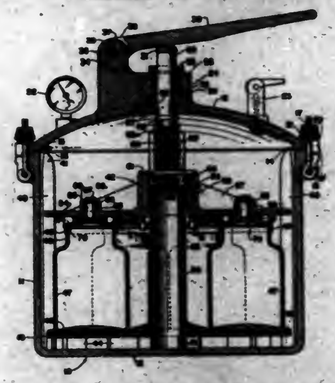


1. A work holding fixture comprising a fixed jaw, a plurality of individual jaw members carried by the fixed jaw, a movable jaw, each jaw member comprising a substantially S-shaped body and having oppositely inclined work engaging faces at one end each of which cooperates with the movable jaw and a work engaging face of an adjacent jaw member in yieldingly clamping a work piece and means to advance the movable jaw toward the fixed jaw.

2,447,237
LACING PUNCH
Daniel D. Duncan, Glendale, Calif.
Application December 18, 1946, Serial No. 717,037
4 Claims. (Cl. 164—123.3)

1. A lacing punch including a handle, and a plurality of spaced prongs secured on one end of said handle and having sharpened edges at the ends thereof, said edges being each inclined at an acute angle to a line through the centers thereof.

2,447,238
ATTACHMENT FOR MOTION-PICTURE PROJECTING MACHINES
Joseph D. Edmondson, Dayton, Tenn., assignor of one-fourth to J. F. Davis, one-fourth to Jess B. Goodrich, and one-fourth to John Ruffner, all of Dayton, Tenn.
Application August 28, 1944, Serial No. 551,524
2 Claims. (Cl. 88—17)



1. Operating means for a dowser of a motion picture machine including a solenoid for moving the dowser to an operative position, an electric circuit for said solenoid, a spring actuated switch in said circuit normally held in open position by the motion picture film and a double pole relay switch between said spring switch and said solenoid adapted to close the circuit to said solenoid and ground the circuit to said spring switch upon closing of the latter.

2,447,239
COMMODE CHAIR
James Samuel Edens, Baltimore, Md., assignor to Ruth La Vera Bush, Greenville, S. C.
Application August 24, 1944, Serial No. 551,071
1 Claim. (Cl. 155—31)

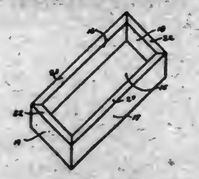
In a combination chair and commode, the combination, which comprises, a box-like base having a bottom, a top, with side walls, an end wall and having an open front and with a commode opening in said top, a drawer removably mounted in the base and removable through the front opening thereof, a seat having a bottom with side and rear walls and an open front positioned on said base, snap fasteners at the sides of the seat connecting the seat to the base, a centrally disposed post in the front of the device having an upper section with a foot positioned on the bottom of the seat, an intermediate section having a foot extending into the drawer and positioned on the bottom thereof, and a lower section carrying a horizontally disposed arm extending under the base, a thumb screw threaded in said horizontally disposed arm of the lower section of the post providing a clamp, said intermediate and lower sections of the post having upwardly projecting tongues with vertically disposed slots

therein, threaded studs on the upper and intermediate sections of the post positioned in the slots of the tongues with the parts of the post assembled, and thumb nuts on said studs.

2,447,240
CONTAINER SUPPORTING AND CLOSING MECHANISM
Henry G. Eisler, Wilmette, Ill.
Application July 29, 1944, Serial No. 547,215
7 Claims. (Cl. 99—356)

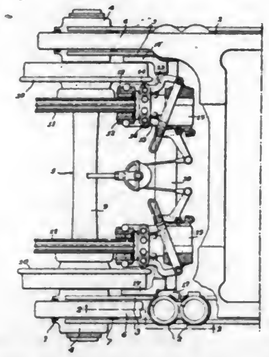
1. In a pressure cooker including a vessel and a cover therefor, a carrier bodily movable into and out of said vessel, said carrier comprising a plate for supporting a plurality of containers, a relatively movable plate for carrying closures for said containers, members movably supported from said closure carrying plate and releasably engaging said closures, springs acting upon said members to urge said engaged closures toward closing position and means for moving said closure carrying plate to cause said members to press said closures into sealing relationship with said containers, said means including a reversible member having an element unequally spaced from the ends of said member for engaging said closure carrying plate to provide an effective length in one position for one height of container and an effective length in the reverse position for another height of container.

2,447,241
CLEANSING AND SCOURING PAD AND METHOD
Leonard H. England, Chicago, Ill., assignor to James H. Rhodes & Company, Chicago, Ill., a corporation of Illinois
Application September 13, 1943, Serial No. 502,121
6 Claims. (Cl. 15—209)



3. An article of the character described, which comprises a household cleansing and scouring pad constituting a spirally wound sheet of flexible water-resistant fibrous material secured together by an adhesive to provide a tubular core for said pad opened at both ends, said adhesive containing a surface active detergent agent, which adhesive provides a layer of substantial thickness surrounding the outer surface of said core, and a layer of felted metallic wool surrounding said core and secured thereto by said adhesive in which a substantial portion of the strands of said wool are embedded, said pad being capable of repeated use because of the water-resistivity of said core and the binding effect of said adhesive upon said wool whereby the latter resists disintegration during use.

2,447,242
WIRE STRAIGHTENER
Edwin T. Fredrich, Walter Barr Mitchell, and Frank E. Buyken, Seattle, Wash.
Application March 26, 1945, Serial No. 657,244
4 Claims. (Cl. 140—147)

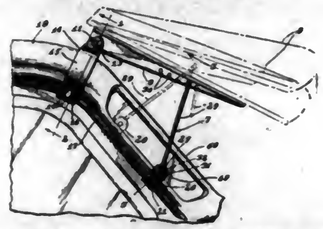


3. A wire straightener of the class described comprising a U-shaped relatively small metal device adapted to be held in the hand of the user and embodying a pair of opposed jaws between which the wire to be straightened is adapted to pass, said jaws being provided with wire contacting and kink removing bosses arranged in a manner to form substantially parallel inner and outer rows and being in staggered relation to each other with a maximum free space transverse to the rows between the periphery of any boss in one row and the periphery of the adjacent boss in the other row slightly less than the diameter of the wire which is to be drawn between the jaws and coacting staggered peripheral portions of said bosses.

2,447,243
DOUBLE-WALLED FOLDABLE CARTON
William Glidden Freel and Samuel Floyd Jones, London, Ontario, Canada, assignors, by mesne assignments, to William P. Frankenstein, Cincinnati, Ohio
Application January 21, 1941, Serial No. 375,306
In Canada January 19, 1940
3 Claims. (Cl. 229—34)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)

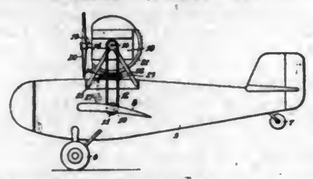
1. In a carton of the class described the combination of a bottom panel, hollow side walls along two opposed sides of said bottom panel, each comprising an inner wall member integrally hingedly connected to said bottom panel and an outer wall member having a securing flap portion hingedly connected to its lower end and permanently connected to the bottom panel but with the ends of said portion free of the bottom, end walls along the remaining two opposed sides of the bottom panel each comprising an inner wall member integrally hingedly connected to said bottom panel and an outer wall member having a flap at its lower end adapted to having its corners inserted beneath the free ends of the outer side wall members securing flaps for releasably securing the end walls in position.

2,447,244
BRAKE ARRANGEMENT
Paul W. Gaenssle, Grosse Pointe Farms, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 14, 1944, Serial No. 563,338
2 Claims. (Cl. 188—59)



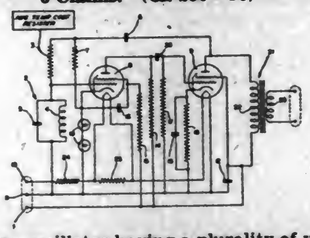
1. In a brake arrangement, a wheel and axle assembly, equalizer bars supported from the opposite ends thereof, a brake rotor carried by said assembly, a brake stator for cooperation therewith, a support for said stator comprising a tubular transversely extending member connected at its ends to the respective equalizers, at least one of said connections comprising a laterally extending arm on said tubular member, a similar arm on the adjacent equalizer embraced by said first named arm, said arms having loose pivotal engagement with each other adjacent their ends, and a horizontal stud on the equalizer projecting into the adjacent end of the tubular member, and cushioning means interposed between said stud and tubular member.

2,447,245
MEAT PATTY MOLDING AND CUTTING DEVICE
Elmer C. Garland, La Conner, Wash.
Application April 14, 1945, Serial No. 588,353
6 Claims. (Cl. 17—32)



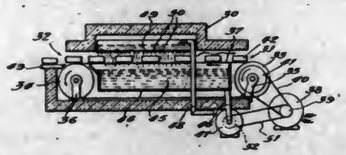
1. In a meat pattie cutting and forming structure of the class described, in combination, a knife including a flat relatively wide blade with a laterally offset handle, an adapter sleeve fitted in sheath-like fashion on said handle, said sleeve carrying a hinge pin, and a frame unit having supporting arms hingedly mounted on said pin, said frame unit being provided with a cutter mold on the outer end thereof movable toward and from said blade, the cutter mold being in the form of a split ring, and the supporting arms of the frame being hingedly connected to diametrically opposite sides of said mold and movable toward and from each other to open and close the mold.

2,447,246
ADJUSTABLE ANGULAR BRACKET MEANS FOR SUN VISORS
John P. Groboski, River Forest, and Joseph G. Groboski, Chicago, Ill.
Application June 18, 1947, Serial No. 755,418
1 Claim. (Cl. 296—95)



Sun visor adjustable support means comprising, stationary support bracket means securable to the rain gutter of an automobile and provided with an arcuate saddle portion configurative with the top portion of the body of said automobile, sun visor bracket means articulately secured to the said support bracket means and provided with a number of drilled openings, companion bracket means slidably securable to the said rain gutter and adjustably positionable with respect to the said stationary support bracket means, and Z shaped rod means having one of its ends articulately secured to the said companion bracket means, its other end being secured at one of the drilled openings in the said sun visor bracket means.

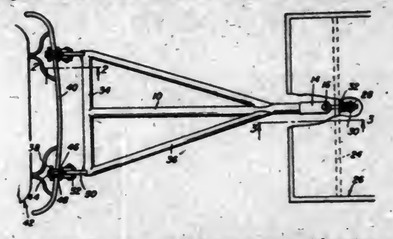
2,447,247
ROTARY AIRPLANE MOUNT AND SYNCHRONIZED WING ADJUSTMENT
Carl Hameseder, Stratford, Conn.
Application September 10, 1945, Serial No. 615,475
1 Claim. (Cl. 244—7)



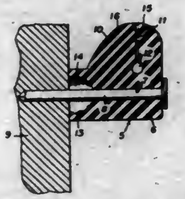
In an aeroplane comprising a body, a relatively strong transverse shaft rotatably extending through said body and having main suspension wings fixed thereon, sprocket gears on said shaft located closely between the wings and the lateral sides of said body, a pair of bearing brackets rising relatively high from said body on the transverse line of said shaft, the brackets being inwardly of said sides, a motor with propeller, aligned stub shafts passing revolvably through said brackets and being fast with the motor between said struts, the propeller blades being clear of and above said body, sprocket gears on said stub shafts registering with and above the first mentioned gears, sprocket chains operatively connecting the registering gears, a relatively large centrally disposed gear segment fast with the motor and partly extending therebelow, aligned bearings fast with the motor and partly extending therebelow, aligned bearing fast with said body below said segment, a worm gear having a shaft journalled in said bearings and being meshed with the teeth of said gear segment, a bevel gear fast on the worm shaft, another bevel gear meshing with the first bevel gear, a rod rigid with the second mentioned bevel gear and having an end within said body, and manual control means disposed on said rod end, substantially as and for the purpose described.

2,447,248
STABILIZED OSCILLATOR
Leslie M. Harris, Williamsville, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application December 23, 1944, Serial No. 569,612
6 Claims. (Cl. 250—36)

6. In an oscillator having a plurality of vacuum tubes each with a plate, cathode and control grid, the signal output of a first tube being fed to the control grid of a second tube, a negative temperature coefficient resistor included in series in a positive feed-back circuit from the plate of the second tube to the control grid of the first tube, and a capacitor and an inductor connected in parallel between the control grid of the first tube and the cathodes of said tubes.



2,447,249
METHOD OF REFRIGERATING AN ARTICLE BY CONTACT WITH A VAPORIZABLE REFRIGERANT
Robert H. Hill, Elgin, Ill., assignor to The Marison Company, Elgin, Ill., a corporation of Illinois
Application October 13, 1944, Serial No. 558,566
2 Claims. (Cl. 62—173)

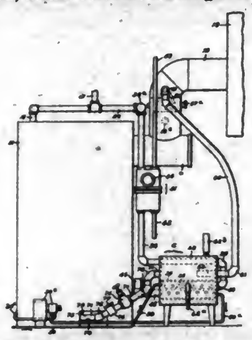


1. The method of refrigerating an article which comprises providing a refrigerant which is adapted to pass from liquid to gaseous states, said refrigerant being provided in a chamber in both liquid and gaseous states, precooling the article with the gaseous refrigerant while moving the article through a portion of the chamber, then continuously wetting the article with the liquid refrigerant during its movement throughout the remaining portion of the chamber and regulating the final average temperature of the article by the speed at which it is moved through the refrigerant.

2,447,250
VEHICLE TOW BAR
Albert R. Holloway, West Palm Beach, Fla.
Application September 9, 1947, Serial No. 772,949
3 Claims. (Cl. 280—33.14)

1. A towing device comprising a longitudinal bar, a pair of spaced parallel horizontally disposed members projecting outwardly from the forward end of said longitudinal bar, a coupling pin removably carried by the rear cross member of a towing vehicle, an eye formed at the outer end of said pin, said eye pivotally mounted between said members, a transverse bar rigidly secured at its center to the rear terminal of said longitudinal bar, pairs of outer plates and inner plates adjustably mounted on opposite sides of a bumper of a vehicle to be towed, a bumper engaging member interposed between said outer and inner plates, said bumper engaging member being rigidly secured to the inner face of said outer plates, pairs of spaced parallel ears projecting outwardly from said outer plates, angular extensions projecting outwardly from the ends of said transverse member, means pivotally connecting said extensions between said ears, and bracing arms having their terminals rigidly secured to said transverse bar and said longitudinal bar.

2,447,251
ELECTRIC FENCE INSULATOR
Lyle R. Huette, Fairbury, Ill.
Application May 22, 1947, Serial No. 749,627
2 Claims. (Cl. 174—166)

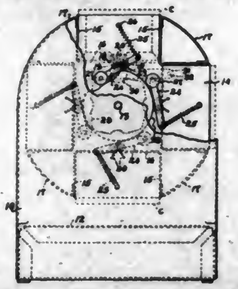


1. An insulator comprising a body of yieldable insulation material having a fastening device inserted therethrough for attaching to a supporting structure, a recess in the body at its inner end providing relatively thin walls surrounding the fastening device, said walls being collapsed by pressure exerted against the outer end of the body to expose the outer end of the fastening device, and said body having an opening to receive a charged wire.

2,447,252
HEATING APPARATUS WITH PROVISION FOR UTILIZING COMBUSTION GASES
Ramón Castro Jiménez, Winthrop, Mass.
Original application July 17, 1940, Serial No. 345,966. Divided and this application May 29, 1943, Serial No. 488,962
8 Claims. (Cl. 158—28)

4. In fluid fuel combustion apparatus, means forming a chamber defining a region of combustion for a fluid fuel burner, rotary vane means for directing air admixed with fuel to the combustion region, a stack for the gaseous products

of combustion extending from said chamber, interceptor means in the stack adapted to trap and divert a selected portion of the gaseous combustion products while permitting draftage to be maintained, and a conduit leading from the inter-



ceptor means to and opening at a location directly subject to the influence of such rotary vane means in a manner to promote return flow and delivery of the diverted gaseous products to the combustion region.

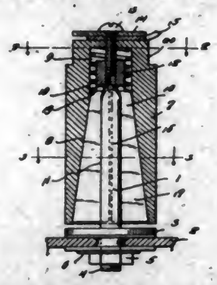
2,447,253

AUTOMATIC LOCKING DRUM FILE

Frank D. Jonas, East Williston, N. Y., assignor to Oxford Filing Supply Co. Inc., Brooklyn, N. Y., a corporation of New Jersey

Application March 1, 1944, Serial No. 524,552
8 Claims. (Cl. 129—16)

3. A filing device comprising a fixed support, a rotatable filing card support mounted on said fixed support and providing a plurality of card trays, a plurality of cards in said trays, locking devices cooperating with the cards to lock them in the trays, and means for releasing the locking devices as the respective trays are moved to work position by rotation of said card tray support, said locking devices including notches in said cards and cooperating keys movable to and from locking position in said notches.



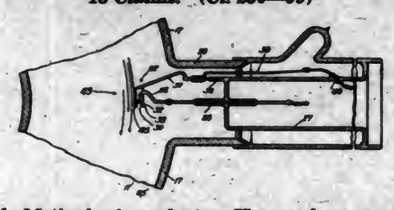
2,447,254

ELECTRIC TERMINAL

Jesse J. Jorgensen, Ancon, C. Z.

Application December 1, 1944, Serial No. 566,176
1 Claim. (Cl. 173—363)

In an electric terminal assembly, including a contact prong; the improvement comprising a socket member adapted to receive said prong, said socket member comprising a sleeve, said sleeve being formed with an internal bore, an end wall closing one end of said bore, said bore being outwardly flared toward said other end, said last-named end of said bore being open, said end wall being formed with an axially-disposed aperture therethrough, an electrical contact screw extended through said aperture, said screw having a head outwardly of said end wall and adapted to clamp an electric wire against said end wall, a collet-like chuck element slidable in said bore, said element having an axial bore slidably receiving said prong, said element having gripping segments surrounding said last-named bore, said segments having tapered outer surfaces complementary to said flared bore, said member being formed with an inner end wall closing said bore



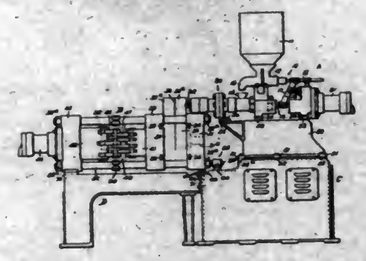
therein, said last-named end wall being formed with a tapped aperture therethrough threadedly engaging said screw whereby rotation of said screw in one direction is operative to draw said member inwardly of said sleeve and move said segments into clamping engagement with said prong, said screw, member and prong being formed of current-conducting material, said member having a reduced inner end providing a shoulder, an expansive coil spring concentrically disposed about said end, one end of said spring bearing against said shoulder, and the other end of said spring bearing against said end wall of said sleeve whereby to load said sleeve and member for relative movement in a prong-releasing direction.

2,447,255

MAGNETIC INDUCTION ACCELERATOR WITH SMALL X-RAY SOURCE

Donald W. Kerst and Robert Serber, Urbana, Ill., assignors to Board of Trustees of the University of Illinois, Urbana, Ill., a corporation of Illinois

Application May 4, 1944, Serial No. 534,060
18 Claims. (Cl. 250—99)



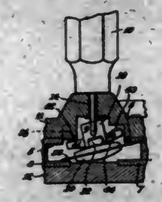
1. Method of producing X-rays from a substantially point source which comprises discharging electrons into a magnetic field, accelerating said electrons by increase of intensity of said magnetic field to rotate in a circular orbit in a median plane normal thereto, applying a stabilizing force by said magnetic field tending to confine said electrons to the median plane of the orbit whereby said electrons tend to oscillate above and below said median plane as they rotate in said orbit, disposing a target of an effective linear dimension less than the amplitude of oscillation adjacent said orbit, and by operation of said magnetic field changing the orbit to bring about impact of the electrons with the target successively as they oscillate upon successive rotations into register with the target so that on failure to strike the same during the first revolution they strike it during a succeeding revolution whereby substantially all of said electrons strike said target.

2,447,256

PLASTICS MOLDING APPARATUS

Edward R. Knowles, Nashua, N. H.

Original application February 5, 1944, Serial No. 521,171. Divided and this application January 18, 1945, Serial No. 573,335
2 Claims. (Cl. 18—16)



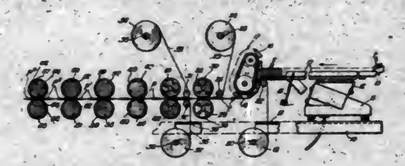
1. In plastics molding apparatus, in combination, a supporting frame, a die press unit thereon comprising a fixed end plate, an opposite outer die-holder plate, a plurality of parallel tie rods extending through said plates and provided with means to hold them against outward movement, an inner die-holder plate reciprocably mounted on the tie rods for cooperation with the outer die-holder plate, pressure means for advancing and retracting said inner die-holder plate, certain of the tie rods being disposed adjacent the supporting frame and being anchored relative thereto at one of their ends, each of the last-named tie rods having a non-threaded end extension, and bearing sleeves anchored on said supporting frame and each movably receiving one of said extensions.

2,447,257

BLADE SHARPENER

Joseph Kuzma, New York, N. Y.

Application November 21, 1946, Serial No. 711,266
12 Claims. (Cl. 51—159)



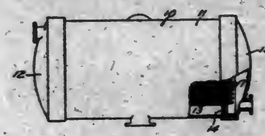
1. In combination, a housing having a guideway, a blade holder adapted to be reciprocated within said guideway, means on said blade holder adapted to retain a blade, said housing having surfaces adapted to be contacted by said blade, said guidway having a variation in elevation along the length thereof to cause said blade holder to oscillate and thereby cause a portion of said blade to alternately contact opposite surfaces of said housing.

2,447,258

MEANS AND METHOD FOR REDUCING TO POWDER FORM MATERIALS PACKAGED AS TABLETS

Frederick A. Lobley, Elkhart, Ind., assignor to Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana

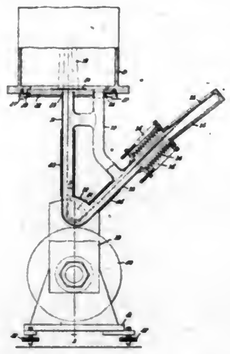
Application October 16, 1943, Serial No. 506,563
6 Claims. (Cl. 93—3)



1. In means for reducing to powder form tablets sealed between strips of protective material providing a continuous string of spaced packaged tablets enclosed in individual envelopes with the marginal portions of the strips extending a substantial distance outward beyond the envelopes, a pair of breaking rolls of a length to receive said string between them, means in advance of said rolls effective for gripping the marginal portions of said strips and thereby controlling the speed of travel of said string to said breaking rolls, and a pair of crushing rolls in back of and parallel with said breaking rolls of a width to receive said string between them, said crushing rolls being yieldingly urged one toward the other and having end rails adapted and disposed to receive and frictionally grip between them the marginal portions of said strip effective for moving said string rearward from said breaking rolls.

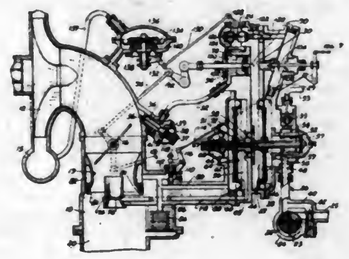
2,447,259

CONDENSER



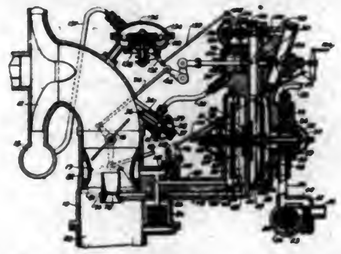
Charles E. Lucke, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware

Application February 12, 1945, Serial No. 577,412
2 Claims. (Cl. 285—30)



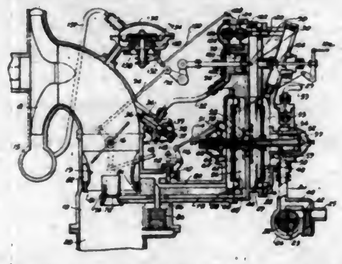
1. In a surface condenser, the combination with a tube sheet provided with a plurality of tube receiving openings, and tubes extending through said openings, of means connecting each of said tubes to said tube sheet to permit movement of the tubes relative to the tube sheet comprising a tubular sleeve of flexible material extending through a tube receiving opening in the tube sheet and having its inner end bonded to a tube, the outer end of said flexible sleeve having an annular laterally extending flange thereon, said flange being bonded at its perimeter to said tube sheet to provide a flexible fluid tight seal between the tube and sheet.

2,447,260
ELECTRON MICROSPECTROSCOPE
Ladislaus Marton, Menlo Heights, Calif., assignor to Research Corporation, New York, N. Y., a corporation of New York
Application June 21, 1945, Serial No. 600,761
10 Claims. (Cl. 250—49.5)



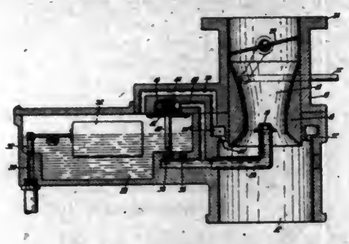
1. An electron microspectroscope comprising means providing a magnified electron image of a specimen, means defining a narrow aperture in the electron image plane, means providing an electron deflecting field in the path of the electron beam emerging from the aperture, and an electron-sensitive layer positioned in the focal plane of the deflected electron beam.

2,447,261
CHARGE FORMING DEVICE
Frank C. Mock, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application October 24, 1940, Serial No. 362,572
52 Claims. (Cl. 123—119)



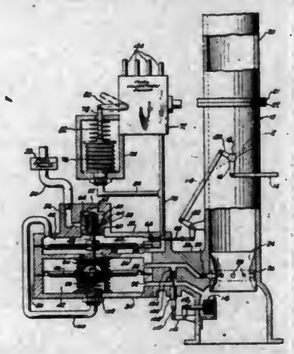
1. A device for supplying fuel mixture to an engine comprising an air passage, a source of fuel under pressure, a connection from said source to the air passage, means responsive to pressures varying as a function of the rate of air flow through said passage to control said connection, and means responsive to variations in the density of air supplied to the engine for modifying said control.

2,447,262
CHARGE FORMING DEVICE
Frank C. Mock, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 24, 1940, Serial No. 362,572, which is a continuation of application Serial No. 118,718, January 2, 1937. Divided and this application January 21, 1948, Serial No. 3,393
18 Claims. (Cl. 123—119)



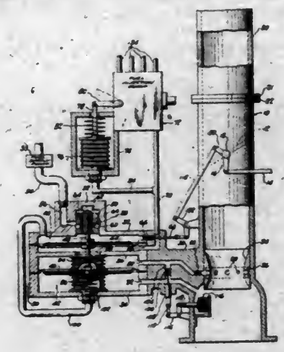
1. A device for supplying fuel to an internal combustion engine comprising an engine-driven fuel pump, a connection from said pump to the engine to supply fuel thereto, regulating means responsive to pressures variable in accordance with changes in the rate of flow of air to the engine to control the supply of fuel by said connection, a throttle valve to control the supply of air to the engine, and a valve in said connection connected to said throttle valve to control the supply of fuel therethrough when the throttle valve approaches closed position.

2,447,263
CHARGE FORMING DEVICE
Frank C. Mock, South Bend, Ind., assignor to Bendix Aviation Corporation, Sonth Bend, Ind., a corporation of Delaware
Application October 24, 1940, Serial No. 362,572, which is a continuation of application Serial No. 118,718, January 2, 1937. Divided and this application January 21, 1948, Serial No. 3,394
39 Claims. (Cl. 123—119)



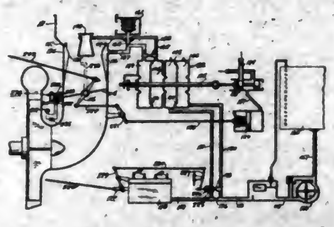
1. A device for supplying fuel to an internal combustion engine comprising an induction passage, a throttle controlling the same, an engine-driven supercharger in the induction passage posterior to the throttle, an engine-driven fuel pump, a connection from said pump to the induction passage anterior to the supercharger to supply fuel thereto under pressure, a metering orifice in said connection, regulating means for regulating the pressure of fuel at the inlet side of said orifice, a bypass around said orifice, and means responsive to supercharger pressure to control said bypass.

2,447,264
CARBURETOR
Guy E. Beardsley, Jr., West Hartford, Conn., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application February 10, 1939, Serial No. 255,676
23 Claims. (Cl. 261—41)



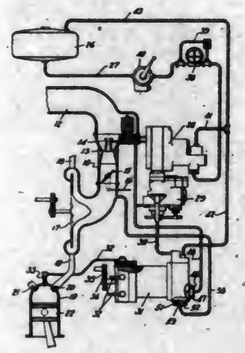
1. A charge forming device for an internal combustion engine comprising a conduit for supplying air to the engine, a throttle controlling the same, air flow measuring means including a venturi located in said conduit upstream of the throttle for setting up a differential in the air pressures at two spaced points in the conduit proportional to the quantity of air flowing through said conduit, a fuel conduit for supplying fuel to the engine, a fuel valve controlling the flow of fuel through the fuel conduit, a fuel metering orifice in the fuel conduit, means including passages extending from the venturi at said spaced points for establishing a differential in the pressures at spaced points in said fuel conduit on opposite sides of the metering orifice thereby to provide fuel flow at a rate substantially proportional to air flow, a by-pass around said orifice, an economizer valve controlling said by-pass, a movable wall operatively connected to said economizer valve, and pressure transmitting means interconnecting the opposite sides of said wall with one of said conduits at the said spaced points therein.

2,447,265
FUEL CONTROL DEVICE
Guy E. Beardsley, Jr., West Hartford, Conn., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 3, 1939, Serial No. 302,749
33 Claims. (Cl. 123—119)



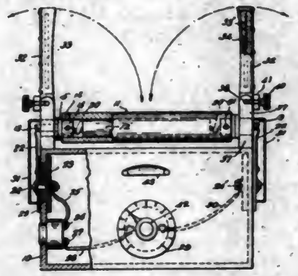
1. In a direct injection fuel system for an internal combustion engine having an air intake, a fuel injection pump adapted to be connected with respective engine cylinders for directly injecting liquid fuel into said cylinders, mechanism associated with said pump for varying the quantity of fuel delivered by said pump to said cylinders, said mechanism including a movable element actuated by variations in a fluid pressure, and control means operatively associated with said movable element to vary the rate of flow by weight of fuel delivered to said cylinders by said pump solely as a function of the rate of flow by weight of air passing to said engine through said air intake, said control means including, a fuel diaphragm movable in response to variations in the rate of flow by weight of fuel passing to said pump, an air diaphragm responsive to variations in the rate of flow by weight of air passing to said air intake, a main fuel orifice for metering the flow of fuel through said injection pump, and at least one auxiliary fuel orifice for supplementing the action of said main fuel orifice at a predetermined engine operating condition.

2,447,266
FUEL CONTROL DEVICE
Guy E. Beardsley, Jr., West Hartford, Conn., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Original application November 3, 1939, Serial No. 302,749. Divided and this application December 8, 1944, Serial No. 567,265
25 Claims. (Cl. 123—119)



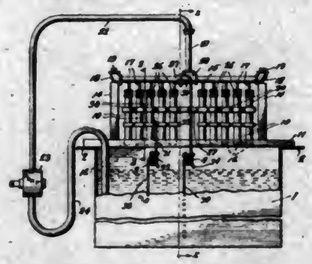
1. In a direct injection fuel system for an internal combustion engine having an air intake, an injection pump having a plurality of outlets for introducing a measured amount of fuel into respective engine cylinders, a fluid chamber and a fluid pressure responsive element for varying the capacity of said pump to vary the amount of fuel delivered by said pump through said outlets to said engine, a conduit connected with said chamber and with the inlet of said pump, a valve for controlling the admittance of fuel to said conduit, and means for adjusting said valve to maintain the rate of flow by weight of fuel delivered to said engine by said pump in predetermined ratio to the rate of flow by weight of intake air to said engine, said means including a venturi in said air intake for measuring the rate of flow by weight of air to said engine and a metering orifice for measuring the rate of flow by weight of fuel to said pump.

2,447,267
FUEL FEEDING SYSTEM
Frank C. Mock, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application January 19, 1940, Serial No. 314,587
21 Claims. (Cl. 123—119)



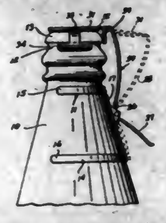
1. A fuel and air supply system for an engine comprising a main air supply passage, a throttle therein, a venturi in said passage for creating an air differential pressure, means jointly responsive to variations in the pressure and temperature of the air in the passage for modifying said air differential pressure, a variable delivery fuel injection pump for intermittently injecting charges of fuel into the engine in timed relation therewith, and means responsive to said modified air differential pressure for varying the fuel pump delivery.

2,447,268
CHARGE FORMING DEVICE
Le Roy J. Evans, Orlando, Fla., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application February 13, 1943, Serial No. 475,783
24 Claims. (Cl. 123—119)



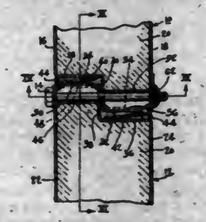
1. In a fuel supplying system, an air passage, an element controlling the passage, a fuel injection pump having a housing, a plurality of pumping units receiving fuel from said housing and having by-pass sleeves for varying the effective stroke of the units, an element for varying the position of the sleeves to thereby vary the delivery of said injection pump, a fuel conduit receiving fuel from a source of fuel under pressure and supplying it to the housing, manual means for actuating one of the elements, a movable wall responsive to variations in pressure for actuating the other of the elements and subjected to fuel under pressure, and valve means in the conduit responsive to pressures at spaced points in the air passage and at spaced points in the fuel conduit for varying the fuel pressure on the movable wall to control the said other element.

2,447,269
ELECTROTHERAPEUTIC APPARATUS
Frederick Myers, Charlestown, Mass.
Application June 6, 1946, Serial No. 674,720
3 Claims. (Cl. 128—24.3)



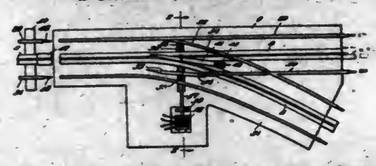
2. In an electrotherapeutic apparatus for the treatment of the foot and ankle, having a support member and a roller mounted thereon, a metallic wing, means pivoting said wing to said support member at one end thereof, means secured to and co-operating with said support member for holding said wing in adjusted angular position with respect to said roller, and means for electrically heating said wing for the radiation of heat therefrom.

2,447,270
ELECTROPLATING APPARATUS
Rodney H. Olsen, Racine, Wis.
Application August 10, 1945, Serial No. 610,041
1 Claim. (Cl. 204—237)



In an electroplating apparatus, a tank open at its top, suspension bars of conductive material extending horizontally in said tank and insulated from each other, a base bar of insulating material extending across said tank and provided with longitudinally spaced sockets adapted to receive and removably support in upright position hollow articles to be plated constituting cathodes, uprights rising from the base bar adjacent opposite sides of the tank, a manifold pipe of conductive material extending horizontally over the base bar in upwardly spaced relation thereto and supported upon said uprights, perforated tubes removably carried by and extending downwardly from said manifold pipe and constituting anodes for extending into the articles to be plated and having their upper ends communicating with the manifold pipe, said tubes being of predetermined length for disposing their lower ends in predetermined spaced relation to lower ends of said articles, a horizontally extending bus bar of conductive material, means for releasably securing the bus bar across the said articles transversely thereof and in conductive engagement therewith, a vertically extending conductor strip connecting said bus bar with one of the bars in the tank, a vertically extending conductor strip connecting the other bar in the tank with the manifold pipe, and a pump having an inlet pipe extending into the tank and an outlet pipe connected with the manifold pipe.

2,447,271
CLOSURE CONTROL
Carl A. Olson, East Rockford Station, Ill.
Application September 10, 1946, Serial No. 695,851
5 Claims. (Cl. 215—64)

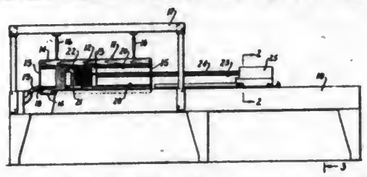


1. In a closure attachment for a bottle including a main support adapted to be clamped to the bottle with a portion of said support extending longitudinally of said bottle, a lever carrier supported upon said portion for longitudinal adjustment thereon, means for maintaining the carrier upon said portion in its adjusted position, a lever on the carrier extending longitudinally upwardly thereof, and a cap carried on the end of the lever adapted as the lever is operated to slide to and fro over the top of the bottle; the improvement comprising at least one guide slot formed in said portion and extending longitudinally thereof, said carrier having portions extending into said slot and mounting said carrier on said portion for longitudinal sliding movement, a longitudinally-disposed series of recesses formed in said portion adjacent to and parallel to said slot, a projection on said carrier, said projection being adapted to be seated in a selected one of said recesses whereby to lock said carrier in a selected longitudinally-adjusted position relative to said support.

2,447,272
INSULATED PANEL
Ralph C. Parkes, Glenside, Pa.
Application August 9, 1945, Serial No. 609,785
2 Claims. (Cl. 189—34)

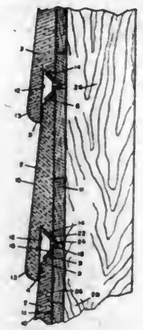
1. An insulating panel comprising a first sheet and a second sheet arranged in spaced and substantially parallel relation to each other, a marginal portion along a side of said first sheet being bent to form a first wall extending in the direction of said second sheet, said marginal portion being further bent to produce a second wall extending substantially parallel to said sheets, said marginal portion being still further bent to produce a third wall extending toward said second sheet, whereby a marginal panel portion of reduced thickness is produced, the marginal portion of the adjacent side of said second sheet being bent to form a fourth wall extending toward said second wall, a sleeve positioned between said second wall and the juxtaposed portion of said second sheet and having at least one side flange which contacts said third wall, and means for securing said side flange to said third wall, there being apertures in said second wall and said second sheet registering with said sleeve for the passage of fastening means through said second wall, said sleeve and said second sheet.

2,447,273
SWITCH FOR MODEL RAILWAY CONSTRUCTION
Frederick O'Dell Patrick, Jacksonville, Fla.
Application July 19, 1944, Serial No. 545,609
1 Claim. (Cl. 246—419)



In a structural assemblage of the class described, in combination, main and auxiliary tracks including parallel main side rails and an intervening hollow centrally slotted underpass feeder rail, switch points pivotally mounted on terminal end portions of the main rails, a reciprocatory operating link underlying said switch points and operatively connected to the free swingable end portions thereof, an electromagnet, an operating connection between the electromagnet and an adjacent end of said reciprocatory operating link, the latter link being provided with an aperture, a one-piece substantially U-shaped switch member, the upper limb thereof being fashioned into a director finger and said director finger overlying the slotted top portion of the feeder rail, the lower limb of said U-shaped member underlying the upper limb and being provided on its free end with a lateral pin constituting a crank, the latter being engaged with the aperture in said reciprocatory operating link.

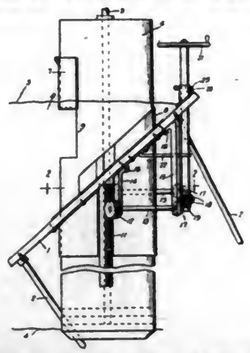
2,447,274
HEDDLE RELEASE MECHANISM
Burt A. Peterson, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application June 14, 1945, Serial No. 599,442
22 Claims. (Cl. 28—46)



1. In a warp drawing machine having means for supporting a heddle frame with a pack of heddles frictionally supported at opposite ends on said frame and slotted intermediate their ends to form eyes relatively offset in the case of adjacent heddles, the combination of a traveling carriage, and mechanism on said carriage for releasing heddles one at a time from said pack, said mechanism including a shaft threaded through the heddle eyes and having a key thereon actuated successively into two positions respectively

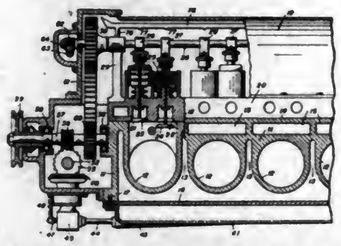
alined with the eyes of adjacent heddles, and detent means engaging with the foremost heddle to hold the same against release from the pack during the movement of the release key from one po-

sition to the other, said detent means being operative into disassociated relation to the foremost heddle following movement of the release key into one of said positions.



2,447,275
SHINGLES AND CLIPS THEREFOR
James G. Price, Coalgrove, Ohio
Application August 13, 1946, Serial No. 690,133
5 Claims. (Cl. 108—8)

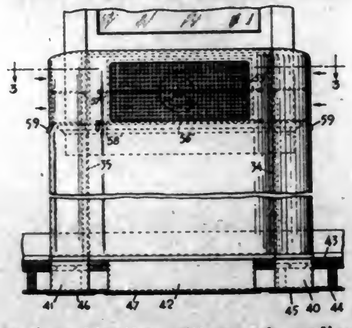
1. In combination a plurality of similar shingles, each tapered in thickness from bottom to top and having a longitudinal recess extending from side-to-side in the lower portion of the base face thereof, a downwardly extending flange overhanging said recess, the lower portion of said flange being adapted to overlie the upper edge of an adjacent similar shingle therebelow, the upper edge of said recess being defined by a beveled surface inclined upwardly from said base face to said flange, the upper edge of said shingle being beveled to present a surface extending from side-to-side and inclined upwardly from the lower face of said shingle to the upper face thereof, and fasteners for said shingles comprising a plurality of members each having a base portion adapted for securement to a support and other portions presenting inclined surfaces angling upwardly and outwardly from said base portion on the upper and lower sides thereof for face engagement, respectively, over the upper edge of one shingle and the surface defining the upper edge of the recess on the next adjacent shingle thereabove.



2,447,276
TURBINE
William J. Pugh, East Lynn, Mass.
Application August 13, 1945, Serial No. 610,550
1 Claim. (Cl. 61—19)

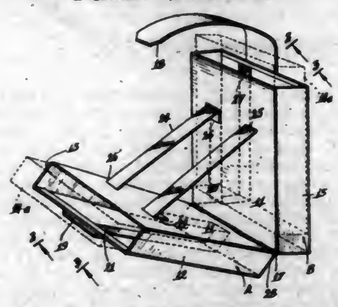
The combination of a fixed turbine, a casing for the turbine which is movable in vertical relation to said turbine and a support for the casing having an inclined upper surface, a sleeve carried by the support, said sleeve having the upper edge thereof corresponding to the inclined upper surface of the support and extending beyond the upper surface of the support, an inlet opening in the casing above the support, a sliding gate on the casing over the opening adapted to vary the diameter of the opening, a pair of racks on the casing, supporting brackets on said support, an operating shaft carried by the brackets, a pair of operating shafts carried by the brackets at a

right angularly outwardly inclined relation to said first operating shaft, cogs on the ends of said pair of operating shafts engaging the racks on the casing, pinions on the first operating shaft, pinions on the pair of operating shafts engaging with the pinions on said first operating shaft, said casing being mounted in a body of water so that the opening in the casing can be varied to conform to the level of the water so that the water is permitted to enter said opening regardless of the level of the water through the movement of said casing in relation to said support.



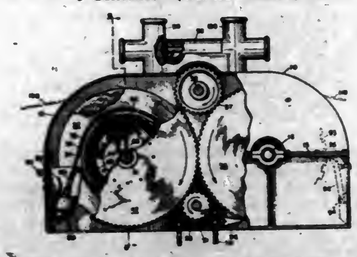
2,447,277
INTERNAL-COMBUSTION ENGINE AND LUBRICATING SYSTEM THEREFOR
Nicholas Rakos, Cleveland, Ohio
Application June 26, 1947, Serial No. 757,251
4 Claims. (Cl. 123—51)

4. An internal combustion engine which includes a cylinder, a crank shaft adjacent each end of the cylinder, the crank shaft being mounted to rotate about parallel axes which lie perpendicular to and intersect the longitudinal axis of the cylinder, means to admit a combustible mixture into the cylinder between the pistons, means to fire said mixture, an exhaust port in the cylinder between the pistons through which spent gases are expelled, a common drive shaft lying parallel with the cylinder and interconnecting the crank



shafts, a cam shaft above the cylinder, said cam shaft lying along an axis which lies midway between the ends of the cylinder and parallel to the axes of the crank shafts and means establishing driving connection between the common drive shaft and the cam shaft, each crank shaft having a bore extending throughout its entire length, an oil reservoir beneath the cylinder in which lubricating oil used to lubricate the engine is collected, a pump driven by the common drive shaft and coupled to the reservoir and pipes leading from the pump through which oil discharged thereby is conducted to the bores in the crank shafts.

2,447,278
AIR CONDITIONING APPARATUS
Richard F. Roper, Washington, D. C.
Application April 27, 1945, Serial No. 590,697
10 Claims. (Cl. 62—129)



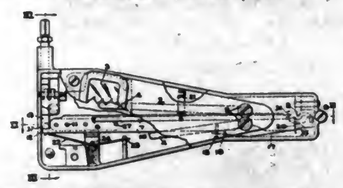
1. The combination with an air cooling and conditioning unit, adapted to be positioned in a room in a building, and including means within the unit for circulating indoor air to be cooled and conditioned from and to the room in which the unit is positioned, of conduit means connected to the unit and leading to and from another room, and valve means associated with the conduit means for circulating the indoor air alternately from and to the first mentioned room and from and to the second mentioned room.

2,447,279
CARDCASE
Anton Rosenfeld, New York, N. Y.
Application May 23, 1944, Serial No. 536,897
1 Claim. (Cl. 206—1)

A case for playing cards comprising a pair of compartments each having front, rear, side and bottom walls, means connecting the compartments at the bottom walls for angular movement about contacting edges of said bottom walls, a tape member having a loop portion to support a pack of cards in each compartment, each loop portion having one end fixed to normally contacting front and rear walls of the respective compartments and the other end penetrating the opposite wall of the respective compartments and fixed to said opposite wall whereby on separation of the compartments during relative angular movement the loops are raised carrying the pack of cards above the tops thereof and on a bringing together of the compartments the weight of each pack of cards causes a descension thereof and a lowering of the loops supporting the same.

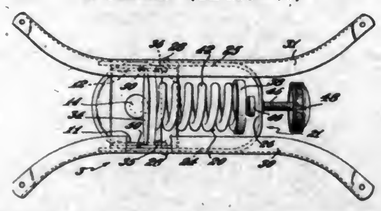
2,447,280
TRAWLING WINCH
Fred W. Rowe, Seattle, Wash.
Application December 23, 1946, Serial No. 717,960
6 Claims. (Cl. 254—185)

3. A winch, consisting of: a housing formed of lower and upper mating units, a revolvable shaft journaled within said lower housing member, a drive gear secured to said shaft, means for transmitting power from an outside source to said driving gear, a cable receiving spool revolvably journaled upon said drive shaft, side plates for said spool, an outwardly extending annular rim secured to one of said side plates and co-axial with said power shaft, an extensible friction member adapted for fluid inflation secured to said drive gear and adapted to have frictional engagement with said annular rim, an axial bore formed within said drive shaft and means for connecting said axial bore with said extensible friction member, means for supplying fluid under pressure to said bore, brake means disposed to selectively engage said annular rim, fluid operating means for said brake means and a single lever adapted to operatively control valve means for operating either said friction member or said brake means.



2,447,281
CONTAINER FILLER
Herman Schneir, Chicago, Ill.
Application October 28, 1944, Serial No. 560,853
1 Claim. (Cl. 226—93)

In a manually portable filler for creamers and the like, a tray of rectangular shape having side walls of greater height than the creamers for receiving and retaining same in uniform parallel rows when filled to capacity, a cover for said tray having a body portion of slightly less area than the tray freely received therein, said cover having



an upturned rim of slightly lesser depth than the height of said tray above the creamers, said rim formed with an outwardly disposed flange received upon the top edge of said tray spacing said body portion slightly above the top level of the creamers, said body portion formed with parallel rows of perforate depressions complementary to the rows of creamers projected slightly into the creamer mouths, and channels connecting said depressions.

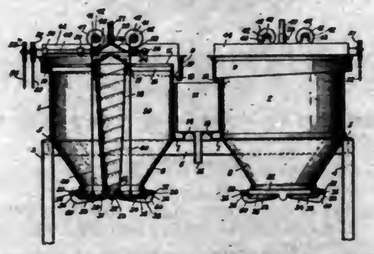
2,447,282
GAUGE
Anthony C. Scinta, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application March 3, 1944, Serial No. 524,899
11 Claims. (Cl. 33—172)

7. A comparator instrument comprising a support, a work engageable member movable thereon, movement amplifying mechanism having a primary lever and a secondary lever, the primary lever acting at one end on the member and at its opposite end on the secondary lever, the opposite ends of the primary lever interfitting with the member and the secondary lever to be held thereby against bodily movement laterally of its plane of movement, spring means acting to yieldably secure the interfitting parts operatively related, said support having a series of seats, a fulcrum pin selectively insertible upwardly from without through the seats, the primary lever having holes registering with the seats and engageable by the pin to mount the primary lever, a flat spring anchored on the support and having a part pressing on the primary lever adjacent the member for urging the latter into gauging contact with a workpiece, and adjustable means acting on the flat spring to regulate contact pressure on the workpiece.

2,447,283
CHAIR IRON FOR TILTING CHAIRS
Henry W. Sheidrick, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a corporation of Massachusetts
Application June 7, 1945, Serial No. 598,032
9 Claims. (Cl. 155—77)

1. A chair iron comprising a seat-supporting member having spaced depending side members and a depending end member adjoining the side members so as to provide a housing, a stationary member having a pair of upstanding arms extending into said housing and pivotally connected with said side members to provide a pivotal support for said seat-supporting member, a rocker within said housing and interposed between and pivotally supported by said arms, and a spring member within said housing acting against said rocker and depending end member so as yieldingly to oppose tilting movement of said seat-supporting member.

2,447,284
SHOE PROTECTOR
Alan N. Sidnam, New York, N. Y., Brown Bolté, New Canaan, Conn., and Thomas C. Neary, New York, N. Y.
Application October 12, 1946, Serial No. 703,066
3 Claims. (Cl. 36—7.2)



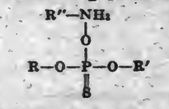
1. A shoe and hosiery protector comprising a pouch-like member having an open top portion, closed opposite end portions and a closed bottom inclined to fit beneath the tread and shank portions of a shoe and having an opening adjacent to one end through which the heel of a shoe can extend, said member having a portion extending upwardly from said top portion and around said one end to cover the ankle of the wearer, and a drawstring extending around the other end of said pouch-like member adjacent to said open top portion for securing said member around said shoe.

2,447,285
PALLET
Budd E. Simonton and Howard J. Dyer, Watertown, N. Y., assignors to St. Regis Paper Company, New York, N. Y., a corporation of New York
Application October 8, 1946, Serial No. 701,888
1 Claim. (Cl. 248—120)

A two-faced pallet for use with lifting trucks having lift fingers, comprising a base member of double-faced corrugated paperboard; a platform member also of double-faced corrugated paperboard; a plurality of relatively stiff, hollow, cylindrical cardboard spacer members interposed between and in substantially tangential relation to said base and platform members, the longitudinal axes of said spacer members extending parallel to said paperboard members and parallel to one another, said spacer members being in spaced relationship to permit the insertion therebetween of lift fingers, said spacer members being adhered to said base and platform members along lines of tangency therebetween, whereby the pressure of a load applied to said pallet will be exerted between said base, platform and spacer members at the adhered lines of tangency thereof and the corrugated material will yield to increase the area of contact of said spacer members with said base and platform members to distribute the load over a larger area without abrupt deformation of any of said members; and a plurality of block members mounted respectively in each extremity of each of said spacer members to stiffen same.

2,447,286
SLUDGE SETTLING AND DEWATERING TANK
Carlos B. Smith and Harry Leslie Bullock, New York, N. Y.
Application March 23, 1946, Serial No. 656,743
3 Claims. (Cl. 210—57)

1. In a structure of the character described, a tank having a vertically-disposed, centrally-arranged closed-top, tubular helix of flat strip material extending from its top to its bottom and providing an annular sludge-collection chamber between it and the inner wall surface of the tank, an inlet located above the closed top of the helix the convolutions of the helix being in partly overlapped relation and being spaced apart to provide an aperture between them, the helix being of greatest diameter at its top and decreasing progressively in diameter from its top to its lower end, the tank having a bottom provided with means for receiving and supporting the lower end of its helix, said bottom being provided with a drain opening surrounded by the helix, and trap-doors at the bottom of the sludge-collection chamber for permitting removal of sludge therefrom.

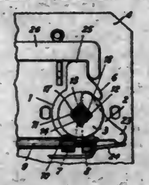


2,447,287
ADJUSTABLE INTRAORAL TRACER
Fay E. Smith, Cleveland, Delmar Lacer, Lakewood, and Clarion B. McLeod, Cleveland, Ohio, assignors to Fay E. Smith, Delmar Lacer, and Clarion B. McLeod, doing business as Smith, Lacer, McLeod Dental Laboratories, Cleveland, Ohio, a partnership of Ohio
Application June 26, 1947, Serial No. 757,144
4 Claims. (Cl. 32—32)

1. An intra-oral tracer of the character described, comprising a body member externally of such shape as to enable it by molding to be attached in fixed position to a dental bite plate, a tracer member mounted in said body member for straight line movement approximately normal to the acclusal plane, and an operator for said tracer member in rod form and of small diameter adapted to extend outwardly through the mouth opening for actuation of the tracer member while it is in place in the oral cavity.

2,447,288
PRIMARY ALIPHATIC AMINE SALTS OF DI-ALIPHATIC SUBSTITUTED MONO-THIO-PHOSPHORIC ACIDS
Herschel G. Smith, Wallingford, Troy L. Cantrell, Lansdowne, and Mark L. Hill, Yeadon, Pa., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 6, 1946, Serial No. 652,482
5 Claims. (Cl. 260—461)

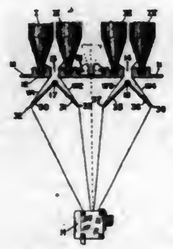
1. A primary aliphatic amine salt of a di-aliphatic substituted mono-thiophosphoric acid, said salt having the following general formula:



wherein R and R' each denote a branched chain aliphatic group selected from the class consisting of alkyl, alkenyl and sulfurized alkenyl groups containing from 5 to 8 carbon atoms, and R'' stands for a straight chain primary aliphatic group selected from the class consisting of alkyl, alkenyl and sulfurized alkenyl groups containing at least 8 carbon atoms.

2,447,289
POLYMERIZATION OF VINYL AND VINYLIDENE CHLORIDES
Hanns Peter Staudinger, Ewell, and Maurice Dudley Cooke, Banstead, England, assignors to The Distillers Company Limited, Edinburgh, Scotland, a company of Great Britain
No Drawing. Application August 2, 1944, Serial No. 547,810. In Great Britain September 6, 1943
4 Claims. (Cl. 260—88)

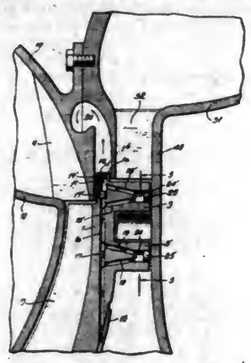
1. In a process of polymerising an asymmetrically substituted ethylene having at most two chlorine atoms in the molecule, in the homogeneous liquid phase in a medium comprising a diluent and a polymerisation catalyst, the step of carrying out the polymerisation in the presence of an aqueous organic diluent containing an amount of water not exceeding 6% by weight thereof, the sole organic component of said diluent being a water-soluble fatty acid having not more than four carbon atoms in the molecule.



2,447,290
DOOR LATCH
Alfred Truninger, Kreuzlingen, Switzerland
Application October 16, 1945, Serial No. 622,612
In Switzerland October 28, 1944
1 Claim. (Cl. 292—336.5)

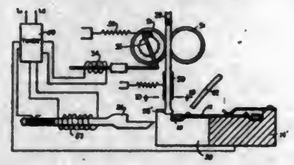
In a door latch in combination a roll back including two cooperating roll back members forming between themselves a passage having a substantially rectangular cross section; a wedge-shaped serrated projection provided on each of said cooperating roll back members so as to project into said passage; an adjusting screw engaging said cooperating roll back members in

such a manner as to move the same toward and from each other when turned so as to adjust the size of said passage formed between said two cooperating roll back members; two door handles; two spindle members each secured to one of said door handles and forming together a split spindle having a substantially rectangular cross section so as to fit into said passage formed by said cooperating roll back members, said two spindle members being provided with serrated cut-out grooves into which said wedge-shaped serrated projections provided on said cooperating roll back members fit so that the serrations on said wedge-shaped projections provided on said cooperating roll back members firmly engage the serrations on said cut-out grooves when said cooperating roll back members are moved toward each other by said adjusting screw.



2,447,291
THREAD SEPARATOR FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application February 15, 1946, Serial No. 647,954
6 Claims. (Cl. 139—247)

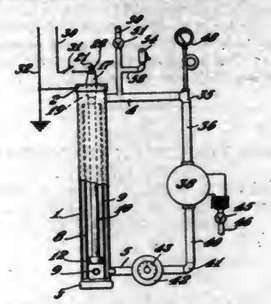
1. A thread separator for a reserve bobbin magazine having a thread slot extending vertically therein, said separator having a central rod formed at the upper end thereof for attachment to the magazine and having a forwardly extending wing provided with a front thread guide edge and having also a rearwardly extending wing provided with a rear thread guide edge, said rod when attached at the upper end thereof to the magazine holding said guide edges substantially parallel to the thread slot.



2,447,292
GAS-ACTUATED TURBINE-DRIVEN COMPRESSOR
Joseph E. Van Acker, Haledon, N. J.
Application October 12, 1943, Serial No. 505,923
4 Claims. (Cl. 230—116)

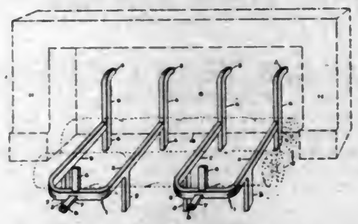
1. A gas-acutated turbine-driven compressor, comprising a shaft, a rotor mounted on said shaft, turbine-blade means fixed on one side face of said rotor and having gas-impinging surfaces arranged to guide gases impinging thereon toward the axis of the rotor, means disposed at one end of said turbine-blade means for guiding actuating gases into impingement with said turbine-blade means, radial conduction means arranged at the opposite end of said turbine-blade means for guiding said actuating gases radially along said rotor face, hollow shaft means communicating with said radial-conduction means for exhausting said gases axially of the rotor and discharging the gas therethrough on the side of the rotor opposite the turbine blades, and blade-means

mounted on the opposite side face of said rotor for compressing air.



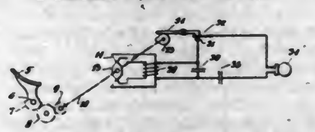
2,447,293
FILLING OF CODE SLOTS OR NOTCHES IN EMBOSSED PRINTING PLATES OR STENCILS
Alfred Vang, New York, N. Y.
Application November 9, 1944, Serial No. 562,694
7 Claims. (Cl. 219—8)

1. A method for filling notches in plate material with wire alloy, having a lobe on one end thereof, said method comprising holding the material, feeding the wire in line with the notch and parallel to the axis thereof, past the material, so that the lobe clears the notch, forcing the wire laterally into the notch and cutting off the lobed end of the wire substantially flush with a face of the material, melting the wire in the notch and off from the remainder of the wire stock, and smoothing the molten alloy in the notch, so as to be substantially even with the opposite face of the plate material.



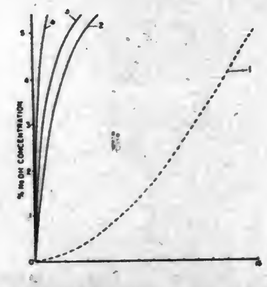
2,447,294
SELF-REGULATING ELECTRIC STEAM GENERATOR
Ralph W. E. Vickery, Brockton, Mass.
Application February 20, 1946, Serial No. 648,977
15 Claims. (Cl. 219—40)

1. A steam generator comprising spaced electrodes defining a steam generating chamber, outlet and inlet lines respectively connected with the upper and lower parts of said chamber, means connecting said inlet and outlet lines so as to provide an exterior fluid circuit between the upper and lower parts of said chamber, and a pressure-regulating valve connected in said fluid circuit and operative in response to a drop in pressure below a predetermined pressure to open so as to permit fluid to pass through said inlet line into said chamber so as to contact said electrodes and thereby effect the generation of steam, said pressure-regulating valve automatically closing when said predetermined pressure has been reached,



thereby to arrest the flow of fluid through said inlet line.

2,447,295
ANDIRON
Frank H. Waggoner, Ramsey, N. J.
Application February 9, 1946, Serial No. 646,644
1 Claim. (Cl. 126—298)

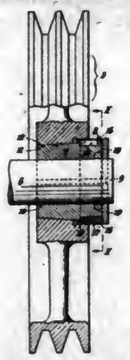


In an andiron, the combination of a U-shaped body with the open end at the rear, two front legs supporting the front end, two rear legs each mounted at the open ends of said body and each extending above said body and terminating at their upper ends in a back turned spacing projection, and a log guard projecting above said body at the middle of the front.

2,447,296
MECHANICAL FLASHLIGHT
Alexander C. Wall, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application March 31, 1944, Serial No. 528,819
4 Claims. (Cl. 240—10.5)

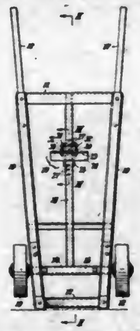
2. A flashlight comprising in combination a generator having a rotating shaft, a first condenser connected to be charged by said generator, a second condenser and a light source in series connection with each other, and contact means under the control of said shaft adapted when actuated to periodically connect said second condenser and said light source across said first condenser and to discharge energy stored in said first condenser through said second condenser and light source thereby to produce a series of flashes.

2,447,297
PROTECTION OF GLASS SURFACES AGAINST ALKALI ATTACK
Walter F. Wegst and Leslie R. Bacon, Wyandotte, and Thomas H. Vaughn, Grosse Ile, Mich., assignors, by mesne assignments, to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan
Application January 6, 1942, Serial No. 425,804
5 Claims. (Cl. 252—135)



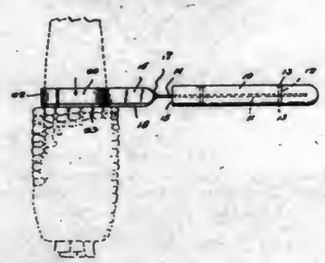
1. A composition for cleaning glass and vitreous ceramic surfaces consisting of 1% to 40% by weight of materials selected from the group consisting of sodium carbonate, trisodium phosphate, tetrasodium pyrophosphate and sodium metasilicate calculated to the anhydrous basis, an alkali-soluble zinc compound giving zinc in anionic form by reaction in alkaline solution present in a ZnO equivalent amount of 1.5% to 7.6% by weight on the basis of the total alkali compounds present, and the balance caustic soda.

2,447,298
CHAIN SAW
Raymond C. Whitlock, San Francisco, Calif.
Application September 14, 1944, Serial No. 553,965
1 Claim. (Cl. 143—32)



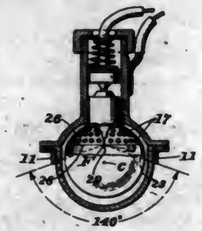
In a saw apparatus, a shield, an endless cutter chain mounted in said shield and adapted to contact a tree to be felled, means for guiding said cutter chain in said shield, turntables positioned at each end of said shield, means for motivating said turntables, said means comprising motor driven shafts connected to said turntables, means connected to the motors for supporting rollers, and segmental pressure plates secured to said motor shafts and positioned above said turntables and capable of being depressed under the influence of the rollers to force portions of said cutter chains into engagement with said turntables, said means for securing said pressure plates to said shafts comprising a nut threadedly engaging the upper end of each of said shafts, and a lug formed on each face of each of said nuts forming a pivotal mounting for each of said pressure plates.

2,447,299
FASTENING MEANS
William A. Williams, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 14, 1945, Serial No. 582,675
1 Claim. (Cl. 287—53)



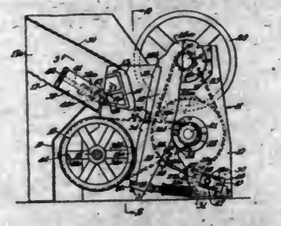
A fastening means of the character described comprising a split sleeve adapted to fit over a shaft and externally tapered to engage in a correspondingly tapered bore in a wheel hub, said sleeve being of a length to project beyond one end of the wheel hub and provided at its projecting end with a circumferential groove; and a screw collar confined between the opposite shoulders of the groove with a portion thereof accessible for wrench application beyond the aforesaid end of the wheel hub, and adapted to engage an internal thread in the wheel hub bore so that when turned in one direction the sleeve will be shifted into binding engagement with the shaft surface and the wheel hub bore, and when turned reversely will release said sleeve.

2,447,300
GRASP DEVICE
William A. Williams, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 16, 1946, Serial No. 641,441
4 Claims. (Cl. 214—65.4)



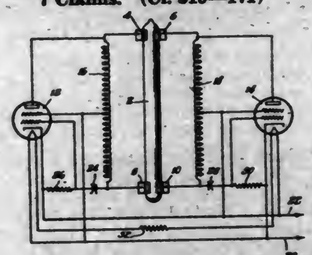
1. A grasp device useful in connection with a transporting truck in picking up container drums and the like provided with outwardly-projecting flanges or chimes circumferentially of their tops, said device comprising a stop member adapted to be affixed to a vertical part of the truck and having a ledge for engaging beneath the chime of a drum of the aforesaid type in upright position; and an associated relatively movable latch element with a hook having a beveled cam end for capacity to ride over the chime and automatically engage it at the back as the truck is brought to the drum from the side to pick it up.

2,447,301
CORN REMOVER FOR COOKED SWEET CORN
Marshall M. Wright, Pierpont, Ohio
Application October 30, 1944, Serial No. 561,023
1 Claim. (Cl. 30—278)



A corn cutter comprising a circularly shaped cutting blade having resiliently overlapping ends, and a handle integral with the cutting blade and extending radially therefrom at a point substantially opposite the overlapping ends, the said handle being bent at right angles to the cutting blade.

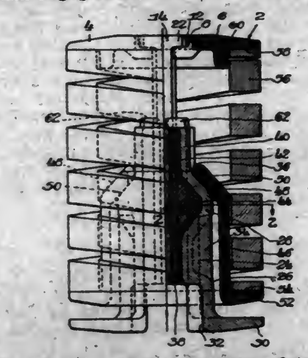
2,447,302
POSITION LIGHT
Charles Adler, Jr., Baltimore, Md.
Application September 29, 1947, Serial No. 776,673
3 Claims. (Cl. 240—7.7)



1. An aircraft position light comprising an electric light source, a concave reflector, said reflector having a multiplicity of spaced inwardly extending reflecting protuberances, angular cut-off means for limiting the horizontal spread of beams from said light source and reflector, and a light transmitting cover, the focal point of said reflector coinciding with the point of said light source and being located between a point outside of the reflector to a point adjacent a line projected across the outer diameter of the reflector, said cut-off means comprising a pair of shields having arcuate edges whose ends meet at diametric points; the focal point of said reflector and the point of said light source substantially coinciding with a point on a diametric line connecting the meeting ends of the arcuate edges of said shields.

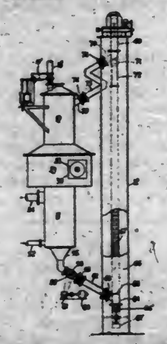
2,447,303
CRUSHING MACHINE FOR ROCKS AND THE LIKE
Einar H. Anderson, Minneapolis, Minn.
Application January 6, 1944, Serial No. 517,167
4 Claims. (Cl. 241—155)

1. In a crushing machine, a rotary crushing roll, a reciprocating crushing jaw opposed to one side of said roll, means for revolving said roll in a direction to cooperate with said reciprocating jaw for material feeding and crushing purposes, means for reciprocating said jaw toward and away from said crushing roll with a compound, limited downward movement as said jaw approaches said roll, said jaw having a lower concave crushing surface opposed to a side of said roll and extending substantially concentric thereof and said roll carrying a longitudinally extending blade protruding from the periphery thereof for engaging said jaw to scrape sticky material therefrom.



2,447,304
CIRCUIT FOR MINIATURE LAMPS
Carl E. Atkins, Elgin, Ill., assignor to Sun-Kraft, Inc., Chicago, Ill., a corporation of Delaware
Application March 20, 1946, Serial No. 655,700
7 Claims. (Cl. 315—171)

1. A circuit for energizing a single gaseous discharge tube with associated electrodes comprising a pair of vacuum tube oscillator circuits each including a vacuum tube, a source of alternating current, means connecting the anodes of said vacuum tubes for energization in phase opposition from said source of alternating current, and means connecting the output of each oscillator circuit to said electrodes of said discharge tube.



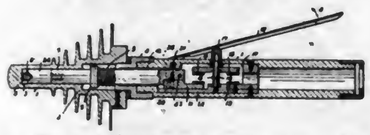
2,447,305
SNUBBER
Fred E. Bachman, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 10, 1944, Serial No. 517,676
18 Claims. (Cl. 267—9)

1. In a snubber, a top follower comprising a base with spaced recesses in the top thereof, a central opening through said base merging with slots extending into respective recesses, a stem having spaced arms extending upwardly through respective slots, each arm having a complementary lug received within the associated recess for interlocking engagement with said base, a pair of spaced friction shoes each comprising a support element having a main wall with a hollow projection presenting an external wedge face, and a removable friction element associated with said support element and having a complementary lug recessed within the hollow projection thereof, said friction element being in frictional engagement with one side of said stem,

a lug on each support element overlying the associated friction element and received between said spaced arms for cooperation with a portion of said stem to limit the expansion stroke of the snubber, a spring support member sleeved over said shoes in complementary wedge engagement with said wedge faces, and a spring compressed between a flange on said spring support member and an aligned portion of said base, each of said support elements comprising a base flange affording a seat for the snubber against an associated supporting member.

2,447,306
FLUID HEATER
Ervin G. Bailey, Easton, Pa., and Ralph M. Hardgrove, Westfield, N. J., assignors to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey
Application September 16, 1943, Serial No. 502,580
24 Claims. (Cl. 263—19)

1. A fluid heater comprising an upper chamber enclosing a fluent gas-pervious mass of refractory heat transfer material and having a heat transfer material inlet and a heating fluid outlet at its upper end, means for introducing a heating fluid directly into the lower part of said upper



chamber in heat transfer relation with the mass of heat transfer material therein, a lower chamber enclosing a fluent gas-pervious mass of refractory heat transfer material and having a heat transfer material outlet at its lower end, said lower chamber having an inlet at its lower end for a fluid to be heated therein and a heated fluid outlet at its upper end above the mass of heat transfer material therein, means forming a vertically elongated structurally unobstructed throat passage of reduced cross-section between and directly connecting said upper and lower chambers and enclosing a continuous fluent gas-pervious mass of refractory heat transfer material connecting said masses of heat transfer material in said upper and lower chambers, said last named means including a tubular refractory member extending downwardly into said lower chamber to a level below the level of said heated fluid outlet, and means receiving heat transfer material from said lower chamber material outlet and returning the heat transfer material to said upper chamber material inlet.

2,447,307

ELECTRODE HOLDER

William Frank Baker and Ian Jack Pickering, Birmingham, England, assignors to The General Electric Company, Limited, London, England

Application November 26, 1946, Serial No. 712,435
In Great Britain October 23, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 23, 1964
3 Claims. (Cl. 219—8)

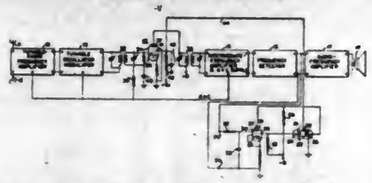
1. A welding electrode holder comprising a body, normally closed electrode gripping means, normally open switch contacts electrically connected in the energizing circuit for said gripping means, means to mount said switch contacts for movement toward and away from one another, an external member, means to mount said member for movement relative to said body, said member occupying a certain normal position with respect to said body, means operatively connecting said electrode gripping means and said member, and means operatively connecting said switch contacts and said member, said member rendering said first named means operative to release an electrode when moved in one direction relative to said body away from normal position and said member rendering said second named means effective to close said switch contacts when said member is moved in an opposite direction relative to said body away from normal position.

2,447,308

PROCESS FOR IMPROVING THE COLOR OF SURFACE-ACTIVE AGENTS

Leland James Beckham, Geddes, and William Alfred Fessler, Camillus, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York

No Drawing. Application October 12, 1943, Serial No. 505,960
7 Claims. (Cl. 260—504)



1. In a process for preparing surface-active agents by successively reacting a hydrocarbon mixture containing olefinic hydrocarbons and derived from a mineral source with a nitrosating agent and an aqueous solution of a water-soluble sulfite, the improvement which comprises removing chromogenetic constituents of an olefin-containing hydrocarbon mixture of the aforesaid type composed mainly of hydrocarbons containing 10 to 30 carbon atoms, by extracting one part by weight of said hydrocarbon mixture with 0.5 to 6 parts by weight of an extracting agent which is incompletely miscible with said hydrocarbon mixture, which has greater dissolving power for the oxygen-containing, sulfur-containing, nitrogen-containing and aromatic constituents of cracked petroleum than for the paraffins and cycloparaffins of cracked petroleum, and which is a member of the group consisting of methyl lactate, methyl formate, diethylene glycol, furfuryl alcohol, ethanolamine, diethanolamine, ethylene chlorohydrin, beta-beta'-dichlordiethyl ether, ethylene glycol monomethyl ether, furfural, phenol, cresol, nitro-methane, nitro-benzene, morpholine, pyridine, methylamine, ethylene diamine and sulfur dioxide, under temperature and pressure conditions at which the extracting agent is in the liquid phase, separating the solvent-extract phase from the raffinate phase, and reacting olefins contained in the raffinate phase with the nitrosating agent.

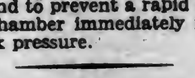
2,447,309

TUNING INDICATOR SYSTEM

Harold L. Blaisdell, Little Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application October 29, 1945, Serial No. 625,159
12 Claims. (Cl. 250—40)

1. A tuning indicator system for a wave-signal receiver including an adjustable tuning means comprising, an input circuit adapted to have applied thereto a control signal the magnitude of which varies with the degree of mistuning of said receiver over individual tuning ranges on either side of a received wave signal, a tuning indicator coupled to said input circuit and responsive to said control signal for indicating said degree of mistuning, and means for deriving a control effect the magnitude of which varies much less rapidly with said degree of mistuning than does said control signal and for utilizing said control effect to vary inversely with the intensity of said received wave signal the sensitivity of response of said indicator to said control signal to reduce the sensitivity of indication thereof with increasing intensities of said received wave signal.



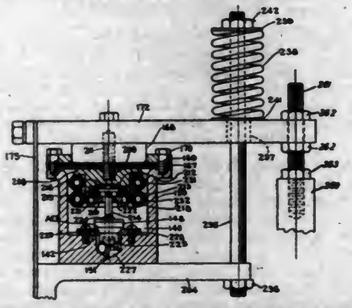
2,447,310

SAFETY RAZOR AND SAFETY RAZOR BLADE CLAMP

Alfred William Brenninger, Philadelphia, Pa.

Application June 10, 1943, Serial No. 490,364
7 Claims. (Cl. 30—51)

1. A safety razor comprising a blade support part, a blade, a blade clamp element including top and bottom plies engaging the top and bottom surfaces of the blade, the blade support and blade clamp element having interengaging tongue and recess portions formed at the ends thereof,



and the tongue portions being resilient and normally spaced to be forced slightly apart upon engagement with the recess portions whereby the blade and clamp element are detachably secured to the support.

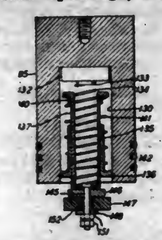
2,447,311

EXPANSIBLE CHAMBER FLUID MOTOR WITH PISTON ACTUATED VALVE AND PRESSURE ABSORBING FLEXIBLE ENVELOPE IN CYLINDER

Ralph Burt, Homer City, Pa., assignor to Syntron Company, Homer City, Pa., a corporation of Delaware

Application May 15, 1943, Serial No. 487,159
3 Claims. (Cl. 121—164)

1. In a hydraulic motor of a single acting expansible chamber type, the combination of a pressure chamber closed by a movable member and having an inlet arranged to be connected to a liquid under pressure and an outlet for discharging liquid from the chamber, said chamber capable of expanding and contracting by the relative movement of the movable member, an operating valve arranged to control the flow of liquid through the outlet connection, a double acting cushion means connecting the movable member with the operating valve to actuate the latter, a sealed flexible envelope enclosing a gas and subjected to the pressure of the liquid in the chamber, said envelope being compressed to absorb the energy of the peak pressure developed upon the closing of the operating valve which energy is subsequently released to the liquid in the chamber to increase the stroke of the movable member and to prevent a rapid drop in pressure in the chamber immediately following the period of peak pressure.



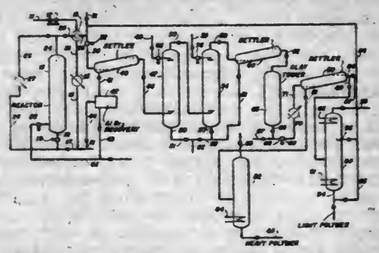
2,447,312

EXPANSIBLE CHAMBER MOTOR WITH PISTON ACTUATED VALVE FOR JOLTING MACHINES

Ralph Burt, Homer City, Pa., assignor to Syntron Company, Homer City, Pa., a corporation of Delaware

Application January 26, 1944, Serial No. 519,778
3 Claims. (Cl. 121—14)

1. Jolting apparatus comprising a base, a separate cylinder secured to said base, a hollow piston in said cylinder, inlet and outlet openings communicating with said cylinder, a valve controlling one of said openings, a guide sleeve in

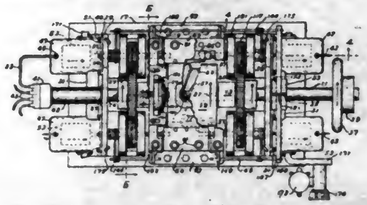


said piston, a telescoping sleeve in said guide secured to said valve, spring means abutting said sleeves, and a spring in said latter sleeve abutting said piston.

2,447,313

POLYMERIZATION PROCESS

Don R. Carmody, Dallas, and Lorld G. Sharp, Irving, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

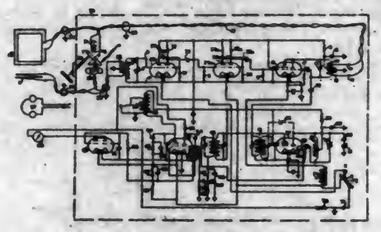


Application October 19, 1946, Serial No. 704,396
10 Claims. (Cl. 260—683.15)

8. The liquid phase process for the manufacture of heavy propylene polymer which comprises the steps of (1) contacting in a reactor a liquified normally gaseous hydrocarbon stream containing propylene and at least one normally gaseous saturated hydrocarbon having not more than 4 carbon atoms per molecule with aluminum bromide catalyst for sufficient time to convert substantially all of the said propylene to propylene polymer, (2) passing the reactor effluent obtained from step 1 in contact with a light fraction of the polymer product obtained by fractionating the reactor effluent as described hereinafter, whereby the major portion of the aluminum bromide dissolved in the reactor effluent is precipitated in the form of aluminum bromide-hydrocarbon complex, (3) separating the aluminum bromide complex obtained in step 2 from the product mixture, (4) adjusting the ratio by weight of the normally gaseous paraffinic hydrocarbons to polymer in the polymer product to a value within the range of from about 1:1 to about 20:1, (5) raising the temperature of the product mixture of propylene polymer and paraffinic hydrocarbons obtained from step 4 to a temperature within the range of from about 145° F. to about 195° F. whereby the product mixture is caused to separate into two phases consisting of a relatively heavy polymer-containing phase and a relatively light polymer-containing phase, (6) separating the phases obtained in step 5, (7) separating propylene polymer from the separate phases obtained in step 6 to

obtain separate streams of relatively heavy propylene and relatively light propylene polymer, (8) recycling at least a part of the light propylene polymer obtained in step 7 to step 2 of the process to precipitate aluminum bromide-hydrocarbon complex from the product mixture, and (9) recovering heavy propylene polymer from step 7 of the process.

2,447,314
INTERNAL-COMBUSTION ENGINE
James J. Carroll, Grosse Pointe Park, Mich.
Application September 17, 1942, Serial No. 458,619
10 Claims. (Cl. 123—58)

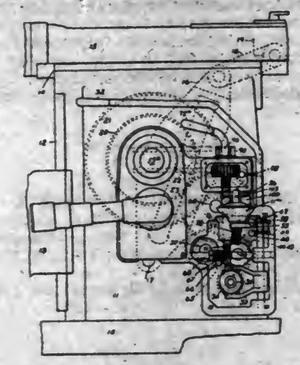


1. In combination in an internal combustion engine, a main shaft, means rotatively journalling said main shaft, a plurality of cylinders, means mounting said cylinders with the axes thereof spaced from and substantially parallel to the axis of said main shaft, a piston in each cylinder a piston push rod secured to each piston, each piston push rod extending from the associated cylinder in a spaced substantially parallel relation to the main shaft, conventional means associated with the cylinders for controlling inlet and exhaust in accordance with the movements of the pistons for performing the usual cycles of an internal combustion engine, power transmission means independently operative between each piston push rod and the main shaft for applying power impulses to rotate the shaft with a predetermined direction of rotation as each piston push rod moves out of its respective cylinder on power strokes, additional power transmission means for transmitting power from the main shaft to the piston push rods for returning the pistons into their respective cylinders successively in a predetermined timed relation, and resilient recoil means arranged for cushioning and aiding in the reversal of the movements of the reciprocating pistons and push rods at the ends of stroke movements.

2,447,315
AMMUNITION STRUCTURE AND LAUNCHING DEVICE THEREFOR
Samuel Herbert Clarke, Baltimore, Md.
Application July 10, 1942, Serial No. 450,486
14 Claims. (Cl. 89—1.5)

12. In combination with a launching device that includes substantially horizontal parallel guides, guide-engaging structures normally engaged with said guides and releasable therefrom and adapted to slide therealong to be launched therefrom, an explosion device that has opposite axles normally engaged with said guide-engaging structures and has one of said axles tubular and provided with a power-applying device extending therethru and normally against one of said guides and thereby restrained against operation, said explosion device being provided with a time-controlled explosion producer and with means to detain the explosion-producer against operation, the last said means being normally engaged with said power-applying device for cooperation in releasing control of the explosion producer so as to permit the latter to operate after it is launched from the launching device.

2,447,316
VARIABLE FREQUENCY OSCILLATORY SYSTEM
Leslie F. Curtis, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application November 27, 1945, Serial No. 631,053
9 Claims. (Cl. 250—36)



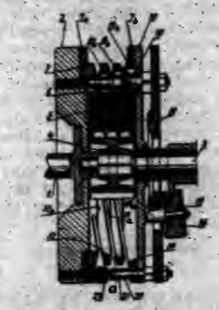
2. A variable-frequency oscillatory system comprising, a reactance network having input and output terminals and including a passive mutual-reactance network normally balanced to provide a substantially zero value of a reactive component of coupling between said input and said output terminals, said mutual-reactance network being responsive to a frequency-control condition external thereto in space for modifying said baalnce of said network to provide a reactive component of coupling between said input and said output terminals, an oscillator for generating oscillations, means for applying said oscillations to said input terminals, means for amplifying the oscillations translated through said network to said output terminals, and means for applying the amplified oscillations back to said oscillator in such phase as to shift the oscillator frequency in response to variation of said reactive component of coupling.

2,447,317
GEAR CHANGING MECHANISM FOR SHAPING MACHINES
Granger Davenport, Montclair, N. J., assignor to Gould & Eberhardt, Incorporated, Irvington, N. J., a corporation of New Jersey
Application October 18, 1945, Serial No. 623,052
5 Claims. (Cl. 74—342)

1. A shaping machine combining a transmission embodying but three serially related sets of change-speed mechanisms for reciprocating the ram at any selected one of sixteen speeds, each of said first and third sets of change speed mechanisms of the series affording but two changes in speed, and the intermediate set of change-speed mechanisms affording but four changes in speed, control means for the intermediate change speed mechanisms, and control means common to both the first and third sets of change speed mechanisms of the series embodying a rotatable and axially movable lever and connections therewith responsive to rotational movement of the lever

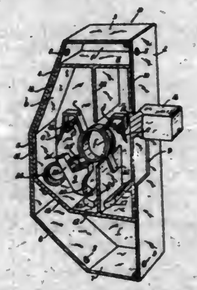
to one of the change-speed mechanisms, and additional connections therewith responsive to

axial movements of said lever to the other of the change-speed mechanisms.



2,447,318
STARTING SWITCH
Frederick C. Daxley, Stratford, and John M. Pistey, Fairfield, Conn., assignors to General Electric Company, a corporation of New York
Application March 18, 1946, Serial No. 655,073
8 Claims. (Cl. 200—16)

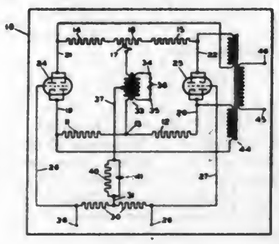
2. An electric switch comprising, in combination, a housing of insulating material, spaced contact members carried by said housing, a push button movable relative to said contact members, conducting means carried by said push button including spring biased ball contacts engaging said contact members for closing a circuit therethrough, a separate switch mechanism carried by said housing, said mechanism including a plunger adapted to engage said push button to move it to closed circuit position, and spring means normally biasing said switch mechanism to open circuit position.



2,447,319
FRICTION CLUTCH WITH MULTIPLE DISKS
Maurice de Borniol de Fourchambault, Paris, France, assignor to Schneider & Cie, Paris, France, a joint-stock company of France
Application May 7, 1945, Serial No. 592,296
In France March 22, 1944
11 Claims. (Cl. 192—69)

11. A friction clutch of the type comprising coaxial driving and driven elements, two series of friction clutch discs rotatable with said driving and driven elements respectively and capable of axial movement relatively thereto, and centrifugally actuated means responsive to the speed of rotation of said driving element for applying clutch engaging force to said discs to move them into clutching engagement with one another, characterized by the inclusion of an annular disc separating cage coaxial with said driving and driven elements and elastically compressible in an axial direction, said cage being connected at one end to said driving element for rotation therewith and having annular shoulders thereon at axially spaced intervals against which rest the discs of one of said series, said centrifugally actuated means being so constructed and arranged as to apply compressing force to the other end of said cage simultaneously with the application of clutch engaging force to said discs,

and means for varying the force necessary to effect clutching action of said discs comprising a plurality of springs arranged parallel to the axis of said axially compressible cage and acting in conjunction therewith for opposing the clutch engaging force exerted by said centrifugally actuated means, and means for adjusting the force exerted by said springs.

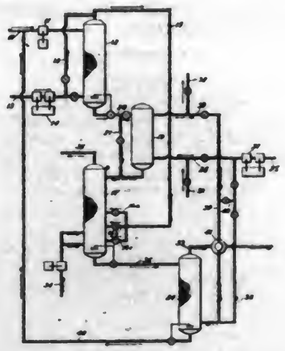


2,447,320
ELECTRICAL SWITCH
Sara Maria Iribarren de Olariaga, Luis Bulgarini, and Percy Forster, Buenos Aires, Argentina
Application July 17, 1947, Serial No. 761,542
In Argentina May 22, 1947
10 Claims. (Cl. 200—77)

1. An electrical switch including two resilient conductive arms arranged in pincer like fashion and adapted to retain in its operative position a movable conductive bridging member represented by a roller, ball or the like capable of passing from the operative to the inoperative position or vice versa by a thrust action of externally actuated means and by the resilient effect of said electrically conductive arms, wherein the two conductive arms arranged in pincer like fashion are provided at their respective intermediate portions with oppositely curved seating sections, adapted to cooperatively receive and retain the movable bridging member, one of the pincer arms having an end extension that continues from the associated curved portion and is so shaped as to

facilitate the release and the entrance of the bridging member, while the other resilient pincer arm has a bent resilient extension the free end of which is arranged at such a distance from the nearest part of the curved seating portion of the same arm, that the movable bridge is capable of moving from said curved portion to the free end without breaking its contact with the conductive arm, an insulating shoe being mounted on the above mentioned free end of the resilient bent extension and which, when the contact bridge is in operative position, remains normally interposed between the conducting portions of the related arm and the other conductive arm, thus blocking the access of the contact bridge to the conductive pincer, said shoe having in addition a contact zone facing an associated portion of the other member, to form with said portion a resilient pair for impulsion of the contact bridge towards the inside of the pincer, during the operative stroke of said bridge.

2,447,321
ELECTRICAL DETECTOR NETWORK
William F. Ertzman, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application June 9, 1945, Serial No. 598,596
4 Claims. (Cl. 171—95)

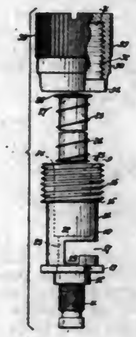


1. An electrical network comprising a source of alternating current, two similar circuits connected in parallel across said source, each circuit including in series a portion having fixed nonreactive conductance and a portion comprising a space path of variable bilateral conductance, means for varying the conductance of one of said space paths differently from that of the other in correspondence with changes in a magnitude to be measured, and means responsive to the alternating potential difference between points correspondingly located on said two circuits to provide a measure of said magnitude.

2,447,322
INFRARED-RESPONSIVE PHOSPHORS
Gorton R. Fonda, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application November 4, 1943, Serial No. 508,959
5 Claims. (Cl. 252—301.6)

4. A composition convertible by heat-induced reaction to an infrared-responsive phosphor, said composition consisting essentially of zinc sulfide, about two to five per cent of a compound chosen from the group consisting of lead sulphate, lead oxide, and lead sulfide, and approximately .001 to .1 per cent by weight of an activator chosen from the group consisting of copper, manganese and mixtures thereof.

5. A phosphor which consists essentially of zinc sulfide, approximately one-half of one per cent of lead, calculated as elemental lead, whereby storage of energy is induced in a state releasable as luminescence by infrared radiation and approximately .001 to .1 per cent by weight of an activator of luminescence chosen from the group consisting of copper, manganese and mixtures thereof.



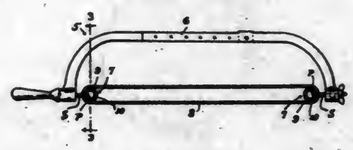
2,447,323
OXYGEN ABSORBENT MEDIA
Celeste M. Fontana, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application August 7, 1944, Serial No. 548,349
1 Claim. (Cl. 252—189)

A composition of matter consisting essentially of a melt of potassium chloride, cuprous chloride and cupric chloride said potassium chloride being present in amounts within the range of from about 25 mole percent to about 45 mole percent, said cuprous chloride being present in amounts within the range of from about 5 mole percent to about 65 mole percent and said cupric chloride being present in amounts within the range of from about 10 mole percent to about 60 mole percent.

2,447,324
SPRING BINDING POST
Benjamin Fox, Philadelphia, Pa., assignor, by mesne assignments, to Hugh H. Eby, Fort Wayne, Ind.
Application March 8, 1944, Serial No. 525,551
3 Claims. (Cl. 173—259)

1. A binding post comprising a threaded base having a wire-receiving slot extending to an opening in the side of the base, a relatively narrow axial guide channel and a relatively wider recess in concentric aligned relation in the base, the intersection of the channel and recess defining a shoulder in the base between the channel and recess, a follower slidably mounted in the guide channel and having a flanged end, a compression spring disposed in the recess and surrounding the follower, said spring being compressed between the flange of the follower and the shoulder in the base, a threaded cap surrounding the flanged end of the follower and movable on and relative to the threaded base in constant contact with said follower and arranged to force the follower inwardly against the lower end of the guide channel in the base, the contacting portions of the follower and cap comprising respectively a substantial point and a relatively flat surface to minimize rotative friction in

the contact between them as the cap turns on the threaded base.



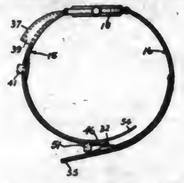
2,447,325
PRODUCTION OF 3,11-OXYGENATED STEROIDS
Thomas F. Gallagher, Chicago, Ill., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application June 24, 1946, Serial No. 678,877
3 Claims. (Cl. 260—397.1)

1. A method of preparing 3,11-oxygenated steroids which comprises esterifying the hydroxyl in 3-position of 3,12-dihydroxy-11-ketocholanic acid, converting the part ester thus produced to the methyl ester by treatment with diazomethane, replacing the 12-hydroxy with bromine by treating the methyl ester with phosphorus tribromide, and subjecting the resulting bromo compound to the action of a reducing agent to convert the bromine in 12-position to hydrogen.

2,447,326
RECOVERY OF FLUOSULFONIC ACID AND USE AS CONDENSING AGENT IN PRODUCTION OF DDT
Charles W. Gates and William P. Woods, Elmira, Ontario, Canada, assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application August 13, 1947, Serial No. 768,490. In Canada May 17, 1947
7 Claims. (Cl. 260—649)

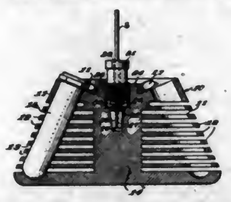
2. The process of recovering fluosulfonic acid from spent acid which has been formed in the manufacture of 2,2-bis(p-chlorophenyl)-1,1,1-trichloroethane by reaction of chloral with monochlorobenzene with fluosulfonic acid as the condensing agent, which spent acid comprises sulfuric acid, fluosulfonic acid and hydrogen fluoride, which comprises admixing fluosulfonic acid containing free sulfur trioxide with said spent acid, distilling the resulting mixture and recovering fluosulfonic acid as the distillate.

2,447,327
ABRASIVE TOOL
Adrian E. Gerrits and Harvey E. Gygi, Appleton, Wis.
Application March 20, 1947, Serial No. 735,879
2 Claims. (Cl. 51—186)



1. The combination with a substantially inverted U-shaped frame having aligned openings through the end portions thereof, opposed adaptors having openings therethrough at their medial points and in alignment with the openings in the ends of the frame, fastening elements slidably extending through the openings in the ends of the frame with their inner ends extending through the openings in the adaptors and their outer ends extending outwardly of the ends of the frame, pins on the inner ends of the fasteners having their free ends seated in depressions in the inner peripheries of the adaptors, a handle secured to the outer end of one of the fasteners, a thumb-nut threadedly screwed on the outer end of the other fastener, and laterally spaced endless belts trained over the outer portions of the adaptors on opposite sides of their fastening elements.

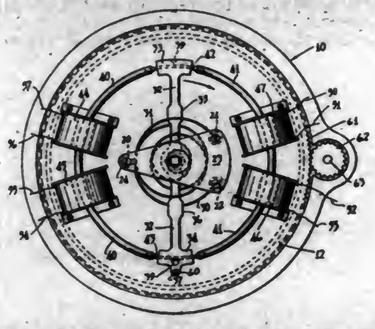
2,447,328
GOLF CLUB GRIPPER
Paul H. Gerrits, Appleton, Wis.
Application January 23, 1947, Serial No. 723,792
1 Claim. (Cl. 273—35)



A golf club gripper comprising a substantially triangular shaped body portion adapted to be disposed in contact with the palm of a hand with one apex of said triangular body portion being adjacent the index finger and the base of the same extending across the heel of said palm, an index finger surrounding loop at said apex of the body portion, a portion of the body portion adjacent the loop extending between the crotch formed by the thumb and index finger of a hand, said portion providing a bearing surface for the shaft of a golf club, said body portion having a notch formed in its base portion, the base of said body portion having a loop extending across said notch and laterally from the sides of said body portion, said loop being of sufficient size to form a securing loop disposed about the heel end of the hand, and said notch and the portion of the loop extending thereacross being adapted to encircle the shaft of a golf club handle.

2,447,329
ADJUSTABLE COUPLING FOR WRIST WATCH BANDS
Charles Goldblatt, New York, N. Y.
Application January 6, 1948, Serial No. 670
9 Claims. (Cl. 24—68)

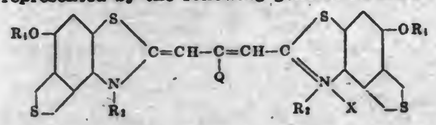
1. A variable coupling for joining the opposed terminal ends of flexible band sections in adjustable relation to each other in overlapping position so that one of said sections overlies the other, the overlying section having its rear face provided with a layer having stringers and separable fastener elements joined into operating engagement by a slider, and a connecting link adjacent the terminal end of the underlying band section connecting the same to said slider whereby pulling the terminus of the overlying section will effect adjustment of the overlying band section in relation to the underlying band section.



2,447,330
ROTOR FOR ULTRACENTRIFUGE MACHINES
Joseph Grebmeier, Menlo Park, Calif.
Application May 16, 1946, Serial No. 670,211
6 Claims. (Cl. 233—26)

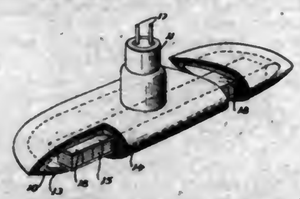
1. A rotor for ultra-centrifugating machines comprising a block of generally frusto-conical form having its smaller end upward, said block comprising a central solid portion and vertically spaced circumferential fins extending normal to the axis of the rotor from the central portion between the upper and lower ends of the block, and tube receiving wells in the block adjacent to and parallel with its conical wall and extending in part through said fins.

2,447,331
CONTROL APPARATUS
Le Roy A. Griffith, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 1, 1943, Serial No. 485,296
6 Claims. (Cl. 323—83)



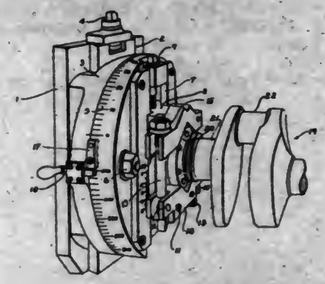
2. In a control instrument, an adjustable member, an actuated member, means mounting said actuated member for pivotal movement with respect to said adjustable member, means resiliently urging said actuated member to take a predetermined position with respect to said adjustable member, and means pivotally adjusting said adjustable member with respect to said actuated member, said adjustable member comprising pairs of hollow inductance coils connected in a normally energized electrical bridge and located in spaced diametrically opposed relationship about a circle to which their axes are tangent, said coils being spaced apart from one another to substantially reduce mutual inductance therebetween, said actuated member including a closed

annulus, having relatively short nonmagnetic portions and relatively long magnetic portions, and a supporting arm for said annulus, each said magnetic portion of said armature at all times completely traversing both coils of one of said pairs.



2,447,332
TRIMETHINE CYANINE DYES
Frances M. Hamer and Edward B. Knott, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application May 4, 1945, Serial No. 592,070. In Great Britain May 18, 1944
5 Claims. (Cl. 260—240)

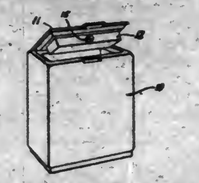
1. The trimethine cyanine dyes which can be represented by the following general formula:



wherein R_1 and R_2 each represents an alkyl group, Q represents a member selected from the group consisting of a hydrogen atom and an alkyl group and X represents an anion.

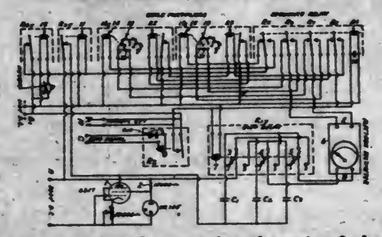
2,447,333
ULTRA-AUDIBLE SOUND RECEPTION
Harvey C. Hayes, Washington, D. C., assignor to United States of America as represented by the Secretary of the Navy
Application December 30, 1931, Serial No. 583,993
18 Claims. (Cl. 177—386)

1. A method of detecting the presence of a source of audio frequency sound which sound also includes audibly modulated ultra-audible vibrations, which comprises utilizing at a receiving station the modulated ultra-audible vibrations to generate similarly modulated ultra-audible variations in electrical potential and producing an indication of said modulation frequencies.



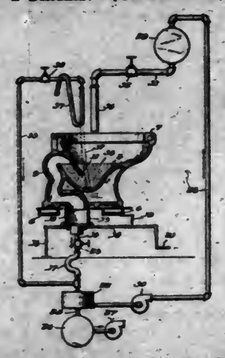
2,447,334
CRANKSHAFT REGRINDING CHUCK
Francis P. Healy, Springfield, Mass., assignor to Van Norman Company, Springfield, Mass., a corporation of Massachusetts
Application December 22, 1945, Serial No. 636,980
2 Claims. (Cl. 51—237)

1. A work holder for crank shafts comprising a face plate rotatable around an axis, a main slide adjustable on the face plate in a plane intersecting the axis of the face plate at right angles, a head rotatably mounted upon an axis parallel to, and movable by the main slide in a plane including, the axis of the face plate, an auxiliary slide mounted on the head for radial movement thereon, means for adjusting and holding in adjusted position said auxiliary slide, a V-block fixed to the auxiliary slide, and a second V-block on the auxiliary slide adjustably spaced from the first, the plane bisecting the angles of the V's being parallel to the path of motion of the auxiliary slide and including the axis of rotation of the head; whereby, with a main bearing of a crankshaft clamped between the V-blocks, the auxiliary slide can be shifted to bring the axis of said bearing into alignment with the axes of rotation of the head and face plate, the main slide can thereupon be adjusted to space the axis of the main bearing from the axis of the face plate a distance corresponding to the throw of the crank pin bearings, and the crank pin bearings can be brought successively into alignment with the axis of the face plate, all without releasing the main bearing from the V-blocks.



2,447,335
REFRIGERATING APPARATUS WITH MEANS FOR INDICATING THE QUANTITY OF SOLID REFRIGERANT THEREIN
Charles E. Heilig, Jr., Upper Darby, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application March 6, 1946, Serial No. 652,354
6 Claims. (Cl. 62—89)

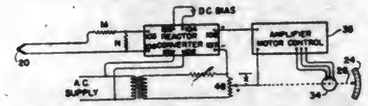
1. Heat exchange apparatus for use in refrigerating systems, said apparatus comprising a vessel containing a normally fluid substance congealable at a predetermined relatively low temperature and characterized by a latent heat of fusion sufficiently high to provide substantial refrigerating effect during the melting thereof, said substance being at least partially congealed during normal operation of the apparatus, and means responsive to variations in the quantity of substance con-



gealed to indicate the hours of refrigerating effect available.

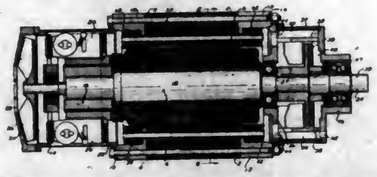
2,447,336
FLUXION METER
Charles A. Hisserich, San Diego, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application November 13, 1943, Serial No. 510,243
13 Claims. (Cl. 177—352)

1. A method of determining the rate of change of range comprising, transmitting a signal, starting the charging of a condenser at a uniform rate at the time of transmission of the signal, receiving the echo of the transmitted signal, charging each of a series of condensers successively at the same rate for the time interval between a respective transmitted signal and the received echo of such signal, and successively comparing the charges on the condensers in the order of their charging so that they indicate the rate of change of range.



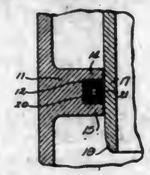
2,447,337
METHOD AND APPARATUS FOR GLAZING CIRCUITOUS PASSAGES
Arthur E. Hoch, Trenton, N. J., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application June 8, 1944, Serial No. 539,361
4 Claims. (Cl. 117—95)

4. The method of applying a liquid glaze to the wall surface of a closet trapway having open



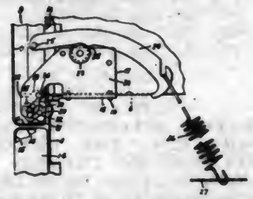
ends which consists in disposing a quantity of liquid glaze within a trapway portion of one end of the passage to form an air seal therefor, then suddenly reducing the air pressure within the trapway to effect movement of the liquid glaze therethrough at relatively high velocity to include contact with the upper and side wall surface portions of the closet trapway by the resultant turbulent movement of the liquid glaze.

2,447,338
TEMPERATURE RESPONSIVE MEASURING SYSTEM
Anthony J. Hornfeck, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application July 12, 1944, Serial No. 544,586
15 Claims. (Cl. 73—360)



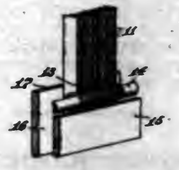
15. An automatic temperature measuring system including, in combination, a thermocouple sensitive to the temperature to be measured and producing a variable low-level direct current signal proportional to the temperature, a network energized from a source of alternating current and having an A.-C. output of amplified value, means for subjecting said D.-C. signal on said network so that the output of the latter is proportional to said signal but at an amplified value, a potentiometer energized from said source of A.-C. and having means to adjust its output, means opposing the network A.-C. output to the potentiometer output, electromagnetic means responsive to the difference in potential and phase directions of said last mentioned outputs, said electromagnetic means being arranged to adjust said potentiometer to balance said outputs, and an indicator actuated by said electromagnetic means.

2,447,339
COOLING OF ELECTRIC MACHINES
Vaino A. Hoover, Los Angeles, Calif., assignor to Electrical Engineering and Manufacturing Corporation, Los Angeles, Calif., a corporation of California
Original application November 6, 1943, Serial No. 509,295. Divided and this application November 13, 1945, Serial No. 627,979
1 Claim. (Cl. 171—252)



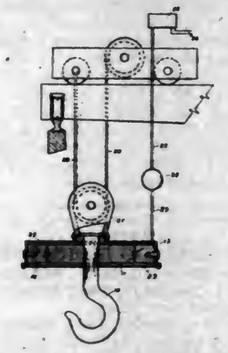
An electrical machine comprising a fixed stator having windings and an axial bore, an armature rotatably mounted within the stator bore, an armature shaft extending from the ends of the armature, a commutator on one end of said shaft, brushes disposed about said commutator, driven means connected to the other end of the armature shaft, housing means for said commutator and brush means, housing means for said driven means, a fan mounted on the armature shaft within the commutator housing and adapted to direct cooling air in the direction of the driven end of the machine, and a plurality of tubes formed of insulating material extending through the stator windings and communicating with both said housing means through which cooling air is forced by said fan through the entire length of the machine, the tubes being made of electrically insulating material which has substantially the same mechanical strength as the insulating material of the wire of the stator winding.

2,447,340
PACKED JOINT FOR CYLINDER BARRELS
Melvin F. Jackson, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application June 14, 1944, Serial No. 540,206
1 Claim. (Cl. 285—22)



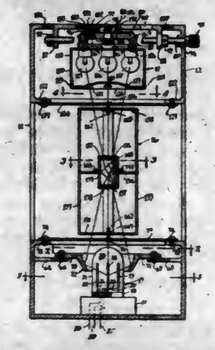
A seal for closing the space between two telescoped tubular members to prevent mingling of oil or oil vapors retained on one side of the seal and water retained on the other side thereof, comprising spaced frangible side walls projecting from one of said members into close proximity to the other member, and an annular ring of rubber substantially filling the space between said walls and members, said rubber ring being provided internally thereof with substantial void space distributed annularly and being of sufficient volume to absorb the swelling of said rubber ring under the influence of oil or oil vapors acting thereon, whereby breakage of said side walls and distortion of said tubular members due to swelling of the rubber is avoided.

2,447,341
OVEN DOOR
Harry R. Johnson, Fort Atkinson, Wis., assignor to Hotpoint Inc., a corporation of New York
Application December 5, 1945, Serial No. 632,980
5 Claims. (Cl. 126—194)



1. In a door structure having means defining a door opening, a door for closing said opening, and hinge means for hinging said door to swing on an axis along one edge of the door comprising, a fixed hinge support adjacent said edge, a coacting hinge element fixed to said door so as to move with it as a unit, a link pivotally connected to said hinge support and to said hinge element, the pivotal connection between the link and the hinge element constituting the swing center of the door, and coacting cam elements on said hinge support and element respectively interacting to force said swing center from said edge in the direction of said door opening and outwardly away from the plane thereof as the door is being moved to its open position and said hinge element moves with it as a unit.

2,447,342
COMB AND REED FOR TEXTILE MACHINES
Frank H. Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 18, 1945, Serial No. 635,648
5 Claims. (Cl. 139—192)

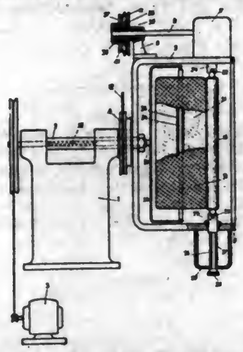


3. In a metallic reed or comb for textile work having a plurality of spaced dents mounted therein, a coil spring for spacing said dents in the structure having its convolutions extending into the spaces between the dents from one face of the reed but not beyond the other face thereof, a bar mounted on one face adjacent an edge of the structure and extending inwardly from said edge to a projecting portion of said spring, and a wider bar mounted on the other face and extending inwardly from said edge to beyond the spring, and parts of the coils of the spring abutting against the inside surface of said wider bar.

2,447,343
ELECTROMAGNET POSITIONING DEVICE
Herbert W. Kelly, Chicago, Ill., assignor to Mechanite Metal Corporation
Application January 24, 1945, Serial No. 574,383
6 Claims. (Cl. 294—82)

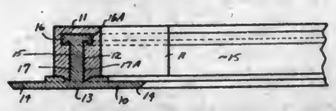
6. An electromagnet positioning device adapted to be suspended by cable means from a crane; said device comprising, in combination, a swivel hook, support means for pivotably supporting said swivel hook, means for fastening said support means to said cable means, an armature fastened to said swivel hook, a magnetic field supported about said armature by said support means, said magnetic field comprising an even number of electromagnetic members spaced annularly about the armature, any two adjacent electromagnetic members forming a pair, connection means for connecting said electromagnetic members to a source of electrical energy, and circuit switching means whereby the mean ends of one pair of electromagnetic members are polarized with one polarity and at the same time the mean ends of a pair directly opposite the first pair are polarized with opposite polarity forming strong magnetic poles of opposite polarity at opposite ends of the armature for holding in position said hook.

2,447,344
PHOTOELECTRIC SYSTEM FOR REMOTE INDICATION OF ANGULAR POSITION
Waldo H. Kliever, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 31, 1943, Serial No. 489,174
16 Claims. (Cl. 177—351)



1. Control apparatus comprising in combination, motor means to be controlled, a first member continuously rotatable about an axis, a plurality of light sources mounted upon said first rotatable member, a second member rotatable about the same axis and rotatably responsive to the earth's magnetic field, a light refracting member carried by said second rotatable member, means for continuously directing light from said sources through said light refracting means, a plurality of electrically light-responsive members opposedly mounted symmetrically with respect to said axis, light reflecting means means mounting said reflecting means to receive said light from said refracting means and reflect said light upon said light-responsive members, and means operatively associated with said light-responsive members and controlled thereby for actuating said motor means.

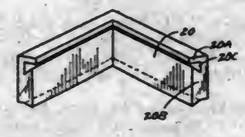
2,447,345
APPARATUS FOR SPINNING AND WINDING TEXTILE THREADS
René Jacques Henri Kovacs, Paris, France
Application September 17, 1945, Serial No. 616,822
In France August 2, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires August 2, 1964
6 Claims. (Cl. 57—71)



1. A machine for spinning and winding textile threads including a stationary support, a frame rotatably mounted at one end of an horizontal axis in said support and open at its opposite end, means controlling the rotation of

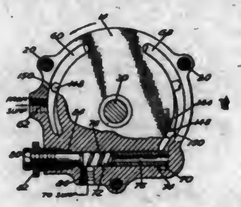
said frame, a friction winding cylinder carried by said frame near the open end thereof, the axis of said cylinder being perpendicular to the axis of rotation of the frame, a slider mounted for reciprocating movement across the open end of said frame in a direction parallel with the axis of the cylinder and in front of said cylinder and receiving the roving directly from the outside, means operated incident to the rota-

tion of the frame with respect to the stationary support for causing reciprocating movement of the slider and rotation of the winding cylinder, a spool carrying shaft mounted in the frame in a plane parallel with the cylinder axis, means positively and yieldingly urging said shaft towards said cylinder, and guiding means carried by the slider for directing the roving between the cylinder and the spool carrying shaft.



2,447,346
CORNERPIECE STRUCTURE
Walter M. Krantz, Youngstown, Ohio, assignor, by direct and mesne assignments, to Ace Storm Window Company, Youngstown, Ohio, a corporation of Ohio
Application August 1, 1945, Serial No. 608,197
3 Claims. (Cl. 189—36)

3. A corner piece structure comprising in combination a shape having an axially extending rib and an unbroken surface flange, the said rib being T-shaped in cross section, a pair of axially extending V shaped grooves formed in the said flange adjacent the base of the said rib, and an L-shaped corner piece having a channel formed therein registering with the said axially extending rib of the said shape and having sharp depending ridges registering with the said axially extending V shaped grooves.

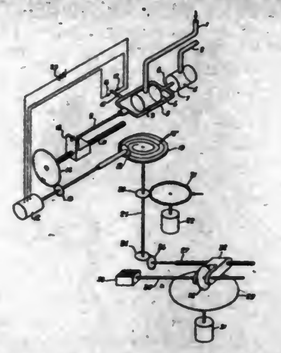


2,447,347
CORNER STRUCTURE
Walter M. Krantz, Youngstown, Ohio, assignor, by direct and mesne assignments, to Ace Storm Window Company, Youngstown, Ohio, a corporation of Ohio
Application August 1, 1945, Serial No. 608,198
3 Claims. (Cl. 189—36)

2. A corner structure comprising in combination a shape having an axially extending upstanding rib, the said upstanding rib having a channel formed in at least one side thereof, the edges of the said channel undercut with respect to the said shape so as to form a dovetailed channel; and an L-shaped corner piece provided with a dovetail shaped extension along one side there-

of and having an outwardly extending flange overlying the said dovetail shaped projection, the dovetailed projection registering with the said dovetailed channel and the outwardly extending flange partially overlying the said upstanding rib.

2,447,348
HYDRAULIC DRIVE
Andrew A. Kucher, Grosse Pointe Farms, Mich., assignor to Bendix Aviation Corporation, Detroit, Mich., a corporation of Delaware
Application May 21, 1943, Serial No. 487,953
10 Claims. (Cl. 60—53)



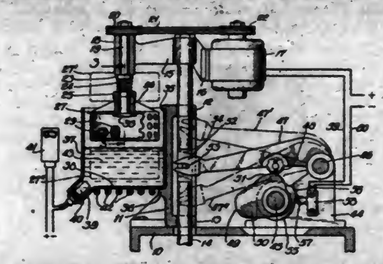
1. A hydraulic drive device comprising a power-driven pump having an intake and an outlet, a motor having an intake with a connection to the outlet of the pump and an outlet with a connection to the intake of the pump, whereby the motor is driven by the pump, a by-pass connecting the intake of the pump with the connection between the outlet of the pump and the intake of the motor, and a valve responsive to the outlet pressure of the pump and automatically controlling the by-pass to maintain a substantially uniform pressure at the motor intake, said by-pass leading through a sump containing a reserve supply of operating liquid.

2,447,349
SHIP'S LOG INDICATOR
Henry Lehde, Brooklyn, N. Y., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application November 4, 1944, Serial No. 561,901
1 Claim. (Cl. 73—407)

An indicating device, comprising, in combination, two opposed pressure cylinders having elements movable in response to pressures, a linearly movable frame embracing one of said cylinders and having a portion connecting said elements so as to be movable therewith in response to a differential in pressure within said cylinders, said frame further having a contact movable therewith, a reversible motor and circuit therefor including said contact, a screw shaft driven by said

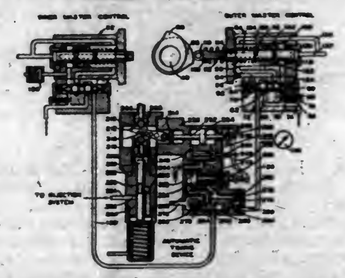
motor, a follower on said shaft, a spring connecting said follower and frame in alignment with the

portion of the latter connecting said cylinders, and indicating means operated by said motor.



2,447,350
CLAMPING MEANS FOR EAR ORNAMENTS AND OTHER ARTICLES OF JEWELRY
Arthur H. Levesque, North Attleboro, Mass., assignor, by mesne assignments, to R. F. Simmons Company, Attleboro, Mass., a corporation of Massachusetts
Application August 30, 1944, Serial No. 551,983
2 Claims. (Cl. 63—14)

1. In a device of the type indicated, a jaw-member constructed of sheet-metal with a looped portion of recessed construction having upstanding parallel side walls connected by a bottom wall, a second jaw-member comprising an arm hingedly connected to said first-named jaw-member, and a leaf-spring provided with a looped portion held within the recess of the loop of the first-named jaw-member and having an arm projecting therebeyond with its end engaging against the end of the arm of the second-named jaw-member, the walls of the recessed loop extending over the edges of the loop of the spring to fixedly attach the latter to said jaw-member with its arm acting against the end of the arm of the opposite jaw-member to swing said members toward each other.

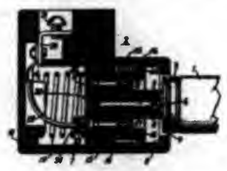


2,447,351
BOBBIN WAXING MACHINE
Davis Marinsky and Louis H. Morin, Bronx, N. Y.; Louis H. Morin executor of estate of said Davis Marinsky, deceased
Application May 12, 1945, Serial No. 593,518
8 Claims. (Cl. 91—42)

1. A machine of the class described comprising a frame, means supporting a tank in the frame, a reciprocating rod supported in the frame at one side of said tank, a shaft carried by the rod and disposed axially over the tank, means supported on the rod for intermittently rotating said shaft, a workpiece carrier, means on the carrier and said shaft for detachably coupling and keying the carrier to the shaft, and automatically

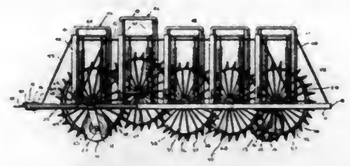
actuated means for operating said rod to move said carrier into three different positions with respect to said tank and for maintaining the carrier for a predetermined period of time in at least two of said positions.

2,447,352
AUTOMATIC TIMING CONTROL FOR FREE PISTON UNITS
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,897
7 Claims. (Cl. 123—46)



7. A free-piston unit including a cylinder, a piston in the cylinder and having a variable length of stroke, and accumulator injection means for injecting fuel into said cylinder, including a plunger adapted to pump fuel into an accumulator chamber, a nozzle, and a valve movable in response to a drop in pressure between said chamber and plunger to connect said chamber to the nozzle for injection of fuel, in combination with means responsive to changes in the end position of the compression stroke of the piston for procuring said drop in pressure independently of the position of the plunger.

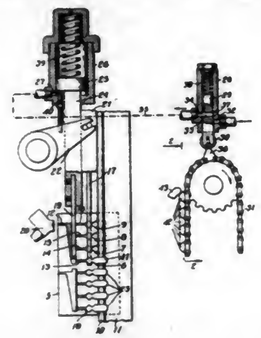
2,447,353
TUBULAR LAMP HOLDER
George S. Merrill, Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application November 25, 1944, Serial No. 565,099
6 Claims. (Cl. 200—51.09)



1. A lamp holder comprising a base having walls which define a cylindrical housing having a stop shoulder intermediate between its ends, a first disk in the housing, a spring biasing said disk against the stop shoulder, walls defining a plurality of spaced sockets in the disk, contacts

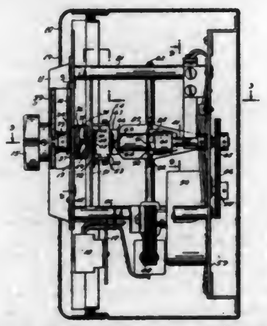
in said sockets, a lamp terminal engaging contact carried by said disk, a second disk in said housing, a spring biasing the second disk to a position in spaced relation to said first disk, pin contacts carried by said second disk adapted to enter said sockets and engage the contacts there-

in when the second disk is moved relatively to the first disk by the insertion of a lamp end into the lamp holder, and means whereby when the pin contacts engage said socket contacts, the socket contacts are connected in series with said lamp terminal engaging contact.



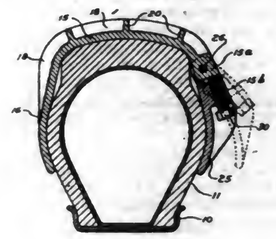
2,447,354
ROTARY SIDE DELIVERY RAKE
Melvin A. Morrill, Laton, Calif.
Application July 8, 1946, Serial No. 682,002
23 Claims. (Cl. 56—377)

11. A side delivery rake comprising a mobile frame, means attached to said frame supporting the frame for ground traversing operation and maintaining the frame in a substantially constant attitude relative to the ground traversed, said means including directional control means, and a plurality of peripherally overlapping rotary raking means mounted on said frame in echelon arrangement and each rotatable in a plane at an angle to the direction of travel of said frame.



2,447,355
DIE-CASTING MACHINE
Louis H. Morin, Bronx, N. Y.
Application March 25, 1944, Serial No. 528,121, which is a division of application Serial No. 460,067, September 29, 1942. Divided and this application January 26, 1945, Serial No. 574,698
2 Claims. (Cl. 18—30)

1. In a die casting machine having a pair of dies with a plurality of cavities therein, an automatic control mechanism for controlling formation of castings in the cavities of said dies, a member supported between the dies and movable relatively thereto to control exposure of the cavities to material injected into the dies, a cylinder, a plunger in said cylinder and extending through one end thereof, the extended end of the plunger supporting said member, a long adjustment screw on the cylinder and cooperating with said plunger, adjustment of said screw controlling movement of said plunger and member to control exposure of the cavities for reception of casting material injected into the dies, spring means normally supporting said plunger in engagement with said screw, and means admitting air, under pressure, to the cylinder to move the plunger, with the



member thereon, against the action of said spring means to expose all of the cavities of the dies for reception of casting material.

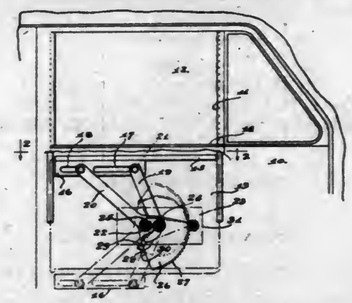
2,447,356
INPUT CONTROLLER
Jens Morton, Philadelphia, Pa., assignor to Automatic Temperature Control Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application August 21, 1945, Serial No. 611,875
22 Claims. (Cl. 200—33)

2. In timers for controlling an electric circuit, a driven member, a single circuit-controlling switch as the sole circuit-controlling element of the timer, switch-operating means movable between two positions corresponding respectively to make and break of the circuit controlled by the timer, means driven by the member for moving the operating means to one of its said positions once during a complete movement of the driven member, a second means driven by the member for moving the operating means to the other of its said positions once during a complete movement of the driven member, means manually settable during movement of said member for varying the time interval between the respective movements of the switch-operating means, the manually settable means including an element for moving the switch-operating means to one of its two positions and for nullifying the action of the respective moving means driven by the member during a complete member movement.

2,447,357
EMERGENCY TIRE SHOE
Alfred J. Mosley, Euclid, Ohio, assignor to The National Bronze and Aluminum Foundry Company, Cleveland, Ohio, a corporation of Ohio
Application February 24, 1947, Serial No. 730,292
2 Claims. (Cl. 152—228)

1. A detachable emergency traction device for automobiles consisting of a cast anti-skid shoe formed to conform generally to the tread portion of a pneumatic tire and having integrally formed side walls, one of the side walls conforming to the side wall shape of the tire to extend toward the tire rim more than half of the radial dimension of the tire, the other side wall of the device being formed to terminate adjacent the tread formation of the tire and terminating in a hinge formation, a second cast member having a hinge formation complementary to the hinge formation of the first cast member conforming in general shape to the side wall of the tire and to extend toward the tire rim more than half of the radial dimension of the tire, a hinge pin connecting the two hinge formations and a bolt in threaded engagement with the second cast member adjacent its hinge formations and adapted to react against the hinge formation of the first cast member and thereby cause the device to be clamped to the side walls of a tire.

2,447,358
FOUNTAIN SAFETY RAZOR
William Neuburger, Elmhurst, N. Y.
Application November 21, 1944, Serial No. 564,429
4 Claims. (Cl. 30—41)



1. In a fountain razor the combination with a hollow handle forming a reservoir, of an extension of the handle forming a pump, a blade holder in the opposite end of the reservoir, a side valve for admitting liquid, and a pair of nozzles adapted to deliver liquid behind the blade.

2,447,359
PRODUCTION OF SODIUM FLUOSILICATE
Llewellyn Cardiff Oakley, Jr., Tampa, Fla., assignor to Tennessee Corporation, New York, N. Y., a corporation of New York
Application December 1, 1944, Serial No. 566,094
7 Claims. (Cl. 23—88)

1. A method for the production of sodium fluosilicate crystals from fluorine compounds contained in superphosphate gases which comprises spraying water in controlled amounts into the said superphosphate gases to form an acid slurry containing from about 6 to 8 percent of hydrofluosilicic acid together with silicic acid and other components, retaining the said silicic acid in suspension in the said slurry during the said spraying operation, passing the said acid slurry to a reaction chamber while the said silicic acid remains in suspension therein, agitating the said acid slurry in the said reaction chamber to maintain the silicic acid in suspension in the liquid in the said reaction chamber, gradually feeding a strong sodium chloride solution to the reaction chamber until a sufficient amount thereof has been added to react with the hydrofluosilicic acid present to form sodium fluosilicate crystals and thereafter rapidly adding a substantial excess of the said sodium chloride solution while the silicic acid is retained in suspension, permitting the sodium fluosilicate crystals to segregate into a layer for a period of time insufficient to cause settling of the silicic acid in said liquid suspension, and separating the said liquid suspension from the settled sodium fluosilicate crystal layer.

2,447,360
WINDOW REGULATOR MECHANISM
John B. Parsons, Toledo, Ohio, assignor to Malcolm W. Fraser, trustee, Toledo, Ohio
Application July 17, 1944, Serial No. 545,213
5 Claims. (Cl. 268—126)

1. Vehicle window regulator mechanism comprising a pair of swinging regulator arms of unequal length, pivotal mounting means for said arms, said arms being adapted to be connected at their outer ends to a window panel, an external gear sector member forming a part of each arm, said pivotal mounting means comprising spaced fixed pivot pins, the pivot pin for the shorter arm passing through a slot in the sector for the longer arm, said slot being arcuate and concentric with the pivot pin of the longer arm, and pinion means having a single operating shaft meshing with said gear teeth, the pitch diameter of the teeth of one sector being different from the other to compensate for the unequal length of said arms.

2,447,361

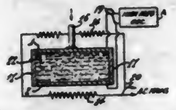
dl-N-CYCLOHEXYLACETYLSERINE HEXAHYDROBENZYL AMIDE

Robert L. Peck, Plainfield, Stanton A. Harris, Westfield, Ralph Mozingo, Elizabeth, Donald E. Wolf, Rahway, and Karl Folkers, Plainfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application December 20, 1945, Serial No. 636,257

1 Claim. (Cl. 260—557)

dl-N-cyclohexylacetylserine hexahydrobenzylamide.



2,447,362

PRODUCTION OF CRYSTALS

Leopold Pessel, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Application November 1, 1945, Serial No. 626,135

23 Claims. (Cl. 171—327)

22. A monocrystalline body produced by oriented growth of finely divided crystallizable substance in the presence of a solvent for said substance under the influence of elevated temperature, pressure, and an alternating electric field.

2,447,363

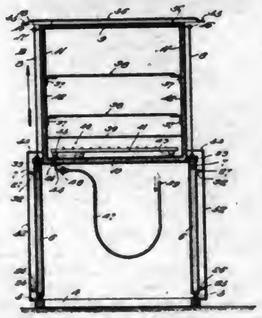
COMPOUND OF UROBILINOGEN AND HIPPURIC ACID AS ANTIPRESSOR

Harold M. Rabinowitz, Brooklyn, N. Y.

No Drawing. Application June 15, 1945, Serial No. 599,771

4 Claims. (Cl. 167—74.5)

1. An antipressor composition consisting of the compound of urobilinogen with hippuric acid.



2,447,364

ELEVATABLE STOVE OVEN

Lewis H. Renshaw, Washington, D. C.

Application April 1, 1946, Serial No. 658,663

3 Claims. (Cl. 126—19)

1. In a stove, the combination with a fixed body, an oven vertically movable relative thereto, a hydraulic means surrounding said oven and including piston and piston rod containing cylinders, means in connection with said oven and coacting with said piston rods to suspendingly support said oven, piston rod guide means in connection with said cylinders, a fluid supply system including a fluid supply means and a conduit encircling and in communication with the lower portions of the cylinders, a multiport control valve for said hydraulic means, a fluid waste system including an exhaust means and a conduit encircling and in communication with the upper ends of said cylinders, said system being in communication with one port of said valve, said fluid supply means being in communication with another port of said valve, and said first encircling conduit being in communication with another port of said valve, whereby operation of said valve to one position permits the fluid flow to said cylinders to elevate said oven, its operation to another position cuts off the supply flow and at the same time connects said supply system with said waste system to empty said cylinders and return said oven to its lowered position, and its operation to a third position maintains said oven at any desired level within its elevational range.

2,447,365

MOUNTING OR RECEPTACLE AND CIRCUIT BREAKER FOR TUBES OR LAMPS AND THEIR CIRCUITS

Herman Ruesch, Peoria, Ill.

Application April 23, 1945, Serial No. 589,870

4 Claims. (Cl. 315—254)

1. Means for mounting a lamp and for closing a circuit therethrough, including in its construction, and in combination with the primary and secondary coils of a transformer, a normally open circuit breaker connected in circuit with the primary coil, a receptacle erected adjacent the circuit breaker normally free thereof, part of said receptacle being yieldably extensible toward said circuit breaker adapted to abut upon the same to close the primary circuit therethrough by a lamp inserted at one end into said receptacle, and means to maintain elastic pressure endwise upon the lamp in the direction of said circuit breaker to maintain closed relation thereof, said receptacle and said means being connected with the secondary coil, closing the circuit through said lamp.

2,447,366

COIL AND MOUNTING THEREFOR

Anthony J. Ruscito, Unadilla, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware

Application September 1, 1943, Serial No. 500,780

1 Claim. (Cl. 171—209)

In apparatus of the class described, a laminated metallic core, a spool of insulating material molded around a central portion of said core, said spool consisting of end flanges extending radially from said core and an intermediate portion having a continuously curved circumferential surface, a metallic terminal embedded in one of said flanges, a winding consisting of a plurality of turns of insulated wire on said intermediate portion between said flanges, the inner end of said winding extending through one of said flanges and being electrically connected to an outside lamination of said core, the other end of said winding being electrically connected to said terminal, a laterally extending lug at each end of each outside lamination of said core, the corresponding faces of said lugs being in a plane parallel to and spaced a short distance from the plane of the corresponding surface of said core.

2,447,367

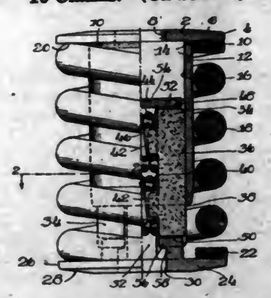
REACTION PRODUCT OF ROSIN-POLYHYDRIC ALCOHOL ESTERS AND PROCESS OF MAKING SAME

John B. Rust and William B. Canfield, Montclair, N. J., assignors, by direct and mesne assignments, of one-half to Montclair Research Corporation, a corporation of New Jersey, and one-half to Ellis-Foster Company, a corporation of New Jersey

No Drawing. Application October 7, 1944, Serial No. 557,728

12 Claims. (Cl. 260—27)

1. A soluble resinous composition comprising the reaction product, at between 200° C. and 300° C., of a rosin-polyhydric alcohol ester containing at least one free hydroxyl group, and a saturated polymer containing hydroxyl-reactive groups selected from the class consisting of carboxyl and carbalkoxy and obtained by polymerization of an alpha-unsaturated acid compound selected from the class consisting of alpha-unsaturated carboxylic acids and esters thereof of monohydric alcohols volatile at said reaction temperature.



2,447,368

SNUBBER

Walter L. Schlegel, Jr., and Fred E. Bachman, Chicago, Ill., assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey

Application February 7, 1944, Serial No. 521,310

16 Claims. (Cl. 267—9)

1. In a friction absorbing device, a top follower comprising a base plate and a friction barrel depending therefrom, said barrel comprising an internal friction surface, a bottom follower comprising a base and a yoke projecting upwardly therefrom, lugs on opposite sides of said yoke at the upper extremity thereof, each of said lugs presenting a substantially horizontal shoe abutment surface, studs projecting upwardly from said base at opposite sides of said yoke and spaced therefrom, each of said studs having at its upper extremity a horizontal shoe abutment face in alignment with the adjacent abutment surface, a pair of spaced friction shoes engaging said friction surface, resilient means under compression between said shoes, each of said shoes having a recess at its upper extremity receiving one of said lugs and a recess at its lower extremity receiving one of said studs, said shoes having substantially horizontal bearing surfaces engageable with respective abutment surfaces and abutment faces, and a spring sleeved over said barrel and seated against said base plate and said base.

2,447,369

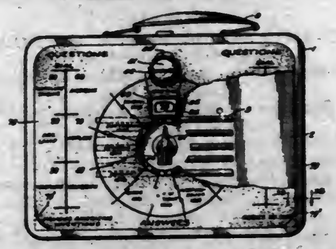
RETORT FOR DISTILLATION FURNACES

Herbert C. Schweitzer, New York, N. Y., assignor to The American Metal Company, Limited, New York, N. Y., a corporation of New York

Application February 12, 1943, Serial No. 475,679

3 Claims. (Cl. 263—47)

2. A zinc distillation retort closed at one end and open at the other, extruded in one piece, having an unlined substantially cylindrical interior space and an outer wall space curved substantially throughout its length and free from abrupt bends and having a substantially uniform wall thickness except on the lower portion where each side wall is gradually thickened until it reaches a maximum thickness at substantially the lowest part of the retort as positioned for operation, said lower portion being substantially solid throughout.

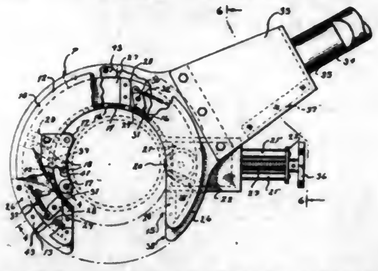


2,447,370

AMUSEMENT AND EDUCATIONAL DEVICE

Daniel Silverman, Richmond, Va.

Application July 19, 1946, Serial No. 684,825

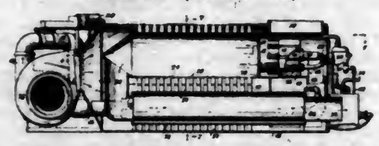


5 Claims. (Cl. 35—48)

1. An educational device of the type described, comprising a cabinet, an electrical unit in said cabinet, said unit comprising first, second and third electrically conducting plates, insulation between said plates, a signal electrically connected between said first and third plates, a battery electrically connected between said second and third plates, a disc having indicia thereon spaced from said third plate by insulating means, an eyelet extending through said plates and disc, said second and third plates being spaced from said eyelet, said disc being rotatable on said eyelet, a rotatable shaft extending through said eyelet and cabinet, a switch rotatable with said shaft and associated with said disc, a pointer rotatable with said shaft outwardly of the cabinet, an electric contact element secured to said disc and extending to said second plate, said contact element being insulated from said disc, said switch being adapted to engage said contact, a projection on

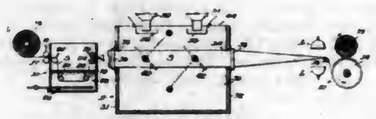
said disc, said projection being angularly spaced from said contact element, a lug on said switch adapted to engage said projection, and a card removably mounted on said cabinet, said card being associated with said pointer and having indicia thereon.

2,447,371
SINGLE WHEEL RATCHET PIPE CUTTER
Stewart Sipsma and Bert Askeris, Kenosha, Wis.
Application April 30, 1945, Serial No. 591,062
4 Claims. (Cl. 30—99)



1. A pipe cutter comprising an inner frame and an outer frame, the outer frame being rotatably mounted on the inner frame, and each of said frames being of a C shape, means for turning the outer frame, a ratchet mechanism operatively connecting the outer frame with the inner frame, a pair of transversely extending guide rollers carried by the inner frame for engaging a length of pipe, and a single disc cutter blade carried by the inner frame opposite a point between said guide rollers for engaging the pipe, and a clutch mechanism for engaging the pipe when the inner frame has a tendency to turn on the pipe in one direction.

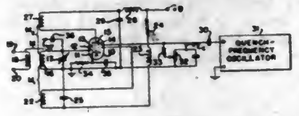
2,447,372
CARBAMYL CHLORIDE AND METHOD OF PRODUCING SAME
Robert J. Slocombe and Edgar E. Hardy, Anniston, Ala.
No Drawing. Application January 16, 1946, Serial No. 641,630
7 Claims. (Cl. 260—544)



1. The process of producing carbamyl chloride which comprises reacting phosgene with ammonia in a phosgene/ammonia molecular ratio of at least 1, said reaction being carried out in the gaseous phase and at a temperature of at least 450° C.

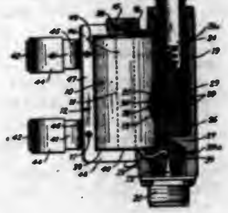
2,447,373
OIL BURNER SYSTEM COMPRISING A VAPORIZING BLOCK
Theophilus H. Smoot, Baltimore, Md., assignor to Anchor Post Products, Inc., a corporation of New Jersey
Application May 27, 1944, Serial No. 537,599
4 Claims. (Cl. 158—28)

1. In an oil burner, the combination of a heat-resistant porous block having air passages through it, means for delivering liquid fuel to be absorbed by such block, an enclosure for the block largely covering the surfaces of such block other than the surfaces through which the ends of such passage run to prevent fuel being volatilized and burned around and against the periphery of the block, means for forcing air through the passages in the block at a velocity adapted to prevent combustion within the block, means for forming a mixing zone into which such passages discharge vaporized fuel and air, means for admitting secondary air into such mixing zone, means forming a combustion chamber in which the fuel mixture is burned, a heat exchanger communicating with the combustion chamber and including means whereby combustion air is preheated by the products of combustion, said air preheating means being so proportioned that when the furnace is operating efficiently such combustion air will be preheated to a temperature of at least 150° F., means forming a chamber on the inlet side of the block and means for admitting said preheated combustion air into such chamber at a temperature of between 150° F. and 400° F. to supply the heat units necessary for volatilizing fuel within said block.



2,447,374
METHOD OF APPLYING COATING MATERIALS
James S. Smyser, deceased, late of Quincy, Mass., by Granite Trust Company, executor, Quincy, Mass., assignor, by mesne assignments, to Behr-Manning Corporation, Troy, N. Y., a corporation of Massachusetts
Continuation of application Serial No. 722,288, April 25, 1934. This application October 25, 1939, Serial No. 301,294
2 Claims. (Cl. 117—93)

1. The process of coating to provide a suede-like surface which includes as steps thereof feeding a carrier or backing and applying an adhesive layer to a surface thereof, and depositing on said adhesive layer particles of finely divided fibrous material under the influence of an electrical field whose lines of force are directed so as to orient the particles with their major axes at an angle of from about 45 to 60° with respect to the backing, attaching the ends of said particles to said adhesive layer and leaving the opposite ends free, thereby forming the suede-like surface for said carrier or backing.

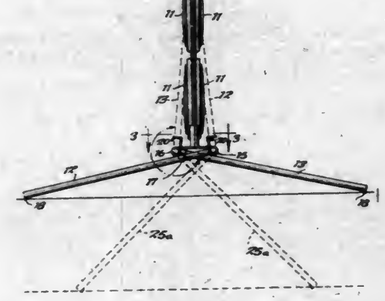


2,447,375
WAVE-SIGNAL TRANSLATING SYSTEM
Maurice K. Taylor and Ian Norman Vaughan-Jones, Hollinwood, England, assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application August 3, 1945, Serial No. 608,664
In Great Britain June 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 1, 1963
11 Claims. (Cl. 250—20)

1. A wave-signal translating system having a predetermined operating frequency comprising, an electron-discharge device having an electron source and a plurality of electrodes disposed in a single electron-discharge path, an input circuit for said device connected between said electron source and a first one of said electrodes, a first output circuit for said device connected to a second one of said electrodes and including means for feeding back signal energy of said predetermined frequency to said input circuit in a regenerative sense, a second output circuit for said

device connected to a third one of said electrodes and also including means for feeding back signal energy of said predetermined frequency to said input circuit but in a degenerative sense, and means for utilizing an applied periodic quench signal to render said first and second output circuits alternately effective so that said translating system is alternately regenerative and degenerative in succeeding operating intervals of such relative duration as to provide superregeneration.

2,447,376
IGNITION APPARATUS
Tullio Tognola, Sidney, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application May 28, 1943, Serial No. 488,850
8 Claims. (Cl. 175—361)



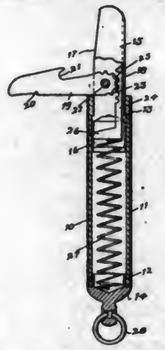
1. In apparatus of the class described, a tubular coil of electrically conductive material, an insulating casing around said coil, laminated metallic means forming a magnetic flux path around a portion of said coil, each lamination of said means being constituted by an elongated strip having bends therein so that the ends thereof are adjacent each other, one end portion of each of said laminations extending through the central opening in said coil, a metallic housing cooperating with the exposed portion of said laminated means for enclosing said coil and casing, a socket in said housing including a tube of insulating material adjacent to and extending longitudinally of said coil, a terminal in said tube intermediate the ends thereof, and means for connecting said terminal to one end of said coil including rigid conducting means secured to said casing and extending through a slot in one side of said tube for limiting angular movement of the latter and an extensible resilient conductor for mechanically and electrically connecting said terminal and said conducting means within said tube.

2,447,377
DEVICE FOR REGULATING ELECTRICAL DISCHARGE
Tullio Tognola, Sidney, and Maurice S. Thorn, Oneonta, N. Y., assignors to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application December 10, 1945, Serial No. 634,037
8 Claims. (Cl. 315—58)

1. A device for regulating electrical discharge comprising a cell containing ionizable gas, spaced electrodes in said cell, and means comprising a condenser connected to ground having an element within the cell in closer relation to the anode than to the cathode, and nearer to the anode than the anode is to the cathode, for ionizing the gas within the cell to initiate the discharge thereof.

2,447,378
ROAD SIGNAL DEVICE OR THE LIKE
Charles J. Wadsworth, Nutley, N. J., assignor to R. E. Dietz Company, New York, N. Y.
Application February 3, 1947, Serial No. 726,005
10 Claims. (Cl. 248—33)

1. A signal device or the like comprising a main member having signalling means and adapted to occupy a standing position, supporting members therefor hinged at one end to the lower portion of said main member at opposite sides of the plane thereof to swing from upwardly extending folded positions adjacent said main member to supporting positions in which each supporting member extends from its hinge connection at one side of said main member transversely below said main member to the opposite side thereof and rests at its free end on a supporting surface for supporting said main member in standing position off of said supporting surface, and means constituting parts of said device which releasably retain said supporting members in their said supporting positions.



2,447,379
PROCESS FOR METALIZING NONMETALLIC ARTICLES
Frederick Ross Wenger, Los Angeles, Calif., assignor to Focal Company, Downey, Calif., a corporation of California
No Drawing. Application April 21, 1943, Serial No. 483,948
7 Claims. (Cl. 117—47)

1. A process for metalizing non-metallic articles of the class described which includes the steps of subjecting the article to a bath of denatured alcohol, acetone and silver nitrate, drying and subjecting the article to a bath of water, denatured alcohol and an alkali metal hydroxide, and drying and subjecting the article to a reducing bath of sodium bisulphite and zinc.

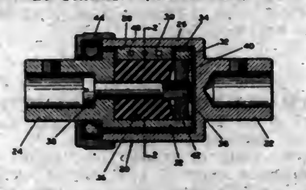
2,447,380
PROCESS FOR METALIZING NONMETALLIC ARTICLES
Frederick Ross Wenger, Los Angeles, Calif., assignor to Focal Company, Downey, Calif., a corporation of California
No Drawing. Application May 4, 1944, Serial No. 534,170
2 Claims. (Cl. 117—47)

1. The process of undercoating non-metallic articles for plating that comprises mixing a solution consisting of about 1 g. silver nitrate to 1 cc. water with an alcoholic-acetone mixture, containing between 20 and 50% alcohol, in a proportion yielding from about 10% to about 15% silver nitrate, immersing a said article therein for about one-half minute at room temperature, semi-drying the article, and immersing the article in a solution consisting of 5–10% sodium hydrosulfite in distilled water.

2,447,381
BOTTLE OPENER
Harold Albert White, Aylmer, Ontario, Canada
Application February 13, 1946, Serial No. 647,234
5 Claims. (Cl. 81—3.35)

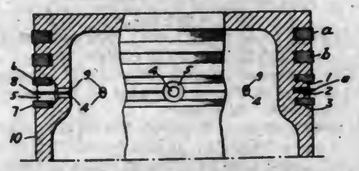
5. In a bottle cap remover, the combination of a casing having an open end, an internal stop member adjacent to the open end of the casing, a spring urged plunger having means adapted to engage said stop member and mounted for limited movement into and out of said casing, said plunger having a longitudinally arranged channel and an arm pivotally secured at one of its ends within the channel and adapted to lie partially enclosed within the channel when in retracted position, releasable means carried by said arm adapted to engage said stop member to retain said plunger and arm in their retracted positions, and means for urging said arm to a position at an angle to the plunger when in an extended position with an intermediate portion of the arm abutting the open end of the casing, and a bottle cap engaging element formed in said arm.

2,447,382
THERMOMETER
Elmer S. Whittier, Bristol, Conn., assignor to The Cooper Oven Thermometer Company, Pequabuck, Conn., a corporation of Connecticut
Application January 5, 1946, Serial No. 639,318
2 Claims. (Cl. 73—367)



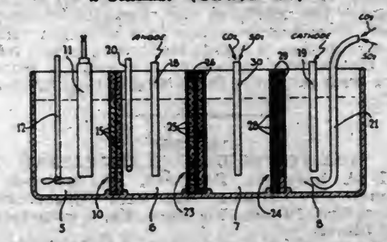
2. In a thermometer, a self-supporting frame of angular form comprising a base and an inclined face plate making an acute angle with the base, the inclined face plate having an outer area provided with a dial and surrounding a central pointer-receiving recess which is pressed back into the angle from the face plate, a pointer in the recess, a housing at the rear of the recess and contained within said angle, a shaft connected to the pointer, a thermostatic element connected to the shaft and to the housing, a bushing passing through the recessed area of the face plate and forming a bearing for the shaft, and the bushing being tightly engaged with the housing and having frictional engagement with the face plate to enable all parts to be turned with respect to the face plate.

2,447,383
ROTATABLE ELECTRICAL DEVICE
Lawrance W. Wightman, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application December 14, 1945, Serial No. 635,003
2 Claims. (Cl. 172—120)



1. A dynamoelectric machine rotatable member having a core with longitudinally extending winding slots therein, a winding including conductors cast in said winding slots and a circumferentially extending ring of electrically conductive material at each end of said core cast integral with said slot conductors in the form of relatively thin circumferentially extending double flanged portions of dense cast material with an open continuous circumferential groove between said flanged portions, said groove being wider at the face of said ring than at its base, and means including a balancing weight secured in at least one of said grooves for balancing said rotatable member.

2,447,384
TORQUE-TRANSMITTING APPARATUS
Otto E. Wolff, Chestnut Hill, Mass., assignor of one-fourth to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application February 25, 1944, Serial No. 523,960
19 Claims. (Cl. 64—30)

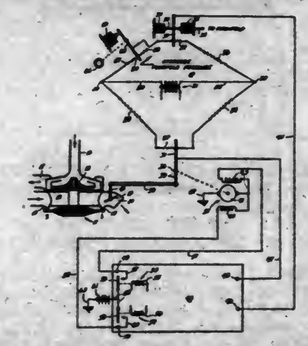


8. In a device for transmitting torque from a rotary driving member to a rotary driven member, means connected to one of said members providing a friction surface, means connected to the other of said members comprising a plurality of friction shoes for operatively engaging said surface, said means cooperating with one another to provide a fluid-tight housing, said housing containing a lubricant accessible to said shoes and said surface, and means for so mounting said shoes that said lubricant substantially completely disengages said shoes from said surface whenever there is relative rotation between said shoes and said surface, said last-named means mounting each of said shoes for limited universal movement and including a unitary pressure-applying member of yieldable material, said pressure-applying member providing at least a solid, continuous, annular mass substantially concentric to said friction surface, said mass being held under axial compression in order to transmit radial pressure to each of said shoes.

2,447,385
PISTON RING PACKING
William Smiley Adams, Haverford, Pa.
Application February 22, 1945, Serial No. 579,213
3 Claims. (Cl. 309—45)

1. A piston ring assembly comprising, in combination, a hollow piston having a main pair of axially spaced annular grooves formed in its external wall and an intermediate annular groove located centrally between said main pair of grooves, said intermediate groove being of relatively narrow width as compared with the width of each of said main pair of grooves, said piston being provided in the wall thereof with a plurality of circumferentially spaced openings disposed with their axes in the plane of said intermediate groove, said openings being each enlarged at its outer extremity to a diameter exceeding the spacing between said pair of grooves whereby to present the latter in communication with the interior of said piston and with said intermediate groove by way of said openings, and split piston rings respectively seated in said grooves, the ring seated in the intermediate groove having a comparatively loose fit therein for constrained floating movement centrally between the rings respectively fitted within said main pair of grooves.

2,447,386
PROCESS FOR OBTAINING ALUMINUM HYDROXIDE FROM SILICATES
George Antonoff, City Island, N. Y.
Application October 25, 1943, Serial No. 507,645
2 Claims. (Cl. 204—96)



2. The method of treating aluminum silicate to produce aluminum hydroxide which comprises reacting the aluminum silicate with a mixture of about 0.75% sulphuric acid and about 2.5% hydrofluoric acid to produce aluminum sulphate, subjecting the aluminum sulphate together with sulphuric and hydrofluoric acids to electrolysis in the anode chamber of an electrolytic cell, while maintaining water in the cathode chamber of the cell in substantially neutral condition and thereby forming aluminum hydroxide in the cathode chamber substantially as and for the purpose described.

2,447,387
PROCESS OF RENDERING FLAVORS ACCESSIBLE IN NUT BUTTERS AND STABILIZATION THEREOF
Fitzhugh L. Avera, Laguna Beach, and Joseph L. Rosefield, Oakland, Calif.; said Avera assignor to said Rosefield
No Drawing. Application May 3, 1943, Serial No. 485,496
9 Claims. (Cl. 99—128)

1. A method of preparing nut butters of full bodied flavor, said method comprising introducing a flavor solvent into a comminuted mass of nuts in the presence of a dineric interface modifier.

2,447,388
CONTROL SYSTEM AND APPARATUS
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 10, 1944, Serial No. 530,422
13 Claims. (Cl. 230—5)

1. A control system for controlling the intake manifold pressure of an aircraft engine, compris-

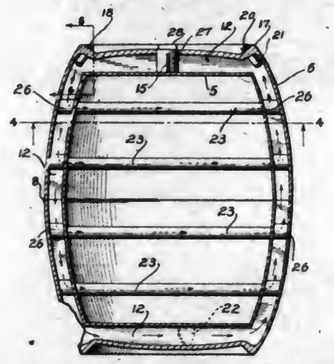
ing in combination, means including a variable impedance device operative to cause a reduction in intake manifold pressure when adjusted in one direction and to cause an increase in intake manifold pressure when adjusted in another direction, and means responsive to atmospheric pressure for operating said variable impedance device to adjust the same in a direction calling for a reduction in intake manifold pressure when the atmospheric pressure falls below a certain value with respect to the setting of the impedance device.

2,447,389

PULL FOR SLIDING GLASS PANELS

Earl M. Borchers, Rockford, Ill., assignor to American Cabinet Hardware Corporation, Rockford, Illinois, Rockford, Ill., a corporation of Illinois

Application June 7, 1947, Serial No. 753,262
7 Claims. (Cl. 16—114)



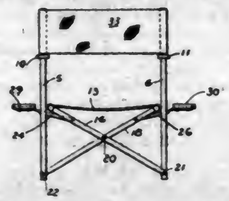
1. A pull for a sliding glass panel comprising, in combination, a U-shaped member of resilient material having front and back legs and a bight portion connecting said legs in spaced relation for the reception of a panel therebetween, said front leg having an integrally formed fingerpiece thereon, and a spring clamping finger struck from said back leg and providing a cam surface for engagement with the rear surface of the panel upon installation of the pull, said front leg and said spring finger coacting to hold the pull in firm, frictional engagement with the panel.

2,447,390

LIQUID COOLED METALLIC BEER KEG

Earl E. Brand, Berlin, N. J.

Application October 24, 1945, Serial No. 624,315
9 Claims. (Cl. 257—15)



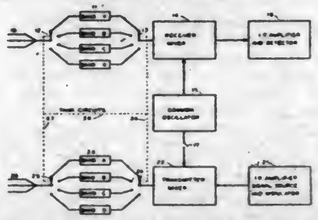
1. A liquid cooled container comprising inner and outer receptacles having top, bottom and side walls spaced apart to form an intermediate cooling compartment, cooling tubes extending transversely through the inner receptacle and communicating with said intermediate compartment, a partition carried by the inner receptacle and extending transversely across the top and bottom thereof and vertically along the sides of said inner receptacle and engaging the outer receptacle for directing the flow of liquid in a vertical path around the inner receptacle and across the bottom thereof, and liquid inlet and discharge pipes communicating with the intermediate compartment at opposite sides of the container and on opposite sides of said partition.

2,447,391

LATERALLY FOLDING CHAIR WITH TRAY

Samuel Aron Brandes, New York, and Frank Lynne Greenfield, Brooklyn, N. Y.; said Brandes assignor to said Greenfield

Application June 19, 1945, Serial No. 600,300
3 Claims. (Cl. 155—140)



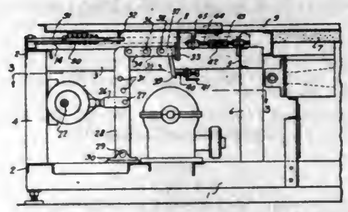
1. A folding chair, comprising right legs rigidly connected to each other, left legs rigidly connected to each other, front folding braces pivotally connected to each other and at the lower ends thereof to one right leg and one left leg, rear folding braces pivotally connected to each other and at the lower ends thereof to one right leg and to one left leg, a top cross bar connecting the braces which are pivotally connected with the right legs, a top cross bar connecting the brace members which are connected with the left legs, a fabric seat carried by said top cross members, levers pivotally connected with the front folding braces and with the forward right and left legs, and service shelves connected with the outer ends of the levers.

2,447,392

SYSTEM FOR ALIGNING RECEIVER AND TRANSMITTER CIRCUITS

John F. Byrne, Wellesley Hills, Mass., assignor to the United States of America as represented by the Secretary of War

Application May 23, 1945, Serial No. 595,353
1 Claim. (Cl. 250—13)



A radio signal system comprising a receiver circuit, a transmitter circuit and a tunable oscillator common to both circuits, said receiver circuit comprising an antenna, a plurality of band pass radio frequency circuits, the aforesaid common oscillator, a mixer stage connected to receive the output of said radio frequency circuits and the output of said common oscillator to produce an intermediate frequency representing the difference frequency between a received frequency and the common oscillator frequency, means to suppress the frequency which is the sum frequency of the received frequency and the common oscillator frequency, and means to amplify and detect the intermediate frequency; said transmitter circuit comprising an oscillator to produce a signal having a frequency equal to the intermediate frequency produced in the receiver circuit, means to amplify said signal and means to modulate said signal, the aforesaid common oscillator, a mixer stage connected to receive the output of said signal oscillator, said amplifier and modulator means and said common oscillator to produce a signal representing the sum frequency of the intermediate frequency and the oscillator frequency, means to suppress the difference frequency representing the difference between the common oscillator frequency and the intermediate frequency, a plurality of band pass radio frequency circuits, each designed to cover the same band of frequencies covered by the band pass circuits in the receiver, and common means for selecting in the receiver circuit and in the transmitter circuit matched band pass circuits whereby said transmitter is always tuned to the same frequency as said receiver input circuits.

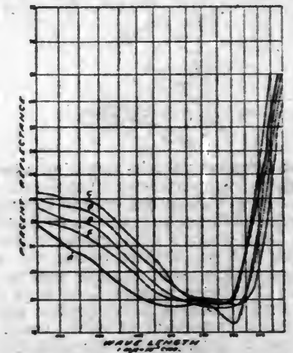
2,447,393

SHUFFLE CONVEYER

Donald C. Campion, Sr., Detroit, Mich., assignor to Loftus Engineering Corporation, Pittsburgh, Pa., a corporation of Maryland

Application April 26, 1945, Serial No. 590,347
7 Claims. (Cl. 198—220)

3. A conveyor comprising in combination a pan upon which the work is placed and along which the work is conveyed, oscillating means, and a toggle lever connecting the oscillating means with the pan, said oscillating means and toggle lever when made cooperating to move said pan forwardly in the direction which the work is being conveyed at a relatively slow speed so that the work moves with the conveyor, a spring arranged to be loaded during the forward movement of said pan, and means for breaking the toggle during the forward stroke of said oscillating means whereby the loaded spring reacts to move said pan in the opposite direction at a relatively faster speed sufficient to jerk the pan from under the work whereby for each cycle of operation comprising a forward and reverse movement of the pan the work is advanced a distance less than the stroke of the pan, and a spring opposite the aforementioned spring for cushioning and arresting the rearward stroke of said pan.



2,447,394

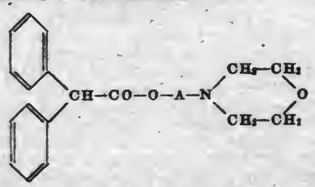
PREPARATION OF A BARIUM LITHOL RED

Clifton C. Candee, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

Application March 24, 1942, Serial No. 435,924
3 Claims. (Cl. 260—195)

1. In a process of producing an extreme yellow shade of barium lithol red, the steps which comprise carrying out the coupling of diazotized Tobias acid and beta-naphthol in the presence of a dispersing agent selected from the group consisting of the alkali and alkaline-earth metal lignin sulfonates and at least one other dispersing agent, adding a solution of a barium salt at a strike temperature of from about 100–170° F., increasing the temperature of the mixture at from

about 3–5° F. per minute to a conversion temperature of from about 40–80° F. above the temperature of the strike, holding the mixture at the conversion temperature until the reaction is substantially complete and maintaining the pH of from about 7.6 to 10.5 of the reaction mixture throughout the process.



2,447,395

MORPHOLINE SUBSTITUTED ESTERS

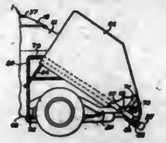
Lee C. Cheney, Detroit, and William G. Bywater, Grosse Pointe Woods, Mich., assignors to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Application July 5, 1940, Serial No. 344,136
8 Claims. (Cl. 260—247)

4. Compounds selected from the group consisting of esters of the formula,

where A represents a member of the group consisting of straight chain and branched chain alkylene residues, and the acid addition salts of said esters.

2,447,396



PREPARATION OF STABLE MEDICINAL SALTS OF ACETYLSALICYLIC ACID

Myer Coplans, Hendon, London, England

No Drawing. Application September 10, 1946, Serial No. 696,029. In Great Britain May 17, 1946
9 Claims. (Cl. 167—65)

1. A solid dry preparation containing an alkaline earth salt of acetylsalicylic acid, a minor amount of the chloride of the said alkaline earth, and a minor amount of a carbonate of the said alkaline earth.

2,447,397
VEHICLE COMPARTMENT HOOD AND FENDER
Burnie J. Craig, Los Angeles County, Calif.
Original application February 12, 1940, Serial No. 318,397. Divided and this application April 25, 1944, Serial No. 532,652
3 Claims. (Cl. 180—69)

3. An automotive vehicle including a body having an engine compartment at one end, a wheel housing at each side of the engine compartment, road wheels for the vehicle arranged in the wheel housings, said engine compartment having an open upper portion, closure means for said engine compartment, said closure means including a pair of closure members, each of the closure members including a top portion and a side portion, the side portion of each closure member forming a closure for the adjacent wheel housing, means to pivotally mount one end of each closure member on the body, the axis of each pivotal mounting being disposed substantially horizontal and extending transversely of the body and being disposed near said one end of the body and between the road wheel axis and the extreme end of said one end of the vehicle, means to hold the closure members in fully closed position and other means to hold the closure members in open position to permit ready access to an engine in the engine compartment.

2,447,398
METHOD OF MAKING POLYVINYL RESIN SOLUTIONS
Bronislaw de Supinski, Parkville, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
No Drawing. Application June 1, 1944, Serial No. 538,331
1 Claim. (Cl. 260—34.2)

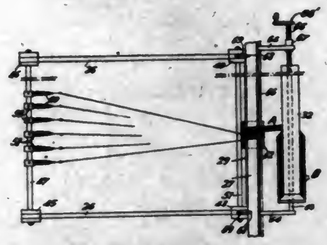
The method of making a gamma polyvinyl chloride resin solution which comprises the steps of forming a slurry by agitating a mixture comprising particles of said resin, a plasticizer for the resin and a liquid solvent capable of forming a slurry with said particles, heating the said slurry and thus causing penetration of the solvent into the resin particles, cooling and stagnating the slurry until the solvent has penetrated into substantially all parts of the resin particles and swelled them, and heating the thus treated material at a temperature not in excess of about 120° C. until it becomes a clear liquid.

2,447,399
DIGGING AND SORTING MACHINE
Charles Lawrence Dey, Princeton Junction, N. J.
Application March 9, 1944, Serial No. 525,765
6 Claims. (Cl. 55—51)

1. In a machine for digging and sorting root vegetables such as potatoes or the like wherein there are parallel diggers arranged to dig adjacent rows of vegetables, parallel inspection belts extending rearwardly from said diggers and each having one side thereof accessible for inspection of the vegetables thereon, a common hopper located between said inspection belts in position to receive vegetables from both belts, a sorter located near the front of the machine, and a con-

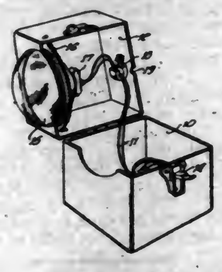
veyor movable longitudinally of the machine in a plane passing between the diggers for carrying vegetables from the hopper to the sorter.

2,447,400
OXIDATION OF AROMATIC HYDROCARBONS
William S. Emerson and Josef W. Heyd, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application January 18, 1946, Serial No. 642,136
4 Claims. (Cl. 260—592)



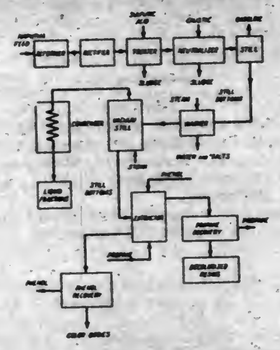
1. The process which includes contacting isopropylbenzene at a temperature below its boiling point with gaseous oxygen in the presence of an oxidation catalyst consisting of calcium hydroxide, and recovering from the oxidation product acetophenone.

2,447,401
SPREADING TOOL FOR RESHAPING DEFORMED AUTOMOBILE BODIES
William H. Ferguson, Malden, and Harry C. Ferguson, Melrose, Mass., assignors to H. K. Porter, Inc., Everett, Mass., a corporation of Massachusetts
Application March 2, 1945, Serial No. 580,572
3 Claims. (Cl. 81—15)



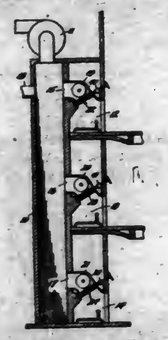
1. A spreader tool comprising first and second base members providing means whereby the parts hereinafter recited are respectively operatively associated with the movable and stationary members of a jack, the second member having work-engaging arms arising from opposite sides thereof, one at least of which is pivotally mounted, and one at least having a proximal approximately straight portion and then being inturned toward the other and having a distal, outwardly extending portion, the arms each comprising a stack of spaced flat elements, those of one arm being opposite the spaces between those of the other, and links pivoted to the first member and to the spaced elements of the arms respectively comprising flat elements staggered in the two links and with their ends received in the spaces between the elements of the arms.

2,447,402
HAND WARPING DEVICE FOR HAND LOOMS
Peter Florjancic and Emil Boral, Zurich, Switzerland, assignors to Max Bucher, Zurich, Switzerland
Application December 7, 1944, Serial No. 567,059
In Switzerland August 6, 1943
2 Claims. (Cl. 28—26)



1. In apparatus for performing warping operation, four corner posts forming a frame, means releasably connecting the posts together whereby the frame is collapsible, a support for warping spools mounted on said frame, a warp beam, one end portion of said beam being in the form of a screw threaded rod, a warp beam support on the frame, means engaging the screw threads of said rod, and means for rotating said rod and warp beam to wind on warp threads and to provide relative axial motion between said beam and the spool support.

2,447,403
UTILITY LIGHT
James E. Forbes, Dallas, Tex.
Application May 3, 1946, Serial No. 666,948
1 Claim. (Cl. 240—8.18)



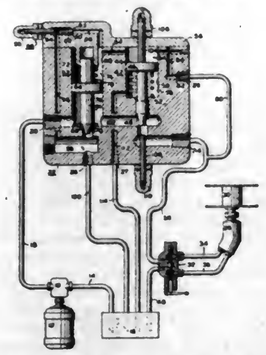
A utility lamp comprising a box composed of related hinged sections, one wall of each section being recessed to define a circular opening when said sections are closed, a sealed lamp unit in said box whose lens protrudes through said opening, a coiled spring anchored at each end to a wall of one of said sections and adapted to bear against and impose tension on said lamp unit to hold the same in fixed relationship with said opening, means within one of said sections for retaining an electric conductor for illuminating said lamp, means for latching said sections in closed position and means for transporting said box.

2,447,404
PROCESS OF DECOLORIZING PETROLEUM HYDROCARBON RESINS
Neal W. Furby, El Cerrito, Calif., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application July 28, 1945, Serial No. 607,564
15 Claims. (Cl. 196—14.20)

1. A process of decolorizing highly unsaturated, air-drying petroleum hydrocarbon polymers containing color bodies, said polymers being bottoms from distillation of resin-containing naphtha, which comprises extracting said polymers without substantially reducing the iodine number thereof by treating said polymers with a combination of two selective solvents, one of which is a polar solvent with preferential solvent action toward naphthenic and aromatic compounds and color bodies, capable of selectively dissolving color bodies from the polymers in an extract phase, and the other of which is a non-polar solvent with preferential solvent action toward aliphatic compounds, capable of selectively dissolving highly unsaturated aliphatic hydrocarbon constitutents from the polymers in the raffinate phase, separating the extract and the raffinate phases, and recovering a residue of light-colored, air-drying petroleum hydrocarbon resins from the raffinate phase.

2,447,405
FIREPLACE FLUE SYSTEM
Harry W. Gabar and Leon Horowitz, Arlington, Va.
Application July 12, 1946, Serial No. 683,118
1 Claim. (Cl. 110—162)

In a fireplace system including a plurality of fireplaces, a main flue, a plurality of branch flues



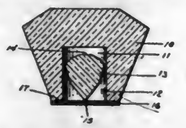
each connected to a single fireplace and said main flue, a plurality of damper means, each operatively positioned relative to one of said branch flues, draft producing means for each of said branch flues, draft producing means for said main flue, and control means for each of said branch flues for simultaneously starting said draft producing means for said corresponding branch flue and opening the corresponding damper means, said control means being operative to simultaneously start said draft producing means for said main flue.

2,447,406

HYDRAULIC POWER TRANSMISSION WITH FLOW CONTROL BY-PASS VALVE

Joseph J. George, Wyandotte, Mich., assignor to Vickers Incorporated, Detroit, Mich., a corporation of Michigan

Application December 26, 1944, Serial No. 569,828
15 Claims. (Cl. 60—53)



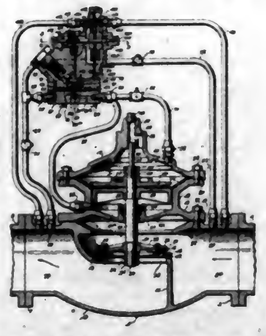
1. In a hydraulic power transmission system for driving a load device at varying speeds and torques but at substantially constant horsepower and containing a fluid pump and motor, the combination of a flow regulating device comprising an adjustable throttle responsive to pressure changes at the motor whereby the throttle varies in predetermined relationship in response to said pressure changes, a compensating by-pass valve responsive to pressure changes ahead of and beyond the throttle for maintaining a constant pressure drop across the throttle whereby the speed of the motor is changed relative to changes in pressures at the motor, and adjustable means responsive to a predetermined pressure whereby the compensating by-pass valve also performs the function of a system relief valve.

2,447,407

GEM

Mark Grain, New York, N. Y.

Application January 26, 1946, Serial No. 643,604
5 Claims. (Cl. 63—32)



1. A faceted gem having an opening in the lower central portion thereof, a smaller faceted gem adapted to fit within said opening which permits it to revolve and move slightly therein, a closure for said opening, said smaller gem resting upon said closure whereby greater brilliance is obtained.

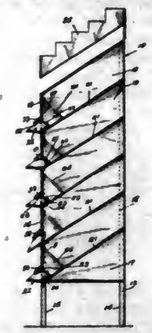
2,447,408

POWER-OPERATED CHECK VALVE

Donald G. Griswold, Alhambra, Calif., assignor to Clayton Manufacturing Company, Alhambra, Calif.

Application May 29, 1943, Serial No. 489,007
2 Claims. (Cl. 137—153)

1. Pilot valve means, comprising: a housing, a fluid distributing base member secured to said housing, said housing having a pilot disc chamber adjacent said base member adapted to receive operating fluid under pressure; a pilot disc seat forming a closure for said pilot disc chamber, a rotatable, ported pilot disc in said pilot disc chamber, said pilot disc seat having an axial opening and said base member having an axial passageway communicating with said axial port and discharging to the atmosphere, said pilot disc having a U-shaped exhaust passageway, one leg of which is in constant communication with the axial port of said pilot disc seat, said pilot disc seat and said base member also having aligned angularly spaced ports and passageways, respectively, said pilot disc having through passageways arranged one upon each side of said U-shaped exhaust passageway and upon an angle relative to said U-shaped passageway corresponding to that of the angular spacing of the ports in said pilot disc seat, the other leg of said U-shaped exhaust passageway being adapted to register with the angularly spaced ports in said pilot disc seat, whereby when said other leg of said U-shaped exhaust passageway is aligned with one of the ports in said pilot disc seat, one of said through-passageways of said pilot disc is aligned with the other port in said pilot disc seat; and means for effecting rotation of said pilot disc.



2,447,409

DELIVERY CABINET

Erwin M. Gulow, Turners Falls, Mass.

Application August 11, 1945, Serial No. 610,224
1 Claim. (Cl. 222—129)

A delivery cabinet including a body provided with a series of vertically arranged bins of similar construction formed with discharge openings and forwardly extending inclined bottoms terminating at the bottoms of said discharge openings, inwardly angled filler pieces disposed in the opposite front corners of each bin for directing the contents of the bins to said discharge openings, spouts hinged at the bottom of each discharge opening to the front of said cabinet for pivotal movement through said openings, said spouts including bottom surfaces and oppositely disposed sides being rounded and covered at their inner rear ends, spaced upwardly extending stops in each spout engageable with the edges of the bins at the upper edges of said discharge openings

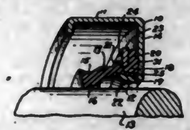
for limiting the movement of said spouts to a slanting or discharge position and to a horizontal or closed position, in which latter position the rear ends of the sides and the tops of the spouts will engage and seat on the bottoms of the bins to close off the flow of the bin contents to said spouts, and springs connected between each spout and the front of its bin to normally and resiliently hold the same in closed position.

2,447,410

PYROLYSIS OF CARBON CHLORIDES

Clifford Allen Hampel, Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia

No Drawing. Application June 24, 1942,
Serial No. 448,317
9 Claims. (Cl. 260—654)



1. In the pyrolysis of carbon chlorides which normally decompose to yield a mixture containing free chlorine which upon cooling of the mixture recombines with other products of the decomposition, the improvement which comprises admixing a paraffin hydrocarbon with the products of the decomposition prior to cooling of the mixture to a temperature at which said recombining of the chlorine occurs.

2,447,411

FLUID SEAL

Fred A. Helfrecht, Redwood City, Calif., assignor to National Motor Bearing Co., Inc., Redwood City, Calif., a corporation of California

Application July 5, 1945, Serial No. 603,358
2 Claims. (Cl. 288—3)

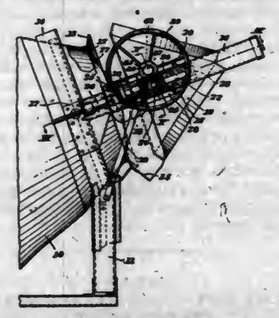
1. A fluid seal adapted to be inserted as a unit to seal the space between two relatively moving cylindrical surfaces comprising a case member having a cylindrical peripheral wall adapted to make a leak-tight, non-rotating fit with one of said surfaces; a generally axial supporting flange set at an angle to and spaced away from the other surface being sealed, and a radial connecting wall extending between said peripheral wall and said supporting flange; a sealing member having a sealing lip adapted to fit the moving surface being sealed with a sliding, substantially leak-tight fit, and a flexible outwardly-flared connecting neck which is provided with axial and radial sealing faces at its flared end, the opposite surface to said axial face having in addition to said radial flared end, a radial flange of lesser radial extent than said end spaced away from it sufficiently to form a recess; and an annular ring fitted tightly into said recess, said ring, due to the angular setting of said axial flange of the case member, serving to force said axial face and said flared end into leak-tight, non-rotating contact with the inner axial and radial surfaces of the case member against which they bear.

2,447,412

PROCESS OF TREATING ARTIFICIAL MAGNESIUM HYDRATE TO PRODUCE MAGNESIA

Russell Pearce Heuer, Villa Nova, Pa., assignor to General Refractories Company, a corporation of Pennsylvania

No Drawing. Application September 20, 1941,
Serial No. 411,695
19 Claims. (Cl. 25—156)



1. The process of treating artificial magnesium hydrate to obtain a refractory starting material of increased density and volume stability, which comprises mixing finely divided artificial magnesium hydrate with finely divided lime until the total lime content is from 2 to 7%, and with added finely divided iron oxide until the total Fe_2O_3 content is from 2 to 10%, silica being present in amounts not over 1.5%, regulating the moisture content to a value of 15% or more, agglomerating the moist mixture under a pressure exceeding 500 pounds per square inch and calcining the agglomerated material at a temperature of between 1300 and 1600° C.

2,447,413

CHARGING HOPPER AND DOOR MECHANISM FOR ROTARY-DRUM MIXERS

Lawrence E. Joseph, Fox Chapel Borough, Allegheny County, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey

Application April 8, 1946, Serial No. 660,359
7 Claims. (Cl. 259—161)

1. A charging and discharging mechanism for a mixer including a frame and a drum rotatable therein having an opening at one end, said mechanism comprising spaced supports extending from said frame adjacent said end, blocks slidable along

said supports, a charging hopper disposed between said supports, shafts extending coaxially from said hopper and seated in said blocks, a closure for said end and means mounting said closure for swinging movement about the axis of said shafts.

2,447,414

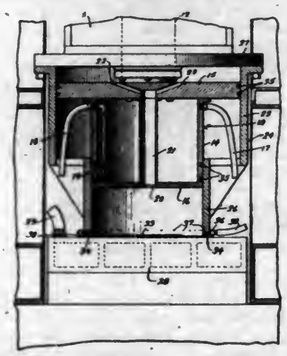
OXIDATION OF ISOPROPYLBIPHENYL

Milton Kosmin and William S. Emerson, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application January 18, 1946, Serial No. 642,137

4 Claims. (Cl. 260—592)

1. The process which includes contacting isopropylbiphenyl at a temperature below its boiling point with gaseous oxygen in the presence of an oxidation catalyst consisting of calcium hydroxide, and recovering from the oxidation product phenyl acetophenone.



2,447,415

PLASTIC FORMING APPARATUS AND METHOD

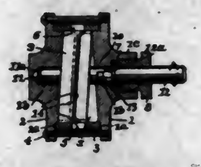
George Albert Lyon, Allenhurst, N. J.

Application July 5, 1944, Serial No. 543,525

17 Claims. (Cl. 18—17)

5. In a double-acting press for plastic material, a heated bed, a piston to press plastic material on said bed, a flange on the upper portion of the piston, means for heating and means for cooling said piston, a chamber element comprising an upper-walled portion snugly receiving said flange and a lower-walled portion forming a cylinder for said piston, said chamber element being movable to engage the bottom edge of said lower portion against said bed and about the plastic material, a passage through said piston and flange to permit escape of air from said lower chamber element portion to said upper portion upon downward movement of said piston and flange in said lower portion and upper portion respectively, and means to direct a fluid stream against the face of the piston.

2,447,416



AXIALLY ROTATING RECIPROCATING PISTON PUMP

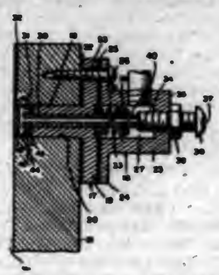
Henry H. Mackal, Paramus, N. J.

Application March 26, 1946, Serial No. 657,194

3 Claims. (Cl. 103—157)

1. Apparatus of the class set forth including, in combination, a cylinder and piston rotative one relatively to the other and the cylinder having its inner end faces pitched in opposite directions relatively to the cylinder axis, and the piston being coaxial with the cylinder space and substantially sealing off flow therethrough from one toward the other of such faces and extending and closely fitting between the same where they most closely adjoin each other and having its sides generally parallel and pitched at an angle not greater than that of the pitch of either such face, said piston having, open at its periphery throughout their own lengths, fluid-conducting passages respectively within diametrically opposite segments of said periphery and one of which passages

is isolated from one side but is open at least at its ends to the opposite side, and the other of which passages is isolated from the latter side but is open at least at its ends to the former side, of the piston, and the cylinder having, cut by a plane radial thereof and which is coincident with the maximum spacing of the said faces, an intake of a width in said plane less than such maximum spacing but formed and arranged to be exposed by first one and then the other of said passages during each revolution of the piston and said cylinder also having, substantially opposite the intake, an exhaust arranged to be exposed by first one and then the other of said passages during each revolution of the piston.



2,447,417

APPARATUS FOR TREATING FOODS

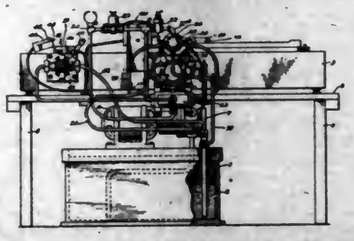
Preston E. Marshall, Wayne, Mich.

Application March 19, 1945, Serial No. 583,451

2 Claims. (Cl. 99—258)

1. Apparatus for treating foods comprising a chamber adapted to contain the food to be treated and having an opening in one wall, an injector having a body portion projecting into the opening and having a compartment adapted to periodically receive a quantity of inert gas under pressure, a plunger slidably supported in the body and having a head supported in the opening in advance of the adjacent end of the body portion, a longitudinal passage extending through the plunger and having one end communicating with the compartment, a transverse passage in the head for connecting the longitudinal passage to the space between the body portion and head, whereby the gas under pressure discharged into the space between the body and head of the plunger acts on

said head to move the latter into the chamber, ports in the head for connecting the passages to the interior of the chamber, and spring means acting on the plunger for returning the latter upon a drop in the gas pressure in said compartment.



2,447,418

SHARPENING APPARATUS

Roger E. Matter, Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association

Application April 21, 1944, Serial No. 532,087

7 Claims. (Cl. 51—65)

6. In a device of the character described comprising a sharpener member and an associated blade holder, power driven mechanism for imparting relative movement between the sharpener member and blade holder for sharpening a blade on said member, an oscillatory blade flipping means connected to said blade holder for swinging opposite sides of a blade alternately into and out of contact with said sharpener member, power control means connected to the power driven mechanism and to the blade flipping means and movable in opposition to a resilient pressure to an operative position for initiating the supply of power to said mechanism and said flipping means, releasable holding means for maintaining said power control means in said operative position, and a power stop controller connected to said holding means and to said flipping means at a position thereon so as to automatically release said power control means to interrupt the supply of power and stop the blade holder with the blade out of contact with said sharpener member.

2,447,419

PREPARATION OF DIPHENYLACETONITRILE

Jack Mills, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 11, 1947, Serial No. 768,061

8 Claims. (Cl. 260—465)

1. In the process of producing diphenylacetonitrile the step which comprises reacting benzaldehyde cyanohydrin with benzene in the presence of a member of the group consisting of boron trifluoride and its etherates.

2,447,420

PLASTIC COATED ARTICLE

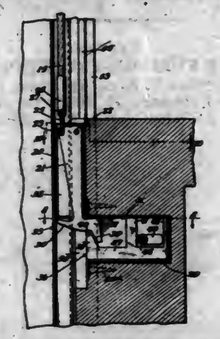
Samuel D. Moore, Mantua, Ohio, assignor to Samuel Moore & Company, Cleveland, Ohio, a corporation of Ohio

Application September 29, 1945, Serial No. 619,331

2 Claims. (Cl. 138—68)

1. An article adapted for hand rails, stanchions, supports and the like, comprising a rigid metallic tube or rod, means for preventing corrosion of the exterior surface, said means comprising an exterior layer of polymeric material which is resistant to corrosive action, said layer

being adherent to said surface and having been applied in a flowable heated tubular condition and thereafter cooled to a hardened condition, said layer having a thickness in excess of .010 inch, and comprising a single, homogeneous body.



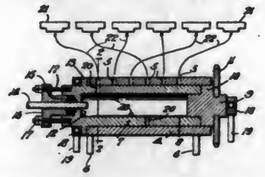
2,447,421

SWINGING WINDOW CONSTRUCTION

Charles G. Nachtrieb, Streator, Ill.

Application April 5, 1944, Serial No. 529,571

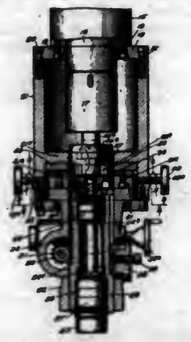
7 Claims. (Cl. 20—42)



1. In a window construction, the combination, with a frame, of keeper means on the frame, a sash mounted in the frame for swinging and sliding movement in relation to the frame, keeper means on the sash, counterbalancing means mounted on the frame and connecting means to detachably connect the counterbalancing means with the sash comprising, a support, a lever member pivotally mounted adjacent one end thereof on the support for movement in a plane normal to the pivotal axis of the member, the lever member having opposite latching portions adjacent an end thereof remote from the said pivotal axis, an arm on the lever member and arranged in spaced relation, about said pivotal axis, with respect to said latching portions, a connecting link pivotally mounted adjacent one end thereof on the said arm for movement about a pivotal axis disposed in spaced relation with the said first mentioned pivotal axis, the connecting link having means thereon arranged to cooperate with corresponding means on the said counterbalancing means disconnectibly to connect the link and the counterbalancing means whereby the counterbalancing means will act normally to urge one of the said latching portions into latching engagement with the keeper means on the frame, the other of the said latching portions being arranged for latching engagement with the keeper means on the sash and having means thereon arranged to cooperate with corresponding means on the sash whereby the said lever member may be operated to cause the said latching portions to engage the said keeper means on the sash and to be disengaged from the said keeper means on the frame respectively, and means on the sash arranged in cooperative relation with the said means on the said latching portion for so operating the said lever member.

2,447,422
CHAIN CLASP
William Nelson, Attleboro, Mass., assignor to J. & L. Tool & Findings Co., Attleboro, Mass., a copartnership
Application November 21, 1946, Serial No. 711,365
2 Claims. (Cl. 24—81)

1. In combination a pair of chain links, a clasp for separably connecting said links comprising, a pair of members each having one end rolled about one link and the other end bent into hook shape, said roll of one member and the hook thereof resiliently receiving the roll of the other member by the spring of the portions to lock the parts into engaged relation.



2,447,423
ROTARY FUEL DISTRIBUTING VALVE
George L. Nies, Ephrata, Pa.
Application February 27, 1945, Serial No. 579,953
2 Claims. (Cl. 137—146)

1. A valve structure of the kind and for the purpose described comprising an elongated fixed casing with a smooth inner cylindrical surface and having spaced exit passages extending from its interior to the exterior and capable of being in communication with cylinders of an engine, an elongated hollow fuel-chamber-containing rotor in and having tight running fit with the cylindrical surface of said casing, a rotatable plug tightly fitted into and closing one end of said rotor, an annular flange on said plug having tight running fit at its periphery with the inner surface of said casing, a wall closing the other end of said rotor, an annular flange on that end of said rotor having tight running fit with the corresponding end of said casing, a fuel supply pipe extending axially through said wall, and means associated with said plug to rotate said rotor, said rotor having spaced ports in its periphery positioned to align successively with the exit passages of said casing during continuous rotation of the rotor.

2,447,424
BORING APPARATUS
William J. Nightingale, Oak Park, Ill., assignor, by mesne assignments, of one-half to Sophie E. Bruen, Chicago, Ill.
Application July 8, 1944, Serial No. 543,996
4 Claims. (Cl. 77—55)

1. In combination with a machine tool including a frame and a power driven rotatable tool spindle having radial bearings afforded by said frame, apparatus for performing precision machining unaffected by play attributable to wear or other causes existing between said spindle and said bearings, comprising: a stationary cylindrical housing, wherein the aforesaid spindle rotates in spaced relation to the inner wall thereof, rigidly secured to the aforesaid frame, a second housing non-rotatably mounted on the first-mentioned housing by means including right angularly disposed slidable members for universal lateral movement in a horizontal plane relatively to said first-mentioned housing, a second tool spindle journaled in said second housing, the plane of movement of said second housing being normal to the axis of rotation of said second spindle, a connection through which the second spindle is rotated by the first spindle regardless of whether or not the axes of said spindles are in alignment and adjustable means supported by the first housing for sliding said slidable members.

2,447,425
DISPOSAL OF REFUSE
Orlo Clair Norton and Adolf E. Hahn, Erie, Pa.
Application March 17, 1945, Serial No. 583,290
3 Claims. (Cl. 210—60)

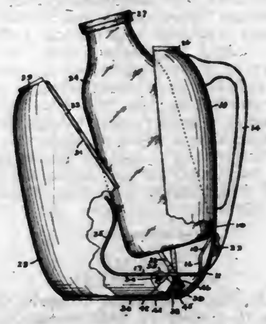
1. A waste disposer comprising an open cylindrical container adapted to receive waste material having an outlet in the side thereof, a vertical baffle extending upwardly from the base of said container spaced from said outlet, a removable horizontal baffle spaced from the top side of said baffle above said outlet, an angularly extending baffle disposed over said outlet spaced from the bottom of said container, and means for agitating fluid in said container.

2,447,426
PRODUCTION OF CARBON MONOXIDE
John August Benjamin Ödberg, Soderfors, Sweden
Application April 20, 1943, Serial No. 483,724
In Sweden June 13, 1942
3 Claims. (Cl. 204—165)

1. The process of producing gas rich in carbon monoxide in a vertical cupola furnace provided with electrodes for forming an arc in the central portion of the cupola comprising the steps of supplying solid fuel to the top portion of the cupola to form a vertical column of fuel with a frustoconical top portion in said cupola, passing the fuel continuously downwardly in said cupola, heating a central zone in said column of fuel by means of electrical arcs so that this central zone

becomes incandescent, feeding a gas rich in carbon dioxide into the annular space formed between the frustoconical top portion of the fuel column and the walls of the cupola and withdrawing a gas rich in carbon monoxide at the lower portion of the reduction chamber, in order to cause the gas to flow through the fuel column substantially between the vertical walls of the chamber and the central, electrically heated zone.

2,447,427
MEAT PRODUCT AND PROCESS
Edwin N. Oftedahl, Chicago, Ill.
No Drawing. Application June 14, 1945, Serial No. 599,525
9 Claims. (Cl. 99—108)



1. A fresh, ground, raw meat composition characterized by its ability to retain its fresh color and to resist bacterial and enzymatic decomposition on storage under refrigerating conditions, said composition comprising ground raw meat which has admixed therewith a quantity of egg white and a lesser quantity on a dry basis of egg yolk.

2,447,428
AUTOMOBILE TIRE GUARD
Jerry O'Leary, Cleveland, Ohio, assignor of one-fourth to M. B. Baubach, Norwood, Ohio
Application July 31, 1945, Serial No. 608,010
11 Claims. (Cl. 301—38)

7. A wheel-like guard for pneumatic tire bearing wheels, said guard comprising a plate member having a generally convex outer surface, said plate member having a plurality of holes therein, a disk member of generally concave inner surface and convex outer surface secured to said plate member at the circumferential edges thereof and being substantially parallel thereto, a ring member having a cylindrical peripheral portion and a radially inwardly extending leg portion secured to said plate and disk members at the circumferential edges thereof to form a tread surface for the guard, a hoop having tabs formed on one edge thereof secured between said plate and disk members with the tabs extending through the holes in said plate member, and means for securing said plate and disk members to a pneumatic tire bearing wheel at the center portions of said members whereby the inner concave surface of said disk member can closely follow the contour of the wheel and pneumatic tire to form a compact assembly therewith.

2,447,429
PITCHER
James C. Procter, Marion County, Ind.
Application January 17, 1947, Serial No. 722,596
5 Claims. (Cl. 215—12)

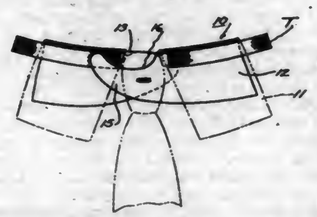
3. In a pitcher having a removable container, a rear housing part; a front housing part; a base member carried by said rear part, upon which member said container may rest; an abutment at the rear of said base member; an elastic member extending upwardly at the forward side of said base member spaced from said abutment a distance to compressibly receive therebetween a lower portion of said container; said rear housing part being shaped to have its upper end portion fit around an upper rear side portion of said container; said elastic member being formed to contact the forward side of said container to urge its said rear upper portion side substantially against said rear housing upper end portion; a hinge connection between said two housing parts arranged to permit the front housing part to swing relatively from the rear part in fore and aft directions; the upper end of said front housing part being shaped to fit around the front portion of said container and thereby, with the upper end of the rear housing part, complete encirclement of the container to leave an upper container end exposed, said hinge connection comprising a pin carried by said front housing part, and a finger carried from the rear housing part to extend under and yieldingly against said pin, said base member being pulled toward the pin by said finger, whereby said housing parts may be separated by forcibly pulling them apart to disengage said finger from said pin, and stop means yieldingly limiting the rocking apart of said two housing parts, said stop means comprising an elastic finger fixed by one end in relation to said rear housing part and extending by a free end into said front housing part, and said front housing part being a pair of spaced apart grooves in the path of said free end whereby that end may spring from one groove to the other upon rocking of the housing parts.

2,447,430

APPARATUS FOR PREVENTING THE FORMATION OF ICE ON WINDSHIELDS

Horace H. Raymond, Berlin, Conn., assignor, by mesne assignments, to Raymond De-Icer Co., Inc., Los Angeles, Calif., a corporation of Delaware

Application April 8, 1944, Serial No. 530,159
7 Claims. (Cl. 20—40.5)



4. In an attachment for windshields for preventing the formation of ice and frost thereon, in combination, a frame the forward end of which is adapted to engage a windshield, a transparent pane secured to the rear face of said frame, said frame comprising four members forming a generally rectangular figure, a distributor built into one of said frame members and having a slot spaced forwardly of said transparent pane, said frame members which extend substantially perpendicular to said distributor member being of uniformly decreasing thickness from said distributor member outwardly, whereby said attachment forms with the windshield a space of uniformly decreasing cross-sectional area, and an inlet pipe for said distributor for supplying hot air to the space between said attachment and the windshield to which it is applied.

2,447,431

SHIRT COLLAR

Melville F. Rogers, Ottawa, Ontario, Canada

Application December 17, 1946, Serial No. 716,777
3 Claims. (Cl. 2—137)

1. A shirt collar having outer and inner folds and fastening tongues extending from opposite ends of said inner fold adapted to overlap one another at the front of the collar, one of said tongues being of a length such as to extend between said folds and to engage at its outer end the juncture portion of said folds, said one of said tongues having its upper portion cut out defining an elongated recess through which the tie is received lengthwise and presenting an upper edge below the knot of the tie by which the knot is supported when said tongues are attached to the stud.

2,447,432

DESTRUCTIVE DISTILLATION OF CASHEW NUT SHELL LIQUID AND PRODUCT THEREOF

William F. Schaufelberger, Pleasant Grove, N. J., assignor, by mesne assignments, to The Harvel Corporation, a corporation of New Jersey

No Drawing. Application April 13, 1944, Serial No. 530,948
3 Claims. (Cl. 202—10)

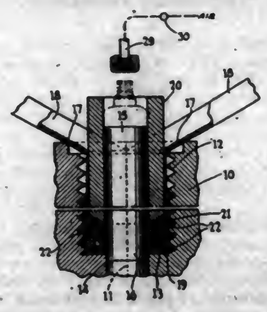
1. The method for producing substantially solid and infusible cashew nut shell liquid residue comprising destructively distilling cashew nut shell liquid between about 560° F. and 620° F. and at a pressure in the range of 0–5 inches of mercury until said residue is obtained and the quantity by weight of the residue is between about 75% and 50% of the quantity by weight of said cashew nut shell liquid.

2,447,433

PROTECTIVE HOOD

Russell N. Schroeder, Inglewood, Calif.

Application July 30, 1945, Serial No. 607,685
4 Claims. (Cl. 128—142)



1. A protective hood supplied with air under pressure including: a head band; a cap and sack-like body portion supported by said head band; a transparent panel in said body portion; a supporting member connected to said head band; an air hose positioned by said supporting member; an air outlet tube connected to said air hose; an air outlet tip at the lower end of said air outlet tube provided with apertures arranged to direct the issuing air against the inner face of the transparent panel; and a pad of fibrous material arranged above said apertures to break up the column of air flowing toward said apertures.

2,447,434

METHOD OF COMPACTING METAL POWDER INTO COMPLICATED SHAPES

Paul Schwarzkopf, Yonkers, N. Y., assignor to American Electro Metal Corporation, Yonkers, N. Y., a corporation of Maryland

Application June 6, 1944, Serial No. 538,912
4 Claims. (Cl. 29—160.5)

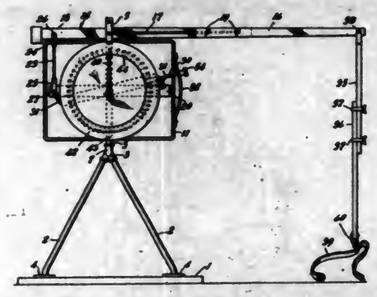
1. In a method of producing from metallic powder a cored article having peripheral projections, the steps of providing a die cavity having a rigid peripheral surface including recesses forming the negative of molded projections, providing a removable rigid core within said cavity, filling metalic powder into the space between the surfaces of said cavity and core, exerting pressure in a direction essentially coaxial with the core to preform a cored compact, replacing the core by a radially expansible pressure means, and expanding the latter radially to additionally and uniformly compress the preformed powder compact.

2,447,435

TIRE TRUCK

Walter A. Settle, Jefferson, Oreg; Nila B. Settle executrix of said Walter A. Settle, deceased

Application February 11, 1946, Serial No. 646,791
5 Claims. (Cl. 214—65.4)



1. A truck for transporting tires comprising a wheel-supported axle, a handle, a rockable means mounted on the axle with the axle forming the axis for the rockable means, means pivotally attaching the handle on the rockable means so that said handle may not only be rotated on the axle but may be rocked in planes parallel to said axle, an extension on the lower end of the handle to provide a saddle for supporting a tire and means connected to the upper end of the handle for retaining the tire in an elevated position.

2,447,436

DISTANCE METER

Brice E. Sharp and George M. Hackman, Knoxville, Tenn.; said Hackman assignor to said Sharp

Application February 28, 1946, Serial No. 650,926
4 Claims. (Cl. 33—125)

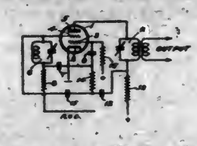
4. In apparatus of the class described, a dial disk graduated in units of measurement of successively increasing value, an indicator sweep arm operative over said disk around the axis thereof, a vertically rocking lever arm, means on one end of said lever arm for attaching the body of a person thereto for operation of said lever arm by jumping movement of said person, and means for operatively connecting the other end of said lever arm to said sweep arm comprising a ratchet wheel, and a rocking pawl carrying beam for rotating said wheel in one direction solely and to which said lever arm is operatively connected, and settable means to disable the pawls on said beam at will comprising a rocking member having shoes thereon adapted to be interposed between the pawls on said beam and said ratchet wheel.

2,447,437

SOFT METAL CASTING

Carleton Henry Smith, Montreal, Quebec, Canada, assignor to National Lead Company, New York, N. Y., a corporation of New Jersey

Application March 27, 1946, Serial No. 657,585
1 Claim. (Cl. 29—187)

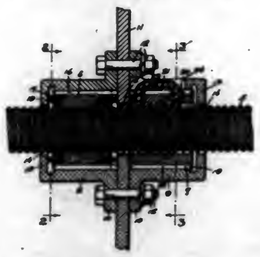


As a new article of manufacture, a caulking metal bar consisting of individual segments of substantially the same weight and form joined together longitudinally by narrow breakable necks of relatively small cross-section and being provided at at least one end thereof with a loop shaped handle having a relatively straight upper gripping section adapted to be conveniently engaged by a closed fist cast as an integral part of said bar and of the same metal being joined thereto by a narrow breakable neck of relatively small cross-section and weighing about as much as an individual segment of said bar.

2,447,438

CIRCUIT FOR TRANSMITTING HIGH-FREQUENCY ELECTRIC OSCILLATIONS

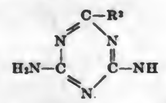
Maximiliaan Julius Otto Strutt and Aldert van der Ziel, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee



Application November 15, 1946, Serial No. 737,572
In the Netherlands January 13, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires January 13, 1961
7 Claims. (Cl. 250—36)

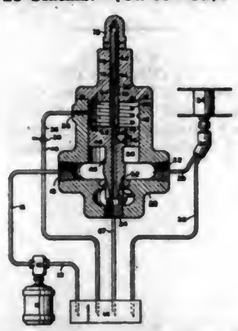
1. A high frequency oscillator circuit arrangement comprising an electron discharge tube having arranged in succession a cathode, a space charge electrode otherwise termed a suction grid, a control grid and an anode, an oscillatory cir-

cuit tuned to the frequency of the oscillations to be generated and coupled between said control grid and cathode, an output circuit coupled between said anode and cathode and comprising a parallel tuned resonant circuit having one terminal thereof coupled to the anode and ohmic resistor means coupled in series with said resonant circuit and having the free end thereof coupled for radio frequencies to said base charge electrode, and means to apply to said control grid potential variations occurring at the interconnection between said resonant circuit and said resistor means whereby a feedback potential having an oscillation-sustaining phase relationship with respect to the voltage of said oscillatory circuit is applied to said control grid.



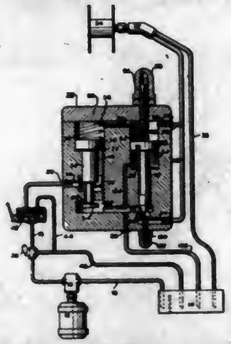
2,447,439
SELF-LOCKING SCREW
Roy E. Thompson, Seattle, Wash.
Application December 12, 1945, Serial No. 634,494
8 Claims. (Cl. 74—424.8)

1. In a self-locking screw, a screw adapted by loading to be subjected to axial thrust, a pair of nuts threaded upon the screw and each arranged for rotation relative to the screw, one of said nuts having a comparatively high coefficient of friction and the other nut having a comparatively low coefficient of friction when subjected to the thrust load of the screw, means permitting both of said nuts to float in an endwise direction through a limited degree of travel and characterized in that the low-friction nut reaches its end limit of travel in advance of the high friction nut, and yielding means associated with the high-friction nut and acting counter to the endwise travel thereof for tensioning the same.



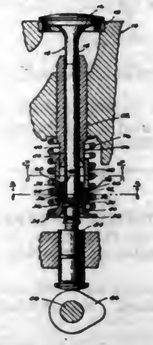
2,447,440
AMINO SUBSTITUTED ARYL GUANAMINES
Jack Theo Thurston, Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 30, 1941, Serial No. 409,141
6 Claims. (Cl. 260—249.5)

1. Amino-substituted polynuclear guanamines having the following formula:



in which R^2 is an amino-substituted polynuclear aromatic radical and the bond between R^2 and the 2-carbon atom of the triazine ring is a carbon-to-carbon bond.

2,447,441
HYDRAULIC POWER TRANSMISSION WITH FLOW CONTROL BY-PASS VALVE
Ralph L. Tweedale, Birmingham, Mich., assignor to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application December 26, 1944, Serial No. 569,827
13 Claims. (Cl. 60—53)

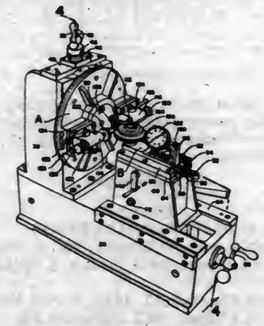


1. In a hydraulic power transmission system for driving a reel and having a fixed displacement pump and a fixed displacement fluid motor, a valve comprising a throttle as the sole restrictive means to bypass a variable portion of the pump delivery around the motor and having a predetermined relationship between its positional adjustment and is resultant opening area, and resiliently-loaded means responsive to the pressure required to drive the motor for controlling the positional adjustment of the throttle.

2,447,442
HYDRAULIC POWER TRANSMISSION WITH FLOW CONTROL VALVE
Ralph L. Tweedale, Birmingham, and Joseph J. George, Wyandotte, Mich., assignors to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application December 26, 1944, Serial No. 569,829
8 Claims. (Cl. 60—53)

1. In a hydraulic power transmission system for driving a reel and containing a constant pressure, variable volume fluid source and a fluid motor, the combination of a circuit for circulation of fluid through the source and motor, a flow regulating device comprising a first and second throttle valve in series in said circuit, the first throttle being responsive to and adjustable by the pressure at the motor whereby the first throttle tends to close in predetermined relationship to an increase of pressure at said motor and the second throttle valve being responsive to pressure changes ahead of and beyond the first throttle for maintaining a constant pressure drop across the first throttle.

2,447,443
VALVE
Harry E. Voorhies, Grosse Pointe Woods, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 4, 1945, Serial No. 620,234
7 Claims. (Cl. 123—90)

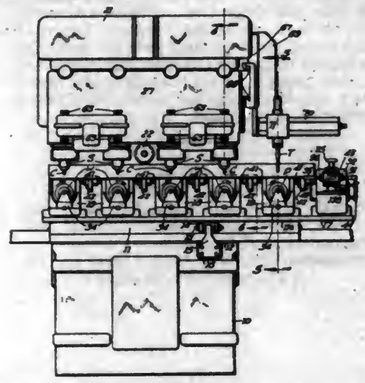


3. In an internal combustion engine a valve seat, a valve cooperable therewith having an enlarged head and an integral stem, a coil spring for returning the valve to and retaining it upon its seat, said coil spring due to its inherent twisting motion during retraction and elongation acting to rotate the valve as the valve is reciprocated and brake means directly associated with the stem of the valve resisting rotation of the valve in one direction.

2,447,444
GROUND STAKE
Philip M. Waite, Corry, Pa.
Application June 19, 1945, Serial No. 600,330
1 Claim. (Cl. 189—91)

An improved ground stake comprising an elongated length of substantially rigid wire bent upon itself to form an elongated straight bar, a beveled end on said bar, a second bar having a straight upper portion, the remaining portion of said second bar spirally wound about said first bar and terminating in a cutting bill below the beveled end of said first bar, the lower end of said cutting bill disposed in substantial alignment with said beveled end, the convolutions of said spiral bar engaging the straight bar along the length of said spiral bar forming longitudinally spaced apart ridges about said straight bar, the straight upper portion of said spiral bar engaging the upper portion of said straight bar and a connecting bar between the upper portions of said straight and spiral bars.

2,447,445
GEAR TESTER
Gunnar G. Widen and Robert J. Helgerud, Minneapolis, Minn., assignors to General Mills, Inc., a corporation of Delaware
Application March 9, 1944, Serial No. 525,742
3 Claims. (Cl. 33—179.5)



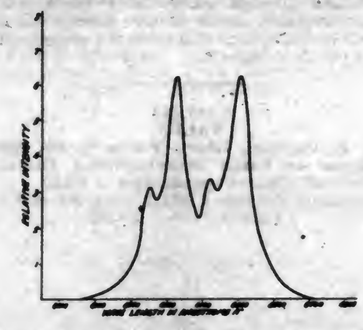
1. Gear testing apparatus comprising a main frame, a plate rotatable about an axis in the main frame, means on the plate for rotatably mounting a gear for rotation at right angles to the axis of the plate, a carriage slidable axially toward and from the plate, a spring for urging the carriage toward the plate, cam means opposing the spring for moving the carriage, the angle of the cam being less steep as the gears approach each other, means on the carriage for mounting a gear for meshing with the first-mentioned gear, and means for measuring movements of the carriage as the gears are rotated.

2,447,446
PATTERN CONTROLLED MACHINE TOOL
Warren Wilder and Herman Horlacher, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Application March 23, 1944, Serial No. 527,792
18 Claims. (Cl. 90—13.4)

1. In a pattern controlled milling machine, a column, means on said column for rotatably supporting a pattern and work piece, a cross slide mounted on said column for movement parallel to the axis of rotation of said pattern and work, a vertically movable slide mounted on said cross slide, a tracer and a rotatable cutter spindle mounted on said vertically movable slide, means for rotating said pattern and work piece, means for actuating said cross slide, means for reciprocating said vertical slide, a control means for stopping and starting said rotating means for said pattern and work piece, a control means for the actuating means for said cross slide, and means whereby said tracer controls the recipro-

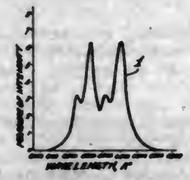
cating means for the vertically movable slide, and means whereby when the control means for the cross slide actuating means is operative said control means for the pattern and work rotation is

rendered effective for simultaneously stopping and starting pattern and work rotation and controlling the stopping and starting of the cross slide movement.



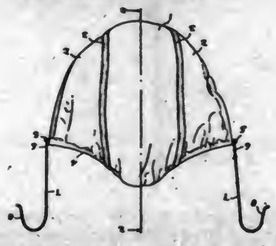
2,447,447
PHOSPHOR MATERIALS
Ferd E. Williams, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 17, 1945, Serial No. 622,822
1 Claim. (Cl. 252—301.6)

A phosphor consisting of zinc fluoride a fluoride of a metal from the group consisting of calcium, strontium, barium and mixtures thereof, and a manganese activator said material having substantially the molar proportions given by the formula $ZnF_2 \cdot XF_2$:0.012Mn in which X is the metal from the said group.



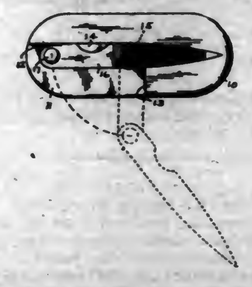
2,447,448
MAGNESIUM GERMANATE PHOSPHORS
Ferd E. Williams, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 17, 1945, Serial No. 622,824
2 Claims. (Cl. 252—301.4)

1. A phosphor for use in connection with a screen consisting of magnesium oxide and germanium oxide and manganese activator having the gram molecular formula, $xMgO \cdot GeO_2 : yMn$



in which x is a number lying between and including 3 and 5 and y is a number lying between and including 0.001 and 0.1.

2,447,449
PHOSPHOR MATERIAL
Ferd E. Williams, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 24, 1945, Serial No. 624,255
2 Claims. (Cl. 252—301.6)

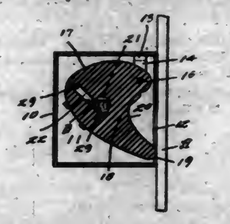


1. A phosphor material consisting of the oxides of magnesium, zinc and germanium having the mol formula $VMgO \cdot XZnO \cdot yGeO_2$, the ratio of V to X being from 3 to 1 up to and including 37 to 3 and the sum of V and X being four times Y and manganese activators in activator proportions.

2,447,450
SURGICAL MASK
Spencer R. Williams, Toronto, Ontario, Canada, assignor, by direct and mesne assignments, to Germ-Ex Mask Company Limited, Toronto, Ontario, Canada
Application December 20, 1945, Serial No. 636,172
3 Claims. (Cl. 128—146)

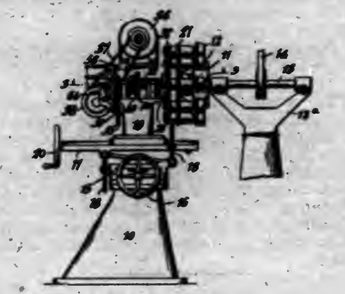
1. A surgical mask comprising a pouch formed with a centre strip of surgical filter gauze and cheek-engaging sector-shaped side pieces of soft fine fabric different from said centre strip and joined to said centre strip with parallel seams, a flexible wire hemmed in the top edge of said pouch, ear bows connected to the ends of said wire, and an elastic loop hemmed in the bottom edge of said pouch and having its ends secured to said wire adjacent the wire ends.

2,447,451
BRUSH MOUNTED NAIL FILE
Minnie May Windmoeller, Mooresville, Ind.
Application November 9, 1945, Serial No. 627,693
3 Claims. (Cl. 132—85)



1. The combination of a mounting base having a recess therein opening from one face and defined by a longitudinal shoulder and a transverse shoulder extending therefrom; a link longer than said transverse shoulder and having one end pivoted to said base within said recess adjacent the juncture of said shoulders; and a nail tool hinged to the other end of said link whereby the tool may be swung clear of said base, and returned across said recess with said link in the recess.

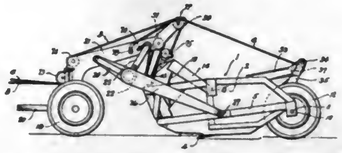
2,447,452
ELECTRICAL SWITCH
Leo C. Zehnpfennig, Merkel, Tex., now by judicial change of name Leo C. Zee
Application March 5, 1946, Serial No. 652,163
2 Claims. (Cl. 200—54)



2. A gravity closing switch for mounting on a door frame and adapted to be moved to circuit breaking position by closing of the door; said switch comprising a stationary member formed of a horizontal top wall, a vertical front wall and opposite end walls having curved rear edges extending downwardly and forwardly, said end walls having a pair of arcuate slots, an upwardly opening housing enclosing said stationary member, means hingedly securing said housing to said stationary member, a pair of inwardly projecting pins carried by said housing loosely engaging in said slots to limit the forward swinging of said housing, a pair of fixed contacts carried by said stationary member, a pair of hook-shaped contacts, a bridging bar fixed to said hook-shaped contacts and fixed relative to said housing whereby said latter contacts will engage said fixed contacts when said housing swings downwardly and forwardly.

2,447,453
ELECTRICAL SWITCH
Leo C. Zehnpfennig, Merkel, Tex., now by judicial change of name Leo C. Zee
Application March 5, 1946, Serial No. 652,166
1 Claim. (Cl. 200—152)

An electric switch comprising a case having an opening in one wall thereof, a lever rockably mounted in said case, a pin in said case pivotally connecting one arm of said lever in said case, said arm having a relatively large mass below said pin, a substantially horizontal arm extending from the free end of said former arm and extending through said opening, a substantially horizontal chamber in said first arm, a reservoir in said first arm communicating with said chamber, mercury in said chamber, contacts in the opposite ends of said chamber, said mass and said mercury biasing said horizontal arm to extended position, the mercury being engageable with said contacts in the extended position of said lever and flowing into said reservoir in the retracted position of said lever, and moving out of engagement with one of said contacts.

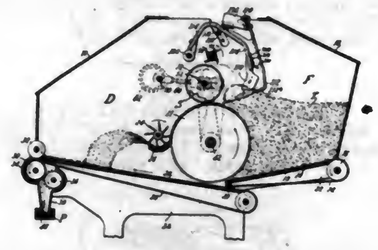


2,447,454
BUFFING AND POLISHING MACHINE
Walter De F. Abbott, Buffalo, N. Y., assignor to Vanott Machine Corp., Buffalo, N. Y., a corporation of New York
Application August 22, 1946, Serial No. 692,285
12 Claims. (Cl. 51—108)

3. In a buffing machine, a work-spindle frame, a multiple-spindle head rotatably supported on said frame, a plurality of rotatable work-receiving spindles mounted on said head for presentation in operative relation to a buffing wheel or the like, means disposed in the operative path of said spindles for individually imparting rotation thereto upon presentation to the buffing wheel, and combined rotatable and axially-shiftable means for releasable driving and latching engagement with said head for intermittently rotating it to and latching it in its respective spindle-operating positions, a clutch-controlled driven mechanism for

said driving and latching means, and means operatively connected to such driving and latching means for governing its shifting to and from its clutching and latching positions.

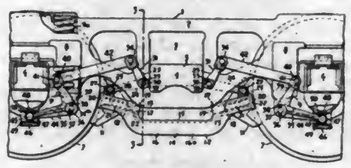
2,447,455
SCRAPER
George S. Allin, Seattle, Wash., assignor to Isaacson Iron Works, Seattle, Wash., a corporation of Washington
Application September 18, 1944, Serial No. 554,642
3 Claims. (Cl. 37—126)



1. In a scraper, a bowl open at its forward end and having opposite side walls and a bottom wall, a load ejector mechanism comprising an upright ejector plate disposed across the bowl and movable therein toward and from its open end, an arm fixed rigidly to the plate and extended rearwardly therefrom, a link hinged at its lower end to the bowl and hinged at its upper end to the said arm at its rearward end, spring means connected under tension with said link to effect the retractive movement of the ejector and resist ejecting movement thereof, and a powered cable means having forward and upward pulling connection with the said plate arm forwardly of its point of connection with the hinged link to counteract downward pressure of the plate on the bottom wall of the bowl.

2,447,456
PROCESS FOR THE PREPARATION OF 2-ACETONYLAZOLES
Alfred W. Anish, Vestal, and Charles A. Clark, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application January 18, 1945, Serial No. 573,462
11 Claims. (Cl. 260—298)

1. The process of producing 2-acetonylazoles which comprises heating diketene with an aromatic primary amine, containing in the ortho-position to the amino group a substituent having a replaceable hydrogen atom and selected from the class consisting of mercapto and selenyl, in the presence of a solvent-diluent capable of dissolving diketene and the said primary amine, and which is inert to diketene, until ring closure is obtained.

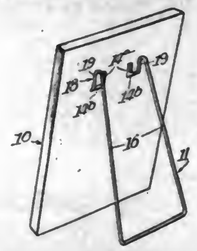


2,447,457
CIGARETTE MACHINE FEED
Charles Arelt, Richmond Hill, N. Y., assignor to American Machine & Foundry Company, a corporation of New Jersey
Application June 11, 1942, Serial No. 446,585
26 Claims. (Cl. 131—109)

1. A tobacco feeding mechanism for a cigarette machine comprising: a rotary carded feed drum, a refuser drum extending along the length of said feed drum, a mounting for said refuser drum, means for imparting movement to said mounting constituting reciprocations circumferentially of the feed drum, and means for rotating said refuser drum one revolution for each reciprocatory cycle, said means for imparting reciprocatory movement to said refuser drum being constructed

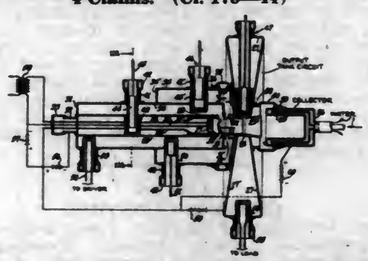
and arranged always to present substantially the same portion of said refuser drum in contact with tobacco to be refused.

2,447,458
BRAKE BEAM SUPPORT
Donald S. Barrows, Rochester, N. Y., assignor to The Symington-Gould Corporation, Rochester, N. Y., a corporation of Maryland
Application January 15, 1945, Serial No. 572,894
17 Claims. (Cl. 188—190)



1. In a railway car truck wherein a side frame and journal boxes are arranged for relative vertical movement, the combination of, a member between said journal boxes and including oppositely directed guideways for supporting slidable brake beams, pivot means carried by said side frame and carrying said member, pivot means carried by said side frame and spaced from said first named pivot means, said last named pivot boxes, and means joining related pivot means.

2,447,459
SOLUTIONS OF CELLULOSE TRIACETATE AND PROCESS OF PREPARING THE SAME
Keith Famulener, Owego, and Russell P. Easton, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application June 21, 1945, Serial No. 600,828
4 Claims. (Cl. 106—189)



1. In a process of preparing a solution of cellulose triacetate having a combined acetic acid content of 61 to 62.5 per cent the improvement which comprises swelling said cellulose triacetate in a solvent mixture consisting of a normally liquid alkyl polyhalide having a boiling point not lower than 40° C. and a normally liquid alcohol, in the ratio ranging from 80–95 to 20–5, respectively, at a temperature ranging from 0° to —75° C., and subsequently raising the temperature of the swollen mixture to room temperature to form a fluid solution.

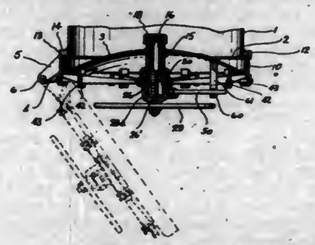
2,447,460
EASEL STAND
Edmond J. Forsyth, Chicago, Ill.
Application October 8, 1945, Serial No. 620,999
7 Claims. (Cl. 248—34)

4. The combination of a panel-like display member composed of sheets of laminated material, certain ones of said sheets inwardly of the rear face of said member having laterally spaced rectangular openings therein and others of said sheets at the back of the member having laterally spaced L-shaped openings therein overlying marginal parts of the sheets beneath and which L-shaped openings provide side and end entrances for the associated undercut recess formed by a part of said other of said sheets adjacent said L-shaped openings and covering the remainder of said rectangular openings, and a member adapted to be detachably connected to the back of said display member for supporting the same in a substantially upright position and including legs having laterally resilient upper ends, an arm connected to the upper end of each leg, said arms when the upper ends of said legs are sprung relatively from a normal position a predetermined amount being insertable lengthwise through the side entrances for both recesses, said upper ends of said legs when released springing back toward their normal position and disposing each arm in its associated recesses to be confined therein by said parts of said other of said sheets adjacent said L-shaped openings and covering the remainder of said rectangular openings.

2,447,461
RESONANT CAVITY CIRCUITS
Andrew V. Haeff, Washington, D. C., assignor to Radio Corporation of America, a corporation of Delaware
Original application January 18, 1941, Serial No. 375,029. Divided and this application April 27, 1943, Serial No. 484,692
4 Claims. (Cl. 178—44)

1. A resonator including a hollow conducting member having an aperture, a conducting member supported on the wall of said resonator and surrounding said aperture, a cup-shaped conducting member supported from a portion of the inner wall of said resonator and registering with said tubular member and said aperture and a re-entrant member of insulating material sealing said aperture and extending through said tubular member and into said cup-shaped member, and a plunger-like conducting member extending within said re-entrant member of insulating material and movable longitudinally of the tubular member and cup-shaped member.

2,447,462
A DYE COMPOSITION FOR COLOR PHOTOGRAPHY
Harold C. Harsh, Richard M. Haff, and Frank J. Kazzuba, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application August 31, 1944, Serial No. 552,210
1 Claim. (Cl. 106—22)



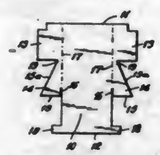
A dye coating composition for color photography consisting of a dispersion of:

Anthraquinone Blue SE (Schultz #861)	grams	3.0
Fast Acid Violet B (Schultz #580)	do	1.5
Polyvinyl alcohol 15% solution	cc.	100
Glycerin	grams	1
Sodium salt of sulfonated ethyl oleate	do	1

2,447,463
REGENERATION OF STEROID KETONES
Emanuel B. Hershberg, West Orange, N. J., assignor to Schering Corporation, Bloomfield, N. J., a corporation of New Jersey
No Drawing. Application July 25, 1947, Serial No. 763,761
5 Claims. (Cl. 260—397.2)

1. A method of regenerating steroid ketones from reaction products of steroid ketones with ketone reagents selected from the group consisting of semicarbazide, hydrazines, hydroxylamine, thiosemicarbazide, and aminoguanidine which comprises heating the steroid ketone reaction product with an acetic acid solution of pyruvic acid.

2,447,464
RETORT DOOR
Frederick T. Jenkins, Seattle, Wash.
Application September 16, 1946, Serial No. 697,328
2 Claims. (Cl. 292—6)

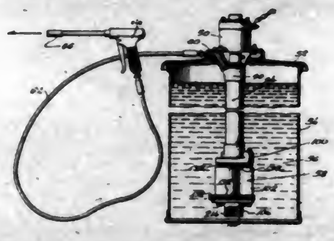


1. A retort comprising a housing formed with an opening, a door hinged on the housing to swing outwardly from sealed to open position, a tubular post rigidly fixed centrally in the door and extended outwardly therefrom, a bearing rotatably and longitudinally movable on the said post, a shaft rotatably fixed in said bearing coaxial of the post and having its inner end portion threaded into the post and an outer end portion extended outwardly from the bearing, a plurality of locking levers on the outside of the door, ex-

tended radially from and each having a ball and socket connection at its inner end with the said bearing, fulcrum guides on the door containing the outer end portions of the locking levers slidably and pivotally therein, keeper members on the retort arranged to receive the ends of the levers therebeneath for securing the door, a turning wheel fixed on the outer end portion of said shaft whereby it may be rotated in one direction to adjust the bearing inwardly on the post to actuate the levers to clamp the door to seal the opening or rotated in the opposite direction to shift the bearing and levers to release the door from sealed contact but without release of the levers from their keepers, and a radial lever arm fixed on the bearing for its rotary adjustment in opposite directions to shift the lock levers from and into their keepers.

2,447,465
6-(ALPHA-ETHYLPROPYL)-2-THIOURACIL AND PREPARATION OF THE SAME
Wilbur H. Miller, Springdale, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 18, 1947, Serial No. 729,405
2 Claims. (Cl. 260—251)

1. 6-(alpha-ethylpropyl)-2-thiouracil.



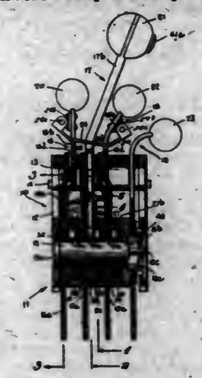
2,447,466
LOCK SHINGLE
Martin G. O'Reilly, Chicago, Ill., assignor to Ford Roofing Products Company, Chicago, Ill., a corporation of Illinois
Application January 19, 1946, Serial No. 642,302
2 Claims. (Cl. 108—7)

2. A lock shingle comprising in combination a rectangular exposed body portion having nailing tabs projecting from its opposite side edges intermediate the top and bottom edges thereof and having locking tabs projecting from said opposite side edges adjacent said bottom edges, said nailing tabs being tapered by having their side edges diverging toward said bottom edge so that the nailing tabs are substantially wider at their bottoms than at their tops, notch means adjacent the wider lower ends of said nailing tabs and in alignment with the side edges of said rectangular body portion for forming an interlocking connection with a locking tab of an adjacent shingle which overlies said nailing tab, the wider lower portions of said nailing tabs providing substantial areas adjacent the interlocking connections to receive fastening nails.

2,447,467
PUMP
George H. Palm, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application October 23, 1943, Serial No. 507,376
16 Claims. (Cl. 103—37)

1. A pump of the class described, comprising a body having an opening extending through the center thereof, a group of three cylinder bores arranged in a plane perpendicular to said opening and forming an equilateral triangle, a second group of three cylinder bores arranged in an equilateral triangle and located in a plane parallel to said first named plane, means providing communication between the apices of the two triangles, pistons located in said cylinder bores, a shaft extending through said opening, a first gear having inclined teeth provided by said shaft, three driving gears driven by said inclined teeth, cranks driven by said driving gears, connections between said cranks and the pistons in the cyl-

inder bores of one plane, a second gear having oppositely inclined teeth provided by said shaft, a second set of driving gears driven by said last-named inclined teeth, a second set of cranks driven by said last-named driving gears, means connecting said last-named cranks with the last-mentioned pistons, a common discharge outlet for all of said cylinder bores, means responsive to pressure variations in said outlet for shifting said shaft and its two gears with oppositely inclined teeth relative to said two sets of driving gears, and a plurality of springs of different strengths for opposing shifting movement of said shaft.

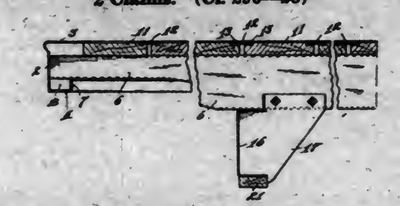


2,447,468
FILM HOLDER AND FILM ENVELOPE TO BE USED THEREWITH
James A. Reyniers, Niles, Mich.
Application May 23, 1945, Serial No. 595,414
12 Claims. (Cl. 95—66)

7. In combination, a film carrier mounted in a photographic apparatus and defining a chamber open at one end, a light barrier adjacent the mouth of said chamber, a transverse abutment adjacent said barrier, a film holder having a central opening, a film mounted in said opening, light shields spanning said opening at opposite faces of said frame, at least one of said shields being flexible and secured to said frame by pressure sensitive adhesive whereby it is removable to pass around said abutment outwardly of said light barrier when said holder is positioned in said carrier.

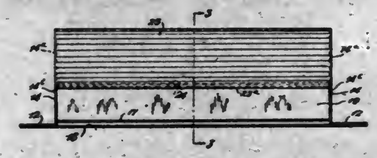
2,447,469
QUADRANT CONTROL
Louis Spraragen, Bridgeport, Conn., assignor to Automatic Locking Devices, Incorporated, Bridgeport, Conn., a corporation of Connecticut
Application October 20, 1944, Serial No. 559,633
15 Claims. (Cl. 74—480)

1. A control device comprising a pair of juxtaposed stationary anchorages; a pair of drive members independently pivotally mounted with respect to the anchorages; means for transmitting motion from the drive members respectively to instrumentalities to be actuated; a pair of levers respectively movably mounted with relation to the drive members; lost-motion driving connections between the drive members and levers respectively whereby the latter are movable between limits with respect to the members, and at said limits have positive driving connections with the members; means for yieldably holding the levers in positions intermediate said limits; a pair of locking means for automatically locking the drive members independently respectively to



the anchorages; means for releasing one or the other of the locking means when one or the other of the levers is moved to either of its limits so that the drive member released thereby may be driven by the said lever to actuate the associated instrumentality, said lever returning to intermediate position and said locking means becoming operative again to automatically lock the drive member when the lever is released; and a manually releasable connecting link means between the levers whereby the latter may be moved simultaneously, or independently of each other, so that the said instrumentalities may be actuated in unison or seriatim.

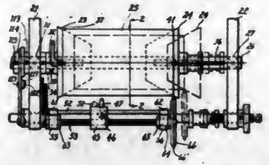
2,447,470
NOISE INSULATING RING FOR EARPHONES
Joseph E. Valentine, Plainfield, N. J., assignor to Oxxyn Company, Clifton, N. J., a corporation of New Jersey
Application December 17, 1943, Serial No. 514,606
5 Claims. (Cl. 179—156)



1. A resilient annular closure member adapted to be fixed on the ear side of an earphone assembly to surround and insulate the sound-transmitting air path between the earphone assembly and the user's ear against extraneous vibrations by resilient conforming contact with the user's head, said annular closure member comprising a fabric envelope and a resilient fibrous filler mass peripherally folded on itself so as to exert an expansive force on the envelope.

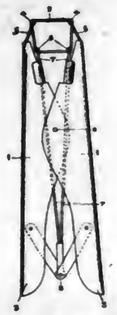
2,447,471
VEHICLE PLATFORM
William A. Wagner, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation of Ohio
Application October 30, 1944, Serial No. 561,139
2 Claims. (Cl. 296—28)

1. In a vehicle platform, a frame, the rails thereof each of channel form in cross-section, providing a pair of flanges extending inward of the frame, one thereof for the lower side of the frame terminating with a right angle bend extending toward the other flange longitudinally of the full length of the rail to provide a ledge inward of the channel of the rail as a bearing for the ends of a plurality of bolsters extending cross-wise of the frame, the ends projecting respectively into the channel of a side rail and said lower flange seating and with its right angle bend laterally confining the ends of stakes, each engaged through a respective aperture in the upper flange at any point longitudinally of the rail.



2,447,472
ROOF VENTILATOR
George W. Donley, Cleveland, Ohio, assignor to The Donley Brothers Company, Cleveland, Ohio, a corporation of Ohio
Application January 4, 1947, Serial No. 720,158
9 Claims. (Cl. 98—42)

1. A ventilator of the character described comprising side members each having an upper edge extending forwardly and upwardly from the rear end thereof and thence forwardly and downwardly and each having a recess extending rearwardly from the front end thereof and defined by a rearwardly extending bottom edge of the upper front portion merging at its rear end with the upper end of the front edge of the rear portion of said side member which front edge extends downwardly from the point of merger, the said recesses being symmetrical, a baffle formed by a wall extending across the last mentioned edges of the recesses and also extending substantially the full width of the ventilator and a wall connected at its rear end to the upper end



of the first mentioned wall and extending across the rearward portion of the bottom edges of the front ends of the recesses and also extending substantially the full width of the ventilator with its front spaced from the front ends of the front portions of the side members, a cover member secured to the top edges of the side members and extending to the front ends of the latter and forming therewith a forwardly and downwardly extending hood, and a screen interposed and supported between the front of the second baffle wall and the front ends of the upper portions of the side walls and the front end of the said cover member and extending the full width of the ventilator.

2,447,473
VARIABLE DRUM FACSIMILE SCANNING MECHANISM
William G. H. Finch, Newtown, Conn.
Application August 26, 1944, Serial No. 551,337
2 Claims. (Cl. 178—7.6)

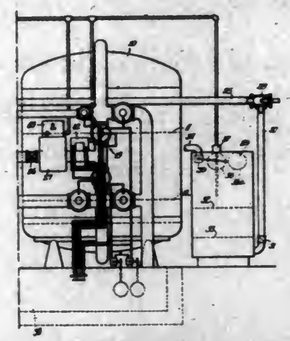
2. In a facsimile system, a drum for supporting an image-carrying sheet, means for scanning the image on said image-carrying sheet, means for varying the diameter of said drum to accommodate images of varying size which may take up the full diameter of said drum, and means simultaneously controlled with said drum-varying means for varying the number of scanning lines scanned as the diameter of the drum is changed.

2,447,474
DEVICE FOR EXPANDING RUBBER RINGS
Arthur Oswald Hammond, Blenheim, New Zealand, assignor, by mesne assignments, to Elastrator Company Limited, Blenheim, New Zealand
Application December 22, 1944, Serial No. 569,406
In New Zealand May 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 12, 1963
3 Claims. (Cl. 128—319)

1. A device for castrating animals through the application of elastic rings and the like comprising a pair of members pivoted together, a jaw at the outer end and a handle at the inner end of each of said members, four studs operated by said members so as to be grouped together when said jaws are closed and to be opened out to expand a ring placed thereabout when said jaws are moved apart, said studs comprising a pair fixed on said members, respectively, for movement therewith and a pair of related to said members, respectively, for movement relative to said first pair, and movement relative to each other, means on said jaws for supporting said movable studs for substantial longitudinal movement in relation to the studs fixed on said jaws and for transverse movement with relation to each other, when said jaws are moved apart, and means on said handles for imparting said movements to said supporting means.

2,447,475
EMULSIFIABLE OILS
Russell A. Kaberg, St. Louis, and John Sterling Harris, Richmond Heights, Mo., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application November 29, 1945, Serial No. 631,789
5 Claims. (Cl. 167—43)

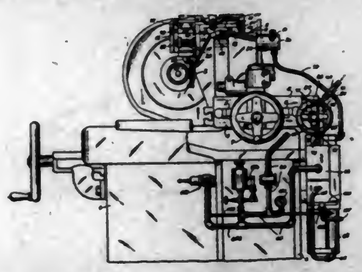
1. A self-dispersing concentrate for forming stable oil-in-water emulsions comprising an aromatic oil; a biological toxicant; from 3 to 10% by weight of an oil-soluble organic surface-active agent which is a neutral salt and which is selected from the group consisting of sulfonates and sulfates and having a Draves wetting time of less than 10.5 seconds in an aqueous solution consisting of 0.5% by weight of said surface-active agent; and from 3 to 10% by weight of the condensation product of 1 mole of a C_4-C_{18}-alkyl-substituted hydroxy compound of the benzene series and from 8 to 25 moles of ethylene oxide.



2,447,476
RECOVERY OF FLUOSULFONIC ACID AND USE AS CONDENSING AGENT IN PRODUCTION OF DDT
Marshall Kulka, Guelph, Ontario, Canada, assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application August 13, 1947, Serial No. 768,485. In Canada May 17, 1947
9 Claims. (Cl. 260—649)

2. The process of recovering fluosulfonic acid from spent acid which has been formed in the manufacture of 2,2-bis(p-chlorophenyl)-1,1,1-trichloroethane by reaction of chloral with monochlorobenzene with fluosulfonic acid as the condensing agent which spent acid comprises sulfuric acid, fluosulfonic acid and hydrogen fluoride, which comprises admixing sulfur trioxide with said spent acid, distilling the resulting mixture and recovering fluosulfonic acid as the distillate.

2,447,477
AUTOMATIC ZEOLITE SOFTENER
Frank D. Prager, Chicago, Ill., assignor to Graver Tank & Mfg. Co., Inc., a corporation of Delaware
Application October 12, 1942, Serial No. 461,804
2 Claims. (Cl. 210—24)

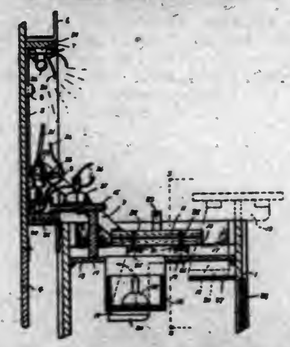


1. In an automatic water treatment apparatus having four operative positions, a series of hydraulically operable valve members, a hydraulic pressure chamber associated with each of said valve members, a pilot unit at least one hydraulic transmission tube entering said pilot unit and

each of said pressure chambers, a pressure supply tube entering said pilot unit, a plurality of stationary ports in said pilot unit interposed between said pressure supply tube and said transmission tubes, ducts between some of said ports, two moveable pilot valve members associated with said ports, each of said moveable members

being adapted in a first position to uncover some of said ports and in a second position to uncover others of said ports, and means adapted to set each of said moveable members into either of said positions, whereby a total of four pilot positions is obtained, corresponding to the said four operative positions of the water treatment apparatus.

2,447,478
GRINDING MACHINE WITH WHEEL DRESSER
John W. Rundt, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application February 19, 1945, Serial No. 578,626
22 Claims. (Cl. 51—2)

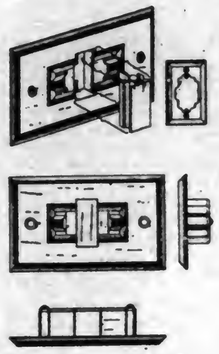


1. In a grinding machine including a work support, a grinding wheel movable into engagement with and disengagement from a work piece on said work support, and a truing element for said grinding wheel, the combination of a fluid pressure system for moving said truing element into engagement with said grinding wheel, said system comprising a fluid pressure cylinder operatively connected to said truing element for moving the latter into engagement with said grinding wheel, a second fluid pressure cylinder for supplying fluid pressure to said first mentioned cylinder, a master valve, a fluid pressure cylinder for operating said master valve and for supplying fluid pressure to said second cylinder, a control valve operable by each disengaging movement of said grinding wheel to admit fluid pressure to said master valve operating cylinder to operate the same, said master valve being interposed between said second and master valve operating cylinders, means for holding said master valve in closed position, and a connection between said master valve operating cylinder and said valve closing means and operable by a predeterminable number of operations of said master valve operating cylinder to release said master valve and permit the same to open.

2,447,479
SEPARATION OF ETHYL BENZENE FROM XYLENES
Francis Edward Salt, Banstead, England, assignor to The Distillers Company, Limited, Edinburgh, Scotland, a British company
No Drawing. Application October 16, 1946, Serial No. 703,491. In Great Britain October 22, 1945
7 Claims. (Cl. 260—674)

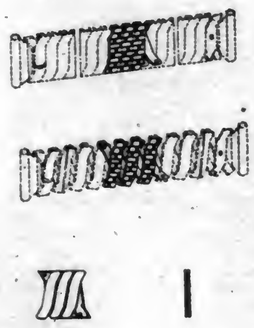
7. A process for the concentration of ethyl benzene in hydrocarbon mixtures comprising ethyl benzene and an isomeric xylene which comprises the steps of reacting the isomeric xylene in said mixture with a material selected from the group consisting of di(alpha-chloroethyl) ether and a mixture of one of the compounds of the group consisting of acetaldehyde and compounds decomposable under the reaction conditions to acetaldehyde, and hydrogen chloride, which mixture reacts under the reaction conditions to form di(alpha-chloroethyl) ether in situ, at a temperature between −15° C. and +15° C. in the presence of zinc chloride, whilst limiting the water content of the mixture to a value not exceeding 50% by weight of zinc chloride used and thereafter subjecting the reaction mixture to fractional distillation.

2,447,480
COMBINED TABLE AND IRONING BOARD
Robert E. Stubbs, Duluth, Minn.
Application February 5, 1945, Serial No. 576,199
3 Claims. (Cl. 38—105)



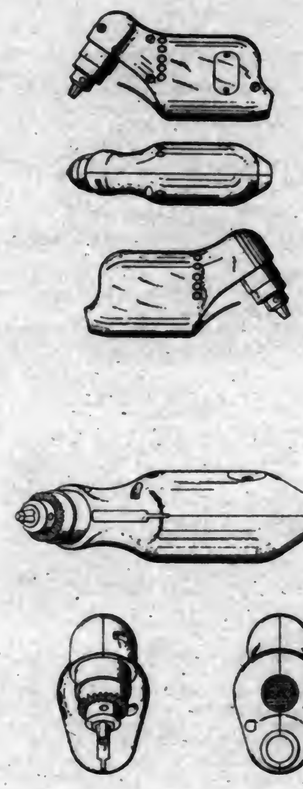
3. A combined table and ironing board including a major chambered base portion, a minor chambered top portion, an ironing board having spaced legs attached thereto, each leg having a notch therein, a shelf secured to the forward wall of said base portion, and slots through the bottom of said base portion spaced to receive said legs, whereby said ironing board may rest within said base portion or be raised to operative position with said legs resting upon said shelf and said notches engaging the upper edge of said forward wall.

DESIGNS



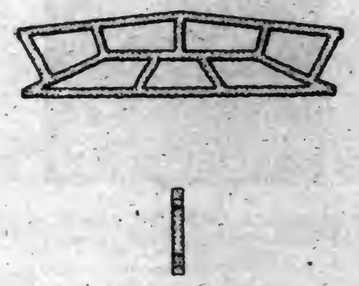
AUGUST 17, 1948

150,529
DESIGN FOR AN ELECTRICAL WALL OUTLET
Melvin S. Adler, Chicago, Ill.
Application June 28, 1947, Serial No. 139,997
Term of patent 14 years
(Cl. D26—13)



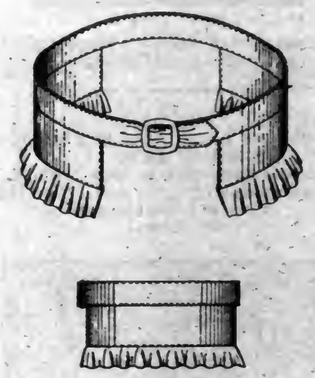
The ornamental design for an electrical wall outlet, as shown.

150,530
DESIGN FOR AN EXPANSIBLE WATCH BRACELET
Arthur Albanese, Providence, R. I., assignor to Marvel Jewelry Mfg. Company, Providence, R. I., a corporation of Rhode Island
Application December 3, 1947, Serial No. 142,933
Term of patent 14 years
(Cl. D45—4)



The ornamental design for an expansible watch bracelet, as shown and described.

150,531
DESIGN FOR A PORTABLE POWER-DRIVEN TOOL UNIT
Frank Osbern Albertson, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a corporation of Iowa
Application April 26, 1946, Serial No. 128,971
Term of patent 14 years
(Cl. D54—14)

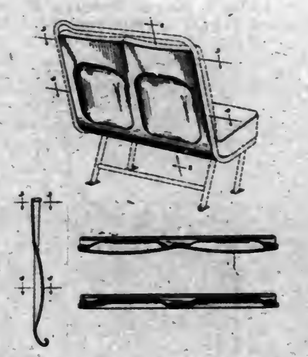


The ornamental design for a portable power driven tool unit, substantially as shown and described.

150,532
DESIGN FOR A CONCRETE FENCE PANEL
William Ashenfelter, Swanton, Ohio
Application November 18, 1947, Serial No. 142,612
Term of patent 14 years
(Cl. D28—1)

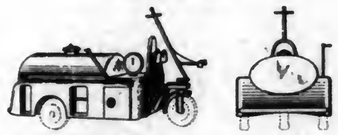
The ornamental design for a concrete fence panel, substantially as shown and described.

150,533
DESIGN FOR A SHORT DRESS BELT
Lee Roy Baggett, Hot Springs, Ark.
Application April 18, 1947, Serial No. 138,486
Term of patent 14 years
(Cl. D2—10)



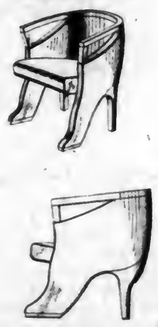
The ornamental design for a short dress belt, as shown.

150,534
DESIGN FOR A FIGURINE
Abraham Bancroft and Daniel Bennett, Longport, England
Application February 24, 1947, Serial No. 137,154
Term of patent 7 years
(Cl. D34—2)



The ornamental design for a figurine, as shown.

150,535
DESIGN FOR A CHAIR BACK
Chester J. Barecki, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application March 8, 1947, Serial No. 137,465
Term of patent 14 years
(Cl. D15—3)

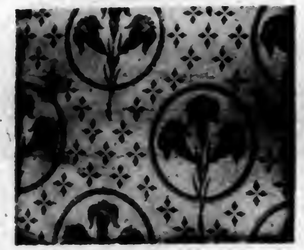


The ornamental design for a chair back, substantially as shown and described.

150,536
DESIGN FOR A HAND TANK TRUCK
Rufus H. Barrett, San Francisco, Calif., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application July 22, 1946, Serial No. 131,787
Term of patent 3½ years
(Cl. D14—3)

The ornamental design for a hand tank truck, as shown and described.

150,537
DESIGN FOR A CHAIR
Salvatore Barrile, Medford, Mass.
Application September 5, 1946, Serial No. 133,061
Term of patent 3½ years
(Cl. D15—1)

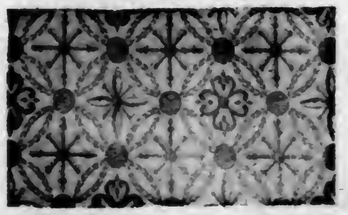


The ornamental design for a chair, substantially as shown.

150,538
DESIGN FOR A NECKLACE
Nickios A. Bauer, Chicago, Ill.
Application August 8, 1947, Serial No. 140,774
Term of patent 14 years
(Cl. D45—16)

The ornamental design for a necklace, as shown and described.

150,539
DESIGN FOR A LITURGICAL FABRIC OR SIMILAR ARTICLE
Apollinaris Baumgartner, New York, N. Y.
Application May 17, 1947, Serial No. 139,101
Term of patent 7 years
(Cl. D92—1)



The ornamental design for a liturgical fabric or similar article, substantially as shown.

150,540
DESIGN FOR A LITURGICAL FABRIC OR SIMILAR ARTICLE
Apollinaris Baumgartner, New York, N. Y.
Application May 17, 1947, Serial No. 139,102
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a liturgical fabric or similar article, substantially as shown.

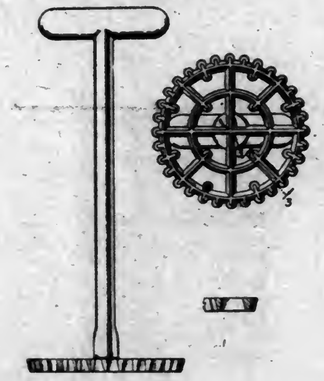
150,541
DESIGN FOR A LITURGICAL FABRIC OR SIMILAR ARTICLE
Apollinaris Baumgartner, New York, N. N. Y.
Application May 17, 1947, Serial No. 139,103
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a liturgical fabric or similar article, substantially as shown.

150,542
DESIGN FOR A LITURGICAL FABRIC OR SIMILAR ARTICLE
Apollinaris Baumgartner, New York, N. Y.
Application May 17, 1947, Serial No. 139,104
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a liturgical fabric or similar article, substantially as shown.

150,543
DESIGN FOR A LITURGICAL FABRIC OR SIMILAR ARTICLE
Apollinaris Baumgartner, New York, N. Y.
Application May 17, 1947, Serial No. 139,105
Term of patent 7 years
(Cl. D92—1)

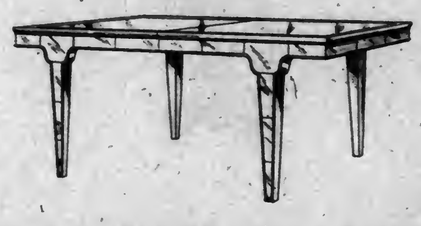


The ornamental design for a liturgical fabric or similar article, substantially as shown.

150,544
DESIGN FOR AN ORPHREY OR SIMILAR ARTICLE
Apollinaris Baumgartner, New York, N. Y.
Application May 17, 1947, Serial No. 139,106
Term of patent 7 years
(Cl. D92—1)

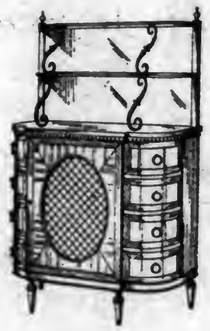
The ornamental design for an orphrey or similar article, substantially as shown.

150,545
DESIGN FOR A VEGETABLE MASHER
David H. Bergstedt, Melvindale, Mich.
Application February 20, 1947, Serial No. 137,048
Term of patent 7 years
(Cl. D89—1)



The ornamental design for a vegetable masher, as shown.

150,546
DESIGN FOR AN EARRING
Marcel Boucher, New York, N. Y.
Application July 29, 1946, Serial No. 132,067
Term of patent 3½ years
(Cl. D45—9)



The ornamental design for an earring, substantially as shown.

150,547
DESIGN FOR A TABLE
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 11, 1947, Serial No. 137,511
Term of patent 7 years
(Cl. D33—14)

The ornamental design for a table, substantially as shown and described.

150,548
DESIGN FOR A CABINET
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 11, 1947, Serial No. 137,513
Term of patent 7 years
(Cl. D32—19)

The ornamental design for a cabinet, substantially as shown and described.

150,549
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,546
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

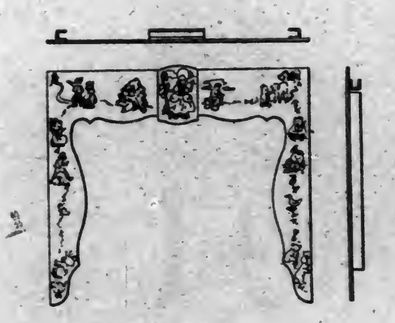
150,550
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,548
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,551
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,549
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or the like, substantially as shown.

150,552
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,551
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or the like, substantially as shown.

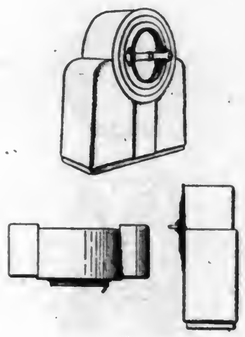
150,553
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,553
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,554
DESIGN FOR A WINDOW CORNICE OR SIMILAR ARTICLE
Sylvia G. Cline, Chicago, Ill.
Application August 9, 1947, Serial No. 140,802
Term of patent 14 years
(Cl. D21—6)

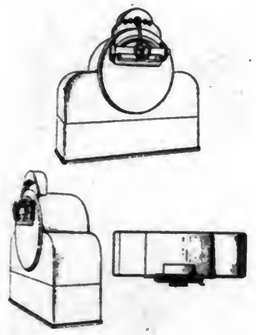
The ornamental design for a window cornice or similar article, as shown.

150,555
DESIGN FOR A CLOCK
Thomas D. Di Addario, Buffalo, N. Y.
Application March 2, 1948, Serial No. 144,861
Term of patent 14 years
(Cl. D42—7)



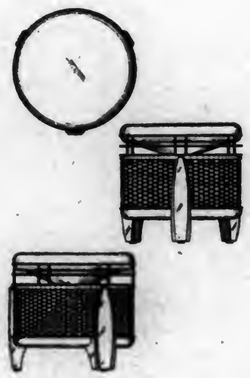
The ornamental design for a clock, as shown.

150,556
DESIGN FOR A CLOCK
Thomas D. Di Addario, Buffalo, N. Y.
Application March 2, 1948, Serial No. 144,862
Term of patent 14 years
(Cl. D42—7)



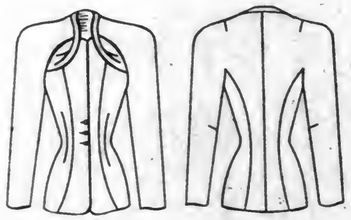
The ornamental design for a clock, as shown.

150,557
DESIGN FOR A SOLVENT RECOVERY MACHINE
Clarence F. Dinley, Detroit, Mich., assignor to Detrex Corporation, Detroit, Mich., a corporation of Michigan
Application July 8, 1947, Serial No. 140,150
Term of patent 14 years
(Cl. D49—1)



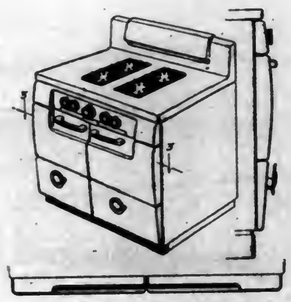
The ornamental design for a solvent recovery machine, as shown.

150,558
DESIGN FOR A DRY CLEANING MACHINE
Clarence F. Dinley, Detroit, Mich., assignor to Detrex Corporation, Detroit, Mich., a corporation of Michigan
Application November 29, 1947, Serial No. 142,879
Term of patent 14 years
(Cl. D49—1)



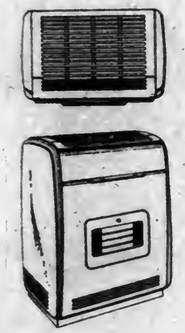
The ornamental design for a dry cleaning machine, as shown.

150,559
DESIGN FOR A CASING FOR A FAN OR THE LIKE
Howard W. Eckles, St. Louis, Mo., assignor to The Emerson Electric Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application August 1, 1947, Serial No. 140,666
Term of patent 14 years
(Cl. D26—7)



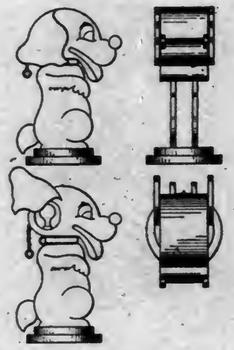
The ornamental design for a casing for a fan or the like, substantially as shown.

150,560
DESIGN FOR A JACKET
Simon Etkin, New York, N. Y.
Application December 6, 1947, Serial No. 142,993
Term of patent 3½ years
(Cl. D3—4)



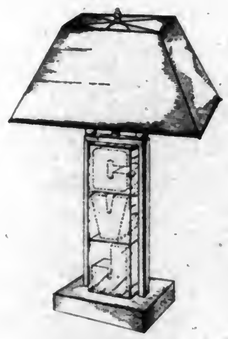
The ornamental design for a jacket substantially as shown.

150,561
DESIGN FOR A GAS STOVE
Richard L. Felver, Pittsburgh, Pa., assignor to Standard Gas Equipment Corporation, Baltimore, Md., a corporation of Maryland
Application September 26, 1946, Serial No. 133,593
Term of patent 14 years
(Cl. D61—4)



The ornamental design for a gas stove, as shown and described.

150,562
DESIGN FOR A SPACE HEATER
Montgomery Ferar, Detroit, Mich., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application April 11, 1947, Serial No. 138,321
Term of patent 7 years
(Cl. D81—19)

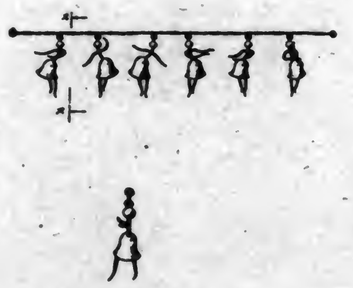


The ornamental design for a space heater, substantially as shown and described.

150,563
DESIGN FOR A LAMP
Morris Gest, Los Angeles, Calif.
Application August 28, 1946, Serial No. 132,935
Term of patent 3½ years
(Cl. D48—20)

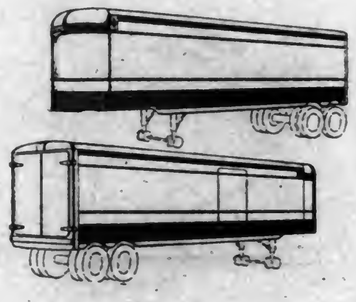
The ornamental design for a lamp, as shown.

150,564
DESIGN FOR A TABLE LAMP
Jack Gordon, Los Angeles, Calif.
Application September 23, 1946, Serial No. 133,530
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a table lamp, as shown and described.

150,565
DESIGN FOR A COMBINED ASH TRAY AND RECEPTACLE OR SIMILAR ARTICLE
Nettie E. Graven, Wooster, Ohio
Application February 13, 1947, Serial No. 136,882
Term of patent 14 years
(Cl. D85—2)

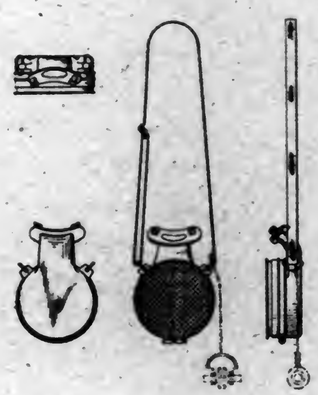


The ornamental design for a combined ash tray and receptacle or similar article, substantially as shown.

150,566
DESIGN FOR A CHARM BRACELET
Russell W. Grefe, Merrick, N. Y.
Application October 16, 1947, Serial No. 141,936
Term of patent 14 years
(Cl. D45—4)

The ornamental design for a charm bracelet, as shown.

150,567
DESIGN FOR A VEHICLE BODY
James W. Greig, Detroit, Mich., assignor to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Application January 31, 1947, Serial No. 136,576
Term of patent 7 years
(Cl. D14—3)

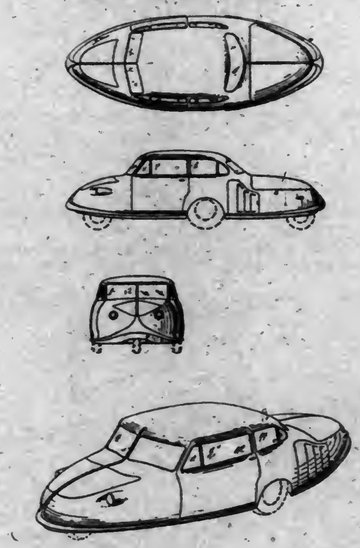


The ornamental design for a vehicle body, as shown and described.

150,568
DESIGN FOR AN INFANT'S SHOE
Steve Griffin, Alameda, Calif.
Application May 3, 1948, Serial No. 146,153
Term of patent 14 years
(Cl. D7—7)

The ornamental design for an infant's shoe, as shown.

150,569
DESIGN FOR A RESPIRATOR
Robert B. Haller, Wilkinsburg, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 6, 1946, Serial No. 133,118
Term of patent 14 years
(Cl. D83—1)

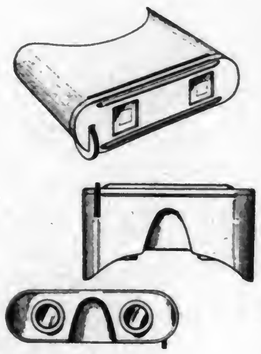


The ornamental design for a respirator, as shown and described.

150,570
DESIGN FOR A SCYTHE
Henry L. Heineke, Springfield, Ill.
Application November 29, 1946, Serial No. 135,188
Term of patent 14 years
(Cl. D40—1)

The ornamental design for a scythe, substantially as shown.

150,571
DESIGN FOR AN AUTOMOBILE
Knut Henrichsen, Los Angeles, Calif., assignor to North American Aviation, Inc.
Application March 24, 1947, Serial No. 137,826
Term of patent 14 years
(Cl. D14—3)



The ornamental design for an automobile, substantially as shown.

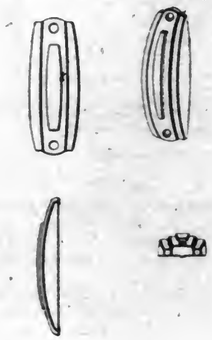
150,572
DESIGN FOR A GOLF BAG CART
Thomas A. Hutsell, Renton, Wash.
Application June 13, 1947, Serial No. 139,644
Term of patent 14 years
(Cl. D14—3)

The ornamental design for a golf bag cart, as shown.

150,573
DESIGN FOR A PICTURE VIEWER
Frederick B. Ingram, Rock Island, Ill.
Application April 26, 1947, Serial No. 138,640
Term of patent 7 years
(Cl. D57—1)

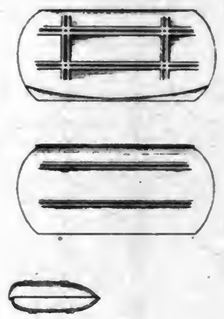
The ornamental design for a picture viewer, as shown.

150,574
DESIGN FOR A CLOCK OR SIMILAR ARTICLE
John M. Janes, Beardstown, Ill.
Application March 6, 1948, Serial No. 144,946
Term of patent 14 years
(Cl. D42—7)



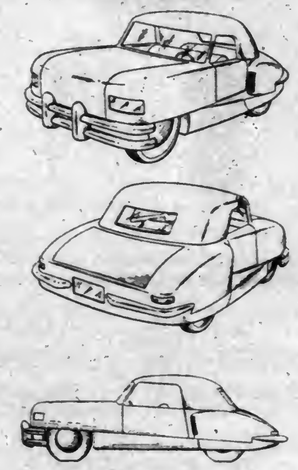
The ornamental design for a clock or similar article, as shown.

150,575
DESIGN FOR A COMBINATION PIANO AND XYLOPHONE UNIT
Benjamin F. Jay, New York, N. Y., assignor to William Jay Emanuel Co., New York, N. Y., a partnership composed of Benjamin F. Jay, Robert Emanuel, and William J. Emanuel
Application November 8, 1946, Serial No. 134,624
Term of patent 3½ years
(Cl. D56—9)



The ornamental design for a combination piano and xylophone unit, as shown and described.

150,576
DESIGN FOR A PUSH-BUTTON SWITCH OR SIMILAR ARTICLE
Ludwig J. Kalwo, New York, N. Y., assignor to Trine Manufacturing Corporation, New York, N. Y., a corporation
Application July 31, 1947, Serial No. 140,646
Term of patent 14 years
(Cl. D26—13)



The ornamental design for a push-button switch or similar article, as shown.

150,577
DESIGN FOR AN EYEGLASS CASE
Aaron Karp, New York, N. Y.
Application January 25, 1947, Serial No. 136,426
Term of patent 3½ years
(Cl. D57—1)

The ornamental design for an eyeglass case, substantially as shown.

150,578
DESIGN FOR AN AUTOMOBILE OR SIMILAR ARTICLE
Edward J. Kasnicka, Los Angeles, Calif.
Application July 6, 1946, Serial No. 131,346
Term of patent 3½ years
(Cl. D14—3)

The ornamental design for an automobile or similar article, as shown.

150,579
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1947, Serial No. 140,298
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,580
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,142
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

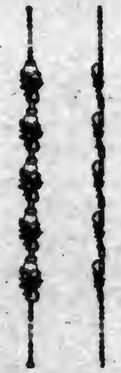
150,581
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,143
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,582
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,150
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,583
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,152
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,584
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,153
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,585
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 20, 1947, Serial No. 141,520
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,586
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,606
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

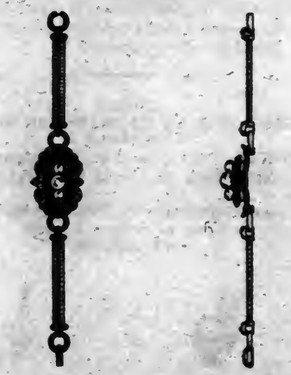
150,587
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,607
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,588
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,608
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,589
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,609
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,590
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,610
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

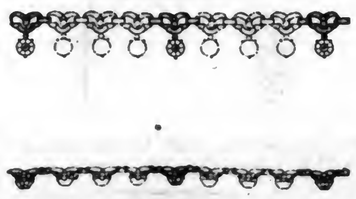
150,591
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,611
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

150,592
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,612
Term of patent 7 years
(Cl. D45—16)

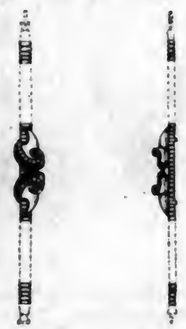
The ornamental design for a necklace or similar article, substantially as shown and described.

150,593
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,613
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,594
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,614
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,595
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,615
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

150,596
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,616
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,597
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,618
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,598
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,619
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

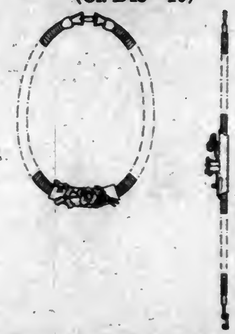
150,599
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,620
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,600
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,621
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,601
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,623
Term of patent 7 years
(Cl. D45—19)

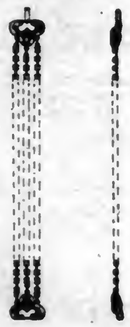


The ornamental design for a brooch or similar article, substantially as shown.

150,602
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,624
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,603
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,625
Term of patent 7 years
(Cl. D45—16)

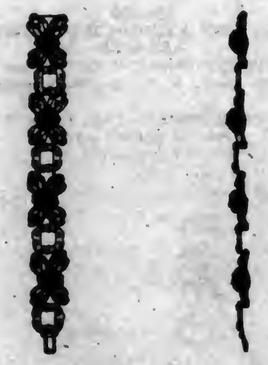


The ornamental design for a necklace or similar article, substantially as shown and described.

150,604
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 29, 1947, Serial No. 141,626
Term of patent 7 years
(Cl. D45—19)

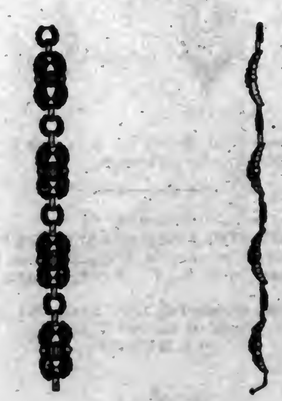
The ornamental design for a brooch or similar article, substantially as shown.

150,605
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,682
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown and described.

150,606
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,683
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

150,607
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,684
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

150,608
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,685
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

150,609
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,686
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,610
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,690
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,611
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,691
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article substantially as shown.

150,612
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,692
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,613
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,693
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

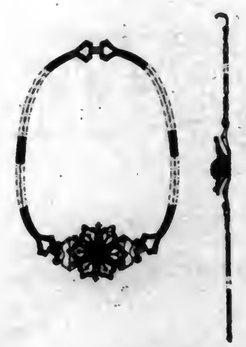
150,614
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,694
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

150,615
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,695
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,616
DESIGN FOR A SEPARABLE BROOCH
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 3, 1947, Serial No. 141,737
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a separable brooch, substantially as shown.

150,617
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 3, 1947, Serial No. 141,738
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,618
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 16, 1947, Serial No. 141,928
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article substantially as shown and described.

150,619
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 16, 1947, Serial No. 141,929
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,620
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 16, 1947, Serial No. 141,930
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,621
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 16, 1947, Serial No. 141,931
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

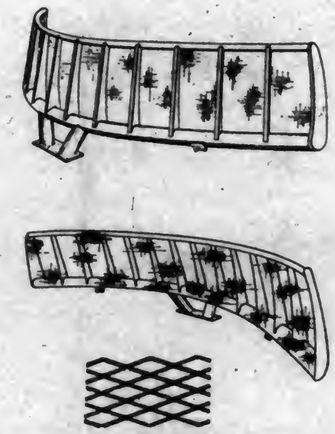
150,622
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 21, 1947, Serial No. 142,048
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,623
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 21, 1947, Serial No. 142,049
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,624
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,264
Term of patent 7 years
(Cl. D45—19)

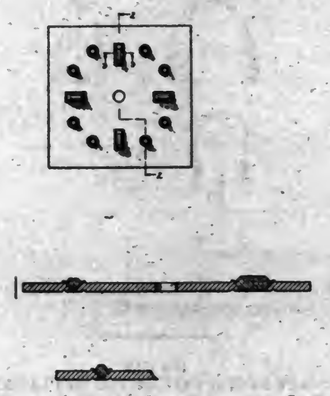


The ornamental design for a brooch or similar article, substantially as shown.

150,625
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 8, 1947, Serial No. 143,030
Term of patent 7 years
(Cl. D45—19)

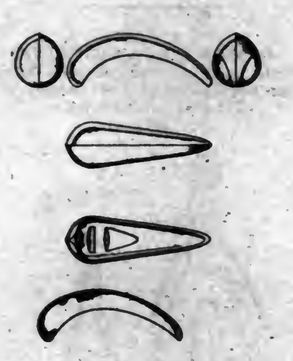
The ornamental design for a brooch or similar article, substantially as shown.

150,626
DESIGN FOR A PARABOLIC REFLECTOR FOR MICROWAVE ANTENNAE
Donald S. Kennedy, North Scituate, Mass.
Application June 20, 1947, Serial No. 139,836
Term of patent 14 years
(Cl. D26—14)



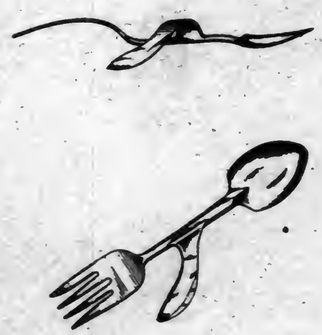
The ornamental design for a parabolic reflector for microwave antennae, as shown.

150,627
DESIGN FOR A STICKPIN OR SIMILAR ARTICLE
George S. Krajian, Hataitai, Wellington, New Zealand
Application November 15, 1947, Serial No. 142,558
Term of patent 14 years
(Cl. D45—19)



The ornamental design for a stickpin or similar article, substantially as shown and described.

150,628
DESIGN FOR A WATCH DIAL
Aaron Goodkind, Brooklyn, N. Y.
Application March 23, 1948, Serial No. 145,289
Term of patent 14 years
(Cl. D42—10)



The ornamental design for a watch dial, substantially as shown.

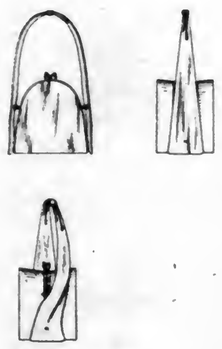
150,629
DESIGN FOR A BOTTLE OPENER
Willis A. Kropp, Summit, N. J.
Application September 11, 1946, Serial No. 133,248
Term of patent 7 years
(Cl. D44—29)

The ornamental design for a bottle opener, as shown.

150,630
DESIGN FOR A COMBINATION KNIFE, FORK, AND SPOON
Arthur L. Kuhlman, Bay City, Mich.
Application February 16, 1946, Serial No. 126,615
Term of patent 14 years
(Cl. D44—29)

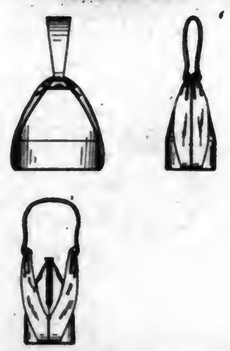
The ornamental design for a combination knife, fork, and spoon, substantially as shown.

150,631
DESIGN FOR AN ANDIRON OR SIMILAR ARTICLE
Oscar P. Kurrie, Dearborn, Mich.
Application August 30, 1946, Serial No. 132,968
Term of patent 7 years
(Cl. D61—6)



The ornamental design for an andiron or similar article, substantially as shown and described.

150,632
DESIGN FOR AN ANDIRON OR SIMILAR ARTICLE
Oscar P. Kurrle, Dearborn, Mich.
Application August 30, 1946, Serial No. 132,969
Term of patent 7 years
(Cl. D81—6)

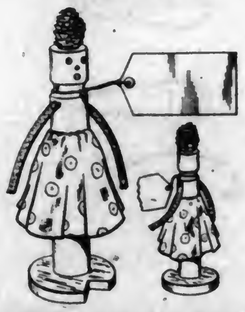


The ornamental design for an andiron or similar article, substantially as shown and described.

150,633
DESIGN FOR A HANDBAG
Abe Lamel, New York, N. Y.
Application August 25, 1947, Serial No. 141,052
Term of patent 3½ years
(Cl. D87—3)

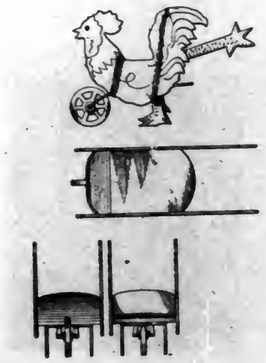
The ornamental design for a handbag, substantially as shown and described.

150,634
DESIGN FOR A HANDBAG
Abe Lamel, New York, N. Y.
Application August 25, 1947, Serial No. 141,053
Term of patent 3½ years
(Cl. D87—3)



The ornamental design for a handbag, substantially as shown and described.

150,635
DESIGN FOR A COSMETIC APPLICATOR
Mary Stevens Landsman, Chicago, Ill.
Application October 29, 1947, Serial No. 142,198
Term of patent 7 years
(Cl. D86—10)

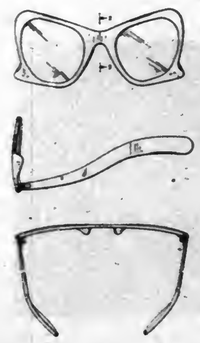


The ornamental design for a cosmetic applicator, substantially as shown.

150,636
DESIGN FOR A FIGURINE
Edwin Lanning, Park Rapids, Minn.
Application September 17, 1947, Serial No. 141,452
Term of patent 7 years
(Cl. D34—15)

The ornamental design for a figurine, as shown.

150,637
DESIGN FOR A TOY BARROW
Pamelia F. Lewis, Sunland, Calif.
Application March 21, 1947, Serial No. 137,789
Term of patent 7 years
(Cl. D34—15)



The ornamental design for a toy barrow, as shown and described.

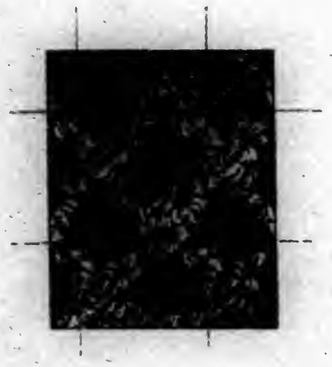
150,638
DESIGN FOR A DOLL OR SIMILAR ARTICLE
Louise G. McDonald, Los Angeles, Calif.
Application November 6, 1946, Serial No. 134,541
Term of patent 14 years
(Cl. D34—4)

The ornamental design for a doll or similar article, as shown.

150,639
DESIGN FOR A PAIR OF SPECTACLES
Albert George McNeill, Philadelphia, Pa., assignor to Bachmann Bros., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application September 16, 1947, Serial No. 141,432
Term of patent 14 years
(Cl. D57—1)

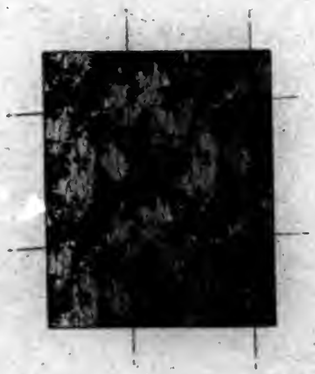
The ornamental design for a pair of spectacles, as shown.

150,640
DESIGN FOR A FRONT PANEL FOR MUSIC BOXES OR CABINETS
Robert P. Miller, Ann Arbor, Mich.
Application January 9, 1947, Serial No. 136,015
Term of patent 3½ years
(Cl. D56—4)



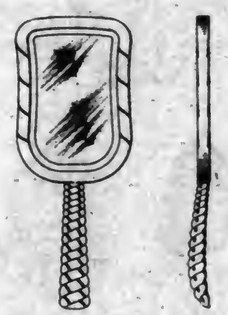
The ornamental design for a front panel for music boxes or cabinets, as shown and described.

150,641
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application November 20, 1947, Serial No. 142,674
Term of patent 3½ years
(Cl. D92—1)



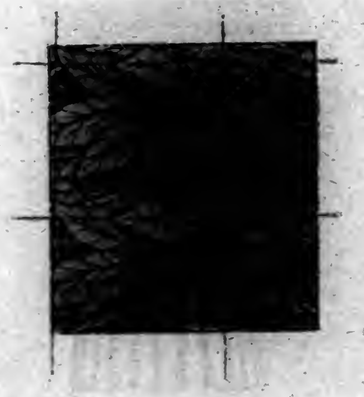
The ornamental design for a textile fabric, substantially as shown and described.

150,642
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application November 20, 1947, Serial No. 142,675
Term of patent 3½ years
(Cl. D92—1)



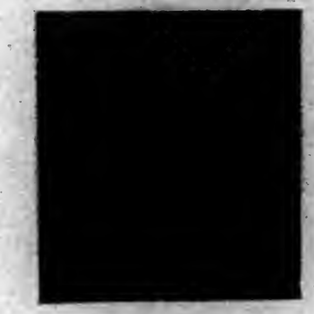
The ornamental design for a textile fabric, substantially as shown and described.

150,643
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application November 20, 1947, Serial No. 142,676
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a textile fabric, substantially as shown and described.

150,644
DESIGN FOR A MIRROR
Peter Muller-Munk, Pittsburgh, Pa., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
Application August 9, 1947, Serial No. 140,796
Term of patent 7 years
(Cl. D86—10)



The ornamental design for a mirror, substantially as shown and described.

150,645
DESIGN FOR A TEXTILE FABRIC
Edmund M. Patterson, New York, N. Y.
Application October 23, 1947, Serial No. 142,104
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a textile fabric, substantially as shown and described.

150,646
DESIGN FOR A TEXTILE FABRIC
Edmund M. Patterson, New York, N. Y.
Application October 23, 1947, Serial No. 142,105
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a textile fabric, substantially as shown and described.

150,647
DESIGN FOR A BALL POINTED FOUNTAIN PEN OR SIMILAR ARTICLE
Jack Pearl, Kew Gardens, N. Y., assignor to Rich-Marc Mfg. Co., Inc., New York, N. Y., a corporation of New York
Application October 16, 1947, Serial No. 141,959
Term of patent 14 years
(Cl. D74—17)

The ornamental design for a ball pointed fountain pen, or similar article as shown.

150,648
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application September 2, 1947, Serial No. 141,165
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

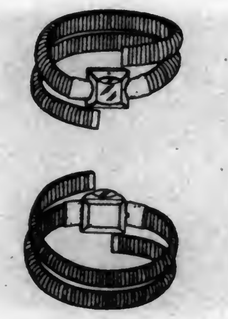
150,649
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1947, Serial No. 141,678
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,650
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1947, Serial No. 141,679
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

150,651
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1947, Serial No. 141,680
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown.

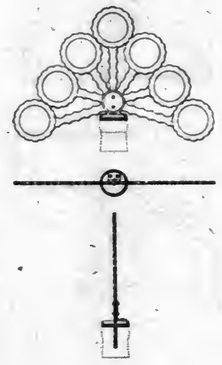
150,652
DESIGN FOR A CONTROL BUTTON FOR ELECTRIC IRON
John N. Polivka, Minneapolis, Minn., and Francesco Collura, New York, N. Y., assignors to General Mills, Inc., a corporation of Delaware
Application February 1, 1946, Serial No. 126,158
Term of patent 14 years
(Cl. D49—6)

The ornamental design for a control button for electric iron, as shown and described.

150,653
DESIGN FOR A COMBINED WRIST WATCH BRACELET AND WATCHCASE
Henry Pommier, New York, N. Y.
Application October 23, 1947, Serial No. 142,111
Term of patent 7 years
(Cl. D45—4)

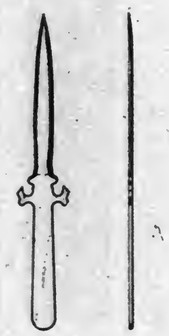
The ornamental design for a combined wrist watch bracelet and watchcase, substantially as shown.

150,654
DESIGN FOR A TEXTILE FABRIC
Edwin Raphaels, New York, N. Y.
Application November 24, 1947, Serial No. 142,754
Term of patent 7 years
(Cl. D92—1)



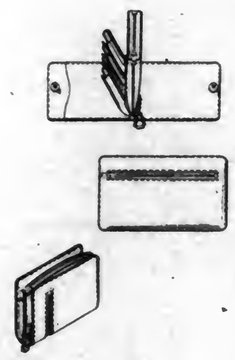
The ornamental design for a textile fabric, substantially as shown.

150,655
DESIGN FOR A COMBINED BRACELET AND SPOON
Jean O. Reinecke, Chicago, Ill., assignor of three-fourths to James F. Barnes, Margaret M. Barnes, and Esther Reinecke, all of Chicago, Ill.
Application November 20, 1946, Serial No. 134,942
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a combined bracelet and spoon, as shown.

150,656
DESIGN FOR AN ADVERTISING DEVICE OR THE LIKE
John J. Reinhold, Marietta, Pa.; Albert C. Reinhold executor of said John J. Reinhold, deceased
Application November 1, 1946, Serial No. 134,439
Term of patent 7 years
(Cl. D1—12)

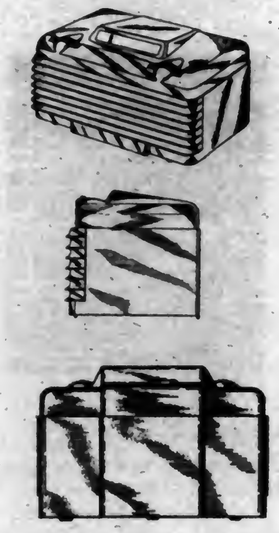


The ornamental design for an advertising device or the like, as shown and described.

150,657
DESIGN FOR A LETTER OPENER OR SIMILAR ARTICLE
Davison M. Richardson, Mobile, Ala.
Application May 6, 1947, Serial No. 138,843
Term of patent 14 years
(Cl. D74—1)

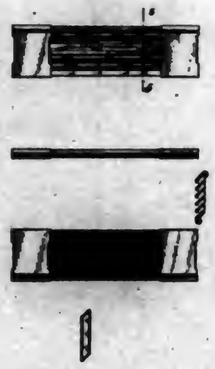
The ornamental design for a letter opener or similar article, as shown.

150,658
DESIGN FOR A COMBINED CHANGE PURSE AND WALLET
Jack Rosenfeld, New York, N. Y.
Application March 25, 1948, Serial No. 145,342
Term of patent 14 years
(Cl. D87—3)



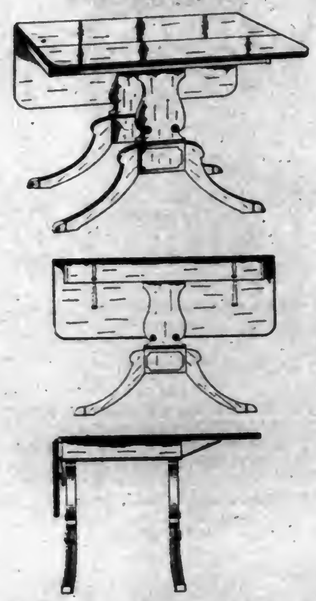
The ornamental design for a combined change purse and wallet, substantially as shown and described.

150,659
DESIGN FOR AN ORPHREY OR SIMILAR ARTICLE
Otto A. Scheurmann, Bayside, N. Y.
Application July 25, 1947, Serial No. 140,496
Term of patent 3½ years
(Cl. D92—1)



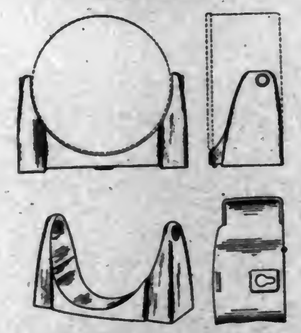
The ornamental design for an orphrey or similar article, substantially as shown.

150,660
DESIGN FOR A RADIO CABINET
Barton T. Setchell, St. Paul, Minn.
Application April 24, 1946, Serial No. 128,912
Term of patent 14 years
(Cl. D56—4)



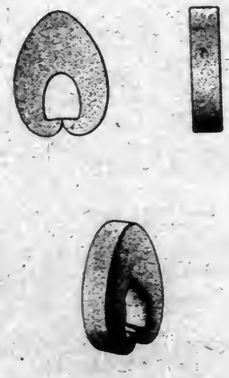
The ornamental design for a radio cabinet, as shown.

150,661
DESIGN FOR A WINDOW VENTILATOR
William Siebels, San Francisco, Calif., assignor to I. J. Roth, Burlingame, Calif.
Application October 14, 1946, Serial No. 133,950
Term of patent 14 years
(Cl. D62—4)



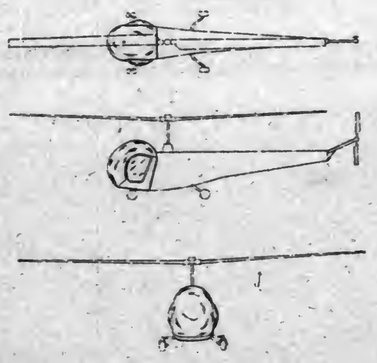
The ornamental design for a window ventilator, substantially as shown.

150,662
DESIGN FOR A TABLE
Russell A. Thornquist, Grand Rapids, Mich., assignor to Extensole Corporation, Sparta, Mich., a corporation of Michigan
Application February 26, 1947, Serial No. 137,170
Term of patent 14 years
(Cl. D32—14)



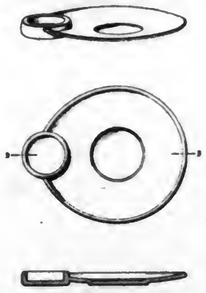
The ornamental design for a table, substantially as shown.

150,663
DESIGN FOR A CLOCK FRAME OR SIMILAR ARTICLE
Kenneth A. Van Dyck, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application December 4, 1947, Serial No. 142,953
Term of patent 14 years
(Cl. D42—7)



The ornamental design for a clock frame or similar article, as shown and described.

150,664
DESIGN FOR A TELEPHONE HOLDER
Herbert H. Webb, Grosse Pointe, Mich.
Application January 19, 1946, Serial No. 125,785
Term of patent 14 years
(Cl. D26—14)

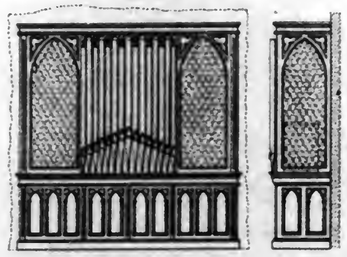


The ornamental design for a telephone holder as shown.

150,665
DESIGN FOR A HELICOPTER
Arthur M. Young and Mancer H. Gleason, Buffalo, N. Y., assignors to Bell Aircraft Corporation, Wheatfield, N. Y.
Application November 14, 1946, Serial No. 134,774
Term of patent 14 years
(Cl. D71—1)

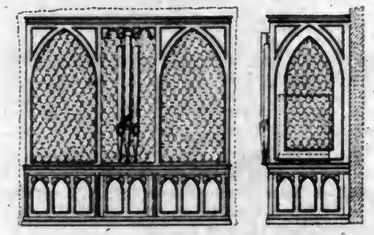
The ornamental design for a helicopter, as shown and described.

150,666
DESIGN FOR A COMBINATION SAUCER AND CREAM PITCHER HOLDER
Edwin J. Zachary, Merced, Calif.
Application February 12, 1946, Serial No. 126,523
Term of patent 3½ years
(Cl. D44—14)



The ornamental design for a combination saucer and cream pitcher holder as shown.

150,667
DESIGN FOR AN ORGAN TONE CABINET GRILLE
Victor I. Zuck, Kenmore, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application April 1, 1947, Serial No. 138,089
Term of patent 7 years
(Cl. D56—4)



The ornamental design for an organ tone cabinet grille substantially as shown and described.

150,668
DESIGN FOR AN ORGAN TONE CABINET CASING
Victor I. Zuck, Kenmore, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application June 27, 1947, Serial No. 139,958
Term of patent 7 years
(Cl. D56—4)

The ornamental design for an organ tone cabinet casing, substantially as shown and described.

150,669
DESIGN FOR AN ORGAN TONE CABINET CASING
Victor I. Zuck, Kenmore, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application June 27, 1947, Serial No. 139,959
Term of patent 7 years
(Cl. D56—4)

The ornamental design for an organ tone cabinet casing, substantially as shown and described.

Condition of Applications Under Examination at Close of Business Aug. 6, 1948

Total number of patent applications awaiting action, 156,012. Date of oldest new application, July 9, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	†Feb. 12	Dec. 20	2985
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	Dec. 10	July 13	3131
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†Oct. 2	†Oct. 24	1478
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Dec. 23	†Jan. 3	3878
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	Dec. 11	July 29	1915
6. SURLE, H., Carbon Chemistry (part)	†Sept. 10	†June 3	1965
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†Aug. 22	†June 13	1763
8. LEWIS, R. O. (Acting), Furniture; Racks and Cabinets	Nov. 9	July 9	4383
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	†Apr. 26	Aug. 30	2250
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Oct. 31	†Oct. 6	1791
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†Dec. 10	†Nov. 17	741
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†Sept. 24	Aug. 9	2125
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	Sept. 20	Aug. 19	2501
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Nov. 6	†July 19	1381
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	†Apr. 22	†Jan. 10	2139
16. LOVEWELL, N. N., Television; Telephony	†Sept. 11	†June 5	1565
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	†Feb. 4	Sept. 10	2113
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combusion Engines.	†May 9	Aug. 28	1972
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	†June 18	Nov. 7	1892
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	†Feb. 17	Nov. 14	1904
21. MADER, R. C., Textiles	†Aug. 8	†July 21	1230
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	†Sept. 22	Oct. 5	1715
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	†Feb. 27	July 24	1276
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†Aug. 12	†Aug. 4	2393
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Oct. 30	Oct. 7	1749
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Nov. 14	Nov. 6	1335
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	†May 10	Nov. 22	3394
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	†June 12	†Aug. 2	1129
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	†Jan. 21	Dec. 2	3177
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Nov. 6	†May 27	1396
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†Nov. 21	†Nov. 20	2150
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	†Feb. 10	Aug. 19	3226
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	Oct. 10	July 31	3473
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	Nov. 9	July 19	1524
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	Nov. 26	Sept. 27	3215
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Nov. 4	Aug. 8	1993
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Oct. 25	†Jan. 29	1442
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	†Mar. 3	†Mar. 25	1988
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	†Feb. 15	July 22	2945
40. DRUMMOND, E. J., Receptacles (part); Packages	†July 23	Sept. 24	3210
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	July 9	Aug. 8	2365
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	†Nov. 1	†Sept. 8	1209
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†Aug. 21	†Sept. 2	1400
44. HARVEY, L. P., Refrigeration; Preserving	July 16	July 22	1128
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	†Jan. 25	Aug. 31	2944
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	†Jan. 13	July 19	1918

NOTE.—The dates given are 1946 except where † indicates 1947 and * indicates 1948.

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 156,012. Date of oldest new application, July 9, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†Oct. 7	†Apr. 15	2186
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	†Nov. 14	†Jan. 29	1506
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†July 20	†May 10	1586
50. LEVIN, SAMUEL, Synthetic Resins	†Nov. 15	†May 6	2382
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†Nov. 12	†Apr. 16	1801
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	†Aug. 8	Nov. 13	3892
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	†Feb. 3	July 12	3744
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†Nov. 15	†Apr. 24	1775
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	†June 12	†Apr. 18	1968
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	†Oct. 9	†Sept. 11	1105
57. MILLER, A. B. (Acting), Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys.	†Mar. 11	Aug. 2	3596
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	Dec. 17	Oct. 24	2094
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	†June 27	†Feb. 6	1967
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†Nov. 20	†Mar. 26	1433
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	Nov. 29	June 7	3557
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	†Mar. 26	Sept. 11	2027
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	†July 17	†June 27	1494
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	*Jan. 5	†Dec. 24	1673
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	†Nov. 8	†Apr. 30	2003
66. LISANN, L., Geometrical Instruments	†Jan. 14	Apr. 16	2140
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	†May 8	†Mar. 27	2129
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	†Nov. 24	†May 29	1506
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	†Apr. 15	Oct. 3	1731
DEMONS: BREHM, G. L.	Dec. 2	*Jan. 2	7880

Total number of trade-mark applications awaiting action (including renewals and republications), 40,907. Date of oldest new application, Aug. 5, 1947; date of oldest amended application, Feb. 4, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	†Nov. 14	*Mar. 23	2003
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	†Sept. 2	*Mar. 15	5249
3. SUMMERS, G. S., Classes 13, 21, 23, 26	†Aug. 5	*Mar. 26	4377
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	†Sept. 10	*Feb. 4	4356
5. RACKNOR, M., Classes 8, 17, 20 24, 25, 32, 37, 38, 45, 47, 48, 49	†Sept. 26	*Feb. 10	3173
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	†Nov. 7	*May 15	3130
7. KEYS, C. M., Classes 16, 19, 55	†Aug. 15	*Mar. 20	2266
8. GEDIMAN, H. W. {Renewals / Republications} All Classes	*June 18 / †Sept. 28	*June 20 / *July 21	77 / 15386

NOTE.—The dates given are 1946 except where † indicates 1947 and * indicates 1948.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Acme Electric Corporation, Cuba, N. Y. Battery chargers, voltage regulators, ballasts, and reactors, etc. Serial No. 530,889, Aug. 24. Class 21.

Acme Electric Corporation, Cuba, N. Y. Battery chargers, voltage regulators, ballasts, and reactors, etc. Serial Nos. 530,891–2, Aug. 24. Class 21.

Adams Candy Company, Dallas, Tex. Candy. Serial No. 538,699, Aug. 24. Class 46.

Agricultural Minerals Company, Montgomery, Ala. Fertilizers. Serial No. 549,865, Aug. 24. Class 10.

Alg-Schechner, Inc., New York, N. Y. Sweaters and cardigans for boys and girls; brother and sister sets. Serial No. 522,917, Aug. 24. Class 39.

Aktieselskabet Bing & Grondahls Porcellaensf Abrik (Porcelainfabrikerne) Bing & Grondahl Og Norden A/S., Copenhagen, Denmark. Art porcelain and stoneware figures of humans and animals. Serial No. 498,744, Aug. 24. Class 50.

Alpco, Inc., Providence, R. I. Jewelry. Serial No. 510,559, Aug. 24. Class 28.

American Aniline Products, Inc., New York, N. Y. Dyeing assistants. Serial No. 529,220, Aug. 24. Class 6.

American Crab Meat Co., Inc., Boston, Mass. Canned cat food. Serial No. 521,169, Aug. 24. Class 46.

American Fork and Hoe Company, The, Cleveland, Ohio. Tool handles. Serial No. 527,605, Aug. 24. Class 23.

American Gas Machine Company, Albert Lea, Minn. Gasoline burning camp stoves. Serial No. 530,361, Aug. 24. Class 34.

American Gas Machine Company, Albert Lea, Minn. Gasoline and kerosene cook stoves. Serial No. 530,362, Aug. 24. Class 34.

American Gas Machine Company, Albert Lea, Minn. Gasoline cooking stoves. Serial No. 530,364, Aug. 24. Class 34.

American Gas Machine Company, Albert Lea, Minn. Gasoline and kerosene lanterns and mantles, generator tubes, etc. Serial No. 530,365, Aug. 24. Class 34.

American Optical Company, Southbridge, Mass. Opthalmic diagnostic instruments. Serial No. 491,945, Aug. 24. Class 26.

American Wine Company, St. Louis, Mo. Sparkling wines and still wines. Serial No. 527,311, Aug. 24. Class 47.

Anco Manufacturing & Supply Company, Tulsa, Okla. Domestic, gas burning, and hot water heaters. Serial No. 535,781, Aug. 24. Class 34.

Anderson, V. D., Company, The, Cleveland, Ohio. Steam traps. Serial No. 531,284, Aug. 24. Class 13.

Andrews Nursery Company, Faribault, Minn. Nursery stocks. Serial No. 533,662, Aug. 24. Class 1.

Andrews Nursery Company, Faribault, Minn. Nursery stocks. Serial No. 535,213, Aug. 24. Class 1.

Apparatus Development Company, Wethersfield, Conn. Apparatus for electrically indicating the conductivity of aqueous solutions of acids, alkalies, and salts. Serial No. 509,555, Aug. 24. Class 26.

Arden, Elizabeth, Sales Corporation, New York, N. Y. Creamy powder foundation. Serial No. 541,068, Aug. 24. Class 6.

Arkwright Merchandising Corporation, New York, N. Y. Women's coats, suits, dresses, etc. Serial No. 534,406, Aug. 24. Class 39.

Arlin Products, Incorporated, Detroit, Mich. Electric gauging mechanisms. Serial No. 504,024, Aug. 24. Class 26.

Armour and Company, Chicago, Ill. Coated abrasive products. Serial No. 532,900, Aug. 24. Class 4.

Armour and Company, Chicago, Ill. Bath and toilet soap. Serial No. 552,739, Aug. 24. Class 4.

Associated Art Service: *See*—
Maurath, Vincent.

Associated Merchandising Corporation, New York, N. Y. Bay rum, camphorated oil U. S. P., castor oil, etc. Serial No. 503,179, Aug. 24. Class 6.

Associated Seed Growers, Incorporated, New Haven, Conn. Grass seed. Serial No. 526,580, Aug. 24. Class 1.

Autographic Register Company, Hoboken, N. J. Blank order or business forms. Serial No. 532,102, Aug. 24. Class 37.

Avco Manufacturing Corporation, Cincinnati, Ohio. Gas ranges. Serial No. 526,655, Aug. 24. Class 34.

Bacon Products Company, Chattanooga, Tenn. Insecticides. Serial No. 549,045, Aug. 24. Class 6.
